ENCYCLOPÆDIA

OF

RELIGION AND ETHICS

P

PICTS.—The Picts and all connected with them—name, race, customs, and language—have long constituted a problem upon which the most contrary views have been held, and which cannot yet be said to be completely solved.

1. Name.—The word 'Picts' has been commonly derived from Lat. *picti*, 'painted men,' but it is now generally admitted that the Latin word is the form of a native name which may or may not have referred to the Pictish (and Celtic) custom of painting and tattooing the skin. The Romans used a word which resembled the native name, and which described this custom of theirs.

The native name is connected with that of the *Pictones*, or *Pictavi*, of Gaul,¹ whose town was *Pictavi* (Poitiers), and the name *Pictones* is sometimes applied to the Picts of Scotland in Irish and Scottish Chronicles.² The Latin name must have been commonly used in Roman Britain, and became, in Anglo-Saxon, *Peohtas*. As the diphthong in *Poitiers* corresponds to an earlier *e*, found in Ptolemy's *Πηκεδώνιον* 'Ακρον on the coast of Poitou, Rhys conjectured that the name was *Pectones* rather than *Pictones*. The Welsh forms *Peithwyr*, 'Pict men,' and *Peitheu* must be derived from *Pect* (cf. Scots *Pecht*, A.S. *Peohtas*, Norse *Petta*). An Irish (Goidelic) equivalent, with the usual transmutation of *p* and *c*, may be *cecht*, which may give the numerous place-names with 'keith' in Scotland.³ What the native name meant is uncertain, but an equivalent is thought to exist in Irish *cicht*, 'engraver,' or 'carver' (or, according to Rhys, 'slaughterer' or 'mighty warrior'), this meaning perhaps being influenced by the Pictish tattooing custom. Nicholson derives *Picti* from an Indo-European stem *peik-*, 'tatu.'⁴

Another native name has the Goidelic form *Cruithni*, from *Qretani*, the name of Picts in Ireland and Scotland, and derived from *cruth*, 'form,' 'figure'; an Irish writer, Duaid MacFirbis, explains it as meaning the people who painted the forms (*crotha*) of beasts, birds, and fishes on faces and bodies. Rhys and Stokes refer it to *cruith-neachd*, 'wheat,' or 'that which is reaped or cut.' Hence it would still suggest the supposed meaning of *Picti*. The corresponding Brythonic name was *Pretani*, in old Welsh *Priten*, later *Prydyn* (*pryd*, 'form'). *Prydyn* means Scotland, the Pictland of the north, while *Ynys Prydain*, 'Isle of the Picts,' was the name for the whole of Britain, and thus must have originated at a time when the whole

island belonged to the *Prydyn*, or Picts.¹ This, then, accounts for the early Greek name *Πρετανικά Νῆσοι*, 'the Pictish Isles.'

Rhys considers that Goidelic invaders of Britain called it by some such name as *Inis Cruithne* (from *Qretani*), 'Island of the Picts'—a non-Celtic race to whom the whole island had once belonged, according to him. On the arrival of the Brythons they changed this to *Ynys Prydain*.² Macbain, on the other hand, maintains that the *Cruithne*, *Prydyn*, or Picts were themselves the Celtic inhabitants of Britain, about 300 B.C., and gave their name to it.³

2. Classical notices.—Caesar writes that the interior of Britain is inhabited by those said traditionally to have been born in the island itself, and the sea-coast by those who had crossed over from the Belgæ. The latter cultivated the land; most of the interior tribes did not, but lived on flesh and milk and were clad in skins. All the Britons dyed themselves with woad. Ten and even twelve of them had wives in common, brothers with brothers, fathers with sons; the children were held to be offspring of him who first espoused the virgin.⁴

Does the last statement refer to all the Britons or only to the interior tribes? Zimmer holds that the reference to 'all the Britons' is a parenthesis, and that the account of the interior tribes is resumed with this statement as to marriage. The interior tribes were presumably Picts, possibly Goidels; Caesar's account of their promiscuity is probably worthless (§ 5 (b)).⁵

Caesar knew nothing of the tribes to the north, who were certainly Pictish. His 'interior tribes' may have been Picts or Goidels, though the Goidels are thought by some to have first come to Britain from Ireland from the 2nd cent. onwards. If the Picts were a Celtic people, there must also have been aboriginal tribes separate from or mingled with them.

The northern tribes first came into notice during the time of Agricola's invasion. Tacitus calls them collectively *Caledonii*, and in his opinion their red hair and large limbs pointed to a Germanic origin. Some of their tribes fought from

chariots, like the southern Britons. They had tribal assemblies, ratified with sacred rites. Calgacus, their leader against the Romans, speaks of their harvests—which points to cultivated lands; and of their wives and children, without any reference to promiscuity. Tacitus makes no reference to the custom of painting their bodies.¹ On the whole, his Caledonians seem to differ but little from the southern tribes akin to the Gauls. Ptolemy² next describes the various inhabitants of Britain according to tribal groups.

South of the Forth and the Clyde were the Otadini and Gadeni on the east, and on the west the Selgovæ, Novantæ, and Damnonii, the last extending to near the Tay. On the east coast, north of the Tay, were the Venicones and Tævali; west of these were the Vacomagi, then the Caledonii and Eboraci. Along the west coast were the Cerones, Creones, Carnonacæ, and Carrii, separated from the Caledonii by the Decantæ. To the north were the Lugii, Smertæ, and Cornavii.

Ptolemy's tribes to the north of the Forth and the Tay correspond to Tacitus's Caledonii, the name of the largest group with whom the Romans came in contact having been given to all the tribes. These may be regarded as Picts, since their position corresponds to that of the Picts described by Bede.³ Possibly some of the tribes south of the estuaries (Selgovæ, Novantæ) may also have been Pictish. By c. 208 the tribes had apparently united into two groups, for Dio Cassius speaks of the two nations of the Caledonii and Maletai into which the names of the others were merged.⁴ The Maletai lived in the flattish region north of the northern Roman wall, and perhaps derived their name from *magh*, 'a plain.' They dwelt in that part of Scotland which, according to Ptolemy, had been occupied by the northern portion of the Damnonii. Dio says that these tribes neglected agriculture, but had cattle, and lived on milk, the produce of the chase, and fruits, but never ate fish. They had horses and chariots, and fought with shield, sword, spear, and dagger (? a dirk). They had community of women, and their progeny were reared as the joint offspring of each small community. They had a certain food a small piece of which sufficed a man for several days. They would also run into morasses up to the neck and live there several days without eating.⁵ According to Herodian, they punctured (tattooed) their bodies in the forms of animals, and went naked, the better to show the ornamentation.⁶

Eumenius, who first mentions the Picts by name, says that Constantius Chlorus in A.D. 306 defeated the Caledonii and other Picts.⁷ The tribes are again summed up comprehensively as Picts in the notices of the invasion of Roman Britain between the walls by them and the Scoti from Ireland or Wales in A.D. 360, and in 384 when Picts, Scots, Saxons, and Atecotti invaded Roman Britain from different directions. When Theodosius came to the rescue, the Picts are described as consisting of two divisions, Dicaledonæ and Verturionæ, doubtless the equivalents of the Caledonii and Maletai.⁸

Rhys has shown that Verturionæ is the Latin form of a Celtic word which appears later as the name of the Pictish district of 'the men of Fortrenn' (Strathern and Monteith). Fortrenn is probably the gen. of Fortriu or Foirtri, which again is found in Fothrève (Kinross and Clackmannan). On the whole, this corresponds to the region of the Maletai. Dicaledonæ suggests the people of the two Caledonias—the regions divided by the lochs from Inverness to Fort William.⁹ Cf. Ptolemy's name for the ocean to the west of Scotland, *Δουκεληρόνιον*.

Claudian says that Theodosius drove the Picts into their own region of Thule; the Scots retired to Ireland, the Saxons to the Orkneys, while he

drafted the Atecotti into the Roman army.¹ Picts and Scots returned to the attack in A.D. 387 and in later years, when the Romans had finally left Britain. The Picts, however, did not continue to hold the land south of the Forth and the Tay, except partially in the district known as Manaw or Manann, where, later, Picts, Scots, Saxons, and Brythons mingled, and possibly in Galloway, where they may have been indigenous.

Manaw or Manann included the western part of Midlothian, Linlithgow, part of Stirlingshire (where the name survives in Slamanian), and apparently Clackmannan, which also preserves the name. The part south of the Forth was known to the Welsh as Manaw of the Gododin (=Ptolemy's Votadini), to distinguish it from the Isle of Man or Manaw.²

Rhys regards the invading Scoti from Ireland who joined the Picts from A.D. 360 onwards as themselves Pictish, mixed with Celtic Goidels. They were the Cruithni of Ulster or Dáin Araide. Their name is cognate with Welsh *ysguth*, a cutting, carving, or sculpture—hence the men who were scarred or tattooed. This name may have been given them by the Brythonic Celts, and Latinized as Scotti. The later Scots who settled in Argyllshire came from another Irish Pictish district, Dalriada, which name they gave to their new habitat.³ Zimmer also regards the Scoti and Atecotti as non-Aryan people of Ireland, conquered by the Irish Celts.⁴ Maclean regards the Scoti as Goidels, and their name as Goidelic = 'tattooed men,' Gael. *sa'bh*, 'to lop off,' O. Ir. *scothain*. 'It was their own name for themselves.'⁵ Skene also regards them as distinct from the Picts, and their region of Dalriada in Ireland as one of their earliest settlements among the Ulster Picts.⁶

The Atecotti were a non-Celtic folk, the Picts of Galloway, Bede's Niduari, and possibly Ptolemy's Novantæ and Selgovæ. Their name means 'the old or ancient race.' This is Rhys's opinion.⁷ Skene regarded them as a people from Ireland who fled in Dalriada, but later considered them as inhabiting the district between the Roman walls.⁸

After the settlement of the Scots in Dalriada, which they took from the Picts early in the 6th cent.,⁹ and the Saxon invasions the Picts or Caledonians occupied all Scotland north of the Firths of Forth and Tay,¹⁰ except the region of Argyllshire and, later, the W. Isles. They partially occupied the district of Manaw, and were perhaps also found in Galloway. The remainder of southern Scotland was occupied by Brythons and Saxons.¹¹

3. Traditions about the Picts.—In accordance with a tendency in mediæval Celtic legends to connect races, tribes, or heroes with classical or Biblical personages and regions, the Picts were derived from Scythia. The Welsh tradition, as found in the *Brut* of Layamon, represents the Picts as coming from Scythia with their king Roderic to Alban (Scotland), where they were defeated and Roderic was slain. Their conquerors, the Britons, gave them a district in Ireland (Caithness, according to Layamon), but refused them their daughters in marriage. Hence they obtained women of the Gwyl (Goidels) from Ireland. Their descendants are the Scots or the Gwyl Ffichti (=Goidelic Picts), who now through these women speak Ireland's speech.¹²

The Irish tradition is found in three forms. In one of these the children of Glean (Gelonius), son of Errol (Hercules), took possession of the Orkneys. Thence they were dispersed, but Cruithne seized the north of Britain, and his seven sons—Caith, Ce, Cirig, Fih, Fidach, Fotla, and Fortrenn—divided the land into as many parts. Five others

of the Cruithneach went to France, and there founded Pictavis. Thence they came to Erin, but were driven forth.¹ In the second form of the tradition the Cruithneach, children of Gleoin, came from Thrace. After building Pictavis, they came to Ireland, and helped Crimthann, king of Leinster, to expel the Tuatha Fidhba. Drostan, their Druid, ordered that the wounded should bathe in the milk of seven score white cows, and the poison of the weapons would not hurt them. They now gained power in Ireland, but Heremon drove them out, giving them as wives the widows of the men drowned when the Milesians came to Ireland. They now acquired Alban (Scotland). Some, however, remained in Ireland. Spells, charms, and omens are attributed to them. The metrical version of this legend says that they acquired their name 'Picti' from tatuing their fair skins, and that on being given wives they swore that from the mother should descend the right to the sovereignty.² A third account says that Cruithneach went over from the sons of Mile (in Ireland) to the Britons of Fortrenn to fight the Saxons, and remained there. Wives were obtained from Ireland, Cruithneach swearing by heaven, earth, sun, and moon that the regal succession should always be on the mother's side.³

The preface to the 10th cent. Pictish Chronicle says that the Picts are so called from *picto corpore*, because they are marked with various figures made by iron points with pigments. The Scots are so called because they come from Scythia, or because they are descended from Scotta, queen of the Scots, Pharaoh's daughter. They came to Ireland in the fourth age of the world, the Britons having come to Britain in the third age. The people of Scythia have white hair—hence they are called Albani—and from them the Picts and Scots originate. Cruide, father of the Picts dwelling in this island, reigned 100 years, and had seven sons—Fib, Fidach, Floclaid, Fortrenn, Got, Ce, and Circinn.⁴

Gildas, who appears to regard the region north of the Forth and the Tay as an island, mentions the Picts as a 'transmarine' people who, with the Scots, invaded Roman Britain. They came from the north-north-east ('ab aquilone'), the Scots from the west-north-west ('a circio'). When they were ultimately driven from the region between the walls, they settled in the north of the island.⁵ Nennius brings the Picts from the Orkneys, whence they occupied a third of Britain up to his own day.⁶ Bede brings them from Scythia to Ireland, whence the Scots directed them to Britain (where they inhabited the northern part, the Britons being in possession of the southern), giving them wives on condition that, when any difficulty should arise, they should choose a king from the female royal race rather than the male—a custom observed among the Picts 'to this day.'⁷

The origin of the Picts from Scythia or Thrace is purely mythical, and the stories of how they obtained wives may be regarded as equally so—an ætiological myth to account for the Pictish succession. The Goidelic name for the Picts being Cruithne, an eponymous Cruithne was regarded as their ancestor, while the seven districts into which Scottish Pictavia or Cruithenraith was divided supplied names to most if not all of his mythical sons—Fib: Fife and Fothreve; Fortrenn: Fortrenn (Srathearn and Menteith); Fodla: Atholl (Athfoille) and Gowrie; Circenn: Maghaircinn=

Mearns and Angus; Cait: Caithness (Cathenesia). Fidach and Ce have no nominal equivalents.

The regions unaccounted for are Mar and Buchan, and Moray, Argyll being included in Dalriada. The legend must therefore have arisen after the occupation of Dalriada by the Scots.

The fact that there were Cruithni, or Picts, both in Ireland and in Scotland may account for the varying traditions of their coming first to Ireland or first to Scotland. One tradition says that both Irish and Scottish Cruithni were governed by the same kings to the number of thirty.¹

4. Who were the Picts?—Rhys regards the Picts as the non-Aryan (Ivernian) aborigines, dispossessed by the incoming Goidels, whose language they adopted, although they greatly outnumbered them. The Goidels were, however, profoundly modified by them in language, race, and customs. Having driven the Ivernians before them, they later made common cause with them against the invading Brythons. Hence there was an amalgamation of the Goidelic and Ivernian elements, and 'the term Goidelic should strictly be confined to the mixed population of Aryan and non-Aryan language in possession of the country when the Brythons arrived.'² Before Pictish, or Ivernian, died out, it was 'loaded with words borrowed from Celtic'—Goidelic and Brythonic—but it also modified Celtic vocabulary and continued the syntax of its own speech.³ Zimmer also regards the northern Celts as having become Goidelic in speech at an early period, while the southern Picts adopted Brythonic speech.⁴

The traces of alleged Pictish (non-Celtic) speech are scanty, but Rhys professed to find them in the Ogam inscriptions of the north, and at first equated it with Basque—an opinion afterwards abandoned. But he still adhered to the theory of its non-Aryan character, and continued to challenge the upholders of the Picts as Celtic to prove that the punctuated Ogam inscription at Lunastig in Shetland is Celtic: 'Ttocuhetsa-ahchitunn-hocvverv-nehhtonn.' The challenge seems a safe one, for, as Lang says, it is 'not merely non-Aryan, but non-human! or not correctly deciphered.'⁵

Rhys also finds non-Aryan traces in Celtic nomenclature, and, assuming totemism to be non-Aryan, argues as to its existence from names like MacCon, 'Hound's son'—the name of a legendary prince whose rule extended from Ireland to Britain. Hence 'MacCon may, perhaps, be regarded as representing the whole non-Celtic race of these islands.' Totemism, however, may have been Aryan, and a personal name is not evidence of clan totemism. He also argues for the non-Aryan character of the Picts from their custom of succession through the mother, traces of which he also finds in the names and relationships of Irish and Welsh mythology.⁶ Zimmer accepts the Pictish succession through the female line, as well as the classical references to promiscuity in the Celtic region, and incest incidents in Irish saga, as pointing to non-Aryan marriage relations. In the case of the sagas, the Celtic invaders of Ireland being in a minority, the aboriginal customs would not be changed at once, and have left their impress in legends.⁷

Skene's whole theory of the history of the Picts is connected with his opinion that there were two divisions of them, eventually distinguished as northern and southern Picts. This is based on Bede's statement that the northern Picts were separated from those of the south by 'steep and

⁷ *HE* i. 1, 7.

rugged mountains,¹ but such a distinction as Skene asserted is probably fallacious. His 'northern Picts' were Gaelic in race and language; the 'southern Picts' were also Gaelic, but, the Damnonii between the Forth and the Tay, who 'belonged to the Cornish variety of the British race,' having been incorporated with them, they introduced a British (Cornish) element into their language. The Damnonii are the Britons of Fortrenn.²

Skene's arguments for the Picts as Goidelic in race and language may be summarized as follows. (a) The Welsh designation for the Picts, Gwydyl Pichti, shows that, since all Goidels were called Gwydyl by the Welsh, the Picts were thus assigned to that race. The term, however, is not an early one, nor is Pichti the regular rendering of Picti in Welsh.³ (b) St. Columba's occasional but not constant use of an interpreter while preaching to Picts was necessary because the difference between Pictish and Irish resembled that between Breton or Cornish and Welsh, which are not always mutually intelligible. The difference may none the less rather have resembled that between Irish and Welsh. (c) Gaelic was spoken in Galloway at a late date, and in the 12th cent. Richard of Hexham and Reginald of Durham called the Gallowegians Picts.⁴ As to this it should be noted that there was an early Brythonic element in Galloway, but the district had been overrun by Goidels, which accounts for the predominance of Gaelic there. The name Picts may have been given to them by those English writers on account of the peculiarity of their language. (d) Many Pictish personal names in the lists of kings are of Irish form; others show a mixture of Brythonic, Gaelic, and Teutonic. The last is accounted for by the sway of the Angles over the Picts in certain districts; the Brythonic element came from the 'Britons of Fortrenn' (the Damnonii), who spoke a dialect akin to Cornish. (e) When the place-names are studied according to strict rule, the generic terms show no Celtic element in the districts occupied by the Picts. Thus 'Pict' does not occur north of Forth and Clyde. (f) Legend attributes a Goidelic speech to the Picts, acquired by them from the Irish women whom they married.⁵ Thus, however, only suggests that the Picts once spoke some other language, or perhaps some other Celtic dialect.

Nicholson is also of opinion that Pictish was a language virtually identical with Irish. He holds, however, that the loss of Indo-European *p* was comparatively late in Goidelic dialects—Pictavian, Sequanian, Belgic, Manxian, proto-Irish, and proto-Pictish—but that *p* was lost in literary or old Irish. *P* in Celtic speech is therefore not always a mutated *qu* or *b*, but may be original and a sign of Goidelic occupation. Insular Pictish, like Pictavian in Gaul, was a Goidelic dialect with *p* preserved to historic times. Highland Gaelic is descended from Pictish, not from the Irish speech of the Dalriadae Scots, who did not conquer the Picts. The word 'Pict' is derived from a root *peik-*, 'taint,' with I E *p* preserved. He also holds that the Belgii were Goidels, and are found not only in Gaul and Britain, but also in Ireland. They are the Fir Bolgs of Irish legend, and, with the Fir Domnann (=the Damnonii) and Fir Galéoin (Picts), were Goidels who preserved *p*. The Kymry or Brythons of other writers—Gaulish, Welsh, Cornish, and Breton—were the first Celtic arrivals in Britain. Then came the Goidels, who drove the Kymry into the interior in pre-Roman times, where later Caesar found them.⁶ If, however, this order of occupation—the opposite of that usually accepted—is true, it is difficult to account for the presence of Goidelic Picts in Scotland, where presumably the Kymry would have retired before them.

Whatever may be said of these views, it is certain that neither Skene nor Nicholson sufficiently faces the fact that, rightly or wrongly, the early notices of the Picts regard them as differing from the Scots in origin, language (dialect), and the matter of the kingship.

¹ Bede, *HE* iii. 4.

² *Celtic Scotland*, i. 231.

³ T. Macbain, in Skene's *Highlanders*, p. 493; Rhys, *Celtic Britain*, p. 242.

⁴ Skene maintains that the language of Gildas shows that Picts remained in the region between the walls after the last invasion, and that Bede's Nidmarian Picts = Picts of Galloway (*Chronicles*, p. cviii, *Celtic Scotland*, i. 123).

⁵ See Skene, *Four Ancient Books of Wales*, i. ch. 7 ff., *Celtic Scotland*, i. 194 ff.

⁶ Nicholson, *Celtic Researches*, p. 110 f.

Some writers are of opinion that no Goidel occupied British soil except from Ireland. Macbain regards the Picts, the Caledonii of Tacitus, the Pietanoi of Pytheas, as the first Celtic incomers to Britain, c. 600 B.C. They were 'a Celtic-speaking people, whose language differed both from Brittonic and Goidelic, but at the same time only differed dialectically from the Gaulish and Brittonic tongues.' Their language, unlike Goidelic, was of the *p* class of Celtic speech, and they were driven west and north by the incoming Belgii. They were thus Caesar's aborigines of the interior.

Macbain shows that Skene's philological arguments for Pictish = Goidelic are defective. Bede speaks of the various dialects or languages spoken in Britain—those of the Angles, Britons, Picts, Scots, and Latins. Pictish was thus different from both Brythonic and Gaelic. Again, the Cruthini of Ptolemy were Pictish incomers from Scotland who had become Gaelic-speaking. The Irish looked upon them as a people different from themselves. The classical names from the Pictish area are mainly Celtic, and a third of them are nearer Brythonic than Gaelic. The lists of Pictish kings are 'decidedly British in phonetics.' Place names in the Pictish region, excluding the Isles, Caithness, and Sutherland, which are largely Norse, show a veneration of Gaelic, since the Scots imposed their language as well as their rule on the Picts, but they are 'very different from names on Goidelic ground—Ireland and Dalriada.' The prefixes *aber* and *pet*, unknown to Gaelic, are found from Sutherland to the Forth. The former is often superseded by Gaelic *inver*, the latter by *baile*.¹ Skene regarded *aber*, *inver*, and *cunaber* or *cymmer* as originally common to both branches of the Celtic language, retained in some dialects, obsolete in others;² but it is surely significant that *aber* does not occur in Argyll (Dalriada).

Other Celtic scholars, Windisch³ and Stokes, also regard Pictish as Brythonic rather than Goidelic. Stokes, after collecting and examining all the known Pictish words down to the period of the Irish annalists, comes to the following conclusion:

'The foregoing list of names and words contains much that is still obscure; but on the whole it shows that Pictish, so far as regards its vocabulary, is an Indo-European and especially Celtic speech. Its phonetics, so far as we can ascertain them, resemble those of Welsh rather than of Irish.'⁴

D'Arbois de Jubainville identifies the Cruithni of Irish legend, who fought against the Fir Fidge, with the Brigantes, a British tribe located by Ptolemy also in the south-east of Ireland. Their Druid Trostan has a name akin to that of the Arthurian Tristan. The Fir Fidge are the Manapii, a tribe identical with the Belgic Manapii. The Brigantes, inhabitants of Britain (Prydyn), were called Cruithni = Britanicos, by the Irish.⁵

Where philological experts are so much divided on the question of language, it is clear that it cannot be regarded as settled. If, however, the Picts were a non-Celtic race, they could not have remained so unmixed with their Celtic conquerors as Rhys's theory demands. And, again, granting that they were Celtic—Goidelic or Brythonic—such incoming Celts must have been numerically small compared with existing aboriginal tribes, which would again imply a mixture of races. Whatever the Picts were, it appears certain that they either adopted or retained Celtic speech.

5. Pictish customs. (a) *Painting and tattooing*.—Caesar says that all the Britons dyed themselves with woad;⁶ and Herodian says of the northern tribes (the Picts) that they tattooed themselves with coloured designs and figures of animals of all kinds, and did not wear clothing, in order that these might be seen.⁷ The custom is also ascribed to them by Donald MacFilibis as an explanation of

their name: a Cruithneach, or Pict, is one who takes the forms, or *cruths*, of beasts, birds, and fishes on his face and body. This probably represents a tradition in Ireland. Far earlier Isidore of Seville explains the name Scotti as derived from their custom of tatuing, and this explanation of the name Picti is given in the Pictish Chronicle (see § 3). Tatuing may have been common to all Celtic tribes at one time, and Claudian personifies Britain as a woman with tatued cheeks.¹ Faces depicted on Gaulish coins have marks on them which appear to be tatu marks.² Probably no great distinction need be drawn between painting and tatuing. Among other peoples these customs are ornamental, are used to produce a frightful appearance, or have totemistic significance. Herodian and Cæsar associate the British custom with the first two of these respectively, but they were not likely to connect it with totemism if that existed in Britain. There is no reason to believe that tatuing was peculiar to the Picts among British tribes.

(b) *Descent through women.*—The community of women ascribed by Cæsar to all the British tribes (or, according to Zimmer, to those of the interior), by Dio to the Caledonians, by Strabo to the Irish (along with incest), and by the interpolator of Solinus to the people of Thule (Shetland), and, in the Hebrides, to the king, who was not allowed to possess a wife, but borrowed such women as he wanted, is regarded by Rhys³ and Zimmer⁴ as a non-Aryan practice among people in Scotland and Ireland who were not Celts, i.e. the Picts, and as explaining the peculiar Pictish law of succession through women. Macbain also regards this succession as non-Aryan, but adopted by the Picts (Celts) from the aborigines whom they conquered.⁵ It is, however, most unlikely that the Picts, whether Celtic or not, who had advanced beyond savagery and whose general customs differed but little from those of known Celtic tribes, had such absolute community of women as these classical writers describe. We may regard it (1) as fabulous, since it is difficult to see how a society based on the matriarchate could indulge in such promiscuity as Cæsar's words denote, or (2) as a mistaken interpretation of marriage customs with which the Romans were unfamiliar. Nor need we suppose with Zimmer that promiscuity and incest incidents in Irish sagas are necessarily non-Aryan customs surviving after the Celtic conquest. They have parallels in all mythologies and all societies. As to the Pictish succession with which these customs are said to be connected, we find from the lists of Pictish kings that brothers by the same mother succeeded each other—'not an unusual feature in male succession'⁶—but no son succeeded his father, who was sometimes a foreigner. When brothers failed, the succession went to a sister's son or to the nearest male relative on the female side. This explains Bede's statement cited above (§ 3). Bede does not make the succession through women absolute; succession through males took place up to a certain point. All this has been explained as an instance of the matriarchate, and therefore non-Aryan. Lang, however, notes that words exist in Greek denoting kinship on the mother's side.⁷ It has also perhaps been assumed too hastily that the evidence points to the matriarchate. In northern Welsh law, when a woman married a stranger, her son had a right to the inheritance of her father, because 'the stranger, entering the

family, brought to it strength, and the nephew, son of the stranger, became the continuator of the grandfather, in some sort his son.'¹ In Ireland by special favour right of inheritance was given to a daughter's or sister's son born of a stranger. Accordingly, d'Arbois de Jubainville explains Bede's statement by the astonishment caused to Anglo-Saxons by the law of inheritance allowed by Celtic custom in the case of sons of daughters in concurrence with their cousins, sons of sons. The Picts had not a law of inheritance differing from that of the Irish or Welsh, and the facts do not require to be explained by the matriarchate.² Already, too, the importance of the sister's son is seen in ancient Celtic history, where, in 400 B.C., King Ambicatus placed each of his sister's sons at the head of an army, the one conquering Bohemia, the other N. Italy.³ D'Arbois de Jubainville's explanation, however, hardly covers the anomalies of the list of Pictish kings, if that is to be regarded as in any way authentic. In Irish and Welsh sagas, where divine groups are called after the mother, or where gods and heroes have often a matronymic, while the father's name is omitted, we may have something analogous to the Pictish succession—some custom perhaps akin to the matriarchate.⁴ But this is so deeply embedded in Celtic myth that we can hardly imagine that it is all borrowed from hypothetical non-Celtic custom, as Rhys maintained.⁵

6. *Religion of the Picts.*—Neither the classical observers nor the biographers of saints who laboured among the Pictish tribes discuss the native religion. As far as the latter are concerned, Ailred in his *Life of St. Ninian* speaks of the southern Picts worshipping deaf and dumb idols⁶—a vague statement. Adamnan speaks of the northern Picts as possessing Druids who extolled their own gods as more powerful than the God of the Christians.⁷ Their magical acts resemble those ascribed to Irish Druids, and Adamnan does not appear to know any difference between Pictish and Celtic Druids. He refers to the fountain which St. Columba found in Pictland, 'famous among this heathen people and worshipped as a god.' The saint blessed it and caused 'the demons' to depart from it for ever.⁸ The cult of wells was common among the Celts and is almost universal. If the Picts were a Celtic folk, their religion may be estimated from what is known of Celtic religion elsewhere (see art. CELTS). Bede says that the southern Picts, i.e. those tribes dwelling in the region immediately north of the Forth, were converted to Christianity by St. Ninian.⁹ This must have been about the beginning of the 5th century. The tribes beyond these, the so-called northern Picts, were converted by St. Columba and his followers. Columba encountered the Druids of King Brude at Inverness, and preached to and baptized the king and many of his people in the latter half of the 6th century.¹⁰

7. *Later history of the Picts.*—The history of the Picts from the 7th cent. to the time of Kenneth MacAlpin is one of internecine feuds, strife with the Scots of Dalriada and with the Angles. The usual view has been that eventually Kenneth MacAlpin, king of the Dalriadic Scots, overcame

the Picts, and ruled over them as king of the Scots, or, according to the 10th cent. Pictish Chronicle, extirpated them—an obviously absurd statement. But Skene, following Pinkerton to some extent, maintained that Aengus MacFergus, the Pictish king from 731 to 761, defeated the Scots and took Dalriada, which now became a Pictish province. In 832 Alpin, of Scottish race by paternal descent, but, as his name shows, a Pict by maternal descent, as king of the Scots fought the Picts and was defeated. His son Kenneth eventually obtained the throne of the Pictish kingdom. This was not the result of a foreign invasion. The events are rather to be regarded as a war of succession; Alpin and Kenneth had a claim through maternal descent to the throne and were supported in that by a party among the Picts and by the remains of the Scots of Dalriada. The Picts, a Gaelic-speaking people like the Scots, were not conquered, and suffered no change of language. There was a more or less silent revolution, a mere matter of succession according to Pictish law, and the modern Highlanders represent the older Picts.¹ Nicholson urges similar views, and points to the unsubstantial nature of the evidence for a Scottish conquest of the Picts (the fact that Alpin and Kenneth are names borne previously by Pictish, never by Dalriadic, kings), to the improbability of the Pictish nation being conquered by their Scottish subjects, as well as to the fact that the Annals still describe Kenneth and his successors as 'rex Pictorum.' Thus the position is somewhat analogous to the change which set James VI., a Scottish king, on the English throne. There was no conquest of the English in this case or of the Picts in the other case.² These views have been strongly combated by Macbain, who insists that the documents are not rightly handled, and that a wrong value is put upon some of them. He shows, e.g., that, though Aengus conquered Dalriada, the Annals insert this significant note, 'wane of Aengus's kingdom.' Yet the conquest of the Picts cannot be clearly explained from our present materials. There had been dynastic wars—attempts to break the Pictish rule of succession. The Scots were aggressive, and superior in culture, and eventually their Gaelic speech both in Pictland and in Strathclyde 'wiped out the original Pictish and British.'³

The problem involved here is entirely one of evidence drawn from obscure documents and of probability, while the view adopted of the original Pictish tongue, Brythonic or Goidelic, must necessarily affect the results. Whatever theory is followed, it is certain that there must be a large Pictish admixture among the Scottish people in the region north of the Forth.

8. The Picts in folk-tradition.—With the disuse of their name in connexion with actual peoples, the 'Picts' or 'Pechts' came to be associated in folk-tradition with megalithic remains and large buildings and with myths of their origin. From being a historic folk, they became a mysterious people, more or less supernatural, and usually considered as of small stature.

'Pecht' in Shetland is synonymous with 'dwarf';⁴ in Aberdeenshire 'picht' means 'a small person,' and in the south of Scotland the 'peghs' are regarded as dwarfs, 'uncle wee bodies, but terrible strong'—their immense strength being necessary on any theory of their having been able to move easily the large stones of archaeological remains, etc., attributed to them. Hence D. MacKitchie regards the Picts as a former dwarf race in Scotland, equivalent to the fairies of popular

belief¹ (see art. FAIRY, § 6). That the Picts were not a small race is proved by what Tacitus says of the Caledonii, nor is there the slightest scrap of historical evidence for the theory. The so-called 'Picts' houses' or 'earth houses'—low underground passages terminating in one or more chambers—need not indicate that they were constructed or used by people of small stature. Their position necessitated a constricted height; they were probably store-houses or hiding-places like those described by Tacitus (*Germania*, 10) among the Germans of his day, and not regular dwelling-places, since they are generally associated with remains of surface dwellings. Scattered over the Pictish area in Scotland, and perhaps of post-Roman date, they may quite likely have been constructed by the Picts, in which case the tradition of their origin would be authentic.

Generally speaking, however, the tradition which ascribes all mysterious or large structures to the Picts (e.g., Glasgow Cathedral) is analogous to wide-spread traditions elsewhere in which the origin of megaliths and colossal remains is ascribed to fairies, dwarfs, giants, the devil, Cyclops, etc.

LITERATURE.—The classical sources have been referred to in the article; the post-classical sources are collected in W. F. Skene, *Chronicles of the Picts, Chronicles of the Scots, and other Early Memorials of Scottish History*, Edinburgh, 1867. See also Bede, *HE*; Nennius, *Historia Britonum*, Irish version, ed. J. H. Todd, Dublin, 1835. The older authorities are mainly: G. Chalmers, *Caledonia*, 3 vols., London, 1807-23; T. Innes, *Essay on the Ancient Inhabitants of the North of Britain or Scotland*, 2 vols., do. 1720, new ed. in 'The History of Scotland' series, viii., Edinburgh, 1879; J. Pinkerton, *An Enquiry into the Hist. of Scotland preceding Malcolm I.*, new ed., 2 vols., Edinburgh, 1814, *Dissertation on the Origin and Progress of the Scythians or Goths*, London, 1757. More modern works are: J. Loth, 'Les Pictes d'après les travaux récents,' *Annales de Bretagne*, vi. (1891) 111 ff.; A. J. A. MACVILLOCH

PIETISM.—1. Use of the term.—(1) Pietism is used in a general sense to indicate a religious attitude of devotional feeling; (2) by Heppel, Ritschl, and others, the term is extended to cover all similar tendencies during the past three centuries; (3) the Roman Catholic 'pietists' are the brethren and sisters of the pious and Christian schools founded by Nicholas Barre, in 1578, for the instruction of girls and boys.

As a proper name, however, the term belongs to the movement which arose under Spener towards the close of the 17th century. Like the term 'Methodist,' it was originally bestowed in contempt.

2. The religious life of Germany at the rise of the movement.—The close of the Thirty Years' War in 1648 left German Protestantism in an impoverished condition. The Lutheran Church was ruled from without by the civil governments of the various States, and from within by theologians as autocratic as the papacy. Both civil and theological rule tend more to vigilance over doctrine than to care for Christian character. The result was that, whilst orthodoxy was never more outwardly alive, it was never more inwardly lifeless. The clergy had not entirely forgotten their functions, it is true, but they were obsessed with the belief that, if there were sound doctrine, as a necessary consequence all else would be right. Luther had placed the seat of faith in the heart, but emphasis had now shifted to the intellect.

⁴ See an amusing instance of this in Lockhart's *Life of Sir Walter Scott*, ch. 29, and Scott's *Pirate*, note 1.

PIETISM

It was held, accordingly, that, if intellectual knowledge (*illuminatio*) were correctly imparted, it would assuredly direct the will aright. Luther had placed the Bible above dogma. The order was now reversed, and a creed-bound Church neglected the Bible in home, school, university, and service. Theological controversy was both frequent and acrimonious. Lay rights were subordinated to pastoral prerogatives. Matters were somewhat better in the Reformed Church, and its presbyterian form of government gave a larger place to the laity; but even here the taint of legalism and the spirit of self-righteousness were only too often in evidence.

Upon this clouded sky Pietism arose, bringing a clearer and purer light. Beginning modestly in an attempt to improve the religious life of Frankfurt, it spread rapidly through Middle and N. Germany. Among the forerunners of the spirit rather than the system of Pietism may be numbered Jakob Boehme (*q.v.*) the mystic, Johann Arndt, and Theophilus Grossgebauer, but the history of Pietism proper is almost entirely bound up with the life, work, and personality of the two great leaders who together and successively gave it inspiration and guided its course, namely P. J. Spener and A. H. Francke. Within the span of their lives may be measured the rise, the growth, and at least the beginning of the decline of Pietism. To sketch their biographies is therefore, in the main, to recount the history of the Pietistic movement.

3. History of the movement; lives of Spener and Francke.—(a) *Philipp Jakob Spener*, 'the father of Pietism,' was born at Rappoltsweiler, Alsace, in 1635. Trained under the influence of a devout godmother, he was impressed early in life by reading Arndt's *Vom wahren Christenthum* (Brunswick, 1606-09). Whilst a student at Strassburg, he found his 'father in Christ' in Johann Schmid. Taking his master's degree by a disputation against Hobbes's philosophy, he continued his studies at Basel, Geneva, Stuttgart, and Tübingen. At Geneva the influence of A. Leger and Jean de Labadie, the ex-Jesuit, combined with the piety, mysticism, and strict discipline of the place to shape his character. At Tübingen he read Grossgebauer's *Wächterstimme aus dem verwüsteten Zion* (Frankfurt, 1661). In 1663 he became preacher at Strassburg, and lectured on philology and history. In 1668 he removed to Frankfurt as chief Lutheran pastor. Here in 1670, developing an idea which he had previously tried at Strassburg, Spener instituted his famous 'Collegia Pietatis,' first in his own house, and subsequently in the church. His aim was to promote fellowship and Bible study; his means were catechizing, lecturing, and discussion. The name, and, according to Ritschl, the idea of such gatherings originated in Holland, where the 'Collegiantes' met 'in collegia' for worship; but this has scarcely been proved. The attempt, inspired by good motives, was imitated, however, and in less capable hands, often indeed in the absence of all leadership, the Collegia gained a name for promoting heresies, fanaticism, and even graver abuses. Spener finally suppressed the meetings. Some were continued despite this, and mostly became separatist communities which seriously injured the good name of Pietism.

In 1675 Spener's *Pia Desideria* appeared in Frankfurt. In it he advocated (1) earnest Bible study conducted in 'ecclesiæ in ecclesia'; (2) a lay share in Church government, as the proper consequence of the Christian doctrine of the priesthood of believers; (3) that knowledge of Christianity is practical, not theoretical, and shown in charity, forgiveness, and devotion; (4) that, rather

than denouncing their errors, sympathetic treatment should be given to unbelievers, to win them, if possible, to truth; (5) that theological training should be reorganized, and emphasis laid on devotion rather than on doctrine; and (6) that preaching should be more practical and less rhetorical. Spener followed up his contentions in *Das geistliche Priesterthum* (Frankfurt, 1677) and *Allgemeine Gottesgelehrtheit* (do. 1680). In spite of the opposition of the orthodox, Spener's influence increased, and in 1686 he became court chaplain at Dresden. Here he offended the elector by rebuking his vices, but refused to resign his post. The Saxon court met the difficulty by obtaining for him the rectorship of St. Nicholas, Berlin, with the title Consistorial Inspector. Here, in a court where the tendency was rationalistic, Spener's true piety was honoured and appreciated.

In 1694 the University of Halle was founded, and Spener assisted in nominating the professors. Spener's coadjutor in the affairs of Halle was Christian Thomasius (1655-1728), the jurist and publicist. Thomasius is an interesting figure. A disciple of Hugo Grotius and Samuel Pufendorf, he had been professor of Natural Law at Leipzig. His views were provocative. He attacked traditional methods in law and theology alike, advocated toleration for all, even for such outlaws as witches and atheists, and advised mixed marriages between Lutheran and Calvinist. Denounced from the pulpits and forbidden to write or lecture, Thomasius had to flee to Berlin to escape arrest. Here he received a welcome, and, taking part in the formation of Halle University, became its rector and professor of Law. In regard to ecclesiastical matters, Thomasius contended that a sharp distinction must be made between that which is inward and that which is external in religion. Questions of piety and of doctrine are inward. The State should therefore leave them alone. In the external matters of worship and Church life, however, the State may rightly interfere, if necessary, to promote the general wellbeing of the country and to maintain peace and order. Thus rendering to Cæsar and to God the things which were respectively theirs, Thomasius reconciled his own broad sympathies with his position as a State servant. Personally he was in the main orthodox, holding that revealed religion was necessary for salvation. Though never a Pietist, and indeed not of the Pietist temperament, Thomasius is interesting as an example of the broader tendencies of his age. He maintained cordial relations with Spener, though in later life he parted from Francke. It is obvious, however, that he had much in common with Pietism's spirit of toleration and its undoctinal bent, and his work at Halle binds his name indissolubly with the Pietistic movement.

Meanwhile Spener's influence was creating jealousy. The theological faculties of Wittenberg and Leipzig attacked him bitterly, the former censuring in 1695 no fewer than 264 errors laid to his charge. This thunderbolt fell harmlessly, however, and Spener reiterated his position in his *Theologische Bedenken* (Halle, 1700-02). His influence maintained itself, and the Pietistic movement continued to flourish. In 1705 Spener died in Berlin.

Spener's was a quiet, well-balanced mind. Himself a profound Bible student and a charitable practical man of devotion, he united Luther's stress upon Scripture with the insistence which the Reformed Church laid upon conduct. Strictly speaking, he was neither mystic nor quietist. He was not a separatist, nor did he desire that Pietism should become a separatist movement. Ritschl indeed declares that he was not truly a Pietist,

because he did not share in the more pronounced developments of Pietism, such as insistence upon a conscious crisis as necessary in the process of salvation, and a complete breach with the world. If this is an extreme statement, it is none the less true that, except for his insistence on the need for regeneration before a man should teach theology, and a belief that the restoration of the Jews and the fall of the papacy would precede the final victory of Christianity, there was little to distinguish Spener's views from the orthodox Lutheran creed of his day.

(b) *August Hermann Francke*, the second great leader of Pietism, was born at Lubeck in 1663. Losing his father at an early age, Francke owed his religious training to a godly mother. He studied at Erfurt and Kiel, where he first met Pietistic influences in the person of Christian Kortholt. He proceeded to Leipzig, where he became an accomplished Hebrew and Greek scholar, graduating in 1685. Here, with Paul Anton and Johann Caspar Schade, he founded the Collegium Philobiblicum to enable graduates to study the Scriptures together, both philologically and practically—a venture of which Spener expressed approval. Francke subsequently visited Spener, and, ultimately returning to Leipzig, lectured to crowded audiences. Opposition, however, soon arose, and Francke's Bible College was suppressed and his lectures forbidden. He thereupon withdrew to a pastorate at Erfurt, but a similar outburst of opposition caused the civil authorities to expel him at forty-eight hours' notice on the charge of forming a new sect. Three months later, at the end of 1691, Spener secured for him the unsalaried chair of Greek and Oriental Languages at Halle (where his colleagues were Anton, Joachim Lange, and Joachim Justus Breithaupt) and a pastorate at Glaucha. Here Francke remained for thirty-six years until his death in 1727, exchanging, in 1698, his former position for the chair of Theology.

Francke was a man of real gifts, eloquent, learned, saintly, and industrious (for his remarkable philanthropic work see below). It is said that, as a token of the respect which his character evoked, the whole town followed his body to the graveside. As a writer Francke was less able than Spener, but, besides controversial pamphlets, he left several works for students and some books of devotion.

With the death of Francke the activities of Pietism waned. Its main power was wielded in N. and Middle Germany, but it exercised some influence throughout Europe, and especially in Switzerland. Frederick I. supported the movement, decreeing in 1729 that all who desired appointments in Prussia must study two years at Halle. Frederick II. was unsympathetic, however, and Valentin Ernst Löscher of Dresden headed an opposing movement. While Pietism withstood this in the main successfully, by the middle of the 18th cent. its force was largely spent, although the violence of the opposition weakened contemporaneously with the decline of Pietism. During the period of rationalism which followed Pietism was quiescent, but its spirit, at least, subsequently revived, and, in better fellowship with orthodoxy, is not yet dead in German evangelical Church life.

A more moderate form of Pietism, centring in Württemberg, flourished longer. Its leader was the famous Johann Albrecht Bengel (1687-1752), together with Friedrich Christoph Oetinger (1702-82) and others. Schaff compares the Württemberg Pietists in their relation to Lutheranism with the early Methodists and Anglicanism. They aspired to be a movement within the Church,

holding prayer-meetings, conducted by lay leaders (*Stundenhalter*), but attending church service and the sacraments. Unlike the Methodists, however, they did not entirely break away, the main body tending to become more churchly without being strict Lutherans. Some communities, like those of Kornthal and Wilhelmsdorf, seceded, following the tendency of so many Pietistic centres to become separatist.

The reaction against rationalism under Baroness von Kindener was inspired by Pietistic influences, as was the party led by Ernst Wilhelm Hengstenberg which flourished at the close of the Napoleonic wars. It was mainly distinguished by its opposition to the scientific study of theology. But these were after-effects. The direct influence of Pietism ceased by the middle of the 18th century.

4. *General principles of Pietism; its strength and weakness.*—Spener's basis was experience. Without attacking doctrine, he relegated it to a minor place, emphasizing the will rather than knowledge, and insisting that justification by faith must be by a faith supported by works, such as repentance, conversion, and a changed life. A certain Puritan strain was manifested in the Pietist's condemnation of theatres, dancing, and such pursuits (*adiaphora*), and in the insistence that the regenerate alone were fitted to teach theology—a point which, somewhat strangely, gave great offence. Some Pietists indulged in millenarian speculation; many dabbled in mysticism; but, in the main, Pietism is justly to be called a movement of revaluation, which tried to attach to regeneration and sanctification as accomplished facts a higher value than to justification by faith as an approved theory. Pietism has been described as the last fruit of the heart-religion originated in the Franciscan movement; and also as the last great surge of the waves of the Reformation, and the final form of its Protestantism. Neither description is strictly accurate. 'Heart-religion' did not start with the Franciscans or end with Pietism; nor are the waves of the Reformation spent. Pietism was the reaction of the spirit against the letter. It sprang up in protest against the formalism of its day. But it represents a permanent spirit, for, just as tyranny provokes rebellion, and licentiousness creates a Puritan reaction, so will formalism always call up some form of Pietism.

The opposition to Pietism, as the lives of Spener and Francke reveal, was violent. It took the form of controversial literature, such as *Invigo Pietismi* (1691), floods of pamphlets, heresy charges, and processes in the civil courts. Its first ground was doctrinal. The contemporary opponents of Pietism seized upon its antidoctrinal, or at least undoctinal, character, alleging that it impoverished the doctrine of justification by faith by laying stress upon the subjective rather than the objective aspect of faith. They declared that Pietism was indifferent to the importance of correct knowledge in religion, and thus uprooted all sound theology. The Pietist stress upon the will offended the orthodox, who regarded the work of the Holy Spirit in conversion to be primarily in the illumination of the understanding, whereas the Pietists regarded it as consisting rather in the stimulation of the will. The later critics, however, chiefly bring charges of another character, mainly of fanaticism, though others see in the movement a retrograde tendency to Catholicism. It is suggested that the subsequent deterioration of Pietism was involved in its own principles. Its insistence upon new birth, separation from the world, and acute repentance is alleged to have led to exaggeration and frequent fanaticism. It is said to have indulged in wild prophecies, mysteries, bloody sweats, the formation

PIETISM

of independent communities, some fanatical like the millenarians, others criminal. A long list of unsavoury scandals can be collected, and men, like Gottfried Arnold (1666-1714), who began as Pietists and ended as fanatical mystics are quoted as examples. It is said that registers were kept for souls, and idle people supported themselves by uttering the shibboleth of Pietism, whilst others committed suicide in religious mania. Such criticism, however, defeats its own ends. It represents the Pietism of Spener and Francke as little as gluttony and drunkenness represent the philosophy of Epicurus. Pietism must be judged in the form in which it was presented by the actual leaders of the movement, not in the excesses to which it degenerated apart from their control. In this statement, however, the main weakness of Pietism is revealed. It was the lack of central control. Unlike Wesley, Spener allowed the movement that he initiated to develop unorganized and largely undisciplined. He let liberty become licence, and it led to degeneration. Spener judged that organization had killed spirituality in the Lutheran Church, but among the Pietists the lack of organization led to the same result. There were other causes. Pietism proclaimed a gospel of individual rather than universal salvation. It tended to leave the Church and the world as evil and to seek purity in isolation. There was also opposition, and subsequently the undermining influence of the rationalistic movement. But the chief cause of the decay of Pietism was none the less the false individualism which left every Pietist community free to direct its own destinies in its own way. The decay of Pietism came when it had worn down opposition; and the influence of rationalism, though hostile, is least potent of all against spiritual movements. One can but conclude that the prime cause of the ultimate failure of Pietism to maintain itself lay in the fatal error of believing that spirituality needs no organization.

5. The results of Pietism.—(a) *In the Church*.—Though the critics of Pietism allege that the *ecclesiola in ecclesia* weakened Church organization and led to separatism, there is little doubt that Pietism tended in the main to restore vitality to the Church. It showed afresh the importance of religious experience; it revealed the religious value of feeling and of practical Bible study; it vindicated lay rights. It led to some improvement in the conduct of worship and a better liturgy. It gave a fresh impetus to hymnology and religious poetry. Paul Gerhardt's hymns proved an inspiration to the Pietists, and stimulated their own production. Spener and Francke both wrote hymns, though Spener's are poor and Francke's few. Better known are those of J. A. Freylinghausen; whilst among the hymn-writers influenced more or less by Pietism may be counted W. C. Desser, B. Schmolck, J. J. Schütz, and G. Tersteegen. Although the Pietistic movement died out without effecting the thorough renewal of the life of the Church which it aimed at securing, its indirect influence tended to restore a truer conception of religion and a more intelligent form of worship, and the legacy which it left became the joint property of many subsequent forms of evangelical revival.

(b) *Philanthropy*.—Perhaps the most enduring result of Pietism was the fresh impetus which it gave to philanthropic work. Francke established the famous Halle schools in 1705, and the foundation still exists. The work began modestly with a ragged school in his own house. Two years later a special building was taken, which had grown at the time of Francke's death to a large institution, supporting nearly 150 orphans, and educating between 2000 and 3000 poor children, for the most

part gratuitously. The system of education was both religious and technical. It embraced natural science, physical exercises, various trades, and the German tongue. One by one were established a printing press, hospital, library, farm, brewery, and laboratory. A teachers' training college was also added and a Bible Society under Karl Hildebrand von Canstein. The best side of Pietism is illustrated in the Halle orphanage—a work which gained for it the support of those to whom its purely religious propaganda did not appeal.

Pietism was also a pioneer in foreign missionary activities. Frederick IV. of Denmark, acting under the influence of Julius Lütken, the court preacher, who was a friend of Spener and Francke, sent men to Halle for training, and asked Francke to find missionaries to Danish E. Indian possessions. In 1704 a mission was thus established at Tranquebar, and the Danish-Halle mission received the congratulations of George I. of England. The Moravian missionary movement also owes much of its strength to the Pietist strain in its ancestry.

(c) *Other movements*.—The Moravians (*q.v.*) may be regarded as indirectly an offshoot of Pietism. Zinzendorf was Spener's godson and a pupil in the Halle schools. From Pietism he learned not only the missionary fervour which characterized the Moravian community, but the emphasis on vital religion also. Through the Moravians the Pietist influence came down to Schleiermacher (*q.v.*), and is found in the insistence which his philosophy lays upon feeling. The Lutheran stress upon knowledge, changed by Spener to emphasis upon will, becomes in Schleiermacher a doctrine of feeling, and in this sense also, despite Ritschl's anti-Pietistic strictures, the Ritschlian theology has its Pietistic strain. Indirectly linked with Pietism by means of Moravianism is the Methodist revival under John Wesley (see art. METHODISM).

By a strange contradiction, the *Aufklärung*, which represented the antithesis of Pietism's religious views, was in some part prepared by the Pietistic movement. In the first place, the individualism of Pietism, which attracted the robust common sense of Thomasius, prepared for the individualism of 'the Enlightenment' (*q.v.*), and, in addition, the reduction of emphasis upon doctrine provided an atmosphere of greater freedom. It is noteworthy that Johann Salomo Semler, who was one of the forerunners of theological rationalism, came from Halle, where he was professor in 1752.

Through these channels the stream of Pietism ran down to the sea and lost itself. If now the watercourse is dry, at least it may be said that the flow was not in vain. Outwardly the record of Pietism is that of a movement which spent itself, but those who take a wider view will see that it was not lost as an influence when it ceased to have an independent course as a movement. The spirit of Pietism survived its body, and still lives in every form of intensive and devotional religious life.

PILGRIMAGE (Arabian and Muhammadan).—1. **Pilgrimages in early Arabia.**—A religious feast like that annually celebrated by the heathen Arabs in the neighbourhood of Meccah was called *hajj*. This word (like Heb. *an*; see, e.g., Ex 10⁹ 12¹⁴, Dt 16¹⁶) designated a periodical feast at any sacred place, to which the worshippers on that occasion made a pilgrimage. Probably there were various holy places in Arabia, where such a *hajj* took place. Epiphanius, e.g., mentions the word Ἀγγελ-αλβαειθ (i.e. 'the *hajj* to the holy temple') as being the Arabic name of a month in N. Arabia. We may suppose that 'the' holy temple to which this pilgrimage was made was a local sanctuary in that country, and not the distant Ka'bah at Meccah (cf. J. Wellhausen, *Reste arab. Heidentums*², p. 85).

Only the great *hajj*, celebrated annually by various Arabic tribes at the holy mountains of 'Arafah and at adjacent places, in the sacred month of Dhu'l-Hijjah, has survived the ancient paganism, since Muhammad incorporated these ceremonies in a somewhat modified form into his own religion. The feast took place at the end of the year (see Wellhausen, p. 94 ff.) and had originally, we may suppose, a magical character. Its purpose in early times must have been to get a happy new year with plenty of rain and sunshine, prosperity, and abundance of cattle and corn. Great fires were lit at 'Arafah and Muzdalifah, probably to induce the sun to shine in the new year. Water was poured on the ground as a charm against drought (hence, probably, the 8th of Dhu'l-Hijjah was called 'the day of *tarwīqah*', i.e. 'the day of moistening [the ground]'). Perhaps the throwing of stones at certain places in Minā, a relic of the primitive heathenism, was originally a symbol of throwing away the sins of the past year, and in this way a sort of charm against punishment and misfortune. Other theories, however, are defended by V. Chauvin ('Le Jet des pierres au pèlerinage de la Mecque,' *Ann. de l'Acad. royale d'archéol. de Belgique*, v. iv. [1902] 272-300; cf. M. T. Houtsma, 'Het skopelisme en het steenwerpen te Mina,' *Verslagen en Mededeelingen der Kon. Acad. van Wetenschappen*, iv. vi. [1894] 194-217) and many others. The excessive hurry and noise which characterized the run from 'Arafah to Muzdalifah and from Muzdalifah to Minā seem originally to have had some magical meaning. The three days at Minā (11th-13th of Dhu'l-Hijjah) were 'days of eating, drinking, and sensual enjoyments,' according to Muslim tradition; fasting during that time was even forbidden—evidently as a symbol of the abundance that was hoped for in the following year.

Every pilgrim entered upon a special state of sacredness (*iḥrām*) during the *hajj*. In this state certain things, allowable at other times, were forbidden. The *muhrim* (i.e. he who was in the state of *iḥrām*) was not allowed, e.g., to cut his hair or nails or to shave his head. His whole body had to be left uncovered, though he might wear two pieces of white cloth (the so-called *ridā* and *izār*). We can hardly doubt that the real purpose of the various obligations of abstinence imposed on the *muhrim* (cf. the Hebrew Nazirite) was originally to bring the pilgrim into a state of magical power

and to strengthen the magical influence of the *hajj* ritual.

It must be observed, however, that in the time of Muhammad the original meaning of the old ceremonies was long forgotten. Indeed, the feast had no longer much religious, but rather a commercial, importance for the contemporaries of the Prophet, since during the *hajj* Meccah and the neighbouring market-places were visited by the Arabic tribes, even from distant countries. Every one could travel and trade then without fear, on account of the general truce between the tribes during the sacred months.

Pilgrimages were also made in early Arabia to the Ka'bah, the old heathen temple at Meccah. The most sacred spot of this sanctuary was the eastern corner in which the venerated Black Stone was fixed, opposite the holy well of Zemzem. It was especially in the sacred month of Rajab (the 7th month of the year) that the Ka'bah was visited by pilgrims, who made circuits round the building and sacrificed first-born camels and sheep. Meccah was surrounded by a *ḥaram* (sacred territory), the boundary of which was marked by stones. He who entered this sacred territory assumed the state of *iḥrām*, and would then pay a religious visit to the Ka'bah. The worshipping of the Meccan sanctuary was called '*umrah*' (i.e. cultus, cultivation of the sacred building) and, as it seems, was not connected with the annual *hajj* of 'Arafah.

2. **Incorporation of *hajj* and '*umrah*' into Islām by Muhammad.**—Muhammad had seen the *hajj* since his youth. When he began to preach, he had no reason for enjoining the old Arabic rites as a religious duty on his followers. For in the revealed books of the Jews and Christians no divine precepts were given as to the *hajj* feast. After the *hijrah*, however, as Muhammad had persuaded himself that the Jews and Christians had changed the true sense of their sacred books, he concluded that the Ka'bah and the ritual connected with this 'house of God' had belonged originally to the true religion, and were founded according to the will of Allah by Ibrahim (Abraham), the great prophet of the Jews and Christians as well as of the Arabs. As a consequence of this theory, the pilgrimage to Meccah now became a religious duty for the Muslims at Medinah, in the second year after the *hijrah*. Several verses of the Qur'an, all relating to the Ka'bah and the ceremonies which must be performed there, were now revealed (see, e.g., ii. 183-199, iii. 89 ff., xxii. 25 ff.).

But the unbelieving inhabitants of Meccah refused to admit the Muslims into the sacred city, and it was not till A.H. 8 that Muhammad tried to go with his followers to Meccah. The first attempt failed. As soon as the Meccans heard that the Muslims were approaching, they prepared themselves for stern resistance. The two parties met at Hudaibiyah, on the frontier of the sacred territory. Negotiations were opened there, and it was settled that the Muslims should return to Medinah, but should be allowed to celebrate their feast in Meccah the next year. According to this treaty, the Prophet came in A.H. 7 with many of his followers to Meccah, and made the so-called '*umrat al-qadhā*' (i.e. 'the *umrah* whereby was performed at last what was neglected till

this time,' or perhaps 'the *'umrah* of the treaty'.

Since Meccah was conquered by Muhammad in A.H. 8, many Muslims joined in the *hajj*, at first along with the unbelieving Arabs and without the Prophet himself. But, in A.H. 8, Qur'an ix. 1 ff. and 28 were revealed. In these verses Allāh declared that all treaties between the Muslims and unbelievers must be revoked, and that nobody who was not a true Muslim might approach Meccah or the *hajj*. Ali ibn Abi Talib (afterwards the fourth *khalīfah*) was sent to Meccah by the Prophet to promulgate this revelation among the pilgrims assembled at the *hajj* of that year.

Thus, in A.H. 10, all unbelievers were excluded from the feast, and now the Prophet came from Medīnah to Meccah in order to partake himself in the *hajj* and to reform the old heathen ceremonies into a good Muslim service. All later Muslims have conformed to the example set by the Prophet at this pilgrimage—the so-called *hajjat al-wada'* (i.e. 'the farewell *hajj*,' because it took place in the year before his death).

3. Muslim pilgrimages (*hajj*, *'umrah*, and *ziyārah*).—The various ceremonies of the Meccan pilgrimage have often been described, not only by Muslim authors, but also by Europeans who have witnessed them. Moreover, the Muslim law-books contain full details about all that a pilgrim has to do during the days of the *hajj*. The pilgrimage to Meccah is called in Muslim law one of the five 'pillars' of Islām. It is a religious duty for every Muslim 'who is able to make the journey to Meccah' (Qur'an, iii. 91)—for women as well as for men. In a few cases believers are exempted from this duty—e.g., if they have not sufficient means to pay their expenses or to provide for the support of their households till their return, or if the journey to Meccah is peculiarly dangerous on account of war or epidemic; also a woman ought not to go unless accompanied by her husband or a near relative.

At the present day most of the pilgrims arrive in the holy city from Jiddah, where they are landed by the steamers of various countries. Those who travel overland come with one of the caravans to Meccah. The two best known caravans in modern times are the Syrian, which comes from Damascus, and the Egyptian, which starts from Cairo. Each has a so-called *mahmal*, i.e. a camel with a richly-ornamented saddle such as distinguished Arabic women used to ride upon. The *mahmal* was a sort of banner in Arabia. In ancient times several *mahmals* often appeared at the *hajj*, every independent *sultān* or *emīr* sending his own caravan to the *hajj* with a *mahmal* as a visible mark of his high dignity (see C. Snouck Hurgronje, *Mekka*, i. 29, 83 ff., 105). This custom was held in honour by the Turkish *sultāns*, who even continued to send the Egyptian as well as the Syrian caravan with a *mahmal*, though they had become *khalīfahs* of the whole Muslim territory.

In the holy city pilgrims usually begin by performing the ceremonies of the *'umrah*, the so-called 'little pilgrimage' to the Meccan sanctuaries. Almost every pilgrim requires the assistance and information of a Meccan guide (*dalīl*, *mufawwiḥ*, or *shaikh*) to instruct him in the ritual and teach him to recite the prescribed sacred formulæ. The Muslim *'umrah* consists mainly of the four following ceremonies:

(1) Before entering the *ḥaram* of Meccah, the pilgrims must assume the state of *iḥrām*, abstaining thereafter from worldly affairs and devoting themselves entirely to religious duties. The inhabitants of Meccah, when performing an *'umrah*, must go out of the *ḥaram*. They assume the state of *iḥrām* on the frontier (usually at Tanīm, which is therefore often called 'Umrah).

(2) The pilgrim then proceeds to the *ṭawāf* (the circuit of the Ka'bah). He begins at the Black Stone in the eastern corner of the Ka'bah, and walks round the temple seven times. When passing the eastern corner, he must kiss the Black Stone. If the crowd is so great that he cannot get near enough to do this, he must touch it with his hand or with a stick or must look towards it.

(3) The next ceremony is the *sa'y* (the running or circuiting) between Safā and Marwah, two sacred places in the immediate neighbourhood of the great mosque of Meccah. Safā and Marwah must once have been hills, which were held in reverence by the Meccans. In later times the soil of Meccah has risen considerably and at the present day Safā and Marwah hardly show above the surrounding houses. A revelation (Qur'an, ii. 153) has confirmed the sacred character of these places. Starting from Safā, the pilgrim runs seven times between the two sanctuaries, in a prescribed manner, moving his shoulders.

(4) At last, arriving at Marwah, he goes to the barber there, who shaves his head and thereby ends the state of *iḥrām*. Originally the ritual shaving of the head must have been a sign that a sacrifice or other religious act was performed.

The *'umrah* can be performed at any time and as often as the individual Muslim likes. The inhabitants of Meccah usually do it in the month of Ramaḍān because this is the special month for religious acts.

Before the beginning of the *hajj*, on the 7th of Dhu'l-Hijjah, a *khatīb* ('preacher'), usually the *qāḍī* of Meccah, gives an address in the great mosque at Meccah to remind the pilgrims of the ritual of the following days. Next day (8th of Dhu'l-Hijjah) most of the pilgrims enter upon the state of *iḥrām* for the *hajj*, and depart from Meccah to 'Arafah, which can be reached in about four hours by camel. According to the law-books, it is best to pass the night in Munā (formerly Minā), about half-way between Meccah and 'Arafah, but usually the great majority of the pilgrims go directly to the plain of 'Arafah. There the *wukūf* takes place on the 9th of Dhu'l-Hijjah. The Muslim *wukūf* is simply the staying or standing in the plain of 'Arafah for the prescribed time (just after mid-day till a little after sunset). This ceremony is also a 'pillar' of the Muslim *hajj*. There are no special rules for the *wukūf* in the law-books. The pilgrims are only waiting there. Wellhausen thinks that this ceremony was of more importance in pagan times, and was perhaps a general sacrifice for all the pilgrims.

After sunset the *ifāḍah* begins (i.e. the running from 'Arafah to Muzdalifah, half-way between 'Arafah and Munā)—according to the old heathen usage, with great hurry and noise. The pilgrims pass the second night in Muzdalifah, and many of them are present at the second *wukūf* there in the early morning. Before sunrise the journey to Munā must be continued.

In Munā the great offering-feast is celebrated on the 10th of Dhu'l-Hijjah. This day is therefore called the *yawm an-nahr* ('the day of slaughtering'). The sacrifice is preceded by the ceremony of throwing seven pebbles to the *jamrah al-'Akabah* (i.e. the heap of pebbles close to the mountain-road) at Munā; to-day this place is marked by a sort of buttress of rude masonry about 8 ft. high by 2½ ft. broad. The Muslims say that this ceremony has been performed since the time of Ibrāhīm because the devil (Shaitān) tried to seduce him on this spot. Before throwing each of the seven pebbles, the pilgrim must say: 'In the name of God, Allāh is almighty!'

The sacrifice at Munā, strictly speaking, concludes the *hajj*, and the pilgrim may then shave his head. But, before returning to the ordinary profane state, he should go to Meccah and make the *ṭawāf* round the Ka'bah, followed by a *sa'y* between Safā and Marwah, if he has not already performed this ceremony on his first arrival at Meccah. It is, however, not necessary to perform the *ṭawāf* and *sa'y* on the 10th of Dhu'l-Hijjah, though it is a meritorious act. It may be done also on one of the following days.

The remaining days, the 11th, 12th, and 13th of Dhul-Hijjah, are called the three days of the *tashriq*. The original sense of this word is uncertain (cf. T. W. Juynboll, 'Über die Bedeutung des Wortes Tashrik,' *ZA* xxvii. [1912] 1-7). It is commonly explained by later Muslims as the drying of the flesh of the victims in the sun. The pilgrims should spend these days at Munā, eating, drinking, and making merry. Moreover, they must again throw seven pebbles each day at each of the three *jimār* ('heaps of pebbles') at Munā. The law, however, allows a return from Munā to Meccah on the second day, and many pilgrims avail themselves of this privilege. Having finished the *hajj*, the pilgrim, before leaving Meccah, should perform a farewell *tawīf* round the Ka'bah.

Other pilgrimages, which are not expressly prescribed by Muslim law (e.g., pilgrimages to the tombs of saints in various countries) are generally called *ziyārah* ('visit') by the Muslims. The *ziyārah* to the tomb of the Prophet at Medinah is regarded as a religious act from which many blessings accrue. Most of the pilgrims visit it before or after the *hajj*.

PILGRIMAGE (Babylonian).—By this word most people understand a journey to a holy place or shrine, either in the pilgrim's native land or abroad. The object of a pilgrimage is to obtain some benefit, material, moral, or spiritual, while the sanctity of the chosen spot is thought to confer. It is true that pilgrimage may be undertaken because such a journey is regarded as meritorious, but the idea of the acquisition of divine favour, either directly or through a saint, is seldom absent. All kinds of benefits may be asked in return for the labour and travail, from the healing of a bodily infirmity to the gift of everlasting life.

1. **Frequency of pilgrimages.**—Though pilgrimages were probably not among the means of grace recognized by the Assyro-Babylonians, they were far from rare. The making of a journey, either for business or for pleasure, must have furnished, in many instances, an opportunity for acquiring the merit or the benefit which a pilgrimage conferred. In such a case the advantages connected therewith would be merely a matter of chance, due to the seizing of the opportunity, for the Babylonians and Assyrians were much addicted to the observance of omens, and those connected with a visit to a place would naturally attract attention and lead to the decision to profit thereby. Several fragments of a tablet, or a series of tablets, dealing with the advantages to be gained from tours of this kind exist, and are of some interest in those cases where the lines are complete. The following are examples of the benefits promised:

'If he go to Lahan, he will build a house' (word-play, *labānu* meaning 'to make brick'). 'If he go to the house (temple) of the Seven (*lit. Intina-ū, the divine Seven*), he will attain perfection (*lit. šālitū*)' (due to seven being the number of perfection).

'If he go to the city Nippur, grief of a day, peace of a year' (Nippur was the renowned shrine, first of Luhl, the older Bēl, afterwards of the god En-urta). 'If he go to Tadmīr (Babylon), trouble of a day, peace of a year' (there is no need to mention the importance of Babylon as a holy centre). 'If he go to Namma, and swim in the divine river (*lit. Nannu*), he will exercise power, his days will be long' (Namma (Nannu) is probably another name of the Euphrates, which was apparently a holy river like the Ganges; in the above extract Namma, which was one of the names of the river-god, was also the name of a town). 'If he go to Sirpur (probably for *Sirpuria* = *Lagaš*), he will be plundered' (perhaps we have to read *Sirgūl*, the modern Zerghul, in which case the pun may have been by comparison with *sirgu*, 'theft').

Omens of this nature were numerous, but so far comparatively few have been found.

2. **Stories of visits to holy places.**—Records of pilgrimages are, for several reasons, few in Assyro-Babylonian literature. It does not seem probable that pilgrimages, unconnected with other business, were often undertaken. In addition to this, it was the custom among the Babylonians, and probably among the Assyrians as well, to send their duties from place to place, in order that they might receive the homage of the faithful; and journeys to worship them, or to obtain the advantages which a pilgrimage brought, were not so much needed. The most noteworthy instance of a pilgrimage is the great journey of Gilgames, king of Erech, to the abode of Ut-napistim, the Babylonian Noah, who had been plared by the god whom he worshipped in 'a remote place at the mouths of the rivers.' Among the benefits sought by the hero was the gift of knowing how he might attain immortality. In this case, as the Babylonian patriarch could not be brought to Gilgames, Gilgames had to go to him (see *ERE* n. 315^b-316^a, vi. 643). The descent of Istar into Hades to bring forth Tammuz, her husband, can hardly be regarded as a pilgrimage in the true sense of the term, as no devotional or spiritual benefit was sought. Different, again, is the legend of Etanna, who tried to visit Istar in heaven, mounting thither on the back of an eagle. The aerial journey was undertaken to invoke the goddess's favour on behalf of the hero's expected child, but apparently failed because he feared to mount so high (see *ERE* n. 315^a, vi. 644).

3. **Travelling in general.** Babylonian tablets of from c. 2300 to 2000 B.C. testify to a considerable intercourse by road between the various towns of S. Babylonia and Elam. These record the transport of provisions, principally drink (probably herb-beer), food, and oil, which were sent to various cities, generally such as were considered sacred on account of their shrines and fane. Among the places most commonly mentioned are Ur, Nippur, Susa, An an (the old capital of Elam), Adamdun (probably in the same district), Kinan, Uru-ua, Sabu^a, and Huhumiri. The persons mentioned in connexion with these consignments are messengers, 'couriers,' and officials who may be classed as 'retainers.' All these seem to have journeyed from the temples of the cities where they lived, on behalf of their employers, though some at least went on their own account. Noteworthy is a statement of a tablet in a private collection, in which one of the persons mentioned is the king's son:

'30 qa of drink, 30 qa of food, 1 gin of oil,
Su-larila,
10 qa of fine drink, 10 qa of food, 10 gin of oil,
Sur-Ninsun, the son of the king.'

That journeys are intended is shown by those lists in which the consignments are described as having been either 'within the city' or 'for the road':

'60 qa of royal drink,
60 qa of food,
1 qa of sesame-oil,
Abu-sallum, viceroy of Sabu^a,
2 qa of drink, 2 qa of food.'

2 gin of oil within the city,
1 gur of heib-beer, 5 qa of food for the road,
Maš, the "retainer."
They have taken (the above) to Sabum.'

Similar entries follow these. The date is 'Month of the Festival of Tammuz.'

As there is no reference to viceroy A bu^m-gallu^m's provisions 'for the road,' he may have been coming to Lagaš, where the tablet was found. Maš, on the other hand, required provisions, as he was going to Sabu^m.¹

4. Vicarious pilgrimages.—In some cases these tablets may record vicarious pilgrimages, made at the request of people who, unable or unwilling to leave their homes, sent others to represent them, and possibly to make offerings on their behalf. In all probability these journeys were in parties or caravans.

5. Later instances.—One of the most interesting visits to a holy place is that of Shalmaneser II. to Babylon, as recorded on the Bronze Gates of Balawat discovered by Hormuzd Rassam. This king relates that, after leaving Marduk-šum-iddina, king of Babylon (851 B.C.), he found 'the fullness of his heart,' and Merodach commanded him to go to Babylon and Cuthah, where the king caused offerings to be made. At E-sagila (the temple of Belus in Babylon) he directed the ceremonies and more offerings were made. Afterwards Shalmaneser 'took the road' to Borsippa, and made offerings to Nebo. Entering E-zida (the temple of Nebo at Borsippa), he caused the rites to be conducted reverently, and offered plentifully 'great oxen and fat sheep.' At both Babylon and Borsippa he made drink-offerings, and there were feasts, with food and wine. The result of all this devotion was that the gods regarded Shalmaneser, though an alien king, with joy, and heard his prayer. Two hundred years later (c. 650 B.C.), King Assurbani-apli went to Arbela to supplicate the goddess of war, Ištar of Arbela, for her divine help against the Elamites.

6. Pilgrimages in a private capacity.—These are not always certain—they may have been simply ordinary acts of worship. Thus Meissner's rendering of *ūki* (from *ālaku*, 'to go') as 'my duty'—'I am firm in my duty at E-zida with regard to my father'—makes the possibility that Bēl-uhhu (?) went on a pilgrimage to the temple of Nebo to pray for his father very doubtful. Nevertheless he did visit the temple on his father's behalf:

'The son of the temple [Nebo, the god worshipped there], when I had prayed with regard to thee, set the time for success as being until the 4th day.'

This grace applied not only to his father Kušā, but also to all his people. In no. 865 of R. F. Harper's *Assyrian and Babylonian Letters* (London, 1902) the writers' statement that 'he [the king] entered Babylon—he kissed the ground before Merodach and Zēr-panitu^m' (i.e. in the temple of Belus) likewise implies at least a turning aside to perform a religious duty. But more to the point, apparently, is the following (from Babylon):

'Letter from Marduk-ibni to Šišku, my brother. May Merodach and Zēr-panitu^m promise the prosperity and the preservation of my brother. Behold, Iddina-Bēl has gone up with me to Sūnu—we made an offering there with Nergal-iddina, his brother. I am looking after your interests.'

Here, again, we have (to all appearance) the combination of business with religious duties.

7. The legend of the 'Mother of Sin.'—This is a bilingual record in which, after describing the misfortunes of the 'royal maid,' as the 'sinful

¹ As an illustration of these journeys in connexion with temples, that in which the priests (of Sippar), c. 1850 B.C., give a ½ shekel of silver to buy grain for a journey may, perhaps, be quoted (A. Ungnad, *Hammurabi's Gesetz*, Leipzig, 1909, no. 481, in vol. iii. p. 184). The amount was the gift of the chief singer (*naru rabā*).

mother' is called, the text, in a fresh paragraph, continues:

'Come, let us go to him, let us go to him!
As for me, to his city, let us go to him!
To the city, to the wonders, let us go to him!

To the city, to the city, to Babylon's foundation,
At the command Ištar gave,
The maid Ama-namtaga (the Mother of Sin) passed through the dust.'

Here follows a long account of Ištar's punishments, from which it would appear that not only did the 'sinful mother' make a pilgrimage to the holy places Kullab, Erech's foundation, Zazabu's foundation, Hursag-kalama at Kis, and E-tur-kalama ('the house of the world's repose'), but she had also to do penance and submit to Ištar's punishments, performed by her servants and ministers. The record is unfortunately incomplete, but it is probable that the deity referred to by the pronoun was Tammuz, Ištar's spouse, whom the 'sinful mother' had offended in some way.

Though the records are apparently scanty and doubtful, the journeys which pilgrimages imply were far from uncommon in Assyria and Babylonia, as the fragments referring to the benefit to be gained from visits to sacred places seem to show.

T. G. PINCHES.

PILGRIMAGE (Buddhist).—In the earliest order and scheme of Buddhist monastic life, if the sacred books of the Tripitaka may be taken to reflect faithfully and in general the teaching of the Founder, there was no recognition of the duty or advantage of pilgrimage, and no sanction given to the practice. Gautama Buddha neither forbade nor enjoined his followers to imitate that which Hindu example must already have made sufficiently familiar—the journeyings to near or distant shrines for spiritual benefit and to render homage. It was impossible that with his views and teaching with regard to the future life he should have allowed the existence or recognized the validity of a habit founded upon the belief in the continuity and permanence of existence after death. The slight evidence available, however, indicates that very soon after the *parinirvāṇa*, and probably in connexion with the distribution of the relics and the building of memorial *stūpas* over them, the practice arose among the adherents and friends of the Buddha of visiting the places thus consecrated by the presence of the earthly remains of their honoured teacher and guide. From this it was an easy step to a practice of pilgrimage which endeavoured at one and the same time to secure personal advantage from a visit to the shrine and to honour the saint whose name and fame were there commemorated. Whatever its origin, the habit of pilgrimage is and for many centuries has been wide-spread in Buddhism, not only in the Mahāyāna school, where it is most prevalent, but also in the Hinayāna of the south.

1. Origin.—It appears probable therefore that Buddhist usage in this respect is, in the first instance at least, imitative of Hindu practice, and grew up independently of any direct command. It is perhaps not without significance also that the Pāli form of the Sanskrit word for pilgrimage (*pravrajyā*, Pāli *pabbajjā*, lit. 'a going forth,' 'retirement from the world') should be the technical term for admission or 'ordination' to the first grade of the Buddhist monkhood. The pilgrim (*pravrajita*, *pravrajaka*, Pāli *pabbajita*) is defined in the *Dhammapada* as one who has abandoned

the world (x. i. 89); and in an earlier verse (i. 75) it is declared that the heedless pilgrim, so far from securing good, only scatters more widely the dust of his (unsubdued) passions. In these and other passages of the early literature there is no direct mention of any aim or purpose other than that of retirement from the world to assume the rank and status of a member of the Saṅgha. There was certainly, however, in the writer's mind the practice, wide-spread and familiar in his time, of a wandering ascetic life which was not entirely aimless, but contemplated visits to sacred temples or shrines as the profitable and meritorious end of its often toilsome and prolonged journeyings.

In all probability also the injunction laid upon Buddhist monks to adopt a wandering mode of existence without settled home or habitation contributed to the facility with which they adopted the Hindu practice of pilgrimage to the sacred places associated with their religious history and faith.¹ Only in the season of the rains, in Vassa, were they prohibited from travelling about, lest injury should be done to living creatures (*Mahāvagga*, iii.). At all other periods of the year the Buddhist monk was to be 'homeless,' possessed of no stated or fixed residence; and a habit or passion for wandering taken up as a religious duty by men to whom the idea of pilgrimage was not unfamiliar, and among a people whose nomadic mode of existence lay probably not many centuries in the past, readily developed into the practice of travel for a religious purpose to a formal and definite destination. The institution of Vassa, with its prohibition of travel, would necessarily place difficulties in the way of continuous or lengthy pilgrimages to distant shrines. In practice, however, the difficulty does not seem to have been felt. The early books and narratives, especially of the Chinese pilgrims, record prolonged journeyings in which there is no reference to interruption or delay caused by the observance of rules for retirement in the season of the rains.

In the later Buddhist literature of both the Northern and the Southern schools references to pilgrimage and the sacred places whither the pilgrims resort are not infrequent. In the *Buddha Charita* the statement recurs that purification from sin may be attained by dwelling or bathing at sacred places;² and these holy centres of pilgrimage are ladders to heaven.³ The extravagant assertion is even ventured that the Buddha himself created millions of ascetics,⁴ whose wanderings are more or less indefinite pilgrimages from shrine to shrine. Holy streams and *tirthas* are recognized in the earliest homes of Buddhism, in part no doubt derived from Hindu custom, but partly associated with Buddhist history and religious origins.⁵ Elsewhere right-minded and pious Buddhists are said to have their places of pilgrimage;⁶ it is a pious duty to build *chaityas* (Pāli *cetiya*) in honour of Buddhas,⁷ where their relics are preserved, and miracles are wrought in the presence of the assembled worshippers.⁸

In the later Mahāyāna literature therefore, and in writings of the Southern school that have come under the influence of this type of thought, the Buddha himself is represented as declaring the sacred character of shrines and other places associated

with the lives of holy men and inculcating the virtue and duty of pilgrimage thereto.¹ It is hardly probable that this feature of his teaching is original. It bears rather the imprint of a later practice, introduced from ancient Hindu usage, and in harmony with the natural desire to maintain communion with and do honour to the dead; and is part of the esoteric and mystical teaching which, according to Mahāyāna belief and assertion, was formulated by Gautama during the later years of his life. There is no real evidence in support of this; and in regard to the doctrine of the life after death and kindred ideas, or those which imply the possibility of relations between the living and the dead and the individual consciousness and capacity for good or evil of the latter, it is unlikely that the direct and limited teaching of his mature life, in which he refused to be drawn into discussion or to make affirmation concerning aught beyond this present world, was later exchanged for positive doctrine and directions based upon such debatable views. The uncertainty of date of the several sūtras and strata of the Buddhist literature must not be overlooked. The Pāli Tripitaka does appear, however, to trace 2-4 in most respects at least its claim to represent most faithfully the predictions and doctrine which Gautama set forth to his disciples.

2. Indian places of pilgrimage. It is probable that the earliest centres of pilgrimage were the places most closely associated with the life and teaching of the Founder. Four of these, viz. Kapilavastu, Kuśanagara, Buddh Gaya, and Benares, were pre-eminent, and for centuries continued to be the goal to which the steps of Buddhist pilgrims were turned; two of them are venerated and resorted to by numerous Buddhist worshippers at the present day, who bring offerings from the most distant lands. Testimony to the reverential regard in which these and many other places were held is found especially in the writings of the Chinese pilgrims. In the Lumbini Grove at Kapilavastu (*q.v.*) was the birth-place of Gautama Buddha. Buried in the dense *tarai* districts of S. Nepal, the lost site of the town was re-discovered in the year 1895, and identified by a pillar and inscription recording the visit of the emperor Asoka. As a centre of pilgrimage it has for a long time been inaccessible and is so at the present time, and thus awakens little interest in Buddhists themselves. Kuśanagara (*q.v.*) also, the scene of the death of the Buddha, was visited by the same Chinese monks, to pay their homage at the sacred site. According to their testimony, Kuśanagara lay at no great distance east of Kapilavastu. The exact site, however, has not been identified.

The two remaining places that shared in all probability with the traditional scenes of Gautama's birth and *parinirvāṇa* the veneration of the earliest Buddhists, and which have maintained to the present day their popularity and sacred character with thousands of Buddhist pilgrims from all parts of the Buddhist world, are Buddh Gaya, six or seven miles south of Gaya (*q.v.*) in W. Bengal, where, seated under the fig-tree in deep meditation, Gautama attained in-light and the bliss of perfect knowledge; and Benares (*q.v.*), probably the most ancient sacred city in the world, the scene of the first deliverance of his message, when in the Deer-Park (Isipatana), in his first sermon addressed to the five ascetics in whose company he had previously practised fruitless austerities, he 'set in motion the wheel of the law,' and founded 'the highest kingdom of truth.'² These places possess an equal sanctity in the eyes of Hindus, and they are sought out by multitudes of pilgrim worshippers of both religions.

¹ Cf. *Mahāvagga*, i. 11. 1: 'Go ye, O Bhikkhus, wander for the gain of the many, for the welfare of the many, out of compassion for the world, for the good, for the gain, and for the welfare of gods and men.' Then follow directions to preach, and the promise that he will himself preach the doctrine.

² *Buddha Charita*, ii. 37; the thought and even the phraseology are of Hindu conception and origin.

³ *Ib.* vii. 40.

⁴ *Ib.* x. 2, xv. 78. Those who bathe and offer their worship in the holy river and reverence the *chaitya* of the three stones become great-souled *bodhisattvas*, and obtain *nirvāṇa*.

⁵ *Mahā-Parinibbāna-Sutta*, v. 16 f.

⁶ *Po-sho-king-tan-king*, v. 27 f.

⁷ *Mūlinda-pañha*, iv. viii. 51 f.; cf. *Buddha Charita*, xv. 62 ff.

¹ Cf. *Mahā-Parinibbāna-Sutta*, v. 16-22: 'There are four places which the believing man should visit with feelings of reverence and awe, . . . the place at which the believing man can say, "Here the Tathāgata was born," . . . "Here the Tathāgata attained to the supreme and perfect insight," . . . "Here was the kingdom of righteousness set on foot by the Tathāgata," . . . "Here the Tathāgata passed finally away in that utter passing away which leaves nothing whatever to remain behind." . . . And there will come to such spots believers, brethren and sisters of the order, or devout men and devout women, . . . and they who shall die while they, with believing heart, are journeying on such pilgrimage shall be reborn after death, when the body shall dissolve, in the happy realms of heaven.'

² *Mahāvagga*, i. 6. 80.

After the death of the Buddha the relics of his body were collected from the funeral pyre, and divided into eight portions. These were distributed to the various claimants for their possession, and over them memorial *stūpas* were erected for their preservation. The places thus made sacred became centres of pilgrimage, which attracted devout worshippers from far and near, and were visited among others by the Chinese monks in the course of their travels through N. India.

3. Historical visits.—(a) *Asoka*.—The earliest historical reference to pilgrimage undertaken with a religious motive is contained in the edicts of the Buddhist emperor Asoka (q.v.) in the 3rd cent. before our era. In the midst of his zealous care for the welfare of his subjects he found time and opportunity for extensive journeyings to the sacred places of the Buddhist faith within his dominions. Besides confirming and propagating the faith by his edicts and missions he erected at these places numerous *stūpas* containing sacred relics, repairing others which had fallen into neglect or decay. For their maintenance also he provided revenues, and himself, according to the tradition, undertook the care and sustenance of 64,000 monks. The limit of his pilgrim travels northward was the ruined site of Kapilavastu; and here, in addition to the erection of a commemorative pillar with inscription, he repaired or rebuilt a *stūpa* in memory of Kanakamuni (q.v.), one of Gautama's predecessors of a bygone age. This enlargement or repair he is said to have accomplished for the second time. In any case his experience and action are sufficient proof of the existence in his day, and for a considerable time previously, of sacred buildings associated with the life and deeds of holy leaders and teachers of old, which had already become centres or goals of pilgrimage. Certainly the *stūpa* of Kanakamuni was not a solitary instance of a commemorative erection, where offerings were presented and homage paid. There were many others, at least in the sacred country of Buddhist origins, and probably elsewhere. The words and acts of Asoka clearly indicate that in his day merit was considered to attach to visits to these spots, and the names and memory of those in whose honour the *stūpas* had been raised were regarded with veneration. The date and circumstances of his visit therefore and the motives that prompted it justify the conclusion that sacred pilgrimage became a recognized observance of the Buddhist faith not long after the death of its Founder.

(b) *Fā-Hian*.—Both Kapilavastu and the scene of Gautama's death at Kuśānagara were visited by the Chinese pilgrim Fā-Hian and others in the 5th and following centuries. The former site Fā-Hian describes as already deserted in his day, inhabited only by a few monks and some poor families; and it has remained ever since in the same state of desolation. In the course of his pilgrimage Fā-Hian visited all the important Buddhist shrines and cities in the north of India; thence he travelled to Ceylon, and paid his homage to the sacred relics there, including the tooth of the Buddha preserved in the island. Everywhere in India he found numerous monasteries with many learned and pious monks; and at the sacred places there were great companies of Buddhist pilgrims, intent on showing honour to the dead and winning merit by their self-sacrificing endeavour.

(c) *Hsuen Tsiang*.—The most important and celebrated Chinese traveller and pilgrim was Hsuen Tsiang (Yuan Chwang [q.v.]), who followed Fā-Hian at an interval of rather more than two centuries. His name and fame still survive in Central Asia, where his memory is revered as that

of a wonder-working teacher and saint. His travels extended over sixteen years from A.D. 629 to 645. In these laborious journeys he covered a considerably wider area in India itself than his predecessor, but he did not visit Ceylon. He appears, moreover, to have been more interested in the present condition of Buddhism, in its doctrine, practice, and literature, than in its relics or holy places of pilgrimage, and to have been more impressed by its vitality and influence, and by the conflicts of the schools, than by the crowds of pilgrims. He visited all the great centres of the Buddhist faith, and makes frequent reference to the revival of Brāhmanism, which even in Buddh Gayā had to a considerable extent supplanted its rival.

At Buddh Gayā also Hsuen Tsiang describes the great temple built by Asoka, 160 ft. or more in height, of eleven storeys, each of which bore golden statues of the Buddha. Probably this building was erected on the site of a more ancient monument that soon after the death of the Buddha was placed there to commemorate the spot on which he attained emancipation and perfect wisdom. The ancient building has been many times reconstructed and restored, and the pyramidal temple with its many images that now occupies the site is rarely without its pilgrim visitors from distant Buddhist countries, who present their prayers and offerings at its sacred shrines. It is surrounded by numerous *stūpas*, ancient and modern, and is as attractive and sacred a spot to Hindu devotees as to those of the Buddhist faith.

The distinctive feature of the enclosure is the ancient Bo-tree, the sacred *pīṭal* (*Ficus religiosa*), under the shadow of an ancestor of which in this place the Buddha established his seat. There are several *pīṭal*-trees surrounding the temple, most of them not improbably descended from the original Bo-tree. The pilgrims lay their offerings and pour their libations of oil and scents at the foot of the oldest, which they regard as the identical tree of Gautama, and affix gold-leaf to the stem, and to the low stone steps by which it is surrounded.¹ It is in his account of the Bo-tree that Hsuen Tsiang records the tradition of the Buddha walking on the water.

Second only to Buddh Gayā in its sacred associations is Sārnāth (q.v.), three or four miles north of Benares. It is believed to be the site of the Deer-Park (Isipatana, Skr. *ṛṣipatana*) where Gautama delivered his first address to the Hindu ascetics. The ancient *stūpa* on the site is probably the same as was seen by Hsuen Tsiang in the 7th century. Fā-Hian also found a monument existing there at the time of his visit. Recent excavations at Sārnāth, conducted by the Government of India, have resulted in the discovery of numerous *stūpas*, shrines, and sculptured stones of different epochs, including two pillars erected by the emperor Asoka and many figures of the Buddha. Evidence also has been found of the existence of monastic buildings and settlements of monks at least as early as the 4th and 5th centuries of our era. The pilgrim history of the site is long and extensive, and if its record could be recovered would be of the greatest interest.²

4. Other pilgrim resorts in N. India.—A mere enumeration of the local centres of pilgrimage in N. India would not be to much profit, and a description of them all is not possible here. The narratives of the Chinese monks who travelled in India are full of notices of the sacred places where the pilgrims congregated from near and far, to

¹ See art. GAYĀ, vol. vi. p. 181 ff., and Monier-Williams, *Buddhism*, pp. 390-401.

² See art. BENARES, vol. ii. p. 468, Monier-Williams, p. 401 ff.; E. B. Havell, *Benares, the Sacred City*, London, 1906.

worship the relics of the saints and to pay homage at their shrines. The impression gained is that such centres of pilgrimage were much more numerous in the early centuries than at the present day, and they were naturally more densely thronged at a time when India was to so large an extent Buddhist in faith. At or near Pataliputra (Patna [q.v.]), his capital city, Aśoka built the first of the 84 *stūpas* which he is said to have erected over relics of the Buddha, and the town is described as containing monasteries and hospitals with thousands of Buddhist monks and pilgrims. According to Fā-Hian, at Śrāvastī, the ancient capital of Ondh, identified with the extensive ruins at Sāhet Mahet in the Gonda District,¹ the first sandal-wood image of Gautama was erected; and there also stood the convent or monastery of Jetavana, an early gift by a rich merchant to the community, sanctified by the frequent presence and preaching of the Master. Later, in the time of Hiuen Tsiang, the town and monasteries were deserted and ruined. Some of the most sacred sites and pilgrim resorts were to be found at Rājagṛha (see COUNCILS [Buddhist], vol. iv. p. 182), the first metropolis of Buddhism, as it has been called, where monasteries and *stūpas* were most numerous, and where some of the ashes of Gautama's body were enshrined. Vaiśālī (ib. p. 183), the scene of the second Buddhist Council, Nālanda (q.v.), the famed university town, Ayodhyā, most holy ground to Buddhists and Hindus alike, where the Buddha is believed to have preached for many years, and numerous other places were renowned centres of pilgrim resort during the period of Buddhist ascendancy in India. Few of these have retained their attraction for Buddhist pilgrims at the present day. In the farther north-west, near Peshāwar, much interest was aroused among Buddhists a few years ago by the identification of the relic mound raised by the king Kaniska (q.v.) on the spot where four hundred years before the Buddha had stood and prophesied of his coming and reign. A few fragments of bone were discovered within a relic casket, which were generally accepted as authentic remains of Gautama himself. They were transported with much ceremony to Burma, and have been preserved in a monastery at Mandalay.

5. Pilgrim movement beyond India.—Within the more recent centuries the stream of Buddhist pilgrimage has been to a large extent diverted from India, and the sanctuaries of the country have passed into other hands or fallen into oblivion and ruin. Buddh Gayā alone has maintained its supremacy and attraction, and is still the centre and most holy place to which the heart and eyes of the Buddhist pilgrim turn with faith and affection. Outside the country of its birth the two great lands of Southern Buddhism, Ceylon and Burma, compete to draw visitors to their sacred shrines. There is constant movement and interchange between countries so closely united in sympathy and religious belief.

(a) *Ceylon*.—In Ceylon the Temple of the Buddha's Tooth at Kandy is unique in its claims on the reverence and devotion of the pilgrim. Small and unimposing as the building is, compared with the great temples of Japan, it enshrines a relic of the Buddha, recognized and honoured by all his followers of every land. The Tooth is preserved in an inner chamber of the temple, resting on a golden lotus-flower within nine caskets of gold, and is exhibited by the priests to pilgrims and visitors. The original tooth is said to have been taken to Kalinga from the funeral pyre of Gautama, and to have been kept in the temple

at Puri for a period of about eight hundred years. Later it was transferred to Ceylon and S. India and again to Ceylon, where it is said to have been burnt by the Portuguese in order to divert the people from idolatrous worship. The priests at Kandy maintain that the true relic was concealed, and an imitation substitute given over to the Portuguese rulers and destroyed by them. The existing bone is not a human tooth, and probably not of human origin (see art. KANDY, vol. vii. p. 631 f.).

There are numerous temples and *vihāras* in Ceylon with their congregations of monks and worshippers, but the most celebrated and frequented place of pilgrimage is Adam's Peak (q.v.), with its sacred foot-print (*Śaṣpāda*) in the rock at the summit. The worship of foot prints is universal in the East; Muhammadans, Hindus, Jains, and others take part in this veneration, and the practice is certainly of very early date, foot-prints of the Buddha being found on the sculptured stones at Bharhut and Sanchi as well as in various other places in India, and also in Siam, Tibet, Burma, and elsewhere. The hole or mark in the rock on Adam's Peak is the most sacred of all, and is visited by pilgrims of many faiths. Hindus believe it to be the foot-print of Siva, Christians of St. Thomas on his apostolic journey of evangelization to the island, Muhammadans of Adam or, according to others, of Ali. The pilgrims of Buddhist faith, however, greatly predominate in numbers.

(b) *Burma*.—Except in these two centres, the spirit and practice of pilgrimage are little effective in Ceylon. It is otherwise in Burma, the rival home and stronghold of Southern Buddhism. The pilgrim habit plays a much larger part in the life of the people, but, in entire accordance with their character, is undertaken less seriously, and is more a matter of sociability and holiday-making than of religious obligation or the discharge of religious duty. The custom, however, of more or less formal attendance at sacred shrines and fulfilment of the appropriate rites and engagements of the sacred season is universal; and the monks themselves connive at and even take part in the merriment and relaxation which follow upon the satisfaction of the claims of religion. The most important and celebrated of all is the Shwe Dagon pagoda at Rangoon, where crowds of pilgrims from Japan, China, and Korea join with worshippers from Ceylon and Siam and the more numerous natives of the country. On the various platforms of the temple are hundreds of images of the Buddha, gilded or in stone, and the summit of the building rises to the height of St. Paul's Cathedral and is crowned with the *ū*, the sacred symbol of the Buddhist faith. There are here preserved, according to the traditional belief, eight hairs of Gautama, and various relics also of the three preceding Buddhas, including the staff of Kaśyapa and the robe of Kanakamuni.

Burma is full of *dagobas* (pagodas), many of them deserted and in ruins, but others centres of attraction to a greater or less distance throughout the surrounding country, and at the festival seasons full of a rich and varied pilgrim life. Perhaps the most renowned next to the Rangoon pagoda are those at Pegu and Prome. Within the walls of the ancient capital of Pagan are the remains of nearly a thousand such buildings; and at Mandalay itself are many *dagobas* and temples unrivalled in their beauty and perennial fame. In the courtyard or precincts of most of these buildings is a sacred foot-print of the Buddha, which in the case of the more famous and accessible of them is rarely without its offering of fruit or flowers.

¹ The identification was made by A. Cunningham, and has been confirmed by recent discoveries.

(c) *China*.—Chinese Buddhism in general has been considerably affected and modified by the native Taoist beliefs of the country; and the pilgrim customs and practice of China are in most instances, as regards both their observances and their sacred centres of pilgrimage, the survivals of earlier Taoist usage. The most sacred shrines where the pilgrims congregate are in origin antecedent to the introduction of Buddhism, in the same way as in the Near East Christian sanctuaries have been taken over and converted into Muhammadan places of worship. The hermits also, whose spirit and aspirations are in all lands closely akin to those of the itinerant pilgrims, have in China adopted the haunts and homes of their Taoist forerunners. The most holy and frequented centres of pilgrimage are the four mountain shrines of Omishan in the west in the province of Szechwan, Putoshan in the east on a sacred island in the Chusan archipelago, Wutaishan in the north in the province of Shansi, and Chih-nuashan in Nganhwei in the centre near the Yangtze river. The most popular and celebrated of these is perhaps the first named, Mount Omi, where the temples on the summit of the mountain are dedicated to Pu-hsien, the *bodhisattva* Samantabhadra, an ancient bronze image of whom in one of the largest monasteries, seated on an elephant, is believed to date from the 7th century.¹ The monks of Putoshan are a sincere and religious folk who welcome yearly to their island home thousands of pilgrim-worshippers, who cross from the mainland to pay their homage at the shrines dedicated to Kwan-yin, the goddess of mercy. The sanctuary on the Yangtze is the least regarded of the four, and in the Taiping rebellion many of its temples were sacked and destroyed. In the temples of Wutaishan the presiding deity and object of worship is Wenshu, the *bodhisattva* Mañjuśrī; situated near the Mongol border, the shrines are as much frequented by Mongol worshippers as by Chinese, and Tibetan emblems and practices are numerous.

There are many other centres of pilgrimage throughout China, often of more than local reputation; and the pilgrims journey for long distances, making offerings and burning incense at the shrines by the way. For the most part they travel in companies, in this respect following the example of the early travellers to India. Solitary ascetics, however, are not uncommon, whose journeying is a perpetual self-inflicted penance. The most celebrated monasteries are in the province of Chekiang, the stronghold of Buddhism in China. It is probably true that in every direction the hold of the ancient faith is slowly weakening, and the practice of pilgrimage is likely to fall gradually into desuetude with the extension of modern systems of education and the decay of Buddhist temples and rites.²

(d) *Tibet*.—In Tibet the most important centres of pilgrimage, where the sacred temples and shrines are to be found, are at Lhasa, the capital of the country, and at Tashi-hlumpo, the residence of the Tashi or Pañchen Lāma. The latter bears the higher repute for sanctity, for the office and functions of the Dalai Lāma at Lhasa have been to so great an extent intermingled and contaminated with political duties and intrigue that the sacredness of his person as an object of reverence has to a certain extent suffered eclipse. His misfortunes and exile during the last few years can hardly have raised his reputation in the eyes of his countrymen. Pilgrims, however, from all countries

where Lāmaism holds sway turn their steps to the capital in great numbers to worship the incarnate Buddha, and to pay their devotions at the numerous sacred shrines. The quiet of Tashi-hlumpo, the 'Mount of Glory,' is undisturbed by the movements of politics, and the great temple and surrounding districts are favourite places of retirement for those who have finally renounced the world and its cares. The person and character of the present Tashi Lāma, who, as an incarnation of the *bodhisattva* Amitābha, receives the worship of all Tibetans, have made a most favourable impression on all Europeans who have come into contact with him.

Tibet is the most priest-ridden country in the world; and of its 3000 or more monasteries none is without its pilgrim visitants, the number of whom varies according to the reputation and accessibility of the temple-shrine. Itinerant bands of Lāmas also of Tibetan and Mongolian race are to be met with outside the country itself, in Central Asia and on the borders of India. Urga in N. Mongolia, the residence of the third Grand Lāma, known as the Bogdo or 'Saint' Lāma, is perhaps the most sacred place in the eyes of the Mongols. The Lāma himself, however, bears an evil reputation for worldliness and immorality. Mongol pilgrims come to worship at his feet and attend the festivals. There are numerous other centres of Lāmaist devotion in Mongolia and China, and the Grand Lāma at Peking is recognized and revered throughout all the countries where a Buddhism of this type prevails.

(e) *Korea and Siam*.—Neither Korea nor Siam, the two chief homes of the Buddhist faith other than those to which reference has already been made, adds materially to the history and records of Buddhist pilgrimage. Korean pilgrims in no great numbers make their way to the sacred places of Mongolia, N. China, and Tibet; but their native land contains no sanctuary of wide repute which attracts the worshipper from afar. In Siam, although the monasteries and temples are thronged at the many and popular festivals, and reverence is paid by all at the shrines, the festive seasons are occasions for friendly intercourse and conviviality, and there is little, as far as can be judged, of the true pilgrim spirit. Nor do Siamese monks make a habit of journeying overseas to the sacred shrines of other lands, although they may be found occasionally at Rangoon, and in the past at least have visited and exercised much influence on the Buddhist thought and observance of Ceylon.

6. *Summary*.—A brief summary, therefore, of pilgrim usage and wont in Buddhism would describe it as an almost universal practice, held in the highest esteem, which in all probability was adopted soon after the death of Gautama Buddha, the principal motive being reverence for his person and for the places where the relics of his cremated body were believed to have been preserved. To a certain extent also, which it is impossible exactly to estimate, his disciples were influenced by a more or less conscious desire to follow on the lines of ancient Hindu custom. With the earlier Hindu practice of pilgrimage they were familiar; and they seem to have wished to break as little as possible with ancestral usage. Whether the Buddha himself by his word enjoined or sanctioned the habit the uncertainty as to the dates and history of the written records makes it impracticable to decide. It is hardly probable or quite in harmony with what is known of his character and teaching to suppose that he did. If, however, the contention of the Mahāyāna school is justified that in his later life he taught a mystical and esoteric doctrine entirely different from that of his earlier years as expounded in the Pāli canonical books,

¹ See A. J. Little, *Mount Omi and Beyond*, London, 1901, p. 63 ff.

² For the pilgrim practice of Japan see art. PILGRIMAGE (Japanese).

then the injunctions and regulations as to pilgrimage and sacred places also may have a similar origin, and may have been framed and announced by Gautama himself, possibly as a concession to the Hindu prepossessions of his followers. The custom was certainly taken up and eagerly followed immediately after his death, and has been ever since a marked feature of popular Buddhism in the East. Nor to any appreciable extent does the practice seem to have lost its hold upon the faith and affection of the Buddhist peoples to the present day.

A. S. GEDEN.

PILGRIMAGE (Christian).—I. Introductory.

—Pilgrimage played a very prominent part in religious life in the Christian Church, particularly in the Middle Ages. The fact that it has so largely disappeared from the religious life of England to-day is apt to conceal its importance in the past and in the countries where it is still in vogue even in the present. A pilgrimage is a journey undertaken to visit sacred places, such as the scenes of our Lord's earthly life in Palestine, the 'threshold of the Apostles' at Rome, or the shrines of saints and martyrs. There were many motives at work; it might be to fulfil a vow or as an act of penance. In some cases it is difficult to say whether a given journey is a pilgrimage or not. The mere use of the word *peregrinatio* in a mediæval source can hardly decide the question. It can be considered better historically and geographically, though the purely religious and psychological sides must always be remembered. The latter are better left over and studied in connexion with the effects of the practice and its place in the history of religion.

Peregrinatio and its cognates in classical Latin refer simply to wandering, and so *peregrinus* was just a stranger. In ecclesiastical terminology a 'pilgrim' was one who went to visit sacred places while his ordinary occupation, whether he was clerk or layman, was something different, whereas a 'palmer' was one who spent his whole life in thus journeying from place to place. Dante gives a rather fanciful explanation of the terms:

'Pilgrim' may be understood 'in the wide sense, in so far as whoever is outside his fatherland is a pilgrim; in the narrow sense none is called a pilgrim save him who is journeying towards the sanctuary of St. James or is returning from it. . . . Chiamansi Peregrini in quanto vanno alla casa di Gializ, però che la sepoltura di santo Jacopo fu più lontana dalla sua patria, che d'alcun altro Apostolo'—they are called *palmeri* because they bring back palm-branches and roses as they journey to Rome.¹

2. Palestine.—It was natural that men should wish to tread again the paths trodden by the Saviour, though the first generations of Christians did not seem to feel this as strongly as their successors. From the 3rd cent. certainly the sacred places were visited. The pilgrimages of Firmilian, bishop of Caesarea, and a bishop Alexander from Cappadocia are mentioned by Jerome and Origen respectively. When the empress Helena visited Jerusalem and discovered what was supposed to be the true Cross, pilgrims flocked thither and the stream was ever on the increase. Many records of such journeys and also numerous itineraries have been preserved. 'The

¹ *La Vita Nuova*, xli.; Dante also refers to pilgrims in *Paradiso*, l. 51, xxxi. 43.

Bordeaux pilgrim' visited Jerusalem in 333. The record of this man is the earliest now extant of a Christian pilgrimage, and is very important as showing the condition of the holy places and the traditions growing up round them at the time. On his way thither he travelled from Bordeaux, south of the Garonne, through Toulouse, Narbonne, Arles, up the valley of the Rhone to Valence, then by way of Milan, Verona, Aquileia, Mitrowitza, Sophia, and Constantinople, through Bithynia, to Tarsus, Alexandria, Antioch, Tripoli, Beirut, Sidon, Tyre, Acre, Ptolemais, Caesarea Palestina, then by Jezreel, Bethshean, and Shechem to Jerusalem. He did not, however, visit Galilee. Many Christians have felt far greater attraction to the scene of our Lord's passion and resurrection than to those of His earthly ministry.²

Paula, a friend of St. Jerome, went on pilgrimage to Jerusalem, and she corresponded with him about it.³ The teaching of St. Jerome much increased the popularity of the movement. Another famous pilgrim in early times was Etheria (Egeria or Echeria),⁴ the author of the *Peregrinatio ad eam*, or *Peregrinatio Etherie*, put by critics in either the 4th or the 6th century. From the 5th cent. onward the number of pilgrims steadily grew, and, though the journey was a long and arduous one, many thousands were willing to undertake it. Pilgrims came from all parts, and not least numerous or important were those from the British Isles—representatives alike of Roman, Celtic, and Anglo-Saxon Christianity in Britain, such as St. Cathaldus (bishop of Tarento, about 680) and Willibald (bishop of Eichstatt, 741).⁵ The ardent wishes of Christians to see Jerusalem and the hardships which they were sometimes obliged to suffer are of the greatest importance for secular as well as ecclesiastical history, for they were among the causes which contributed to the Crusades. When Saracen rulers were tolerant, Christians had little to fear, but in times of persecution the difficulties of the journey were further increased, and thus eventually the crusading spirit was generated (see ART. CRUSADES, I. 3). No doubt motives of political conquest and worldly ambition entered into the Crusades as well as into the practice of pilgrimage. Meanwhile pilgrimage gave rise to the great military orders. While the Hospitallers cared for pilgrims after their arrival in Jerusalem, the Templars protected them on the way from Antioch thither (a hospital which had first been founded by Charles the Great was destroyed in 1070 and another was built).

St. Jerome, though he believed strongly in pilgrimage, nevertheless wrote:

'Et de Hierosolymis et de Britannia aquasque patet arida coelestis: "Regnum enim Dei intra vos est." Antiochia, cuncta Aegypti, et Mesopotamiae, Pontus, Cappadociae, et Armeniae examina Monachorum non videri Hierosolymam: et patet illis absque hac urbe paradisi janua. Invenit Hilarion, cum Palaestina esset, et in Palestina viveret, uno tantum in die vidit Hierosolymam, ut nec continere loca sancta propter viciniam, nec rursus Dominum loco claudere videretur.'⁶

St. Gregory of Nyssa wrote a special letter *de iis qui adeunt Hierosolymam* (PG xvi. 1010 ff.).

The adventures of British pilgrims have a special interest, and almost every Welsh or Irish saint went on pilgrimage.

⁵ Ep. viii. 'ad Paulinum,' quoted in J. Usher, *Britannicarum Ecclesiarum Antiquitates*, London, 1887, p. 109.

From the 13th cent. pilgrimages to the Holy Land, though still frequent, were less numerous than those to Rome. Despite the difficulties of the journey, William Wye, Fellow of Eton, visited Compostella (see below, 11) in 1456 and travelled thence to Palestine in 1458 and again in 1462. From his MSS Wynkyn de Worde, the disciple of Caxton, compiled his *Informacion for Pylgrymes into the Holy Land* (printed in 1498, 1515, and 1524). The pilgrimages from England to the Holy Land went on continuously to Reformation times. Sir Richard de Guildforde and John Whitby, prior of Guisborough, went to Palestine, embarking at Rye, in 1506; and in 1517 Sir Richard Torkington, rector of Mulberton, Norfolk, visited Jerusalem.¹

From all the countries of Europe pilgrims travelled to the Holy City. It was natural that most should come from those countries which had taken part in the Crusades, but they came also from elsewhere. Russian pilgrimages commenced soon after the country was converted, about A.D. 1000.

¹ In 1022 allusion is made in the Life of St. Theodosius of Kiev to Russian pilgrims in Palestine; the first known name is that of St. Varlaam, abbot of the Laura of Kiev, who visited Jerusalem in 1062.²

The earliest extant record is that of Daniel, an abbot whose identity is not certain. He spent Easter of 1107 in Jerusalem. His work shows devout feeling; and, though a Greek priest, he was friendly to the Latin clergy. He travelled by way of Constantinople, Abydos, Tenedos, Mitylene, Chios, Ephesus, Samos, Patmos, Rhodes, Patara, Cyprus, thence crossing the sea to Jaffa and Jerusalem.³ He saw the miracle of the holy fire (see below, 17) and visited the Virgin's tomb—the traditional scene of the Assumption. Though Italy had so many places sacred to the Christian, particularly the Eternal City, Italian pilgrims came in large numbers to visit Palestine. Venice sent her convoys, and the citizens of Lombardy visited Venice on the way. Among the earliest Italian pilgrims to Palestine was St. Antonio Piacenza, who went to Jerusalem in 570 and wrote *de Locis sanctis quæ perambulavit Antoninus martyr*. Pantaleone, a citizen of Amalfi, went to Palestine about 1065, and a pilgrim hostel was established by him in Jerusalem. In 1219 St. Francis of Assisi went on pilgrimage. In the 14th and 15th centuries pilgrimages became far more numerous. Roberto da Sanseverino set out from Milan in 1458. In 1486 Fra Girolamo Castiglione (or de Castellione), a native of Milan, went to Palestine and thence to Arabia and Egypt. The Cavalier Santo Brasca went to Jerusalem in 1480. He wrote an account of his journey, and his information may have stimulated Canon Pietro Casola, a member of a noble Milanese family, who undertook a pilgrimage in 1494. Casola travelled via Milan, Brescia, Verona, Vicenza, Padua, Venice, Ragusa, Corfu, Navarino, Candia, Rhodes, and Cyprus to Jaffa, and thence to Jerusalem. His account is quite interesting reading and has recently been made accessible to English readers.⁴ The pilgrim traffic was so great that it had to be officially regulated, and, considering the discomforts of travelling at that time, it is remarkable that so large a number were willing to face the risks.

² Hans von Mergenthal, who accompanied Duke Albert of Saxony to the Holy Land in 1476, recounts that the sleeping place allotted to each pilgrim was so narrow, that the

passengers almost lay one on the other, tormented by the great heat, by swarms of insects, and even by great rats which raced over their bodies in the dark. If a luckless pilgrim succeeded in dozing in spite of the general discomfort, he was soon awakened by the stamping of the animals penned up on deck, or by the talking, singing and shouting of his neighbours. Most of those who fell sick died "God be gracious to them!"¹

In the 16th cent. the number of Italian pilgrimages continued to fall off, though they never entirely ceased.

3. Rome.—Next after Jerusalem, Rome was the city which drew the largest number of pilgrims. The causes which contributed to the rise of the papacy made Rome a pilgrim resort; more especially the tombs of St. Peter and St. Paul exalted it into the goal whither Roman Catholics flocked. One centre of interest was the catacombs. At first used as burial-places, they afterwards became sacred places, hallowed by the bones of martyrs and visited by thousands of pilgrims (see art. CATACOMBS). These came from Britain both before and after the English conquest (King Ina of Wessex founded an English school for Saxon pilgrims and scholars in Rome in 727), and Irish and Welsh saints were among the most indefatigable in their pious journeyings.² Archbishop Usher observes:

¹ Britannii hinc temporibus Romam, Hierosolymam, et Syriam invisere soliti.³

So St. Bridget journeyed to Rome as a pilgrim; likewise Findan of Leinster in 847 to fulfil a vow.⁴ Several Celtic saints, having performed their pilgrimage, settled permanently on the Continent, sometimes obtaining bishoprics. Ninian visited Rome during the pontificate of Pope Damasus (366-384), who had given all Christian pilgrims access to the catacombs.

As time went on, the intercourse between Britain and the Continent became more intimate, so that there was a continual stream of pilgrims to Rome, especially after the failure of the Crusades; the difficulties of travelling, pestilence, and other causes had checked the number of those who went to the Holy Land. The papal jubilee proclaimed by Boniface VIII. in 1300 with its special indulgences drew more than 20,000 pilgrims to Rome. Again at the jubilee of 1450 under Nicholas V. thousands of visitors assembled. In the English College at Rome from 100 to 200 pilgrims were provided with hospitality every year in post-Reformation times. Pilgrims have never ceased to visit Rome; the large number of churches and relics have been continuous sources of attraction.⁵

4. England.—The pilgrimages, however, which left the deepest mark on Britain as elsewhere in Europe were, perhaps, not those to distant lands, however holy, but those to sacred spots nearer home. There were several famous shrines in England not only of national but of world-wide fame, and many others which were prominent in religious life, although not often visited by strangers from a distance. Earliest among British shrines was Glastonbury. When first it became famous is unknown. It was a place renowned in Celtic tradition, and therefore it had become sacred before the advent of Christianity in England, and probably even before the time of Christ. It was very likely on the site of a Celtic temple. Perhaps the particular form of heathen worship there celebrated was the cult of the dead (see artt. BLEST, ABODE OF THE [Celtic] and GRAIL, THE HOLY). There was a Celtic settlement of pre-Roman date

near by, which has recently been excavated.¹ Various legends grew up to account for its fame. In the Glastonbury Chronicle under 1259 there was this entry:

'Anno ab Incarnatione XLIII. discipuli sanctorum Philippi et Jacobi Apostolorum venerunt in Britanniam; a quibus primum Oratorium in insula Avalloniae.'

King Ina of Wessex founded a monastery at Glastonbury, then went to Rome on pilgrimage and died there.² Dunstan was abbot of Glastonbury; it grew in fame and importance, and became associated with many saints and heroes—St. Joseph of Arimathea and St. Patrick, King Arthur and Guinevere; and its monks gathered together a wonderful collection of relics—portions of the Crown of Thorns, the True Cross, and the Holy Sepulchre, and bones of St. John the Baptist, St. Peter, and St. Paul. Its fame outlasted the Middle Ages, and a miracle was believed to have been performed there in 1751.³

After Glastonbury in historical sequence, though in the later Middle Ages of even greater fame as a pilgrim resort, was the shrine of St. Thomas à Becket at Canterbury. His murder in 1170 profoundly shocked the whole of Europe, and crowds of pilgrims soon began to visit the spots made sacred by his life and death. His shrine became ever more splendid, and boasted many famous jewels, including the 'Regale' of France. The Jubilee of 1470 brought 100,000 pilgrims to Canterbury. Many of these would be from foreign countries. The pilgrims went first to the transept of the martyrdom in the Cathedral.

'Before the wooden altar the pilgrims knelt, and its guardian priest exhibited to them the various relics confided to his especial charge. But the one which surpassed all others was the rusty fragment of Le Bre's sword, which was presented to each in turn to be kissed. The foreign pilgrims, by a natural mistake, inferred from the sight of the sword that the martyr had suffered death by beheading.'⁴

Then the pilgrims went to the choir and saw the general relics, about 400 in number, then to St. Andrew's Tower, and, last of all, to the shrine itself. It had a wooden covering which, till lifted, concealed the gold, silver, and jewels with which it was encrusted. Among foreign pilgrims Leo von Rotznitz was sent on an embassy to England in 1446. Two accounts of his adventures were written, one in Bohemian, preserved in a Latin translation, the other in German. He went and saw the sights usually shown to pilgrims. He and his companions visited the shrine.

'Ibi vidimus sepulchrum et caput ipsius. Sepulchrum ex puro auro confiatum est, et gemmis adornatum, tanquam magnificis donis ditatum, ut par ei uideretur. Inter alias res preceps spectatur in eo et carmineus gemma, qui nocte splendens solet, dimidi ovi gallinacei magnitudine.'⁵

The German account relates:

'Da zeiget man uns das schwert, damit man im den kopf abgeschlagen hat. Da weist man auch ein mercklich stuck des heiligen creuzes, auch der nagel einen und den rechten arm des lieben herrn Ritter sant Gorgen und etlich dorn in einer mosttrauzen von der durnen kron.'⁶

The Canterbury pilgrimage is remembered among those who take little interest in ecclesiastical history because of Chaucer's *Canterbury Tales*. The journey from the Tabard Inn at Southwark was one of the three ways by which Canterbury was regularly approached by pilgrims. In 1513 a visit was paid to it by Colet and Erasmus; the wealth displayed and the superstition encouraged roused the feeling in Colet which was soon to break forth in him and others in the Protestant Reformation. Erasmus was more reserved and quiet in his strictures, less prone to depart from

Catholic practice and tradition.¹ The last Jubilee at the shrine was that of 1520. The reverence shown to the memory of St. Thomas à Becket was annoying to Henry VIII., and in 1538 the shrine was destroyed by royal command.

Next in importance in mediæval England was the shrine of Our Lady at Walsingham in Norfolk. The special relic that attracted pilgrims here was a small phial reputed to contain a few drops of her milk. This shrine was likewise destroyed at the Reformation. A poem written in 1595 (of uncertain authorship) laments the desolation which had overtaken the scene of the piety of former ages. It concludes:

'Sin is where Our Lady sat,
Heaven is turned to Hell,
Satan sits where Our Lord did sway,
Walsingham, oh! farewell!'²

Other famous places of pilgrimage in mediæval England were Durham (for the shrine of St. Cuthbert), Lichfield, Bury St. Edmunds, and Peterborough. A special feature of English pilgrimage was its anti-royalist character—to reverence as a saint one who had been condemned as a traitor.³

5. Wales.—All the Celtic parts of Britain were specially rich in shrines, just as their inhabitants went as diligently as any to Rome and the Holy Land. The chief Welsh shrine was the Holy Well of St. Winifred in Flintshire.

'It is a significant circumstance that the only road through Wales from north to south started at Holywell and ended at St. David's, both conspicuous pilgrim resorts in the Age of Faith.'⁴ A monastery was founded at Holywell in 1119, which was destroyed at the Dissolution. The history of the shrine is important as showing the connexion of pilgrimage with sacred wells. When any well became famous, and its waters were reported to have either medicinal or miraculous qualities, it soon became a place of pilgrimage. This has been so not in Catholic Christianity alone but in the whole history of religion.

6. Scotland.—The earliest Scottish shrine to which pilgrims resorted was Whithorn (St. Andrew's). The church there was built by St. Ninian in memory of St. Martin of Tours about 397. Ninian himself was buried there in 432, and the place was renowned among the Irish and among the Welsh of Strathclyde. Like Walsingham, it was popular as a place of royal pilgrimage. Another Scottish shrine was that of St. Mary of the Rock at St. Andrews. This has now been swept away by the sea. It was on the rock at the foot of the cliff on which the Cathedral now stands. Other Scottish places were Dundee (for the relics of St. Mordue), Dunfermline (for the shrine of St. Margaret), St. Margaret's Chapel at Edinburgh Castle, St. Nicholas' Chapel, Leith, St. Kentigern's Chapel on Loch Lomond, and St. Mungo's Chapel at Glasgow.

7. Ireland.—Pilgrimage has been for centuries a dominant feature of Irish religious life, for among the Celtic peoples every hill and well and stream has its own tutelary god or spirit or fairy. Christianity only reconsecrated many places sacred already in Celtic (possibly even in pre-Celtic) times; and, despite spasmodic efforts made by Protestant governments to repress them, Irish pilgrimage has gone on with no real interruption from the Reformation until the present day.

Most famous of Irish shrines was St. Patrick's Purgatory on Lough Derg in Donegal. In the lake there is an island round which various legends grew. It was said that a knight, Gwinn,

⁶ *Ib.* p. 253.

descended to Purgatory from there and came back to this present life.

'This pilgrimage has been ascribed to insatiable greed and wilful deception on the part of monks, who fostered it with an eye to their own advantage; but the matter cannot be so summarily dismissed. The usage lies, doubtless, in the deep-rooted beliefs of the pre-historic period, and is a reflex of the old Druidic doctrines colouring Christianity. . . . The origin of the pilgrimage must be therefore sought, partly in the geological features of the island (suggestive to the credulous in Ireland, as in other European countries, of an entrance into the Nether Regions) and partly in a native pre-Christian mythology, the implicit belief in the existence of spirits of woodland and water, and the supposed communication carried on between them and mortals.'¹

The connexion with St. Patrick is probably legendary, but it enhanced the glory of the place. Abuses and superstitions grew apace, and in 1497 the pilgrimage was 'abolished' by Pope Alexander VI. The Privy Council ordered its suppression in 1632, and in the second year of Queen Anne it was again prohibited.

'And whereas the superstitions of Popery are greatly increased and upheld, by the pretended sanctity of places, especially of a Place called St. Patrick's Purgatory in the County of Donegal and of Wells to which Pilgrimages are made, by vast numbers at certain seasons. . . . Be it further enacted that all such meetings and assemblies shall be deemed and adjudged Riots and unlawful Assemblies.'²

A fine of ten shillings was to be imposed if the offender refused to be publicly whipped. But suppression was of little avail, and the pilgrimage has continued under ecclesiastical supervision until our own day. Pilgrimage thither is now observed in the Roman Catholic Church as a penitential exercise, and 'it seems the only pilgrimage of modern times conducted like those of the Middle Ages' (*CE* xii. 95). Other places of pilgrimage in Ireland were Downpatrick in Co. Down (sacred to St. Patrick, St. Bridget, and St. Columba), St. John's Well in Meath, and Cranfield in the parish of Drummaul, Co. Antrim.

8. France.—Among famous French mediæval shrines was Chartres:

'Avant que le christianisme eût été prêché dans les Gaules, les druides étaient dans l'usage de s'assembler tous les ans aux environs de Chartres. On prétend qu'ils avaient en ce lieu un sanctuaire révéré. C'était, dit-on, une grotte, où ils honoraient une statue qui représentait une femme assise, tenant sur elle un enfant, et l'autel portait cette inscription *Virgini pariturae*. Lors de la prédication de l'Evangile on bâtit sur cette grotte une église, vers le milieu du III^e siècle, au plus tard.'³

Chartres therefore, like Glastonbury and St. Patrick's Purgatory, seems to have been the scene of an ancient Celtic cult. The wooden statue of the Virgin was destroyed at the Revolution.

Among modern French shrines the chief is Lourdes (*q.v.*). Others are La Salette in Dauphiny and Liesse.

9. Switzerland.—Of Swiss shrines the most important is Einsiedeln. There was a monastic community there in the 9th century. It is in the canton of Schwyz, became famous as a centre of pilgrimage in the 10th cent., and has continued to be so until the present time, despite the preaching of Zwingli in the 16th cent.⁴ and the destruction of the monastery in 1798 by the French invaders. The yearly pilgrims are now more than 150,000.

10. Italy.—Besides Rome itself numerous other Italian cities were pilgrim resorts, though none attained special pre-eminence except perhaps Assisi, because of its connexion with St. Francis and in a lesser degree with St. Clare. Siena was associated with St. Catharine; and Venice, with its splendid

basilica of St. Mark, was often visited on the way to the Holy Land. See also art. LORETO.

11. Spain.—Foremost of the shrines of Spain was that of St. James, or Santiago di Compostella, which attained a fame in the Middle Ages greater than that of almost any other city save Rome. It is said that St. James appeared there in a vision in 816, and that his remains were discovered there. The shrine became associated in legend with Charles the Great, but it was not till the 12th cent. that the foundations of its greatness were really laid. Not only Spaniards but pilgrims from all over Europe worshipped there, especially those from Wales and Ireland. In Welsh bardic literature there are many allusions to Compostella.¹ A Latin hymn to St. James has been finely translated by George Borrow.² The pilgrimage flourished till the 14th, but considerably diminished from the 18th century.³

12. Germany.—Chief among German places of pilgrimage was Aachen (Aix-la-Chapelle), the mediæval capital of Germany, which possessed numerous relics. The most important were the white robe in which the Virgin was clothed in the stable at Bethlehem, the swaddling clothes of the infant Christ, the linen cloth in which the body of John the Baptist was wrapped after his execution, and that in which our Lord was crucified; there were many lesser relics besides. The pilgrimage to Aix has continued till the present time. In 1881 there were 158,968 pilgrims. Another mediæval city renowned for its pilgrimage was Trier (Trèves), which possessed the seamless holy coat worn by our Lord before His crucifixion. Cologne was famous as containing relics of the three kings, traditionally called Gaspard, Melchior, and Balthasar.

13. The Syrian Church.—The pilgrimages so far considered have all been either of the West of Europe or else in Palestine itself. But beyond the frontier of the Roman Empire the Syrian Church grew and flourished, though on lines in some ways different from those of the Græco-Roman world. Pilgrimage was made by Syrian Christians at a date earlier than by those of the West. Noh, bishop of Adiabene (163-179), had been taken as a child by his parents to Jerusalem on what may fairly be called a pilgrimage.⁴ Pilgrims continued to visit Jerusalem; the subject, however, is still involved in some obscurity.⁵

In 558 a Nestorian synod considered the subject:

Canon ix. declares that no new monasteries shall be built without the knowledge of the bishop of the diocese; if one were built and the bishop knew, he would give it a revenue sufficient for its upkeep and for hospitality to pilgrims. Canon xv. proclaims that the faithful ought to give their offerings and perform their vows for the remission of their sins in the places where they live, and not wander far afield. Why should they go to distant places? It is a puerile habit which gives satisfaction to the senses but not to the soul. If any of the faithful, after having visited the churches and convents of their own country, desire to visit those that are further away, not with the idea that God will there favour them more, but to give some part of their goods to the head of the convent, they are not to be hindered. But, if they wander about as people who have lost their God, not knowing where they will find Him or where He will hear them, they are sick souls in need of health and should be led to the doctrine of perfection.⁶

This shows that the abuses of pilgrimage were quite obvious at this time, and they must have been widely spread to have called down ecclesiastical censure in these terms. Gregory Bar-Hebræus, bishop of Guba (probably Bear Omshash, north-east of the Gulf of Akaba) and primate of the East († 1286), quotes from a letter of one John Bar-Finchoje to a monastic friend describing the

pilgrimage to the Holy City and what was to be seen and done there.¹

14. The Reformation.—Changes so wide in the religious life of Europe as those which came to pass in the 16th cent. were bound to leave their mark not only on the Protestant countries, but within the bounds of Catholicism as well. Much purging of abuses took place at the Counter-Reformation; and, while in some countries Protestantism lost its first conquest, with the advancing tide of Catholicism not everything that had been destroyed was built up. Under Mary Tudor, *e.g.*, no attempt was made to restore the shrine of Becket in Canterbury Cathedral. The Continental Reformation brought with it the abolition of pilgrimage. Thus, in the programme of reforms of the bishop of Pomesania in 1525, art. 4 declares:—

'Henceforward there shall be no pilgrimage nor wanderings to holy places, since they aid no man's salvation.'²
In Sweden the Lutheran Synod of Orebro in 1529 decreed:

'Peregrinationes ad loca sancta quanta fieri possit moderatione removebuntur,'

showing that, as in other things, Lutheranism dealt more gently with Catholicism than did Calvinism.³ Calvin in the prefatory letter to Francis I. (23rd Aug. 1536) of his *Christiane Religionis Institutio*, wrote:

'Cur ergo tanta sacrovitia et acerbitate pro missa, purgatorio peregrinationibus, et id genus nugis belligerantur, ut sine eorum explicatissima, ut ita dicam, fide salvam fore pietatem negent, cum tamen nihil eorum a verbo Dei esse probent?'⁴

The Edict of Reformation of Bern for the Pays de Vaud (24th Dec. 1536) declared in art. 17:

Bénédiction.—'Nous avons aussi ordonné que toutes bénédiction de voyage et pèlerinages soient ôtées, et que nul soit si hardi d'aller en iceux sous peine, l'homme de dix florins la femme de cinq florins.'⁵

The Council of Trent (1563; sess. xxv.) condemned those who affirmed that 'places dedicated to the memories of saints are vainly visited.'

15. Royal pilgrimage.—Throughout the Middle Ages pilgrimage was a constant observance among kings and princes; to show honour to the saints of their country was a natural thing, and sometimes a king went in penitence, as did Henry II. to the shrine of Becket, after the murder of the archbishop. The Scottish kings continually went to Whithorn. Margaret, daughter of Christian I. of Denmark, wife of James III. and mother of James IV. of Scotland, went thither after the birth of her son in 1473, though her journey has been described as a 'pleasant outing rather than a penitential exercise.'⁶ James IV. himself went there several times, as also did James V., though not so often as his father. James IV. visited also Whitekirk in E. Lothian, where in 1430 James I. had built a house for the reception of pilgrims.

Some interest attaches to the pilgrimage of one who later became a king: Henry, Earl of Derby (afterwards Henry IV.), visited Prussia and then went on to the Holy Land. He travelled by way of Dantzic, Frankfort-on-Oder, Prague, Vienna, Treviso, Venice, Corfu, Rhodes, Jaffa, Ramah, and Jerusalem, returning through Rhodes, Cos, Corfu, Ragusa, Venice, Treviso, Pavia, Vicenza, Verona, and Milan.⁷

16. The effects of pilgrimage.—It is quite clear that a custom so wide-spread must have left its effect not simply on the religion but on the entire life of the world. It helped, as has been seen, to

produce the Crusades; it drew far afield men who would otherwise have been content to stay in their own country, and gave them a knowledge of distant lands. The countries of Europe had, by means of the pilgrims, far more intercourse with each other in the Middle Ages, not only in religion, but also in commerce, literature, and art. The economic effect of pilgrimage was also considerable. Though many cities already famous became pilgrim resorts, in some cases towns or villages hitherto obscure became, by virtue of a shrine or the relics of a saint, places of national, perhaps even of world-wide, fame. These facts, however, must never obscure the essential religious importance of pilgrimage (it is wrong, *e.g.*, to put as one of the chief 'effects' of the custom the fame of the *Canterbury Tales*; that the pilgrimage to Canterbury afforded the occasion for some of the most famous English poetry is after all only incidental).

In post-Reformation times in Catholic countries pilgrimage has often been undertaken for the sake of cures such as those (some of which are genuine) wrought at Lourdes.

17. The place of pilgrimage in the history of religion.—It has already been noted that pilgrimage is not confined to Catholic Christianity, and also that pre-Christian shrines were consecrated to Christ and to His saints. This fact is of importance for the comparative study of religions, and, like other facts in that science, should be neither minimized nor wrongly emphasized. How far, all over the world, Christian and pre-Christian customs and rites were interwoven is not yet known for certain. As S. A. Cook says in a letter,

'The visit to the grave of the more or less deified hero, the annual meeting on the occasion of initiation or other ceremonial, the periodical festivals at which different towns or clans assembled—all these represent universal ideas.'

Some observances of Christian pilgrimage have close analogies elsewhere—*e.g.*, the miracle of the sacred fire at Jerusalem.¹ (Glastonbury, St. Patrick's Purgatory, and Chartres (see above, 4, 7, 8) are instances of pagan holy places being consecrated to Christian pilgrimage.)

The pilgrim with his staff, his broad flat-crowned hat, and his mussel-shell or other badge, has now disappeared, but thousands still go every year on pilgrimage. Shall we dismiss it as a mere superstition? It is something more than, although it is akin to, the sentiment that has made it the supreme desire of many whose relatives have fallen in action to visit their graves when the war is over. The underlying idea, conscious or unconscious, is that definite sanctity attaches to certain places because of what has happened there, as though some of the personal magnetism of the person who had lived or died there still survived and could communicate itself to the visitor. A similar idea would explain a so-called 'ghost,' not as the actual spirit of a dead person surviving after his bodily death in a given spot associated with him in lifetime, but rather as an impress or influence left by him still capable of affecting those who come to the place. Thus the study of pilgrimage leads us into psychic and psychological problems the solution of which is still beyond our range.

L. D. AGATE.

PILGRIMAGE (Hebrew and Jewish).—The origin of the Hebrew pilgrimage is to be sought in the early Semitic life. To the primitive religious conception the deity was not ubiquitous, but was localized—by the nomads within the confines of a sacred district, frequently an oasis, by agriculturists in the sanctuary of a village or town. The performance of certain religious duties, therefore, normally involved a journey of greater or less length, which in time increased as the renown of particular sacred places, and the advantages for trading offered by a larger concourse of people, led to the further centralization of worship. Economy of time and effort, also, reduced the visits to a limited number at regularly recurring periods, to which was postponed the payment of vows replacing intervening religious duties. There thus was instituted the annual family or clan pilgrimage, as pictured in 1 S 1³. At times a lengthier pilgrimage into strange territory resulted in a protracted stay as a *ger*, or even in permanent settlement; Abraham is the archetype of the pilgrim immigrant, and perhaps in Dt 26⁵ 'ôbhed (AV 'ready to perish') contains the ideas of the Arabic root 'abada, 'strange,' 'long from home,' 'permanent dweller.' Moreover, every traveller into strange territory was in a sense a pilgrim, a prospective visitor to the local shrine; hence, apparently, the right of sanctuary, of protection, was extended to cover the entire journey within the tribal territory—a supposition which may in part explain the sacred character of the primitive Semitic institution of hospitality (*q.v.*). At all events, the journey itself became an essential part of the religious celebration, assuming a quasi-sacred character—in itself a meritorious act.

The development of the pilgrimage of the clan into one of larger groups was due in part to the advantages of combination when the journey was long and led into strange territory; and this development was hastened when the period of pilgrimage was made to coincide with that of nomadic or, especially, with agricultural festivals. The Hebrew term *hagh* denotes both the pilgrimage journey and the festival ceremonies at the shrine; but which of these two ideas is the original denotation is uncertain. The concept 'encircle,' which seems common to various trilateral extensions of the biliteral root *h-g*, may be seen both in the

dance and in the circumambulation which concludes the pilgrim journey; nevertheless, if in Arabic *hajj* originally did not denote the circumambulation of the Meccan shrine but only the visit to 'Arafah (J. Wellhausen, *Reste arabischen Heidentums*, Berlin, 1897, pp. 79–84)—i.e. a visit, from the standpoint of Quraish, to a strange shrine under protection from the tribal adherents of that shrine—an original meaning 'pilgrimage,' 'recourse to a place of refuge,' should be preferred (cf. the roots *hajâ* and *haja'a*).

The origin of the Hebrew *hagh* as involving a nomadic journey seems discernible in some of the regulations for the Hebrew festival celebrations, especially the Passover (though the latter is associated in the Pentateuch with an agricultural epoch and with traditions of a definite historic departure from Egypt). A three days' journey into the desert is made antecedent to the first Passover celebration; and the extension of the celebration of the festivals in general over an entire week is in part a reminiscence of the journey period (cf. the pilgrimage month of the Arabs). But especially the eating of unleavened bread (the nomad's usual bread), the roasting of the lamb whole (in nomad fashion), and the start by night (as frequently in the case of desert caravans) offer the setting for a dramatic revival of the ancient desert life and wanderings; therein sanctity and religious significance are attached to archaism, in the same manner as in the regulation for the building of an altar of dirt or unhewn stones (Ex 20). The pilgrimage of Tabernacles is a similar religious-dramatic revival of tent life (Hos 12¹⁰ reads 'tents' for the 'booths' of Lv 23⁴²; cf. also 2 Ch 7¹⁰, if the phrase 'into their tents' is to be understood literally here).

The pilgrimage had also a political importance. The close association in a common purpose of large numbers of people from different tribes and communities afforded the basis for the development of a more permanent national unity, and played a part no less in ancient pan-Hebraism than in modern pan-Islamism. In the Pentateuchal legislation which purposed the centralization of worship in Jerusalem the attempt is clear to increase the spirit of unity by bringing all males together in pilgrimage to one shrine at three different periods of the year (the festivals of Passover, Weeks, and Booths). That this legislation, however, reflects actual conditions—that all the male inhabitants of Palestine simultaneously left their homes three times every year to make what for some would have been an extended journey—seems improbable; and the special emphasis laid upon the Passover in certain passages (Nu 9¹⁸) or upon the Feast of Tabernacles in others (1 K 8⁶⁵), shows perhaps that one or the other was in reality the pilgrimage period at different epochs in the national life, or (more likely) for different clans or families at the same epoch. Jeroboam testified to the political value of the pilgrimage in his attempt to counteract its unifying force by changing the place and time of it (1 K 13²⁷, with which cf. the reported action of Walid ibn 'Abd al-Malik in promoting the pilgrimage to a certain mosque in Jerusalem as against the Ka'bah, or that of the papal monarchy in diverting the pilgrimage to Rome).

After the building of the Second Temple in Jerusalem the Holy City was without rival as the objective of Jewish pilgrimage. Jews journeyed thither from Mesopotamia, and the journey itself became an even more important factor than before, often involving considerable hardship and danger; the old laws of hospitality to the pilgrim became correspondingly broader, and the inhabitants of Jerusalem took special measures to accommodate

visitors in the city as well as along the roads leading thereto.

But after the destruction of the Second Temple conditions changed; though there was still an annual celebration of the Feast of Tabernacles (on the Mount of Olives), with the cessation of sacrifice the pilgrimage, too, ceased to be an obligatory act. It assumed in general a personal and emotional character and lost much of its former joyousness. Pilgrims to the site of the Temple now came principally to mourn and to pray for the restoration of Zion, and they were not always welcomed by the non-Jewish population of the land. Conditions improved under Muhammadan rule; and in the 9th cent. many Karaites in particular made the pilgrimage. During the Crusades the pilgrimage seems to have ceased again; but with Saladin it was resumed,¹ and recovered something of its ancient joyous character. In many cases the desire to visit Jerusalem was coupled with the purpose of living and being buried on holy ground, and the pilgrimage thus became a pious immigration; as early as the 11th cent., indeed, a fully organized Jewish community existed at Ramlah; and there was a marked influx of Jews from Spain somewhat later, and from other parts of Europe in the 15th and 16th centuries. Earlier than this impulse from persecution there is found as a secondary cause of pilgrimage the general purpose of travel (as in the case of Judah Halevi and Ibn Ezra), the frequency of which is evidenced by a special travellers' prayer in the Jewish ritual.

At the same time Jerusalem again had its rivals as the object of pilgrimage. In Egypt there was a famous synagogue at Dumûh (modern Tammûh), near Cairo, to which Jewish families journeyed to celebrate the Feast of Weeks. But in Muhammadan countries the multiplication of shrines was due to the development especially of another type of pilgrimage—that to the tombs of pious men, of saints and reputed miracle-workers. Though evidence of the belief in the supernatural power of tombs may perhaps be found in 2 K 13²¹, and such a belief among certain classes of Jews may have persisted along with other beliefs in miracles, the custom of visiting graves in order to pray and ask for divine intervention seems to have been borrowed by Jews from their Oriental neighbours; at any rate such a *ziyârah* (lit. 'visit') is sometimes made by Muhammadans and Jews to the graves of the same Biblical heroes. By the Oriental Jews themselves no distinction in reverence is made between the supposed tombs of Biblical characters and those of later saints. Palestine has many tombs of local, and several of more than local, veneration. To the supposed tomb of Zebulun at Sidon, e.g., pilgrims come from all parts of Palestine, and also to that of Rabbi Meir (q.v.) at Tiberias. That of Simeon ben Yohai at Merom near Safed has long been visited by Jews even from Persia and Africa; indeed, in the 16th cent. Safed rivalled Jerusalem, especially as a place for permanent settlement, for it offered hospitality such as neither the Muhammadans nor the Jews of the Holy City any longer extended.

Outside of Palestine pilgrimages are made to several tombs in Kurdistan (e.g., that of Nahum near Mosul), in Mesopotamia (e.g., that of Ezra near Basorah and that of Ezekiel near Babylon), and in Persia (that of Mordecai and Esther at Hamadan). In Algeria and Morocco are several tombs of Jewish worthies of local renown, and these, too, are sometimes visited by Muhammadans and Jews together. In Europe only Galicia, Volhynia, and parts of Poland have their pilgrim

¹ In the 13th cent., e.g., there is recorded the visit of 300 rabbis from Spain and France.

shrines, though the travelling instinct as such has sometimes found expression in a sort of pilgrimage to various famous synagogues, such as at Prague, for purposes of prayer; and the wandering student, journeying far to sit at the feet of renowned rabbis, was a familiar figure until the 19th cent. in Germany and still later in Poland and Hungary.

In some cases the tomb-pilgrimages take place at fixed annual dates which, especially in Palestine, often coincide with the various festivals of the Jewish calendar; in other cases they take place at the pleasure of the individual. In Muhammadan countries a relationship with the older Semitic pilgrimage is seen in the joyous festival character which the celebration assumes, even beside the tomb.

WILLIAM POPPER.

PILGRIMAGE (Indian).—1. Origin.—Pilgrimage in India is the result of the amnestic basis of the popular beliefs, reflected in the higher forms of Hinduism and even in the local developments of Islâm. Nothing strikes a new chord to the country more than the crowds of pilgrims travelling by road or rail towards some holy river, the local abode of some god or godling, the tomb of some saint or martyr.

It seems not unlikely that the virtue of a pilgrimage arises mainly from the sacred character attaching to the place itself and not so much from the desire to honour the deity whose shrine it is. If that is so, the feeling which propitiates undertaking of the journey is not a very great advance on the primitive reverence for certain places as the abodes of spirits (R. V. Russell, *Census of India*, 1911, vol. xiii, Central Provinces Report, pt. i, p. 91).

To this may be added the fact that water, by the analogy of the removal of physical impurities, is a potent agent in the removal of sin. Thus, in many sacred places there are pools dedicated to the god Kâma, which take his name, not because he is worshipped there, but because he bathed in this place when he wished to free himself from the sin of having killed the demon Kâvaya, who is held to have been a Brahman. The germ of the idea of pilgrimage is found in the words of Indra to Harishchandra:

'There is no happiness for him who does not travel; living in the society of men, the best man often becomes a sinner; for Indra is the friend of the traveller. Therefore wander' (*Ātisharpa Brâhmana*, vii, 13).

But, though in the *Rigveda* the animistic worship of rivers appears, pilgrimage, in its modern sense, is not referred to, and even in the *Brâhmanas*, while a particular sanctity attaches to river fords (*tirtha*) and certain privileged regions, like the banks of the Sarasvatî, there is no knowledge either of pilgrimages or of holy places (A. Barth, *Religions of India*, Eng. tr., London, 1892, p. 82). Even Mann (*Laus*, viii, 92) regards visits to the Ganges or to Kurukshetra as comparatively unimportant.

Gautama, however, declares that 'all mountains, all rivers, holy lakes, places of pilgrimage, the dwellings of *ryis*, cow-pens, and temples of the gods are places which destroy sin' (xii, 14 [*SBE* II. (1879) 276]).

The origin of the modern practice may be traced to the revival of Brahmanism and its absorption of local cults. Every place where a local spirit was propitiated or worshipped soon came under the control of a body of local priests, interested in attracting visitors because their offerings formed their means of livelihood.

2. Places of Hindu pilgrimage.—The number of places to which pilgrims resort is enormous. In

the following list the more important holy places are classified according to their geographical position and the deities mainly worshipped, it being understood that many places combine the cults of more than one deity :

(a) *Places*.—Bengal: Barābar, Gayā, Deogarh, Kālighāt, Kāmākhya, Sāgar Island, Tarakeswar; Bihār and Orissa: Pārasnāth, Puri-Jagannāth; Panjāb: Dera Nānak, Jwālamukhi, Katās, Kurukshetra, Takht-i-Sulaimān, United Provinces of Agra and Oudh: Allāhābād, Badarināth, Latesar, Benares, Bindhāchal, Brindāban, Chitrakūt, Deupātān, Deoprayāg, Gangotri, Garhmukhtesār, Hardwār, Jannotri, Kedārnāth, Mahāban; Bombay: Alandi, Bechrāji, Chāṇḍod, Dwārka, Jejuri, Nāsik, Pālitāna, Pandharpur, Shetrunjā; Madras: Bābā Baran, Bhavāni, Chidambaram, Comorin, Conjeeveram, Gokarn, Rāmeswaram, Seringapatam, Srirangam, Tirupati; Central Provinces: Māndhātā, Balāchustān, Hinglāj; Rājputānā and Central India: Ālu, Ajmer, Amarkantak, Barwāni, Nāthdwāra, Pushkar, Rakhabh Dev.

(b) *Culte*.—Brahmā: Pushkar; Viṣṇu: Badarināth, Gayā, Hardwār, Nāthdwāra, Pandharpur, Puri-Jagannāth, Tirupati; Kṛṣṇa: Mathurā, Gokul, Bindhāban, Mahāban, Dwārka; Śiva, the twelve great *līṅgas*: Somnāth in Kāthiāwār, Mahikāla at Ujjain, Omkāra in the Nārādī, Trayambak near Nāsik, Nāganāth in the Nāgām's Domains, Vaidyanāth in the Deccan, Bhīmaśankar on the river Bhīma, Kedāreswar in the Himālaya, Viṣvānāth at Benares, Mallikārjuna in the Karnātik, and Rāmeswār at the extreme south of the peninsula; other places sacred to Śivare: Bakreswar, Barābar, Chidambaram, Deogarh, Gokarn, Hardwār, Jejuri, Katās, Kedārnāth, Tarakeswar; various forms of the mother-goddess, Kālī, Durgā, Devī, etc.: Arasū, Ambā Bhavāni, Bindhāchal, Comorin, Deupātān, Hinglāj, Jwālamukhi, Kālighāt, Kāmākhya; sacred rivers: Allāhābād, Amarkantak, Bāgheswar, Batesar, Bhavāni, Chāṇḍod, Deoprayāg, Gangotri, Garhmukhtesār, Jannotri, Nāsik, Sāgar Island. The chief places visited by Buddhists are: Bodh Gayā, Kuśinagara, Potala, Sarnāth; by Jains: Barwāni, Gīrnār, Pālitānā, Rakhabh Dev, Shetrunjā. Worshippers of Rāma and Sītā visit Ayodhyā, Chitrakūt, Nāsik, and Sītākupl. The heroes of the *Mahābhārata* are venerated at Kurukshetra and Thānesar. The cult of the dead is performed at Benares, Hardwār, Gayā, and Siddhpur. In the number of sacred places few regions rival the Himālaya, and, in particular, Kasnir. The latter is a country where there is not a space as large as a grain of sesamum seed without a *tirtha*—a place of pilgrimage (Kalhana, *Rājataranginī*, ed. M. A. Stein, London, 1900, ii. 367, 376; *Āin-i-Akbarī*, tr. H. S. Jarrett, ii. 354 ff.).

3. Pilgrimage among the Buddhists.—The great monasteries, *stūpas*, and *dāgūbas* erected over the relics of Buddha, many of which had disappeared, have been unearthed by the Archaeological Survey. Bodh Gayā, where Buddha gained his title, and where the *bodhi*-tree beneath which he sat became an object of veneration, still commands respect among Buddhist pilgrims from Burma and farther east. In 1905 the Tāshi Lāma of Tibet visited the ruins at Sarnāth, near Benares burned vast quantities of butter and incense, and scattered flowers. At the close of the rite of adoration the Tāshi Lāma was transfigured and the other Lāmas worshipped him (*The Times*, 20th Dec. 1905). Next to the Tree of Wisdom at Bodh Gayā, the sites regarded as most holy are the scene of Buddha's death at Kuśinagara (*q.v.*), the eight great *chaityas* which enshrined his relics, Mt. Potala in S. India, Sthambala in the north, and the *guru's* Fairy-land in Udyāna to the west. The Indian sites are seldom visited by Lāmas and Tibetans on account of the great distance and the expense of the journey. Probably for the sake of convenience and economy, they have transferred the site of Buddha's death from Kuśinagara to a place known as Sālkuśa in Assam (L. A. Waddell, *The Buddhism of Tibet*, London, 1895, p. 305 ff.).

4. Places of Jain pilgrimage.—The Jains, probably on account of the retiring character of the cult and the desire to avoid pollution from animal slaughter, selected as their sacred sites places far from the abodes of men, like Mt. Ābū in Rājputānā, Pālitāna and Gīrnār in Kāthiāwār, Samet Sikhar or Pārasnāth in Bengal. The southern Jains have special places of pilgrimage at Padmāvati in Mysore and Guṇeswar in S. Kānara (*BG* xxii. [1884] 118).

5. Holy places shared by different religions.—Some places are shared by the followers of more than one religion. Hindus and Muhammadans

both visit the ledge below the Takht-i-Sulaimān, from which King Solomon is said to have taken his last view of India before he carried off his dusky bride (T. H. Holdich, *The Indian Borderland*, London, 1901, p. 73 f.; cf. *ERE* vi. 709).

6. Pilgrimages by the ascetic orders.—Some of the most extended pilgrimages are those performed by Gośāins, Sannyāsīs, and other ascetics.

Jonathan Duncan (*Asiatic Researches*, v. [1799] 37 ff.) gives an interesting narrative of the pilgrimages performed by Prānpur Sannyāsi, an Ūrdhvabāhu, i.e. one whose arms had become rigid by being constantly held over his head (M. Monier-Williams, *Brahmanism and Hindūism*, London, 1891, p. 88). He journeyed to all the chief Indian shrines, Kābul, Bamian, Baku on the Caspian Sea, Astrakan and Moscow, through Persia and Bokhara, and thence across the Himālaya to the source of the Ganges at Gangotri. Then he went to Nepāl and the sacred lake Mānasarovar and Lhāsa, whence he returned to India bearing dispatches to Warren Hastings, who gave him a rent-free estate. When this account was written, he was still in the habit of making excursions to Nepāl and to other parts of India.

Ascetics often wear symbols of such journeys, a white conch-shell denoting a journey to Rāmeswar in the south, iron, brass, or copper armlets indicating pilgrimages to Pāsupatināth, Kedārnāth, and Badarināth in the Himālaya.

7. River pilgrimages.—The favourite form of Indian pilgrimage is to shrines on the banks of the great rivers, like the Ganges, Jumnā, Nārādā, or Godāvarī. The Indus and the Brahmaputra are too far from the Holy Land of the Hindus to have acquired special sanctity. The great rivers, though places on their banks have been occupied by the votaries of special deities, are unsectarian, and any Hindu, whatever his rank may be, may bathe, provided he avoids causing pollution to high-caste worshippers. The places at which these rivers rise, like Gangotri, Jannotri, or Amarkantak, and sites on their upper waters, like Nāsik or Hardwār, are sacred. Even more highly regarded are the junctions (*sangam*) of two or more holy rivers, like the meeting of the Ganges, Jumnā, and the mythical Sarasvatī at Allāhābād, known to Hindus as Prayāga, 'the place of sacrifice' *par excellence*; Bāgheswar, Deoprayāg, and other junctions higher up the stream; and Sāgar Island, where the river joins the sea. Such places are often dedicated to the worship of Śiva, a god of fertility. Bathing in these holy places cleanses both body and soul, and brings the pilgrim into communion with the benign water-spirits and with the honoured dead whose ashes have been consigned to the waters.

8. Rules of pilgrimage.—The dates and hours at which bathing is auspicious are fixed by the local priests, and depend on various considerations connected with the local cultus. Thus, at Allāhābād the chief bathing fair is held on the new moon of the month Māgh (Jan.-Feb.), at Hardwār at the beginning of the Hindu solar year. At both these places specially important assemblies occur every twelfth year when the planet Jupiter enters the sign of Aquarius (Kumbha), such fairs being known as the Kumbh Melā (for the importance of the sidereal revolution of Jupiter, which is completed in 11 years, 314·92 days, as affecting religious observances, see *GB*, pt. iii., *The Dying God*, London, 1911, p. 49). From ancient times bathing during eclipses has been a means of expelling the evil spirits which are abroad at this time. According to tradition, the Yādavas bathed at Somnāth during an eclipse.

An important rite performed at sacred places is the circumambulation of the sacred object in the course of the sun, keeping the right shoulder towards it (*pradakṣiṇā*). Sometimes, as at Benares (*ERE* ii. 467), there is a holy road surrounding the sacred area along which the pilgrims march. Sometimes, as at Mathurā, where the sites associated with the life of Kṛṣṇa are spread over a considerable space, they are visited in rotation under

the direction of a Brāhman, who usually recites at each holy place the local religious guide-book (*mahātmyā*), which embodies the religious lore. These Brāhman guides form a special class, often notorious for roguery and rapacity, like those known as Gangāputra, 'sons of the Ganges,' the Chaubē of Mathurā, the Gayāwāl of Gayā, the Prayāgwāl of Allāhabād (Crooke, *TC*, Calcutta, 1896, ii. 387 ff.; *BG* ix. pt. i. [1901]; Kālhaṇa, *Introd.* i. 20). These men usually keep lodging-houses for entertainment of guests, tout for pilgrims, and keep books which record for many years the arrival of persons of particular castes or families. There is an elaborate system of touting for pilgrims to Jagannāth (W. W. Hunter, *Orissa*, London, 1872, i. 140).

When the holy place is, like Hardwār, Benares, Gayā, or Siddhpur, associated with the cult of the dead, the ashes of relatives, which have been preserved until this opportunity, are consigned to the water, and the mind rites (*śrāddha*) are performed. It is an interesting development that since the introduction of the Government parcel-post the ashes are often sent by it to a Brāhman competent to perform the rites, without the attendance of the relatives being required.

In the case of serious sin a special rite of atonement (*prāyāścitta*) is performed during the pilgrimage. The hair of the penitent, which is supposed to hold his sins, is cut off, only a single tuft being left on the crown of the head. He bathes in ten different ways, each with the use of an appropriate text, dresses in clean clothes, worships the deity, and, while the Brāhman performs the fire sacrifice (*homa*), presents ten kinds of gifts, the last being the 'shadow' gift, a cup of melted butter in which he has beheld the reflexion of his own face. He then says to the priest: 'This penance of mine must be rendered valid by you,' to which the reply is made: 'It is rendered valid.' If a sinner should die leaving this rite unperformed, it is the duty of his successor to perform it; if it be neglected, father and son descend to hell (A. K. Forbes, *Rās Mālā*, London, 1878, p. 631 f.).

g. Austerities practised by pilgrims.—Besides the suffering caused by long journeys in ox-carts over ill-kept roads, the crowding in railway carriages, the inconveniences of camping on the river bank, and the bad accommodation in the pilgrim lodging-houses, special austerities are undergone. One form of penance for grievous sin is the measuring of the length of the pilgrim's body by successive prostrations on the ground as he journeys to the sacred place. Waddell notes this as a Buddhist practice at Lhāsa, where some zealots traverse the Circular Road in this way—a distance of about 6 miles, the number of prostrations being over 40,000; in some cases the hands of the pilgrims are protected by padded wooden clogs, the soles of which are studded with hob-nails (*Lhāsa and its Mysteries*, London, 1906, pp. 364, 375).

According to the historian Rashīd-dīn (H. M. Elliot, *Hist. of India*, London, 1867-77, i. 67), at Somnāth 'many of the more deluded devotees, in performance of their vows, pass the last stage crawling along the ground upon their sides; some approach walking upon their ankles, and never touch the ground with the soles of their feet, others go before the idol upon their heads' (for similar customs at Pandharpur see *BG* xx. [1884] 470).

On several occasions the emperor Akbar, in imitation of the Hindu practice, walked on foot from Agra to Ajmer to visit the shrine of the saint Mu'īn-d-dīn Chishtī (Elliot, v. 328).

The original custom of branding the pilgrim with the sacred symbol of the god as a proof that he had performed the pilgrimage is now often superseded by a mark made with moistened clay. But in S. India, among the Sri-Vaiṣṇavas and Mādhavas, the visitor to the monastery (*matha*) is branded on both shoulders (E. Thurston, *Ethnographic Notes in S. India*, Madras, 1906, p. 403 f.). The practice of piercing the cheeks and tongue with a silver needle when going on pilgrimage is more common in S. than in N. India (*ib.* p. 402 f., *Castes and Tribes of S. India*, Madras, 1909, v. 399). Occasionally in S. India pilgrims keep a

handkerchief tied over their mouths to show that they are subject to a vow of silence during the pilgrimage, or they wear a mouth-lock, a silver band over the mouth, with a skewer piercing both cheeks (Thurston, *Castes and Tribes*, v. 399). Abū al-Fadhl says of Nagarkot in the Panjāb:

'Pilgrims from distant parts visit it and obtain their desires. Strange it is that in order that their prayers may be favourably heard, they cut out their tongues: with some it grows again on the spot, with others after one or two days. Although the medical faculty allow the possibility of growth in the tongue, yet in so short a space of time it is sufficiently amazing' (*Ain-i-Akbari*, tr. H. S. Jarrett, n. 313).

On the sacrifice of joints of the fingers at certain Indian shrines see *GB*, pt. iii., *The Dying God*, p. 219 f. At the pilgrimage to the temple of Sasta in Travancore the Aiyappans (for in these pilgrimages the worshippers call themselves by the name of the god) have to undergo a preliminary course of 41 days' scanty diet and sexual abstinence (*Census of India*, 1901, vol. xxvi., Travancore Report, pt. i. p. 98).

10. Muhammadan pilgrimages.—It does not fall within the scope of this article to describe the pilgrimage (*hajj*) to Mecca, Medina, or Kərbela, that to Mecca having succeeded the old pagan spring feast (W. R. Smith, *Lectures on Egypt*, London, 1912, p. 546). In India the number of tombs of saints (*pir*, *auliā*) or martyrs of the faith (*shahīd*) is legion, and they attract large bodies of pilgrims.

For N. India see A. O'Brien, 'The Muhammadan Saints of the W. Panjab,' *JAF* xii. [1911] 509 ff.; W. R. Lawrence, *The Valley of Kashmir*, London, 1895, p. 286 ff.; Malik Muhammad bin, *Bahawalpur State Gazetteer*, Lahore, 1904, p. 159 ff., *Census of India*, 1911, vol. xii., N.W. Frontier Province Report, p. 37 f.; for Baluchistan, *FL* xiii. [1902] 38 ff.; for S. India, S. H. Bilgrami and C. Wilcott, *Historical and Descriptive Sketch of the Nizam's Dominions*, Bombay 1883-84, ii. 571 ff.; *IB* ix. pt. i. [1901] 360.

Such monuments abound in the vicinity of Muhammadan capital cities, like Delhi, Agra, Lahore, or Lucknow, and they are visited by low-class Hindus as well as by Muhammadans. Some shrines, like those of Mu'īn-d-dīn Chishtī at Ajmer, the martyr Ghāzī Miyaṇ at Bahraich and Gorakhpur, and Shah Madar of Makunpur, vie with Hindu holy places in attracting both Hindu and Muhammadan pilgrims. But the erection of tombs, and still more the superstitious veneration of them, is opposed to the laws of orthodox Islam, and Wahābīs—the puritans of Islam—prohibit visits to them. The practice now so common among Muhammadans of visiting such places is clearly derived from the practices of the Hindus, and the rites performed differ little from Hindu and Buddhist custom. The pilgrims circumambulate the building in the course of the sun, crush into the tomb chamber to imbibe the breath of the saint which is supposed to survive round his remains, or, as a special privilege to be gained by payment of a fee, they are allowed to observe or even to touch clothes which are supposed to have been worn by the saint or martyr—his turban in particular, or some other article which may have belonged to him. Many of these shrines are potent in the cure of disease, and at some—e.g., at the tomb of Hanwant Naik at Sangamner in the Ahmadnagar District—wooden legs or arms are offered to secure relief (*BG* xvii. [1884] 737). Many of the Panjab shrines are efficacious in the cure of leprosy or other diseases (*Census of India*, 1911, vol. xiv., Panjab Report, pt. i. p. 385 f.).

11. Opposition to tomb-worship among some Hindu sects.—Some modern sects which aim at restoring the primitive usages of Hinduism have protested against the worship of tombs and relics, and even against pilgrimage.

The Ārya Samāj (q.v.) discourages the practice of bathing in holy rivers, of pilgrimage, of the use of beads and sectarian marks, of gifts to worthless

mendicants, and of all the many rites of modern Hinduism (H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and N.W. Frontier Province*, Lahore, 1911-14, ii. 231). The Sikh guru Nanak (*q.v.*) said:

'Religion consisteth not in wandering to tombs or places of cremation, or sitting in attitudes of contemplation' (M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, i. 60).

Guru Amar Dās endeavoured to prevent Sikhs from visiting Hardwār, Benares, and other places of Hindu pilgrimage (*ib.* ii. 87). But this rule is now generally disregarded, and Hardwār in particular is visited by crowds of Sikh pilgrims. Guru Govind Singh opposed the worship of saints like Guggā and Sakhi Sarwar, as well as visits to Muhammadan cemeteries and places of cremation (*ib.* v. 158). But Nanak visited the tomb of Shaikh Farid at Ajodhan, and modern Sikhs frequent Ambela and Kartarpur (*ib.* i. 84, iii. 26). Veneration of the Sikh saints, or *bhagats*, prevails widely (*ib.* vi. 1 ff.). One of the leading principles of the Lingayat sect in S. India is that between God and His worshipper no mediator is required, and that sacrifices, penances, pilgrimages, and fasts are unnecessary (*BG* xxii. [1884] 105; *Census of India*, 1901, vol. xxiv., Mysore Report, pt. i. p. 533).

12. Social aspect of pilgrimages.—The desire for change, the relief of the dull everyday life of the village, is an incentive to pilgrimage often stronger than religious enthusiasm. Hence women, who see little of the outer world, lose no opportunity of making these journeys. Trade is carried on at all the great religious fairs, where cattle, horses, elephants, and camels are readily bought and sold, and where women purchase their annual stock of necessities and trifles. This movement of the people on pilgrimage has done something to relieve the parochialism of village life; the possibility of meeting an out-caste in a crowded railway carriage weakens caste restrictions, while the need of food from uncertain sources diminishes some of the precautions which the Hindu by the rules of his caste is compelled to adopt. The improvement of communication by road and rail has certainly increased the numbers of pilgrims. But Brāhmins and other managers of sacred places assert that their profits have not increased with the larger crowds. The tendency now is naturally to visit the most sacred places, while those of less religious importance are neglected. The pilgrim makes a shorter visit, and the reaction against the influence of Brāhmins tends to reduce the amount of his benefactions. The chief danger from pilgrimages is the risk of the spread of epidemic disease, and on some occasions in recent years cholera seems to have spread into Central Asia and even into E. Europe and the Mediterranean area by contagion from pilgrims visiting Hardwār and other sacred places in N. India. The burden imposed on the executive and sanitary officials in managing crowds of excited peasants, ignorant of the elementary rules of sanitation, has become increasingly arduous.

LITERATURE.—There is no monograph on the subject of Hindu and Muhammadan pilgrimage. A full list of places of pilgrimage will be found in *IGI*, Index, s.v. 'Pilgrimages'; for Hindu pilgrimages see W. Ward, *A View of the History, Literature, and Mythology of the Hindus*, Serampore, 1818, ii. 324 ff., and elsewhere; W. J. Wilkins, *Modern Hinduism*, London, 1887, p. 240 ff.; for an interesting popular sketch see W. H. Sleeman, *Rambles and Recollections of an Indian Official*, Oxford, 1916, p. 585 ff.; for Madras, J. E. Padfield, *The Hindu at Home*, Madras, 1896, p. 174 ff.; for Muhammadan and Hindu pilgrimages in N. India see Abū al-Faḥl, *Ain-i-Akbari*, tr. H. S. Jarrett, Calcutta, 1878-94, iii. 303 ff.; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, Oxford, 1906, p. 597 ff.

W. CROCKE.

PILGRIMAGE (Japanese).—The practice of religious pilgrimage in Japan may be traced back to the 8th cent., when the Buddhist missionaries opened mountain passes and consecrated some of

the peaks to be places of worship (see art. MISSIONS [Buddhist], vol. viii. p. 704). In the course of the 9th and 10th centuries groups of mountaineering priests gradually established definite series of pilgrim itineraries. Legend has it that an emperor (reigned 984-985), in the distress occasioned by the death of his consort, left his palace and paid a visit, wearing monastic robes, to the thirty-three sanctuaries dedicated to Kwannon (Skṛ. Avalokiteśvara) in the central provinces. However this may be, we know that at the end of the 10th and the beginning of the 11th cent. frequent pilgrimages were made by the court nobles to Buddhist and Shintō temples (on the same itineraries), and that the pilgrimage to the thirty-three sanctuaries of Kwannon was, from the 15th cent., one of the most popular. In the former case the pilgrimage was combined with pleasure, and rhyming meetings were often held in front of the sanctuaries. In the latter case the pilgrimage was undertaken as an act of penance and accomplished by stiff climbing, for the majority of the thirty-three sanctuaries stood, and still stand, on hills or precipices—in accordance with the conception that the deity Kwannon looks down with compassion from on high upon the human world.

The pilgrim-bands to the thirty-three Kwannon sanctuaries consisted usually of a few persons, often a family, parents and children; they wore white robes, on which they received stamps of the various sanctuaries, and, while marching, they chanted hymns supposed to have been revealed by the respective deities of the places. At the places of pilgrimage acts of penance were performed, such as fasting, bathing in water-falls, and sleepless prayer. On the way the pilgrims subsisted on alms, and, when they died, they were tenderly buried by the villagers, these acts of protection to the pilgrims being considered of similar merit with the pilgrimage itself. The same may be said of all other religious pilgrimages, and that was the reason why, even in the ages of warfare and disturbance in the 15th and 16th centuries, the practice of pilgrimage came more and more into vogue, stimulated as it was by the sense of misery and by many distressing experiences. In these centuries, and more decidedly after the restoration of peace and order at the beginning of the 17th, the places of pilgrimage were multiplied enormously, being arranged in groups of from six to eighty-eight in number. Most of these were Buddhist sanctuaries dedicated to certain deities or connected with the life incidents of Buddhist saints. The distribution of the places in one group was various—sometimes limited to a certain locality, sometimes scattered over a wide area. Besides the places arranged in series there were several isolated ones, to which the pilgrims, in company or individually, paid a visit after long tiresome journeys.

A noteworthy feature in some of these pilgrimages was that they were practised as a kind of initiatory ceremony introducing young people to religious mysteries when they were entering adult life. Most pilgrimages of this kind were mountaineering trips over dales and precipices, paying homage at the sanctuaries erected here and there, and finally worshipping the chief deity enshrined on the summit. The pilgrims were guided by trained leaders, who were mostly regular mountaineering priests, and who directed the ceremonies. The most famous of the mountains visited were Kimpusen in Yamato, Ontaké in Shinano,¹ a group of three peaks in the north-east, the well-known Fuji, etc. Besides these and other Buddhist-Shintō sanctuaries there were several purely Buddhist or Shintō centres of pilgrimage, one of

¹ Percival Lowell, *Occult Japan*, Boston, 1896, a book chiefly based on the author's observations on Ontaké.

the most prominent being the temple of Isé dedicated to the sun-goddess. Every spring groups of pilgrims composed of young men and women made a journey of many days to it and paid homage to the supreme deity of Shintō. This pilgrimage to Isé had nothing austere in it, but was merely a pleasure trip. Yet sometimes a form of maniac frenzy took possession of many of the young people, who started on the journey without any money or provisions but were well provided for by alms. This pilgrimage and many others have, in the peaceful times since the 17th cent., more and more assumed the character of pleasure trips.

Besides the regular religious pilgrimages there was in Japan a curious kind of pilgrimage connected with poetry and romance. The classical poetry of Japan, dating chiefly from the four centuries from the 9th to the 12th, sang of places eminent for natural beauty (in many cases the poets did not compose their poems on the spots). In the course of time these places became the classical names for the respective excellences, such as Yoshino for the cherry-blossom, Sarashina for the moonlight in autumn, Fuji for snow, etc. The visit of poets to these places was called the pilgrimage to see the *utu-makura*, literally, 'the pillows of poetry'—the basis or source of poetic inspiration—and it was conducted with a certain amount of religious zeal or piety, as a cult of the beauty of nature. There was also a pilgrimage of romantic interest which consisted in paying visits to the places described in epic or romantic stories. In this case the pilgrims, whether individuals or parties, knew well enough that the stories were fictions, and yet they wandered among the mountains and forests and along the sea-coasts and streams mentioned in the stories, in order to keep alive their interest in the stories and heroes. This pilgrimage was less religious than the lyric pilgrimage, although some itinerant monks performed religious services on various spots in memory of the heroes or heroines who were said to have died there, as if their souls were still hovering about. Both of these pilgrimages have grown in fashion since the 17th cent. and have become more and more mere pleasure trips.

Another modification of pilgrimage was the wandering in search of one's enemy for the sake of revenge, for vendetta has been regarded, since the 14th cent., but more definitely since the 17th, as the duty of the son or brother of a murdered person. In this case the man aiming at revenge dressed himself as a pilgrim, and was, indeed, a true pilgrim, in so far as he naturally worshipped in various sanctuaries on his way and prayed for a speedy discovery of the enemy. The disguise of a pilgrim was also adopted by political or military spies, in this case serving a totally ulterior purpose.

Finally, we may add that pilgrimages, whether of an austere religious character or combined with pleasure, are much in vogue even to-day,¹ and that many pilgrims can be seen in the country districts marching along in the costumes that have been customary for pilgrims for centuries.

LITERATURE.—Besides works mentioned in article, see B. H. Chamberlain, *Things Japanese*,² London, 1905; *Encyclopedia Japonica* (Japanese), Tokyo, 1911, s.v. 'Jūrei'.

M. ANASAKI.

PILGRIM FATHERS.—The Pilgrim Fathers movement is one of the most cherished memories of British and American Christianity. It has (1) a religious, and (2) a political significance. As a religious movement, it rested on the supremacy of Jesus Christ in His own Church and the sufficiency of the Bible for all the purposes of Church rule and guidance, and it did much to restore these elements of a living religion to their proper place

in the Christian life of England. The experiment then made of relying solely on the constitutive and regulative power of the gospel in building a Church has been of great value. It has had an influence far beyond the limits of the Churches which inherit directly the Pilgrim tradition. The political importance of the movement lies in the fact that it was a conspicuous experiment in democracy conditioned by religious motives and restraints, so that democracy is seen at its best. C. Borgeaud (*Rise of Modern Democracy in Old and New England*, Eng. tr., London, 1894) has shown how the parent stem of democratic constitutions in England and in the United States is to be found in the Church covenants of Independent Churches—the line of descent being, in England, through the 'Agreement of the People' (1617) to the theory of the Social Contract, and the settlement of 1648, in America, through the contract first made in the cabin of the Mayflower to the constitutions of Connecticut, Massachusetts, and Rhode Island, and so to the constitution of the United States itself (see esp. Borgeaud, pp. 104-116, for summary of argument of the book).

1. Name.—The name 'Pilgrim Fathers' belongs properly to the company of exiles for conscience's sake who founded the settlement of New Plymouth, Massachusetts. The word 'pilgrim' is not used in the ecclesiastical sense of a visitor to a shrine, but in the original meaning as a wanderer in distant lands. It became familiar to the members of the Separatist Churches owing to their compulsory migrations from England to Holland and from place to place there. It was first used about the time when plans were discussed for leaving Leyden, and may be traced to the description in the Epistle to the Hebrews (11¹²⁻¹³) of those who 'seek a better country' as 'strangers and pilgrims on the earth.' The classic passage is in Bradford's *Hist. of Plymouth Plantation* (*Coll. of Mass. Hist. Soc.*), p. 59:

'And ye time being come that they must departe, they were accompanied with most of their brethren out of ye citie, unto a towne sundrie miles off, called Dorch-Haven, where the ship lay ready to receive them. So they betooke ye goods and possessions, which had been their resting place for 12 yeares. They saw how they were *persecuted*, and looked not much on their things, but all up their eyes to ye heavens, their dearest country, and quoted their songs.'

It is important to distinguish the Separatist Pilgrims from the colonists who founded the commonwealth of Massachusetts, with which their settlement was afterwards incorporated. The Separatist was the product of gathered churches formed on a basis of spiritual affinity and the acceptance of regulative Christian principle. The distinguishing features of the colony are found chiefly in the religious ideals which inspired the Pilgrims, the association of their religion with a democratic civil government, the character of the men who formed the settlement, and the social structure of a colony cemented by religious feeling and principle.

2. Origin.—The impulse which formed Separatist Churches came through zealous Puritan preachers, such as Richard Bernard, Thomas Toller, and Robert Gifford, who did not themselves become Separatists. Applying the principles learned from these men, a more resolute company in Gainsborough, Scrooby, and Austerfield formed communities of worshippers who bound themselves by 'express vocal' covenant 'as the Lord's free people, to walk together in all His ways, made known, or to be made known to them, according to their best endeavour, whatsoever it should cost them, the Lord assisting them' (quoted by John Brown, in *Early Independents*, p. 103; for other covenants see John Cotton, *The Way of the Churches of Christ in New England*, London, 1643, quoted in Borgeaud, p. 82; and for the covenant of Salem

¹ Cf. E. F. Calthrop, 'Pilgrimage in Tokyo,' in *Proceedings of Japan Society* (London).

see Mather, *Magnalia*, i. 18, quoted in Brown, *Pilgrim Fathers of New England*, p. 286). Their aim was to constitute a Church on the lines of the NT, and they separated from the Church by law established, because (1) 'the profane and ungodly multitude' was admitted to communion; (2) the 'various ecclesiastical offices and callings, courts and canons were unlawful and unchristian, and had no warrant in the Word of God'; and (3) the Church was 'in subjection unto an antichristian and ungodly government, clean contrary to the institution of our Saviour Christ' (Harl. MSS 360, fol. 70, quoted in Brown, p. 85).

For about ten years from 1590 there was one church formed on these principles worshipping in Gainsborough. When its numbers increased and the members from the surrounding district found the distance too great, a second church was formed at Scrooby, meeting in the house of William Brewster, an ancient manor-house which had once belonged to the archbishops of York. The pastor was Richard Clyfton, formerly a Puritan rector of Balworth in Lincolnshire, 'a grave and reverend preacher, who by his paines and diligens had done much good, and under God had been a means of ye conversion of many' (Bradford, p. 10).

3. Leading personalities.—*Robert Browne* (1550–1633).—See art. BROWNIISM.

Barrowe, Greenwood, and Penry.—In 1592–93 Henry Barrowe (Clare Hall, Cambridge, 1570, Gray's Inn, 1576), a converted barrister, John Greenwood, a Cambridge graduate (Corpus, 1581), and John Penry (b. 1559, executed 1593), a Welshman and Cambridge graduate (Peterhouse, 1580), were put to death for refusing to abjure Brownist principles at the bidding of Archbishop Whitgift. The Conventicle Act of 1593 provided that persons above the age of sixteen who refused to repair to church as by law established, or attended a conventicle, should be imprisoned, and, if they failed to conform in three months, should be banished from the realm. If they returned, they should be hanged. That act led to the migration to Amsterdam and Leyden, and eventually to Massachusetts. Barrowe left his property to the church of which he had been a member, and with the help of his legacy most of the members were able to emigrate to Holland in 1593. They settled first at Kampen and then at Narden on the Zuyder Zee, where they were so needy that the magistrates voted a small sum of money for their relief. In 1595 they were settled at Amsterdam.

Francis Johnson (1562–1618).—The pastor of the 'Ancient Church' in London—by 'ancient' the Brownists meant 'primitive'—was Francis Johnson, formerly a Fellow of Christ's College, Cambridge (1584, M.A. 1585), and a popular Puritan preacher. He was expelled from the university, and imprisoned, for a sermon preached at St. Mary's, maintaining Presbyterianism to be of divine right, liberated on the petition of 68 members of the university, and allowed to emigrate to Middelburg (1589–92), where he became pastor of a Puritan church. His conversion to Separatist principles was due to a book by Barrowe and Greenwood sent out in 1591 from the Fleet prison, named *A Plaine Refutation of M. Giffard's Booke, intituled A short Treatise against the Donatistes of England*. Johnson was authorized by the magistrates of Dort, where the book was printed, to confiscate the whole impression. He publicly burned all but two copies. Taking up one of these 'to see their errors,' he was convinced by its argument, gave up his pastorate, and visited Barrowe in prison. He then joined the Separatist Church in London and became its pastor. When his flock emigrated, he was left behind in prison, and it was not until 1597 that he rejoined them and

resumed the pastorate. He had meanwhile made a voyage in the Hopewell to the Gulf of St. Lawrence, but was obliged to return to Amsterdam owing to the misfortunes that overtook his ship.

Johnson's autocratic temper led to some unfortunate disputes in the church of which he was pastor, the more discreditable that they were largely personal, concerned with his wife's dress and the criticisms of his brother George. Johnson aimed at intra-congregational Presbyterianism, maintaining that 'a body of simple church members, aggregated without Elders, had no power except to elect Elders. It could not even ordain them. It could not excommunicate an erring and unrepentant member' (H. M. Dexter, *Congregationalism of the last Three Hundred Years*, p. 326).

Henry Ainsworth (1571–1623) became a scholar of Caius College, Cambridge, in 1587. In 1593 we find him serving as a bookseller's porter in Amsterdam and a professed Brownist. He was a man of sensitive, scholarly temperament, and played an important part in the history of the church at Amsterdam, where for a time he held the office of teacher under Francis Johnson. No fewer than 23 treatises came from his pen between 1598 and 1641 (see Dexter, p. 346), of which perhaps the best known are the *Counterpoison* and the *Apologie or Defence of such true Christians as are commonly (but unjustly) called Brownists; against such imputations as are laid upon them by the Heads and Doctors of the University of Oxford*, which he, jointly with Francis Johnson, prepared for presentation to James I. and afterwards published in 1604 (*ib.* pp. 306–309). He was a man of wide and accurate learning, especially eminent as an Orientalist and commentator on the OT. Beginning in 1616, he published annually a book of annotations on the five books of Moses, the Psalms, and the Song of Solomon, which were greatly admired by the Hebrew scholars in the university of Leyden:

'They thought he had not his better for the Hebrew tongue in the University, nor scarce in Europe' (quoted in Mackennal, *English Separatists*, p. 209).

He gave up the allegorizing method of exegesis which was then general, in favour of the more modern method. His commentaries were thought worthy of republication in Edinburgh as late as 1843. Many unverifiable stories are told of Ainsworth in Amsterdam, illustrating his poverty, piety, learning, and Christian conviction. He was chosen pastor of the church at Amsterdam during the absence of Francis Johnson in Newfoundland, and later, when Johnson's autocratic rule had made unity impossible, Ainsworth withdrew. The dispute began with a discussion on the power of excommunication, in which Ainsworth maintained, against Johnson, that the power belonged to the congregation as a whole and was not to be used by the elders and officers alone. In 1610 Ainsworth and thirty others who shared his views formed a third Congregational church in Amsterdam.

D. Neal's story of Ainsworth's death is as follows:

'It is reported, that having found a diamond of very great value in the streets of Amsterdam, he advertised it in print, and when the owner, who was a Jew, came to demand it, he offered him any acknowledgment he would desire; but Ainsworth, though poor, would accept of nothing but a conference with some of his rabbies upon the prophecies of the Old Testament relating to the Messiah, which the other promised; but not having interest enough to obtain it, and Ainsworth being resolute, it is thought he was poisoned' (*Hist. of the Puritans*, London, 1887, i. 421).

John Robinson (1576–1625) entered Corpus Christi College, Cambridge, in 1592 and became Fellow in 1599. For four following years he appears to have been a lecturer or preacher in Norwich, where he was 'worthily revered of all the city for the grace of God in him' (Ainsworth,

Counterpoison). He records his own unwillingness to break with the Puritan ministry:

'Had not the truth been in my heart as a burning fire shut up in my bones, Jer. xx. 9, I had never broken those bonds of flesh and blood' (*Works*, ed. R. Ashton, London, 1851, II. 52).

In 1603 or 1604 he was suspended for his disregard of conformity, and united himself to the church at Gainsborough. He accompanied the members of the Scrooby church to Amsterdam, expecting to join with the church already established there. They found that church troubled by dissensions about its own discipline, and decided to go on to Leyden. In the Amsterdam discussion Robinson sided with Ainsworth against John Smith, Thomas Helwys, and Francis Johnson, who were Presbyterianizing the internal government of the church. Robinson published a moderate and able statement of the Congregational position, rejecting all sectarian names and maintaining simply its justification as an original Christian type. In Leyden Robinson was admitted to the university in Sept. 1615, where he attended lectures by Episcopius and Polyander. An attempt has been made on very slight grounds to discredit the account of a debate between Robinson and Episcopius, in which Robinson defended Calvinism against the famous Arminian. Bradford's account of the debate (p. 21) is partisan, but obviously reliable, and the debate accounts for the position which Robinson holds in the Dutch records of the Pilgrim church. From this time the Independents in Leyden were known as 'Robinsonians.' A debate with Episcopius on a theological subject had all the ardours of a political contest, for the Remonstrants, who were Arminians, followed John of Barneveldt, who wanted an Erastian National Church and was in favour of the unpopular truce with Spain. The Contra-Remonstrants, who were Calvinists, were on the side of Prince Maurice—in favour of a free Church in a free State, and bent on continuing war against Spain.

Robinson's published writings are the most authoritative, balanced, scholarly, and positive statement of Separatist principles that we have. They combine the claim for liberty of worship with catholicity of feeling and belief. He debates counsels of peace, considers dissuasions against Separation, discusses reasons against it, confutes errors alleged to be held by Separatists, and deals with the nature of Christian fellowship. His teachings may be said to have leavened all Churches with the idea that spiritual affinity is the basis of Christian fellowship. In 1617 he joined with Brewster, who was associated with him as elder of the church in Leyden, in presenting 'seven articles' to the Privy Council, detailing the ecclesiastical position of the Pilgrims, in order to satisfy the Lords of the Council that they were proper persons to settle in Virginia. From that time till the actual migration in the Mayflower (1620) he was a leader in the correspondence with Sir Edwin Sandys and the negotiations with the Merchant Adventurers. It was in Robinson's clear mind that the reasons against settlement in Holland first took definite form. The Pilgrims cherished loyal attachment to the British crown and wished to live under it; their children were being drawn into service as soldiers and sailors under the Dutch government; the difficulty of earning a respectable living in Holland prevented other Englishmen from joining them, and they had 'a great hope and inward zeal of laying some good foundation or at least to make some way thereunto for ye propagating and advancing the gospel of the Kingdom of Christ in those remote parts of earth; yea, though they should be but even as stepping-stones unto others for ye performing of so great a work' (Bradford, p. 24).

The facts as to Robinson's famous address to the departing Pilgrims are as follow.

That address appears first in a brief narrative attached to Edward Winslow's *Hypocritie Unmasked*, published in 1646, i.e. 26 years after the time when it was spoken. Winslow says: Robinson 'used these expressions or to the same purpose' (*A Brief Narration*, p. 98). Bradford, in his *History of Plymouth Plantation*, makes no quotation from this address, nor does Morton mention it in his *New England's Memorials*, published in 1689. Cotton Mather, writing in 1702 (*Magnalia Christi Americana*), turns the address into the first person, and changes 'ere long' into 'quickly.' It seems probable that the address embodies the substance of a sermon preached on Err 34, mentioned by Bradford as following a day of solemn humiliation. Bradford says that 'he spent a good part of the day privately and suitable to their present occasion' (p. 59). Dexter (pp. 497-499) thinks that the famous words, 'He was very careful that the Lord had more truth and light yet to be the forth of it in his Word,' refer to polity, and not to doctrine. He defends this interpretation on the ground that this alone explains Winslow's quotation in a pamphlet defending the Pilgrims' letters from Separatist exclusiveness. The attempt to describe the address as being beyond Robinson's powers, as shown in his other writings, is one of the extravaganzas of that rival criticism. It is more within Robinson's scope than that of any other of the Pilgrims or founders of New Plymouth. The fact that the speech was duly recorded when it occurred speaks in value to the needs of the colony as in the line of experience in matters ecclesiastical and political. Such records are sometimes verbatim, and almost always substantially, accurate.

With regard to the Church of England, Robinson was classed as a Semi-Separatist, Semiist, or Independent, because he 'approved of communion with the Church of England, in the hearing of the word and prayer (though not in sacraments and discipline)' (John Shaw's *MS Advice to his Son*, 1654, quoted in *DNB*, art. 'Robinson, John'). He also approved of 'private communion' with godly members of the Church of England, and he preached the lawfulness of attending Anglican services as early as July 1617. He left a MS on the *Lawfulness of Hearing of the Ministers in the Church of England*, which was found in his study after his death and published in 1634. Robert Baillie (1569-1662), the Presbyterian, writes that Robinson was 'the most learned, polished, and modest spirit that ever that sect [Independents] enjoyed' (*A Discursive from the Errors of the Time*, London, 1615, p. 17). The English government prevented Robinson from joining the Pilgrims in the Mayflower owing to his authoritative influence with them, and, before the embargo was withdrawn, Robinson died (1st March 1625), after an illness of eight days. In 1891 the National Council of Congregational Churches of the United States affixed a memorial on the outside wall of the Pieterskerk in the Kloosteg opposite the site of Robinson's house in Leyden.

William Bradford (1590-1657) is the historian of the Pilgrim colony. He was born at Austerfield, in York-shire, and became a friend of William Brewster, who was 23 years his senior. He joined the Brownists in 1606, followed the Scrooby exiles to Amsterdam in 1607, and accompanied them to Leyden in 1609. He is entered in the books there as a fustian-weaver. He was one of the signatories of the letter from Leyden to Carver and Cushman in England in June 1620. In the same year he sailed in the Mayflower, and unfortunately, while he was on an exploring expedition, he lost his first wife, Dorothy May (of Wichech, Cambridgeshire), by drowning, while the ship lay in Cape Cod harbour. Chosen governor of New Plymouth in 1621, he was re-elected every year (with exceptions at his own request) for twelve years till he 'by importunity got off' (*Hist. of Plymouth Plantation*, p. 307). He had literary and methodical habits which make his record of the doings of the Pilgrims of great value. His history of the passengers in the Mayflower, with personal notes, is priceless to the American genealogist. He left in MS a full *History of Plymouth Plantation*, which lay unidentified for many years in Lambeth Palace library, till it was recognized by Joseph Hunter,

and published by the Massachusetts Historical Society. Bradford began his history, which he modestly calls 'these scribbled writings,' in 1630 'and so pieced up at times of leisure afterward' (p. 6). The last sentence was written in 1650, when the narrative stops abruptly without any formal ending.

Miles (or Myles) Standish (1584-1656) was the soldier of the Pilgrim movement. He came of a Lancashire family, the Standishes of Standish, and had served in the Netherlands before 1602. Longfellow, who has popularized in verse the story of his courtship, says that he could trace his pedigree plainly back to Hugh Standish of Duxbury Hall in Lancashire, England, and that he was heir to vast estates, of which he was basely defrauded. Duxbury Hall is between Wigan and Chorley, lying off the highway, and it is true that a page in the registers of the parish church for 1534, the supposed year of Myles Standish's birth, shows signs of having been tampered with. He became friendly with the exiles in Leyden, and, though probably not a member of the church, he went with the Pilgrims as a military protector. He was chosen military captain of the colony, and did much to secure its safety by his rapid and skilful measures of defence against the Indians. The estates of Duxbury, New England, where he died in 1656, are still the property of his descendants. His force of character and romantic career have made him a favourite with poets and novelists.

Edward Winslow (1595-1655) of Droitwich was, according to Hutchinson, 'of a very reputable family and of a very active genius' (quoted in *Chronicles of the Pilgrim Fathers*, p. 269). He happened to pass through Leyden on his travels, and was so impressed with what he saw of the life of the Christian brotherhood there that he identified himself with them, and eventually went with the emigrants in 1620. Twenty-five years later he wrote:

'I persuade myself never people upon earth lived more lovingly together and parted more sweetly than we the Church at Leyden did; parting not rashly in a distracted humour, but upon joint and serious deliberation, often seeking the mind of God by fasting and prayer, whose gracious presence was not only found with us, but His blessing upon us from that time until now' (Young, *Chronicles of the Pilgrim Fathers*, p. 380).

His name stands third among the signers of the compact on board the Mayflower. He was in England as agent for the colony in 1623-24, and for Plymouth and the Massachusetts settlement in 1635. In 1646 he was chosen to rebut in England the charges against the colonists of religious intolerance and persecution. He died at sea on an expedition against the Spaniards in the W. Indies.

Other eminent men among the Pilgrims were:

John Carver (1575-1621), an English Puritan, who, having been chosen deacon in the church at Leyden, sailed in the Mayflower, and was made first governor of New Plymouth.

Thomas Brewer, a wealthy Puritan from Kent, who established himself as a printer in Leyden. Persecution followed him thither, and drove him to join the Pilgrims, where he was associated with William Brewster in printing and publishing several important documents.

Robert Cushman, who was closely associated with Carver in the business arrangements of the new colony. He accompanied the Pilgrims as far as Plymouth, England, but remained in England to act as their agent. In 1621 he was in the new colony.

4. The Pilgrim company in Leyden.—The piety of New England descendants of the Pilgrim Fathers has moved them to investigate every record of the sojourn of the exiled Pilgrim colony in Holland. A list of the Pilgrim company in Leyden,

compiled by H. M. and M. Dexter and published in their *England and Holland of the Pilgrims*, contains 584 names, including children. The majority of these were men and women in the common walks of life. Between 7th Nov. 1598 and 4th Jan. 1617, the names of 118 Englishmen occur in the marriage records of Amsterdam.

Of these 102 have recorded their occupations: 38 are fustian-workers, six are tailors, four are glovers, three are masons, and two are classed in each of the following trades: bombazine-finishers, button-makers, chandlers, cutters, damask-weavers, embroiderers, hodmen, schoolmasters, smiths, trunk-makers, and turners. Besides these, 28 trades or professions are represented by one barber, carpenter, cobbler, compositor, cooper, draper, engraver, fireman, furrier, goldsmith, hat-dresser, ligature-worker, mercer, minister, painter, pewterer, physician, printer, sailors' barber, seaman, sheath-maker, silk-ribbon-weaver, smith's journeyman, Spanish-chair-maker, sword-cutter, tobacco-pipe-maker, turner in ivory, and wood-sawyer.

These are typical of the whole company, apart from the leaders. They were people of good sense, native intelligence, solid habits of industry, frugality, and self-reliance, and with some education in the primary sense. They were not trained by the experience of high commerce to take large risks, nor by the owning of land to the duties of rule and government. The eminent qualities needed to explain their great venture are a regnant conscience and a wide apprehension of the presence and will of God, making everything else second to the supreme endeavour to get God's will done on earth as in heaven; and these are the qualities which come out in their later history in New England. With the increasing complexity of social life, they found it difficult to agree on methods of determining the will of God in their circumstances, and this led to an increasing reliance on democratic methods and measures.

5. The Pilgrim migration.—The Separatist church existed for eight or nine years in Leyden, marked chiefly by the sustaining and conciliatory ministry of John Robinson. But it was not possible for its members to remain there. Their children began to drift into the habits and customs of the young Hollanders, and the elders realized that the next generation would probably have lost distinctive character. They had no identity of interest with the country in which they were living, and, above all, they realized that Holland offered no scope for their providential calling. They believed that it was their lot to lay the foundations of a Church and to advance the Kingdom of God in some remote part of the world. It was not enough to have 'freedom to worship God.' Their principles were constructive, and they wanted a fair field for their exercise. Robinson and Brewster privately discussed the idea of removal to America—New England or Virginia. It was then made public, and, after much discussion between enthusiastic optimists and fearful pessimists, the enthusiasts carried the day. The period of negotiations for starting a colony in New England was protracted and dreary, extending from 1617 to the sailing of the Mayflower in 1620. The usual method of launching a colony was for a company to secure a patent—or charter—from the king. The Pilgrims applied to the London Virginia Company, which numbered among its councillors Brewster's friend, Sir Edwin Sandys. But the company was torn by dissensions; and the Pilgrims' agents, John Carver and Robert Cushman, found it almost impossible to get their business through. More than once negotiations were on the point of being dropped. The church had hoped to have the right of liberty of religion granted to them and confirmed under the king's seal; but the king refused this, although he promised not to molest them if they were peaceable. When, on 19th June 1619, a patent was at last granted by the London Virginia Company and confirmed under

the company's seal, it was found that no financial help was forthcoming, for the company was penniless. At one point the problem of securing help seemed so hopeless that the church entered into treaty with some Dutch merchants who were willing to transport them to the Hudson river and to provide them with cattle if they came under the Dutch government. In this extremity help came from one Thomas Weston, a London merchant, who visited the church in Leyden. He and some Merchant Adventurers, who were his friends, had taken out a patent from the Virginia Company in the name of John Pierce, and offered to advance money to supplement what the Pilgrims had and to supply them with shipping. Articles of agreement were drawn up in London, but afterwards altered in favour of the Adventurers—much to the confusion of Cushman, who had to accept what he could get lest he should lose their help altogether. At last, as the summer of 1620 threatened to pass with nothing done, a great effort was made to speed preparations, and two ships were got ready—the *Speedwell*, a pinnacle of 60 tons, bought and fitted in Holland, and the *Mayflower*, a vessel of 180 tons, hired and fitted in London.

The departure from Leyden, which is immortalized in poetic and pictorial art, is the departure of the *Speedwell* from Delfshaven. A day of humiliation was appointed by the Leyden church. John Robinson gave the farewell address from the text *Ezr 8*²¹: 'Then I proclaimed a fast there by the river Ahava, that we might afflict ourselves before our God, to seek of him a right way for us, and for our little ones, and for all our substance.' It was on this occasion that he used the words afterwards recorded by Winslow. A small majority of the church had decided to stay behind, and by agreement the pastor was to stay with the majority. They accompanied the rest to Delfshaven, and committed them affectionately to the care of Almighty God. The *Speedwell* arrived at Southampton on 5th August, and was there met by the *Mayflower*, which had sailed from London with the rest of the company.

Difficulties still awaited them. There were financial difficulties with Weston, as the body of Pilgrims refused to sign the altered articles, and he refused to give them money that they had expected. They had to part with their stock of butter to clear their debts in Southampton. When the two ships at last got away, it was found that the *Speedwell* was leaky. She had been over-masted and had strained her timbers. The ships put back to Plymouth, where the Barbican quay which they used is still pointed out. The *Mayflower* took on board the most effective part of the *Speedwell's* company and the latter ship was then dismissed. Among those who remained (about eighteen in all) was Cushman, who despaired of the voyage, but later recovered courage and joined the colony, where he did good service. After a voyage of nine weeks in a crowded vessel, which encountered the usual autumn storms of the Atlantic, the Pilgrims were overjoyed to sight land on 19th November. They recognized the headland as Cape Cod. Passengers and officers consulted together and decided to sail southward towards the Hudson river in the direction of the land secured by their patent. But the ship was entangled in dangerous shoals and currents, the wind failed them, and they made back to Cape Cod. The change in their destination brought with it some dangers. The Virginia Company had no rights in New England. Their patent, therefore, had no authority and could confer none. To avoid the risks of disorder under these altered circumstances, the adult males were called into the cabin of the *Mayflower* and all signed the memorable compact

which became the basis of the constitution of the colony:

'In y^e name of God, Amen. We whose names are under-written, the loyal subjects of our dread sovereign Lord, King James, by y^e grace of God, of Great Britaine, Fraunce and Ireland King, defender of y^e faith, etc., having undertaken, for y^e glory of God and advancemente of y^e Christian faith, and honour of our King and countrey, a voyage to plant y^e first colonie in y^e Northern parts of Virginia, doe by these presents solemnly and mutually in y^e presence of God, and of one another, covenant and combine our selves together into a civill body politick, for our better ordering and preservation and furtherance of y^e ends aforesaid; and by vertue hereof to enacte, constitute and frame such just and equall lawes, ordinances, acts, constitutions and offices from time to time, as shall be thought most meete and convenient for y^e generall good of y^e Colonie, unto which we promise all due submision and obedience. In Witnes whereof we have hereunder subscribed our names at Cape Codd the 11 of November, in y^e year of y^e said our sovereign Lord, King James of England, France and Ireland y^e eighteenth, and of Scotland y^e fiftie-fourth, Anno Dom. 1620' (Brown, p. 201 f.).

Then follow forty-one names—the most notable list of names in the history of New England.

The landing of the Pilgrims by Plymouth Rock, as they called the solitary rock which marks the sandy shore, ended one series of troubles. The problems that they had now to meet were those of a new settlement, wrestling at first a bare living from nature in a severe climate and surrounded by watchful enemies. That the faith and courage of the little community were sufficient to meet and overcome these difficulties was largely due to the severe school of experience through which they had already passed successfully.

6. The Plymouth colony, Massachusetts. As with most communities starting on a religious basis, the methods of the Pilgrim colony were at first communistic. The capital for starting the colony had been advanced by the Merchant Adventurers—a commercial undertaking, whose profits were to be derived from the sale of beaver-skins, timber, etc., collected and sent over by the colonists. The Plymouth settlement agreed that all the profits of trade and labour were to be held in common till the end of seven years, and no individual enterprise could be started by the planters for their own benefit. The land system was completely communistic, all the land being the property of the community and all the labour expended on it being for the common good. The people were conscientious and public-spirited, full of sympathy and mutual helpfulness, but, in spite of this, their honest effort at communism broke down. Men disliked the fact that their wives had to work for other men, and complained that, as they could not command the labour of their own servants, the servants that they had brought with them were a burden without corresponding compensation. In the spring of the third year each man was given a small plot of corn-growing land for himself. The allotment was only for present use, not for inheritance; but the value of the additional incentive was at once felt. The men worked harder, and women and children went willingly to work on their own piece of land.

The following summary of the economic system of Plymouth Plantation is supplied by C. W. Eliot:

The Pilgrims were plain, labouring people who all worked with their hands and expected to get their living as 'planters.' They made their living by farming, fishing, hunting, and practising the elementary trades of a new settlement. . . . They sailed from England under articles of agreement at which were registered the proceedings of a joint stock company, the shares of which were held by two classes of persons, one called 'adventurers' and the other 'planters.' The adventurers merely put capital into the outfitting of the expedition. The planters were persons who crossed the ocean and were to bear the hardships and labours of the expedition. The planters might or might not put capital into the venture. Some did acquire shares in the joint stock company as adventurers by putting in money or money's worth in goods; but the greater part did not hold shares except as planters. Every planter aged sixteen years and upwards received on going a single share in the stock company rated at ten pounds. A planter who carried

with him his wife and children or servants was allowed a share in the company for every person sixteen years old and upwards and for every two children between ten and sixteen years old. Every child under ten who went in the ship was to receive in the ultimate division of the holdings of the company fifty acres of unmanured land. All the planters were to be fed and clothed out of the common stock and goods of the company. Each planter was to work four days in each week for the company, and two for himself and family. At the end of seven years each planter, head of a family or a group, should own the house and garden land occupied by him and his. The undertaking entered into on these terms was a strong case of co-operation and co-operative management for a short term of years, with acquisition by every head of a family, at the end of that short term, of a house and garden (*The Road toward Peace*, p. 169 f.).

For the protection of the colony, every able-bodied citizen was expected to bear arms. Every youth learnt the use of the simple weapons which were then available for the chase and for war. The Pilgrims started the New England muster and military system, prototype of the admirable military organization of republican Switzerland (*ib.* p. 174).

In the fourth year the communal system was still further abandoned. A piece of land was granted in perpetuity to each family in the proportion of one acre to every person, as near to the town as might be. Gradually room had to be made for the encouragement of enterprise in the collection of furs. In 1626 the Merchant Adventurers sold their rights in the plantation to Isaac Allerton and some associates for £1800. All 'heads of families and able young men of the colony' then became partners. The land and cattle were divided, and each received by lot twenty acres of land. Bradford, Allerton, Standish, Winslow, Brewster, and three others accepted responsibility for the debts of the colony, and hired the trade of the whole community for a term of years to enable them to discharge the debts. The community then definitely broke with its communistic tradition and entered on that capitalistic phase of social organization which is still an outstanding feature of American life.

A reply to critics.—The charge most frequently levelled against the Pilgrim colony is that of illiberality. It is urged that they adopted the very methods which had driven them out of England. John Lyford, who had been sent out by the London Merchants as a clergyman, was sent home for trying to set up the ritual of the Church of England, though his offence was confined to occasional use of the Prayer Book. They persecuted Roger Williams and drove him out to become the founder of Rhode Island. They severely repressed the Quakers, and they were guilty of the confusion of Church and State functions against which they had protested in England.

The reply to this charge is twofold. (1) In the early days of the colony it existed in the midst of enemies. Its Brownist reputation exposed it to constant criticism both from England and from other colonies on the Atlantic seaboard. Its very existence depended on maintaining the purity of its own communion and its solidarity in the face of hostility. Bradford's conduct towards Roger Williams was personally merciful and considerate. He regarded him as a man 'godly and zealous . . . but very unsettled in judgement' (p. 310), and this was true. Williams was allowed to go to Rhode Island, which was within the Plymouth patent. In each case of so-called persecution other elements were involved besides those of religious opinion. Action was taken on the ground of civil order rather than religion. The colony could not afford to be hospitable to divergences of conduct which would break up its solidarity. Measures of caution even carried to the point of excess were preferable, in the interests of public policy, to taking risks which might jeopardize the main witness and even the existence of the colony.

(2) Another line of reply is that Plymouth, in virtue of its democratic method, contained the remedy for its own mistakes. The argument for

democratic liberalism is not that it will always be right, but that, when it goes wrong, it can right itself. An authoritative autocratic government is necessarily dogmatic, and, having gone wrong in a matter of judgment or policy, generally makes the wrong worse by using force to make the wrong appear right. Thus it goes from bad to worse and hastens to a catastrophe. A democratic government may make as many mistakes as an autocratic government, but the mistake, once discovered, is easily repudiated and remedied by a change of leaders and of policy. The appeal in democracy is always to some principle of reason and justice within the minds of the people, and the democratic method is the surest way of allowing that principle to assert itself. The Plymouth colony was responsible for acts that in the modern judgment, though not in its own, were illiberal, but it was never illiberal in principle. It worked out in its own way a distinction between civil and religious policy, and ultimately established a much greater freedom of individual opinion than England has yet achieved. It led the way towards the discovery that in order to live peaceably and helpfully beside each other it is only necessary that men should cherish the same ideals of public liberty, public justice, and co-operative management.

The Pilgrim colony—Plymouth—existed as a separate State only from 1620 to 1691, when it was incorporated with Massachusetts. By far the most important part of its history is included in the years before 1660. During the years 1620-60 it was under the leadership of such men as Bradford, Standish, and Brewster, and its influence was due to the precedents laid down by these outstanding personalities. For more than thirty years Plymouth was fortunate in enjoying the benefits of democracy without its drawbacks. The disadvantages of popular rule are well known: it tends to be unstable; it lacks authority; it encourages place-seeking and popularity-hunting, and sets a premium on self-advertisement. From all these Plymouth was saved by the massive character of its first leader, Bradford. He held office without salary, and so stimulated public spirit. He promoted unity in the colonial government by maintaining the pre-eminence of Plymouth and by supervising the growing townships. He gave stability to the government by preventing it from going to extremes, and he introduced social and philanthropic reforms so far in advance of the general custom in England that many have attributed them to his sojourn in Leyden, when he may have reaped the benefits of centuries of Dutch experience. So consistently was Bradford elected to the post of governor that the colony is perhaps best pictured as a large family over which this wise leader presided with paternal authority. With the exception of about five years, when at his request Winslow or Prince held office, Bradford was governor from 1621 till his death in 1657.

During his long period of office the characteristic features of the Pilgrim spirit in public affairs had time to get well established, such as local self-government based on the primary or township meeting, elective unpaid officials, State registration of births, deaths, and marriages, the registration of land transfers, State schools and pensions. The foundation of Harvard University was begun in 1636 by John Harvard, a citizen of Massachusetts, a 'godly gentleman and a lover of learning who gave one half of his estate, it being in all about one thousand seven hundred pounds, towards the erecting of a college, and all his library' (*Chron. of the Pilgrim Fathers*, p. 142). His foundation was made effective by gifts from New England towns which gave them a voice in the administration of its affairs. The public hand of the State added

the rest (Hunter, *Collections*, i. 242). The importance of those methods lies not in their local value, but in their having created a type that was imitated far and wide as settlements multiplied and colonization spread over the hinterland behind Plymouth.

7. *Survivals of Pilgrim influence.*—Heroic figures in the dawn of a nation's history constitute one of its most precious assets. Such figures are the Pilgrim settlers as they stand out against the background of battle with nature and unsympathetic governments, inspired only by great principles and a great religion. Americans have learned to treasure the memory of the men of the Pilgrim migration, and both directly and indirectly the influence of these men may be traced in the national ideals. At Plymouth in Massachusetts an obelisk commemorates the landing of the Pilgrims. The original rock on which they landed is enclosed to prevent curio-hunters from carrying away mementos. Articles of furniture belonging to the Pilgrims are preserved in a special museum. The names and genealogies of the Mayflower families are carefully preserved. A society of Americans in England is known as 'the Pilgrims,' and it has recently co-operated in the erection of a beautiful minaret at Southampton marking the spot from which the Pilgrims sailed. In the Pilgrim clubs, such as that of Philadelphia, which hold an annual dinner, diminutive models of the Mayflower are distributed to the guests; and the heroic virtues of the Pilgrims still appear in post-prandial perorations. The religious significance of the Pilgrim migration gives way on such occasions to their importance as national founders and pioneers.

More significant are such institutions as Thanksgiving Day—26th Nov.—which commemorates a turning-point in the experience of the first settlers. In October of each year the President of the United States issues a proclamation recalling occasions for special thanksgiving and recognizing providential guidance in the events of the year. The governor of each State issues a proclamation for his own State with the same general object. The people are invited to spend a day of thanksgiving on the date mentioned. Either on this day or, more commonly, on the preceding evening public and united services are held, at which an address is given on the religious significance of some public event. This is probably one of the most genuine illustrations of national religion in any country, and its general observance is the more notable as there is no Established Church in any State. It is an adequate illustration of the observance of national religion without an Established Church. 'Forefathers' Day,' which celebrates the landing of the Pilgrims at Plymouth, is also observed annually on 22nd Dec., though 21st Dec. (new style) more accurately represents the date of the event.

The Pilgrim colony of Plymouth exercised an influence out of proportion to its numbers on New England States with which it was incorporated, and that influence was specially marked in the direction of (1) *self-government*. The tradition of the other colonies, such as Massachusetts, had more of the old-world reliance on authority, tradition, and force. The Pilgrim colony had been founded on the basis of self-government, and, although everything was done in the king's name, it was both in principle and in effect left to evolve its destiny from its own resources. It is to the relative success of these experiments that America owes its unbounded faith in the adequacy of democracy for the guidance of the affairs of a nation.

(2) Although the Pilgrims were compelled to defend themselves by the use of arms, their principles were *peace principles*. Their first effort was

to live at peace with their neighbours. If other white men had not disturbed their relations with the Indians, they might have continued free from the disturbances of war. They never left peace for war willingly and without regret. This original bias in favour of peace methods has grown stronger with the history of the States, and has left its mark in the fact that America had at the beginning of the present century the smallest army in proportion to its population of any nation in the world. Its long frontier with Canada had known no fort and only one ship of war for a century. American influence in Europe is thrown consistently on the side of peace. The peace treaties of President Woodrow Wilson's Democratic Government are the most careful and ingenious instrument yet devised by any nation for the settlement of disputes without resort to the final arbitrament of war.

(3) The special genius of the American people is a singular combination of *practical philanthropy and commercial shrewdness*. It is weak on the side of governmental co-ordination, strong on the side of individual initiative and personal development. It regards education up to the university standard as a right of the American born, and relies on education as the principal method of producing national unity and patriotism. It has profound confidence in its own standards of value, and is generously active in promoting philanthropy and Christian missions. It is strongly averse to class distinction, and accepts alien immigration so long as the immigrants conform to American standards of citizenship. In spite of numerous personal eccentricities, the general standards of morality are Puritan. The relations of the sexes are natural and healthy, and a 'New England conscience' is a synonym for an exact moral rectitude that produces a high level of personal character. It would be fanciful to trace all these characteristics to one origin, but undoubtedly they have flourished in America owing to the fact that Separatist Puritanism was hospitable to those features of human progress and hostile to the opposing influences. Democracy in America is not quite so triumphant over all the evils of the Old World as some of its advocates have claimed, but it has encountered so many difficulties in its course with success that it has reasonable confidence that it will be found adequate in meeting the remainder.

LITERATURE.—I. *REPRINTS OF ORIGINAL DOCUMENTS*.—*Chronicles of the Pilgrim Fathers*, with introd. by John Massieff ('Everyman's Library'), London, 1910, contains Nathaniel Morton's *New England's Memorial* and supplement, Robert Cushman's *Discourse*, John Smith's *New England's Trials*, and Edward Winslow's *Relation and Brief Narrative* (all except *New England's Trials* reprinted from the ed. of the B. C. Congregational Board of Publication); William Bradford's journal, *The Hist. of Plymouth Plantation*, Massachusetts Historical Society, Boston, 1856 (ed. V. Faget, *Bradford's Hist. of the Plymouth Settlement*, London, 1909); William Brewster, *Letter Book*, Massachusetts Historical Society, Boston, 1794; G. Mount, *Relation*, with introd. and notes by H. M. Bretcy, do. 1906; S. Purchas, *Hakluytus Posthumus or Purchas His Pilgrimes*, Glasgow, 1905-07, vol. xix., with abridgements of Winslow's *Relation* and *Good News from New England*; John Winthrop, *Journal, Hist. of New England*, 1630-33, ed. J. K. Hosmer, New York, 1908; William Wood, *New England's Prospect* (1634), ed. C. Dean, Boston, 1865; Edward Arber, *Story of the Pilgrim Fathers as told by themselves, their Friends and their Enemies*, London, Boston, and New York, 1897; Oliver Cromwell's *Soldiers' Bible*, facsimile, ed. E. Calamy, London, 1894; Robert Browne, *A New Year's Gift*, Congregational Historical Society, do. 1904.

II. *COLLECTIONS OF ORIGINAL PAPERS*.—Publications of the Massachusetts Historical Society, Boston, 1792; A. Young, *Chronicles of the Pilgrim Fathers of the Colony of Plymouth, 1606-1608*, do. 1841; J. Hunter, *Collections concerning the Early Hist. of the Founders of New Plymouth*, London, 1843; P. Force, *Tracts and other Papers relating principally to the Origin, Settlement, and Progress of the Colonies in N. America*, Washington, 1836-47, II.

III. *MODERN HISTORICAL ACCOUNTS*.—J. Waddington, *Congregational History*, London, 1869-80, II.; Williston Walker, *The Creeds and Platforms of Congregationalism*, New York, 1893; *Early Independents*, ed. A. Mackennal, London, 1893;

Champlin Burrage, *The Early English Dissenters, 1550-1641*, Cambridge, 1912 (an original piece of work with some fresh material, but not always balanced in judgment); H. M. Dexter, *The Congregationalism of the Last Three Hundred Years as seen in its Literature* (Lectures at Andover, 1876-79), New York and London, 1880; H. M. and M. Dexter, *The England and Holland of the Pilgrims*, do. 1906 (both these books contain a mass of information on facts and literature); L. Bacon, *The Genesis of the New England Churches*, London, 1874; H. W. Clark, *Hist. of English Nonconformity*, do. 1911 (an attempt to show that the history of Free Churches is inspired by one idea, principle, or spirit, viz. the subordination of organization to life); Winnifred Cockshott, *The Pilgrim Fathers. Their Church and Colony*, do. 1909 (an eminently readable historical narrative specially useful for the relations of the Pilgrim colony to its environment in America); John Brown, *The Pilgrim Fathers of New England and their Puritan Successors*, do. 1895 (a standard history based on original research); Charles William Eliot, 'The Pilgrims' Ideals, A Free Church in a Free State in 1620,' in *The Road toward Peace*, Boston and New York, 1915 (valuable for description of the social economy of the Pilgrim colony); E. Dowden, *Puritan and Anglican*, London, 1900; R. Browne, *A Treatise of Reformation without tarrying for arie*, Middelburg, 1582, reprinted by the Congregational Hist. Society, London, 1903; A. PINDAR.—1. Life.—Pindar, the greatest lyric poet of Greece, was born at the village of Kynoskephalai near Thebes in Boeotia in (522 or) 518 B.C. The date of his death is not certainly known, but *Pyth.* viii. is assigned to the year 446 B.C. As his earliest poem, *Pyth.* x., belongs to 498 B.C., his poetical activity covers a period of more than half a century of the most stirring epoch of Greek history.

The ancient lives of Pindar, which are full of the usual type of legend attaching to the youth of genius, have little or no independent value. His family was of aristocratic blood, claiming descent from the Aigeidae (*Pyth.* v. 75 f.: *Ἰκοντο Θῆρανδε φῶρες Αἰγείδαι, ἐμὸι πατέρες*); his father's name is variously given in the ancient lives as Daiphantos, Pagondas, Skopelinos, his mother's as Kleodike or Myrto. In the course of his poetic career he was brought into intimate relations with the ruling families of Greece proper, as well as of Macedonia, Sicily, and Kyrene in Egypt. He appears to have had a specially close connexion with Delphi, where in the temple of Apollo, according to Pausanias,

ἀνάκειται οὐ πόρρω τῆς ἐστίας θρόνος Πινδάρου· σιδήρεον μὲν ἔστιν ὁ θρόνος, ἐπὶ δὲ αὐτῷ φασὶν ὅποτε ἀφίκοντο ἐς Δελφοὺς, καθίστασθαι τὸν Πινδάρου καὶ φθεῖν ὅσους τῶν φόρων ἔς Ἀπόλλωνα ἔστιν (x. xxiv. 6).

He is said to have died in Argos. His tomb in the hippodrome at Thebes is mentioned by Pausanias (ix. xxiii. 2).

Arrian (*Anab.* i. ix. 10) and Plutarch (*Alex.* 11) record the pleasing story that, when Alexander the Great razed Thebes to the ground, he spared the house of Pindar as well as the descendants of the poet 'out of reverence for Pindar.' The ruins of this house were still shown in the time of Pausanias and beside it a 'temple of the Dindymene Mother (Kybele), dedicated by Pindar, the image being the work of Aristomedes and Socrates of Thebes. The practice is to open this temple on one day in the year and no more. I had the good fortune to visit it on that day and saw the image of Pentelios marble, as well as the throne' (Paus. ix. xxv. 3). To this temple Pindar himself seems to refer in *Pyth.* iii. 77 ff.: 'But I will pray to the Mother, the awful goddess unto whom with Pan beside my door the maidens sing oft-times by night.'

2. Works.—Pindar's lyric production covered a wide variety of subject and form. His poems were distributed by Aristophanes of Byzantium in 17 books: *ἔμνοι*, *παίανες*, *διθύραμβοι* (6 books); *προσῳδαί* (2); *παρθέναι* (3); *ὑπορχήματα* (2); *ἐγκώμια*, *θρήνοι*, *ἐπινίκια* (4). Fragments of the various types survive, but only the epinikian odes are extant in any completeness.

The *ἐπινίκια* are classified—not always quite accurately—as Olympian, Pythian, Nemean, and

Isthmian, according to the games at which the particular victory celebrated was won. It might seem surprising at first sight that round a theme so apparently trivial as an athletic victory Pindar should have been able to weave poetry of enduring interest and charm. But, indeed, the details of the victory are, as a rule, only lightly touched upon. The central theme of the poem is a myth connected with the history of the victor's family or city, which Pindar introduces with surprising propriety and skill. This myth, and the moral reflexions which it suggests and illustrates, constitute the real substance of the Pindaric poetry.

But, further, it is to be remembered that the great games for which Pindar wrote were much more than mere athletic gatherings such as we are familiar with in modern times. Part of the regular ritual at the funeral of a dead chieftain was an athletic contest—an *ἀγὼν ἐπινάμειος*—such as that described in *Iliad* xxiii., embracing competitions in feats of physical strength and skill as well as in music and poetry.

Hesiod (*Works and Days*, 654 ff.) tells us that at the funeral of Amphidamas, king of Chalkis in Euboea, 'his great-hearted sons advertised many prizes; and there I say that I was victorious in the hymn and carried off an eared tripod.'

Celebrations of this sort held annually in honour of a local hero and accompanied by the due performance of offerings (*ἐναγίσματα*) to the dead are attested all over Greece. It was an amalgamation of such local hero-cults with the worship of Zeus, Apollo, and Poseidon that gave rise to the great national games of Olympia, Delphi, and the Isthmus.

Thus these meetings were essentially in the nature of religious festivals, of national and not merely local meaning and importance. And as national festivals they conferred on the victor and his city a glory to which it is difficult to suggest a modern parallel. Politically, too, they were of immense value for the realization of Hellenic unity, none but competitors of acknowledged Greek blood being admitted to participation in them. In the brilliant period at which Pindar wrote the Greeks had everywhere repelled the barbarians—Persian, Etruscan, Carthaginian. They had vindicated their 'place in the sun,' and had entered into full possession of their heritage of intellectual freedom, champions of civilization and conscious of their power. The games celebrated at the hallowed sanctuaries of Greece were not only for the Greeks of the mother-country but for their distant colonies beyond the seas an opportunity of meeting together to worship the gods of their ancestors and to realize amid the splendour of the festival their common pride and glory of Hellenic blood. Small wonder that the victor at Olympia or at Delphi seemed to have attained the pinnacle of earthly success.

'The victor for the rest of his life hath a honeyed calm, so far as touches games' (Ol. i. 97 ff.).

This is the feeling which the sculptor of the famous statue of the charioteer discovered at Delphi in 1896 has sought to realize.

'Le conducteur de char est beau, paisible, heureux d'avoir gagné le prix: il s'en contente' (E. Bourguet, *Les Ruines de Delphes*, Paris, 1914, p. 237).

3. Leading thoughts.—(a) *The frailty of man.*—We are told that at a Roman triumph it was customary for a slave to ride behind the general in the triumphal car, whose duty it was to remind him of his mortality: 'Respite post te, hominem memento te.'

'et, sibi consul

Ne placeat, curru servus portatur eodem' (Juv. x. 411).

So in Pindar over against the brilliance of festal joy and splendour looms always the shadow of mortality. Thus in *Nem.* xi.—a poem which is, however, not an *ἐπινίκιον*—he says:

'Now if a man hath wealth and in beauty surpass others,

and foremost in games also hath displayed his might, let him remember that his raiment covers mortal limbs and that last of all he shall put on a garment of earth' (16 ff.).

But it cannot be too strongly emphasized that this is no pessimism which should blunt the edge of enthusiasm. It is only the sober colouring which human life presents 'to an eye that hath kept watch o'er man's mortality.' Hence, so far as it works in practice, it is made an incentive to redeem the time by some deed of glory which shall annul the triumph of death.

'The high adventure accepts not the coward; since we must die, wherefore should one sit in darkness nursing a nameless age without lot in glorious deeds?' (*Ol.* i. 81 ff.). 'A man for aches flies when he attains his heart's desire' (*ib.* viii. 72 ff.). The right spirit is the spirit of the Argonauts, in whom 'Hera kindled the all-persuasive sweet longing for the ship Argo, that none should stay behind, nursing by his mother's side an unadventurous life, but rather, even at the price of death, should earn along with his fellows valour's drug' (*Pyth.* iv. 14 ff.).

It is worthy of remark that in no single passage of Pindar are the brevity of life and the certainty of death made a plea for a life of sensual pleasure in the present.

Nothing is more characteristic of Pindar than the earnestness with which he preaches this sane and clear-eyed recognition of the limitations of mortality. Men and gods are, indeed, the children of one mother, Earth, but they are born to different destinies:

'One is the race of men, one the race of gods, and from one mother do we both have breath; but an altogether separate power (*δυναμὶς*) divideth us; man is naught, but the brazen heaven abideth, an habitation unshaken for ever' (*Nem.* vi. 1 ff.).

Human life has its own appropriate goods: health, wealth, the blessing of children, a good name; to the stable and unbroken felicity of the gods a mere mortal must not aspire.

'I come to pray that thou, O Olympic victor, mayst carry a cheerful old age unto the end, thy sons, O P-amis, standing by thy side. If a man waters his prosperity to health, sufficient in possessions and adding thereto fair fame, let him not seek to become a god' (*Ol.* v. 21 ff.). 'Mayst thou weave life's web in happiness unto the end and thy children's children have evermore the portion that now is and better in the after days' (*Nem.* vii. 98 ff.). 'A god might have a heart untouched of woe, but happy and worthy to be sung is that man in the eyes of the wise, whose, victorious with his hands or the excellence of his feet, hath won the mightiest of prizes by his daring and his strength, and, while he yet lives, hath seen his name daily attain the Pythian crown. The brazen heaven he may never climb; but all glories that we of mortal race attain, these he accomplishes unto the farthest voyaging. By ship nor on foot wilt thou find unto the meeting of the Hyperboreans the wondrous way' (*Pyth.* x. 21 ff.). 'If the son of Aristophanes, bring beautiful and doing deeds worthy of his beauty, hath set his foot upon the utmost heights of valour, it is not easy farther to pass the trackless sea beyond the pillars of Herakles' (*Nem.* iii. 19 ff.). 'If together with many possessions a man hath won proud renown, it is not possible that a mortal should reach with his feet any farther height' (*ib.* ix. 40 ff.). 'Whatever records are blown among men touching the infinite glory of the dead or the living, these they have attained utterly; in deeds of utmost valour they lay their hands from home upon the pillars of Herakles; seek no farther excellence' (*Isth.* iii. (iv.) 27 ff.). 'If any man fares well and is well spoken of, seek not to become Zeus; thou hast all, if this share of glory be thine. Mortal things befit mortals' (*ib.* iv. (v.) 13 ff.).

Change and uncertainty are the dominant characteristics of human life:

'Surely man's death hath no appointed term nor know we when we shall end a quiet day with enduring good; divers streams at divers times come unto men, fraught with joy or with sorrow' (*Ol.* ii. 32 ff.).

The life of man is in its very essence a tangled skein, a chequer of good and evil. For a man to aspire to more would be to seek to overstep the boundaries of justice (*δίκη*) — the *alte terminus herens*, which divides the destiny of mortals from that of the gods.

'A man with his mortal mind should seek such things from the gods as are meet, knowing that which lies at his feet, such destiny as we are born to. Aspire not, O my soul, to deathless life, but exhaust thy practicable means' (*Pyth.* iii. 69 ff.). 'If thou, O Hieron, canst understand the sum of words, thou knowest by hearsay from men of old — for one good thing the immortals deal to mortals two evils together. Now this the foolish are not able to bear in orderly wise (*κόσμου πέποιθε*), but only good men who turn the fair things out' (*ib.* iii. 51).

On no other condition can human prosperity attain such relative stability and permanence as are attainable by mortality than that it be made up both of 'these and those' (*τὰ καὶ ταῦτα*), of good and evil.

'Yet quench the boast in silence; Zeus giveth both these and those, Zeus the lord of all' (*Isth.* iv. (v.) 61 ff.). 'They say that just so a man's felicity, if it blooms exultingly, must fade from these and those' (*Pyth.* vii. 16 ff.). 'For for men who strive there is uncertainty of Fortune till they reach the very end. For she giveth both of these things and of those' (*Isth.* iii. (iv.) 52 ff.).

(b) *The strength of the gods.* — Over against the frailty and mutability of mortality Pindar emphasizes the strength and stability of the gods:

'Time (*αἰών*) with the rolling years brings ever other changes; but the children of the gods are unswerving' (*Pyth.* iii. 1 ff.). 'In a little while the pleasure of man grows up, and even so it falls to the ground when shaken; an adventitious creature of a day! what is any joy? what is any sorrow? Man is the dream of a shadow' (*Pyth.* vii. 9 ff.).

The background of Pindar's theology is the orthodox traditional theology of his race, with its anthropomorphic representation of the god as a race of beings superior, indeed, to men but of like passions with them. But the reasoned beliefs of the worshipper are inevitably framed in a setting of tradition, much of which is repugnant alike to his intellect and to his moral sense. It is quite evident that Pindar, like Aeschylus, felt strongly that the orthodox theology held much that was inconsistent with a worthy conception of the gods. He would have sympathized with Xenophanes in his censure of Homer and Hesiod, 'who have attributed to the gods all things that are a shame and a reproach among men, and he would have agreed with the famous line of Euripides (*ap. Plat. Mor.* 21 A): *ἡ θεὰ γὰρ ἀνθρώπων οὐκ ἐστὶν ἠθελή*. 'Meet is it,' says Pindar, 'that a man should speak noble things of the gods: the blame is less' (*Ol.* i. 35).

This feeling is well illustrated by the manner in which Pindar on occasion refines the grosser elements of the traditional mythology.

Thus in *Ol.* i. he deals with the story of Phobos, son of Tantalos. Legend told how Tantalos invited the gods to a banquet at which he served up to them his son Phobos. The gods did not part of the flesh, save only Demeter, who ate a portion of his shoulder, which was afterwards replaced by a piece of wood. This story Pindar rejects. It is a mere invention of the epic poets, a story to count for the supernatural carrying off of Phobos by Poseidon; the ivory shoulder (referring probably to some family's birthmark) was congenital. He had it even 'when Phobos took him from the basin of purification' (*ib.* 25) the *ἄλκυονας*, the bath of purification, not a Medea cauldron in which, Pelias-like, the *membra disiecta* of the boy were cooked into a new life.

Again, take his treatment of the story of Neoptolemos, son of Achilles, in *Nem.* vii. There was a persistent tradition that Neoptolemos was slain at Delphi. According to one version, he had come to plunder the temple of Apollo (*Nem.* x. 1 ff.). *Ἡρακλῆς δ' Ἀχιλλεύου τρεφόμενος ἄρσεν* and was slain at the instance of the Pythian priestess by the Delphians (*ib.* 1 ff.). *Ἡρακλῆς δὲ τὸν Ἀχιλλεύου Ἡρόνιοι τρεφόμενοι ἀνέκρινον* and by Apollo's priest himself (*ib.* x. 10 ff.). *Ἡ δὲ θεὰ καὶ καὶ ἐκείνη*. Neoptolemos was a *καὶ ἐκείνη* *ἀνδραγαθία*. In Pindar's version a little outward element of the myth disappears. Neoptolemos came, not as an enemy, but to offer to Apollo the firstfruits of the spoil of Troy. His death was the result of a chance quarrel that he might fulfil the destiny which required that one of the house of Atreides should slay with a bow a grove of Apollo and be the presiding genius at the hero-culturations; so far from the Delphians causing his death, they were much grieved by it: 'He went unto the god, bringing treasure of livestock from Troy; and there in a quarrel over meats a man slew him with a knife (*κατακτείνῃ*). The hospitable Delphians were grieved exceedingly. Yet he but fulfilled his destiny; it was decreed that within that most ancient grove there should be in time to come, beside this well-walled altar of the god, some one of the house of Atreides, and that he should dwell there to be keeper of judgments for the mortal hero-proceedings to maintain justice of fair name' (*Nem.* vii. 40 ff.).

Yet again, Homer tells us in *Iliad* v. 366 ff. how Herakles wounded Hades at Pylos (Elean); 'And giant Hades there (that suffered a swift arrow, when this same man, the son of Zeus, smote him in Pylos amid the dead and gave him over to pain. And he went unto the dwelling of Zeus and high Olympus, grieved at heart and pierced with pain; for the arrow was driven into his shoulder and grieved his soul.' Pindar, in emphasizing the prowess to which men may attain by favour of the gods, instances this feat of Herakles. But, as the house

seems to reflect upon a god, Pindar, employing the figure of aposiopesis, breaks off suddenly and says nothing of the wounding of Hades: 'By favour of God (*δαίμων*) are men good and wise. For how else could Herakles have brandished in his hands his club against the trident, what time at Pylos Poseidon stood and pressed him hard? pressed him, too, Phoibos warring with his silver bow, nor did Hades keep unmoved the wand, wherewith he brings down to the hollow way of them that die the mortal bodies? Flung from thee, O my mouth, this tale! To speak evil of the gods is hateful skill, and untimely vaunting strikes a note of madness. Prate not, then, of such things, leave war and battle altogether apart (*χωρίς*) from the immortals' (*Pyth.* ix. 28 ff.). The word *χωρίς*, which Pindar uses here, is almost technical in this special sense; cf. *Aesch. Ag.* 686 f.:

εὐφρόνουν ἡμᾶρ οὐ πρέπει κακαγγέλω
γλώσση μιν αἰνεῖν: χωρίς ἢ τιμὴ θεῶν.

The same tendency is seen in his treatment of the story of the Danaids in *Pyth.* ix. 111 ff. and in the emphatic *μόνον* in *Pyth.* iii. 100 f. (*ὄντες μόνον ἀθανάτα τίκων ἐν Φθίᾳ Θέτις*), which rejects in passing the gruesome saga which represented Achilles as the sole survivor of seven children (*Lycophr.* 178; schol. *Il.* xvi. 87, etc.). Pindar's position is, in fact, precisely that of Euripides, *Iph. in Taur.* 336 ff., where Iphigenia rejects the idea of human sacrifice being pleasing to Artemis:

ἐγὼ μὲν οὖν
τὰ Ταντάλου θεοῖσιν ἐστίματα
ἀπιστα κρίνω, παῖδες ἡσθίνα βόρᾳ,
τοὺς δ' ἐνθάδ', αὐτοῖς ὄντας ἀνθρωποκτόνους,
εἰς τὴν θεὸν τὸ φαῖλον ἀναφέρειν δοκῶ.
οὐδένα γὰρ οἶμαι δαιμόνων εἶναι κακόν.
'Si Dieu a fait l'homme à son image, l'homme le lui a bien rendu.'

The gods, according to Pindar's view, though they had birth, like men, are deathless and ageless, free from disease and pain (*frag.* 143, *ap. Plut. de Superstit.* 6), omniscient (*Ol.* i. 64), and all-powerful:

'God accomplishes every purpose according to his hopes; God who overtakes the winged eagle and outstrips the dolphin in the sea, and brings low many a proud man, but to others gives ageless glory' (*Pyth.* ii. 49 ff.). 'Swift is the doing and the ways are short when gods are fain' (*ib.* ix. 67 f.). 'For me no marvel is beyond belief when it is wrought by gods' (*ib.* x. 48 ff.). 'God is able to raise undefiled light from black night and to hide the clear radiance of day in cloudy darkness' (*frag.* 142, *ap. Clem. Alex. Strom.* v. 708).

The gods are the authors of all human success and achievement:

'From the gods are all means (*μοχλῶν*) for mortal excellence (*ἀρετῶν*); from them are men wise and mighty of hand and eloquent of tongue' (*Pyth.* i. 41 f.; cf. *Ol.* x. (xl.) 10). Only such success as the gods give is to be desired: 'May I desire glory from God' (*θεῶν*) (*Pyth.* xi. 50). Only such success can be enduring: 'The prosperity that is begotten by the grace of God is more enduring for men' (*Nem.* vii. 17). Man proposes, God disposes: 'Now I hope, but the issue lies with God' (*Ol.* xiii. 104 f.). What is done without God is better left unsung: 'Each thing that is without God is not worse hushed in silence' (*ib.* ix. 103).

The ineluctability of fate or destiny is strongly affirmed in Pindar, but it is not an uncompromising fatalism and is in no way inconsistent with an overruling Providence, or deterrent of the initiative and effort of men. A man should cherish good hope (*Isth.* vii. (viii.) 15)—not the *κεφαλὴ ἐλπίδες* whose issue is vanity (*Nem.* viii. 45, *Pyth.* iii. 23); not the desire of the moth for the star: that way lies madness (*Nem.* xi. 48). A man's duty is to aim at a reasonable ambition (*ib.* xi. 47); in the perplexities of life to look to the immediate duty (*Isth.* vii. (viii.) 13 f.). In pursuit of his aim he must spend and be spent, though the issue is uncertain (*Ol.* v. 15 f.). He cannot foresee the future, and fortune now bestows and now withdraws:

'The black fields do not give their fruit continuously nor will the trees in every circling year bear their fragrant flowers with equal wealth, but only alternately. Even so Fate (*μοῖρα*) guides the race of men. There is given of Zeus no certain mark for men. Yet do we embark on high enterprise and plan many deeds; for our limbs are chained by hope unabashed; but the river of foreknowledge is set afar' (*Nem.* xi. 39 ff.).

We must be content to accept what fate has in store for us—not an austere impersonal fate, but the will of God: τὸ μέριμνον Διόθεν πεπραμένον (*Nem.* iv. 61; cf. *Pyth.* xii. 28 ff.).

'The mighty wind of Zeus steers (*κυβεργῶν*) the destiny (*δαίμονα*) of men whom he loves' (*Pyth.* v. 122 f.).

In this conviction Pindar says:

'To me whatsoever excellence sovereign Destiny (*Πότμος*) has assigned, I know well that Time in his course shall bring it

to its fated fulfilment' (*Nem.* iv. 41 ff.)—words which might almost seem to have been in the mind of Milton when he wrote:

'Yet, be it less or more, or soon or slow,
It shall be still in strictest measure even
To that same lot, however mean or high,
Toward which Time leads me, and the will of Heaven
(*Sonnets*, ii. 9 ff.).

The cruder form of the doctrine of the envy of the gods was of course familiar to Pindar. It is clear that Pindar, who calls envy 'the companion of fools' (*φθόνον κενεοφρόνων ἐταῖρον* [*frag.* 128]), would not seriously attribute envy to the gods. When he alludes to it, it will be seen that it is merely a *façon de parler* and ethically means simply that a man should not seem to encroach on the prerogatives of the gods,

'Or pass beyond the goal of ordinance

Where all should pause as is most meet for all'

(*Tennyson, Titmouse*, 80 f.)

That this is so becomes clear upon an examination of Pindar's references to the doctrine. In *Pyth.* x. 19 ff. the train of thought is evident. The Aleuadai have had great success; may they not meet with envious reversals (*φθονεῖν μεταρροπία*) from the gods; a god may have perfect and unbroken felicity, man must expect alternatives of weal and woe; he cannot climb the brazen heaven. In the second passage, *Ol.* xiii. 25, it is little more than a form of speech. The third passage, *Isth.* vi. (vii.) 39 ff., rightly interpreted, is an admissible commentary on the ethical content of the doctrine of the *φθόνος θεῶν*:

'Let not the envy of the immortals disturb (cf. *Ol.* vi. 97) whatsoever pleasant thing of the day I pursue quietly unto old age and for my destined life. For all alike we die, but destiny differs. But if one looks for far things, his stature is too short to reach the brazen abode of the gods: the winged Pegasus threw his master Bellerophon when he would have come to the habitations of Olympus amid the company of Zeus.' That is to say: I recognize my mortality; I will not seek the things afar; being the creature of a day, I will pursue quietly (*εὐκαλῶς*), not with violence and wantonness, but *ἡσυχῇ νεμόμενος*; cf. *Pyth.* xi. 54 ff.: *φθονεῖν δ' ἀμύνονται ἄνθρωποι* εἰ τις ἀέρον ἐλὼν ἡσυχῇ τε νεμόμενος αἰὼν ὕβριν ἀπέφυγεν, not the far things, but the good of to-day which is ever the highest for a mere mortal (τὸ δ' αἰεὶ παρόμενον ἐσλὼν ὕψιστον ἐρεῖται παντὶ βροτῷ [*Ol.* i. 99 f.]). So shall I not be liable to the envy of the gods.

Pindar's attitude may be summed up in three words—*ὕβρις*, *κόρος*, *ἄρη*. The precise meaning of these terms is somewhat fluctuating and the relation of the first two is sometimes reversed. *ὕβρις* is 'insolence', 'wantonness', 'pride' (*Pyth.* ii. 28, viii. 12, x. 36, xi. 55, *Ol.* vii. 90, *Isth.* iii. (iv.) 27), or 'violence' (*Nem.* i. 50, *Pyth.* iv. 112). *κόρος* is 'satiety' (*Ol.* ii. 95, *Pyth.* i. 82, viii. 32, *Nem.* vii. 52, x. 20) or the resulting 'insolence', 'pride' (*Ol.* i. 56, *Nem.* i. 65). Hence Pindar (*Ol.* xiii. 10) makes "Τῆβρις the bold-mouthed mother (*μητέρα θρασυμυθῶν*) of *Κόρος* (so, too, the oracle in Herod. viii. 77: *διὰ Διὸς σβέσσει κρατερὸν Κόρον "Τῆβρις υἱόν*), whereas elsewhere (*Theognis*, 153; *Solon*, *frag.* 8) *Κόρος* is father of "Τῆβρις. "Ἄρη is in Pindar 'woe' (*Ol.* i. 57, xi. (x.) 37, *Pyth.* xi. 55, *Nem.* ix. 21, and *frag.* 42 (171). 4), but *ἀδύρα* is 'infatuation' (*Pyth.* ii. 23, iii. 24). The doctrine of sin implied in these terms is illustrated by the following passages:

'He [Tantalos] could not digest his great prosperity, but for his insolence (*κόρος*) won an exceeding woe (*ἄραν*)' (*Ol.* i. 55 ff.); Ixion was greatly blest, 'but lust (*ὕβρις*) drove him to an exceeding infatuation (*ἀδύρα*) and speedily he suffered his deserts and won a choice affliction' (*Pyth.* ii. 23 f.).

The sequence is success (*δύστος*), pride (*ὕβρις*), infatuation, or moral blindness (*ἄρη*)—'quem deus vult perdere, dementat prius.' *Aeschylus*, rejecting, as Pindar does, the crude conception of the envy of the gods, gives a similar sequence (*Ag.* 750 ff.): old "Τῆβρις begets a young "Τῆβρις and unholy *Θράσος*, which are dark "Ἄραι for the house. In other words, success leads to pride, whence springs sin; one sin leads to another, and with repeated sin comes greater boldness (cf. 222 ff.: *βροτοὶ θρασύνει γὰρ ἀλοχρόμητις τάλαινα παρακοπὰ πρωτοπήμων*). Precisely so in the OT 'Jeshurun waxed fat, and kicked: . . .

then he forsook God which made him, and lightly esteemed the Rock of his salvation. They moved him to jealousy with strange gods, with abominations provoked they him to anger' (Dt 32^{1st}).

(c) *Man's relation to the gods and to fellow-men.*—Man's duty in relation to the gods (εὐσέβεια) necessarily includes the performance of his duty to his fellow-men, but it involves, further, the specifically religious duties of prayer and sacrifice. According to Hesiod, the doom of the silver race came upon them because they did not refrain from violence to one another, 'neither would they worship the immortals nor do sacrifice upon the holy altars of the blessed ones' (*Works and Days*, 134 ff.). So in Pindar:

'Success is given for the sake of their piety (εὐσεβείας χάριν) in answer to the prayers of men' (*Ol.* viii. 9). 'No anywise my spirit bids declare that to the Emmenidai and to Theron glory hath come by gift of the Iynaridai of goodly steeds, forasmuch as they more than any other among men visit them with hospitable tables, with pious mind maintaining the rites of the blessed ones (εὐσεβείῃ νόμῳ φιλόσπονδες μακάρων τελεταί)' (*Ol.* iii. 82 ff.). Similarly in *Ol.* vi. 77 ff. success in the games is directly connected with such observances:

'Surely as thy mother's brothers, O Hagesias, in their home beneath Kyllene's hill presented with many prayerful sacrifices (λαῖα θυσίας) piously (εὐσεβέως) Hermes, the herald of the gods, who keeps contests and the dispensation of games, . . . it is he with his father the thunderer who accomplishes thy success.'

The duty of man towards his fellows is summed up in the word *dike*. This in its essence is the due observance of use and wont, νόμος, ῥέσος, *Sittlichkeit*. Eunomia is the daughter of Themis (*Ol.* ix. 15 f.) and sister of Eirene and Dike, worshipped by the Korinthians, who are fain to keep from them Hybris, the mother of Koros (*ib.* xiii. 6 ff.). Ixion's temptation of Hera is described as εἶναι παράρτοροι (*Pyth.* ii. 35). Men are tempted to accept a guileful gain in preference to justice, but they travel to a stern reckoning (*ib.* iv. 130 f.). Dike regulates also the relation of man to the gods; any encroachment on the prerogatives is sternly punished:

τὸ δὲ πᾶρ δίκαν γλυκὺ πικροτάτα μένει τελευτὰ (*Isth.* vi. (vii.) 47 f.).

First in the list of specific virtues we may put *eudokia*, keeping of oaths. Those who enjoy eternal happiness after death are briefly described in *Ol.* ii. 65 as those who rejoiced in keeping their oaths (ἐχαιρον εὐδοκίαις). Next comes truthfulness:

'In every sort of state the man of straight speech (εὐθύλογος) is best: in a tyranny and when the loud mob (λαῖρος στρατός) and when the wise (σοφοί) keep the city' (*Pyth.* ii. 86 ff.).

The slanderer, on the other hand, is an unmitigated evil:

'Rhadamanthus fares well because he reaped the blameless fruit of his soul (καρπὸν ἀνώματον ἀρεῶν) and delights not his heart with deceits, such as ever attend the wiles of whisperers; an invincible evil to both parties are the suggestions of slander, like to the mood of the fox' (*Pyth.* ii. 73 ff.).

And it is not only straightness of speech that Pindar praises but also straightness in action:

'Divers are the arts of divers men, but a man must walk in straight paths (εὐθείας ὁδοίς) and fight according to his nature' (*Nem.* i. 25 ff.).

Diagoras, the heavy-weight from Rhodes, is described as a 'huge straight fighting (εὐθύμαχον) man' (*Ol.* vii. 15). In one passage, indeed, Pindar does seem to suggest that craft should be met with craft, when he speaks of an athlete who made up for deficiency of stature by the cunning of the fox:

'One must do everything to bring low the foe' (*Isth.* iii. 66 (iv. 48)).

Already Plutarch (*Mor.* 21 A) had noted this as inconsistent with other passages of Pindar. Next the duty of gratitude is pointed by the fate of Ixion, who was a signal example of ingratitude:

'Bound by command of the gods to his winged wheel he declares to men that one should repay the benefactor with kindly recompense' (*Pyth.* ii. 21 ff.).

On the other hand, the poet grieves to see 'envy requiting noble deeds' (*Pyth.* vii. 18 ff.). Kindness

is commended, cruelly condemned, by the examples of Kroisos and Phalaris (*Pyth.* i. 94 ff.). The second *Pythian* is beset with many difficulties of interpretation, but it is impossible to quote as Pindar's own view:

'Let me love him who loves me: but towards my enemy as an enemy I will run upon him like a wolf, no, drag now this way, now that, in crooked paths' (*Pyth.* ii. 83 ff.).

Rather Pindar's position is expressed in *Pyth.* ix. 93 ff.:

'Therefore a citizen be he friend or be he foe, let him not hide that which is well done for the common weal, nor make void the saying of the old man of the sea who said that one should praise even a foe who doth good deeds.'

Among the primary duties are honour to parents and patriotism:

'In that thou keepest thy father at thy right hand, thou maintainest the prerogative when of old among the hills the vase that at Phylax's son gave to the fatherless son of Kroisos . . . but never to rob of their father the destined life of his parents. Of old Antiklesos (Antiklesos) (Nem. Kyprii i. 14) had this mind, who died for his father' (*Pyth.* vi. 19 ff.).

'Whoso in this cloud wards off the had of blood for his dear fatherland, inflicting death upon the foe, let him know of a surety that he wins the highest glory for his fellow-citizens, whether he live or die' (*Isth.* vi. (vii.) 27 ff.).

Although Thebes occupied an unworthy position in the great struggle against the barbarians, Pindar speaks with real feeling of the glory of the victory which removed the 'Tantalos-stone' which hung over the head of Hellas (*Isth.* vii. (viii.) 10; cf. *Pyth.* i. 76, *Isth.* iv. (v.) 48 ff.). Pindar recognizes, too, the duty of kindness to the stranger within the gates (*Ol.* ii. 6, *Isth.* ii. 39 f., and *passim*). It is noteworthy that the *μέσση* in the *Iliad* of Aristophanes base their claim to bli son the two grounds that μεμνημέν' εὐσεβῆ τε δουρομεν τροπον περὶ τοῖς ἔθνευς καὶ τοῖς ἰδιώταις (456 ff.).

Pindar, as an aristocrat, insists much on the virtues of heredity:

'That which is by nature is always best' (*Ol.* ix. 100; cf. ii. 85 ff., *ib.*);

and he is much impressed with the splendour of a tyranny such as he witnessed in Sicily:

'On a tyrant, leader of a people, looks the rich Fortune if on any man' (*Pyth.* iii. 85); 'Overs are the kinds of greatness, but the crown of greatness is for kings' (*Ol.* i. 114 f.).

But his personal predilection is for a modern aristocracy in which the government is in the hands of the *σοφοί* or *ἀγαθοί*. The middle estate is the more enduring. The great virtues are those of social service, those which exalt the State (*Pyth.* xi. 52 ff.).

There be some who mock at a man who frets at those who spend money on the great games and hoard their own wealth, forgetting that at the last they shall 'render their souls to Hades without glory' (*Isth.* i. 68).

Pindar's own ideal of life is beautifully expressed in the following:

'May I cleave to the simple paths of life that, when I die, I may attach to my children no evil fame. They pray for gold and some for limitless lands. Mine be it and the love of my townsmen to hide my limbs in earth, praying what is worthy of praise, and scattering rebuke on sinners' (*Nem.* viii. 35 ff.).

(d) *The soul.*—A special interest attaches to Pindar's views of the origin and ultimate destiny of the soul. According to the typical Homeric conception, when death occurs, or in any case after the body has been consumed on the funeral pyre, the soul goes to the sunless house of Hades under earth, leaving behind its 'manhood and youth,' existing still in a dim half-life, and no more affecting or affected by the things of the upper world. Only some favoured mortal, like Menelaos, may by special dispensation of the gods pass without dying to the Elysian plain (*Od.* iv. 563), an idealized earthly paradise.

According to Hesiod (*Work and Days*, 158 ff.), the fourth race, i.e. the race immediately preceding our own, was the race of heroes or half-gods:

ἀνδρῶν ἥρώων θεῶν γένος, οἱ καλεῖσθαι
ἡμίθεοι πρότερό γ' ἦσαν κατ' ἀνθρώπων γένος.

These were the men who warred at Thebes and Troy, and, after death,

'Zeus the son of Kronos gave them a life and an abode apart from men, at the ends of the earth, far from the immortals. Among them Kronos rules. And they, with heart free from sorrow, dwell in the Islands of the Blest beside deep-eddyding Okeanos, happy heroes, for whom the bounteous earth bears honeysweet fruit, blooming thrice a year' (*ib.* 166 ff.).

Now both these ideas are familiar to Pindar. We have first the Hyperboreoi, worshippers of Apollo (*Ol.* iii. 16), whose life is perpetual bliss:

'Disease nor age touches that holy race, but they dwell apart from toil and battle, escaped from overjust Nemesis' (*Pyth.* x. 41 ff.; cf. *Isth.* v. (vi.) 23).

Then we have the miraculous carrying off of Pelops and Ganymede to Olympus (*Ol.* i. 40 ff.); the swallowing up of Amphiaraios by the earth (*Nem.* ix. 24); Ino (Leukothea) lives an immortal life with the Nereids (*Ol.* ii. 28 ff.); even after death Semele is raised to Olympus (*ib.* ii. 25 f.), Polydeukes is raised to alternate life with his brother Kastor—half the time beneath the earth and half in the golden halls of Heaven' (*Nem.* x. 87 f.); and so on.

But of far more importance is the Hesiodic passage. The conception of the 'heroes'—the great men of the heroic past—as being after death exalted to perpetual felicity had become part of the orthodox Greek belief. And the word 'hero' (*ἥρωες*) had taken on a new meaning. It was no longer confined to the great figures who had fought at Thebes and Troy. Great men of a less remote past who had deserved well of their fellow-men were conceived as enjoying an exalted state after death and received the honours and offerings of hero-worship. The founder (*οἰκιστής*) of a city, especially, was worshipped as a hero in the city which he had founded.

The full content of this hero-conception cannot be discussed here. The offerings made to them were specifically called *ἡρώεσσι*; thus Pollux, viii. 91, in enumerating the duties of the *ἄρχων πολέμαρχος*, καὶ ὕψ:

Θύει μὲν Ἀργεῖδι ἀγορεύει καὶ τῷ Ἐνναλίῳ διατίθεται δὲ τὸν ἐπιτάφιον ἀγῶνα τῶν ἐν πολέμῳ ἀποθανόντων καὶ τοῖς περὶ Ἀργεῖδιον ἐναγίζει.

They were conceived as occupying an intermediate state between men and gods, though they seem rarely to have been appealed to as intercessors for man with the gods (but see *Nem.* vii. 95 f.). As compared with the gods, their range for good or evil is restricted, their worship and their influence being local and attached to the place of their grave. Hence we hear constantly of the bones of a hero being brought home from a foreign land where he had died, that they might find sepulture there, and there form the centre of his worship. But, like the gods, the heroes could take on bodily shape, human or otherwise, to aid their worshippers in a crisis, and such phantom appearances (*φάσματα*) are often referred to—e.g., Echelut or Echelaios (the man of the plough-stilt), who appeared at Marathon and, like Hay of Lun-carty, dealt havoc with his plough (*Paus.* i. xxxii. 5; cf. i. xv. 3), Neoptolemos and others, who helped to repel the Gauls at Delphi (*τὰ τε τῶν ἡρώων τηρικαυτὰ σφισιν ἐφάνη φάσματα*, ὁ Ὑπέρροχος καὶ ὁ Λαοδίκης τε καὶ Ἰϋρρος [*Paus.* x. xxiii. 2; cf. i. iv. 4]).

Hero-worship is closely akin to the cult of the chthonian deities and the veneration of the dead, and found an especially congenial soil in Boeotia, and hence interests prominently the Boeotian poets Hesiod and Pindar. Pindar knows of the hero-cult of Pelops at Olympia where 'in his grave by the stream of Alpheos he hath part in splendid blood-offerings' (*Ol.* i. 90 f.), of Neoptolemos and others at Delphi (*Nem.* vii. 31 ff.; cf. *Neoptolemon* . . . τάφος καὶ οἱ κατὰ ἔτος ἐναγίζουσιν οἱ Δελφοί [*Paus.* x. xxiv. 6]), and, besides others, most significantly of all, Battos (Aristoteles), founder of Kyrene (*c.* 630 B.C.):

'Aristoteles . . . built greater groves of the god and laid down a straight-cut horse-trodden way across the plain for the

processions of Apollo; where at the end of the marketplace he lies apart in death. Blessed was he while he dwelt with men, and thereafter a hero worshipped by the people (*ἥρωες λαοεβίης*)' (*Pyth.* v. 89 ff.; cf. R. M. Smith and E. A. Porcher, *Hist. of the Recent Discoveries at Cyrene, 1860-61*, London, 1864).

Pindar's deep interest in the state after death is unmistakable. He likes to imagine the dead still touched by the fortunes of their living descendants:

'And apart in front of the halls are other holy kings (*βασιλῆες ἱεροί*) who have Hades for their lot, and when great deeds are bedewed with song, they haply hear with the hearing of the dead (*χθονίᾳ φρενί*) of the success which is common to them and to Arkesilas' (*Pyth.* v. 98 ff.). 'Go now, Echo, to the dark-valled house of Persephone, bearing to his father the glorious tidings . . . of his son's victory at Pisa' (*Ol.* xiv. 19 ff.). 'The dead too have some part in things duly done, and the dust hides not the good grace of their kin. May Iphion hear from Aggella, daughter of Hermes, and tell Kallimachos of the bright honour at Olympia which Zeus hath granted to his kin' (*Ol.* viii. 77 ff.; cf. *Nem.* iv. 85).

At the supreme moment of the family's fate

Entstehen ihren Grabern manche Schatten,
Die Seelen schweben von dem Himmel nieder,
Die Heimat und die Freunde zu besuchen,
Sie nahen dir mit geisterhaften Schimmer,
Umstülzt von heil'gem überird'schem Glanz.
Sie bringen doch die alte Liebe mit'

(W. Hauff, *Der Schwester Traum*).

But of quite special importance are certain other passages of Pindar, which are best considered together:

(a) *Ol.* ii. 53 ff.: 'Wealth adorned with deeds of excellence brings occasion for these things and for those, bringing a deep wild mood—a bright star it is, a most true light (*φῆγος*) for a man. And if he that hath it knows that which is to be—that of the . . . of the helpless souls (*ἡρώες* here, not *ψυχὰς*) straightway here pay the penalty, while the sins done in this realm of Zeus one judges under earth, pronouncing doom by hateful constraint. And, ever more equally by day and night enjoying the sun, the good receive a life free from travail, veiling not the earth with labour of the hand nor the waters of the sea in that shadowy life, but with the honoured of the gods those who rejoiced in keeping their oaths live a tearless life; but the others endure woe not to be beheld. But whoso, abiding unto three times on either side, have endured to keep their soul (*ψυχάν*) utterly from iniquity, rise by the way of Zeus unto the tower of Kronos. There round the Islands of the Blest the breezes of Okeanos blow and flowers of gold are glowing, some ashore on glorious trees, while others the water feeds, with chams whereof they entwine their hands and twine garlands, according to the just council of Rhadamanthus, whom the mighty sire, husband of Rhea, throned in the highest, hath as ready assessor. Peleus and Kadmos are numbered among these, and thither his mother carried Achilles, when she had persuaded the heart of Zeus by her prayers.'

(b) *Frag.* 129 (*ap. Plut. Consol. ad. Apoll.* 85): 'For them shines the strength of the sun below while it is night here; and in meadows (*λειμώνες*) of purple roses their suburb is shady with frankincense and laden with golden fruits. . . . And some in houses, some in feats of strength, some in draughts, and some in the lyre take their delight, and by them blooms all fair-flowering bliss. And fragrance is spread about the lovely place (*χῶρος*) as they mingle evermore all manner of offerings in fash-shining fire on the altars of the gods.'

(c) *Frag.* 131 (*ap. Plut. loc. cit.*): 'By happy dispensation all (travel) to an end that delivers from travail (*ἀσπίονον τελευτάν*). And the body indeed of all men follows overmastering death; yet is there left alive a copy of life (*αἰῶνος εἰδωλον*); for this alone cometh from the gods; and it sleeps while the limbs are active; but to sleeping men it reveals (*δείκνυσιν*) in many a dream the coming judgment of happiness and woe.'

(d) *Frag.* 133 (*ap. Plato, Meno*, 81 B): 'From whomsoever Persephone accepts atonement for the ancient woe (*πρὸν πάλαιον πένθος*), the soul of these she sends back again in the ninth year to the upper sun. From these spring glorious kings and the swift of strength and the mightiest in wisdom. And for the time to come they are called by men holy heroes (*ἥρωες ἁγροί*).'

(e) *Frag.* 137 (*ap. Clem. Alex. Strom.* iii. 518): 'Happy is he who hath seen these things ere he goes beneath the earth; he knows the end of life, and he knows its god-given beginning.' We take no note here of *frag.* 132, which is generally regarded as spurious.

A full discussion of these passages is impossible in the scope of this article. There are many difficulties of interpretation, due in some cases to absence of the context, in others to the fact that some of the words used may have possessed an esoteric meaning which we do not fully realize—e.g., *φῆγος ἐνυμμάτων* (cf. *Aristoph. Ran.* 454 ff., where the Eleusinian μύσται say: *μόνοι γὰρ ἡμῖν ἥλιος καὶ φῆγος ἰαρόν ἐστιν, ὅσοι μεμνήμεθ' εὖσεβῶν τε διήγομεν τρόπον περὶ τοὺς ξένους καὶ τοὺς ἰδιώτας*), *ἀγροτέρων* (it seems significant that this is an epithet

of Artemis; cf. the sacrifice offered by the polemarch [Pollux, viii. 91; Plutarch, *de Malign. Herod.* 26]), and so on. Also we do not know how far the passages represent one consistent doctrine.

But in general outline the essentials are as follows. The soul and the soul alone 'comes from the gods.' By reason of ancient sin—*πένθος*, suffering which is sin—the soul is imprisoned in the body. Then it passes through a period of trial 'three times on either side.' Some commentators take this to mean three times in all—once here, once in Hades, and lastly here. But it more naturally means once here and then below; then here and again below; then once more here and once more below. Having passed these six alternating periods successfully, in the ninth year—the sacred *évvaerπtς*—Persephone accepting atonement, the soul enters its final life in the body of a king, a mighty athlete, a poet, or a philosopher, after which it passes in the guise of a hero to the Isles of the Blest.

How much Pindar in these speculations owed to the mysteries of Eleusis (to which frag. 137 especially seems to refer), how much to the rise of Orphic and Pythagorean doctrines in the latter part of the 6th cent. B.C., we need not here inquire. Nor can we discuss the influence which, through Pindar, these doctrines exercised on Plato and later thinkers. What is important is that Pindar expounds, with all the earnestness of personal conviction, the doctrine that the soul is in her origin divine and that she carries in her the seed of emancipation from the flesh—an emancipation to be attained, not by some peculiar dispensation of the gods, but by her own effort towards purity.

A. W. MAIR.

PIR.—1. The term and its synonyms.—*Pir* is a term denoting a spiritual director or guide among the Sufis, or mystics of Islam. The functionary described by the title is known also under other names: *shaikh*, *murshid*, *ustadh*. *Pir* is a Persian word, but is applied to a spiritual guide more commonly in India and Turkey than in its native home; *shaikh* in our special sense is in general use throughout Islam; *murshid* is also wide-spread, but in Turkish- or Arabic-speaking countries rather than in India; *ustadh* is found in Persia.¹

2. The authority of the spiritual guide.—Theoretically speaking, any one who has advanced sufficiently in the mystical experience of divine reality may undertake to give spiritual guidance to others. But, as a matter of fact, the *pir*, or *murshid*, nearly always bases his right to direct souls on the authorization of some teacher who has directed him in the mystic way (*ṭarīqah*). This authority is valid only in so far as the teacher traces his claim to teach through a succession of teachers, or *murshids*, to the founder of some one of the numerous Darwish orders. The *murshid*

¹ *Shaikh* is used also of the *khalīfah*, or deputies, of a *pir*, or *murshid*. These men may have their own disciples, usually of the poorer class or such as are at a distance from their own proper guide. They may give the mystic way (*ṭarīqah*) to those who seek it, and may even confer the rank of *shaikh* upon such as have advanced sufficiently. *Shaikh* often describes the official head of a Darwish community rather than the same man as the spiritual director of a narrower group of disciples (*murshids*). *Pir* is employed also somewhat loosely of the founder of a Darwish order, and still more generally of a *wali*, or saint. In Persia, India, and Turkey the term is current among non-Muslims as well as Muslims. The Hindus apply it to their dead saints, and in Persia and Turkey it designates an inferior priest among the Yezidis. In this non-Muslim usage the same extraordinary gifts of knowledge and miracle-working are implied as the Muslims ascribe to their *pirs*.

follows the tradition of the order to which he belongs. He is under the grand *shaikh* of his order, who resides at the place where the tomb of the founder of the confraternity is found. The grand *shaikh*, for his part also, proves an authority lineally derived from the founder.¹ He makes little or no attempt to control the local *shaikhs* of his order. It is in his power to summon a general council of *shaikhs*, whose action would be binding on each of them and on the Darwishes subject to them; but such councils are and always have been of exceedingly rare occurrence. In reality there is little official restraint on the independence of the Darwish *shaikhs*.² Even in their relation to the civil power they occupy a position of special privilege, and *shaikhs* of pre-eminent sanctity or strong character make a large place for themselves in public life. The local influence of many *shaikhs* is very significant; their word is felt to have the force of law, and the demands which they may make on the community are granted without dispute. If they levy a fine because of some offence against a member of their order, it will be paid. Government officials pay them respect in various ways.³

On the whole, the part played by the *shaikhs* in the communities of the Muslim world has been in favour of order and public welfare. They have taught by example and precept the principle of loyalty to authority, and they have been devoted to the interests of Islam, which they recognize to be inseparable from the interests of the sovereign State.⁴

3. The *pir* and the mystical life.—In order to act as a spiritual guide in the life of the mystic (*ṭāqīwuruf*, 'to live the life of a Sūfī') the *pir*, or *murshid*, must hold a *sanad* from his teacher. This is a written permission (*ijāzah*) giving him the right to pass on to others the *ṭarīqah*, or mystical discipline, as he has learned it, and also conferring upon him the authority to perform healing miracles and to work signs. The validity of the *sanad* depends upon the chain of guides whose names connect the name of the issuing *shaikh* with that of the founder of the *ṭarīqah*, or order.⁵ The *shaikh* may hold the *ijāzah* of more than one teacher if he has followed more than one

¹ The grand *shaikh* is described as occupying the *sajdah*, or prayer-carpet, of the *pir*, or founder.

² The *Shaikh al-Bakr*, who is supposed to be descended from Abu Bakr, the first *khalīfah*, is appointed by the Egyptian Government to have supervision over the Darwish orders in Egypt, and within the borders of that country exercises a real official authority. The office which he holds finds no analogy in other Muslim countries, and in Egypt its purpose is not to dictate but to prevent revolution.

³ (a) Occasionally a specially powerful *shaikh* may be accorded a controlling influence over several local Darwish fraternities, and the recognition may even be given to his son after him. This does not necessarily imply the right to modify the spiritual discipline of these fraternities or the direction of novices. The influence is more or less irregular and affects the general well-being of the orders rather than their respective *ṭarīqahs*. The conduct of the latter is in the hands of the *pirs*, or *murshids* (*shaykhs* who are spiritual directors). (b) The history of Morocco in former times was that of a country governed by Sufi *shaikhs*. In Persia the political power of the *shaikhs* has been a constant factor in the history of the kingdom. The great poets of Persia in most cases have been Sufi teachers. In Turkey the highest places of power sometimes have been held by Darwish *shaikhs*—e.g., Abū Huda, the personal *umid* of the Sultan Abdu'l-Hamid. The weight of influence exerted by hundreds of powerful Darwish *shaikhs* throughout the Ottoman empire is admitted by competent observers.

⁴ The principles of Sufism, if pressed to a logical conclusion, are anarchistic, but Sufi practice knows little of revolt against either civil or religious authority. Even the Darwish *ṭarīqahs* which are promoted by the *shaikhs* have in them no spirit of antagonism to the public order. The Wahhabis, Mafisists, and Senusi movements are, indeed, revolutionary in character, but neither professedly nor really are they part of the Sufi movement.

⁵ The chain of supporting names (*isnad*) is, of course, carried back from the founder to the Prophet and thence back to Abraham, Adam, and God Himself. The *sanad* usually bears the seals of other *shaikhs* as additional credentials.

ṭarīqah and has been admitted to membership in more than one Darwish order.

The presupposition is that one who holds a *sanad* has attained to that stage of advancement in the mystic path which brings him to an intuitive knowledge of God. He has attained to *ma'rifah* ('gnosis') and is himself an '*arif*' ('gnostic'). The consciousness of self has been absorbed in the consciousness of Allāh (*fanā fi'llah*) and he is regarded as *maḡdhūb* ('attracted'). The one who is to guide others in the *ṭarīqah* must have gone at least thus far himself. He through his teacher has become possessor of the *silsilah* ('spiritual chain'), which ensures that the teachings and spirit (*rūḥanīyyah*) of the founder of his order have come down to him. Spiritual guides possess a trained susceptibility to hypnotic influences, whether mediated through the environment, through other persons, or through autohypnosis. Training also enables them to arrange conditions adapted to produce hypnotic states in others.¹

It may be allowed that a great many of the Sūfi *shaiḡhs* meet fairly well the conditions laid down by the great Ṣūfi al-Ghazālī for the *murshid*. They are orthodox, faithful to the *sunnah* of the Prophet, and correct in life. They are not usually well trained in the higher branches of Muslim learning. Very many are of humble attainments outside of the tradition and ritual of their particular order. The greater number hold scientific knowledge in slight esteem, as conveying a false conception of reality and so hindering progress towards an immediate perception of truth (*dhawq*).² A relatively small number of *shaiḡhs* are serious students of theology and law, and some of these have established for themselves a secure reputation as teachers of these sciences.³

4. The *shaiḡhs* and learning.—The attitude of the *fayḡhs* and *ulamā* towards the spiritual guides of Sūfism is not now so hostile as it was in the early centuries of the movement. Many are still covertly suspicious or jealous, but nearly all recognize that the *shaiḡhs* are meeting a deep craving of the Muslim world for a satisfying experience of communion with God. They infuse a spiritual vitality into Islām which theology and law have never been able to contribute, and the orthodox doctors admit this. The majority of the learned teaching class have put themselves under the direction of spiritual directors and are members of some Darwish order.⁴

The Sūfi view of knowledge is that to be true it must be given to the heart by God (*ilhām*). The task of the Sūfi guide is to prepare the heart that Allāh may open it and lodge therein the apprehension of reality. The impartation of ideas and cultivation of logical capacity are not his special task, but rather the development of the power of suggestion and direct emotional impression. If this is secured, the vivid and immediate states of

¹ The Oriental is much more subject to hypnotic influence than the Occidental, but the hypnotic powers possessed by individual *shaiḡhs* vary. There are those who may induce hypnosis with little or no exercise of will. The vulgar account of hypnotic states is that the persons concerned are *melāḡs* (possessed by the power of Allāh).

² The ordinary believer looks upon the *murshid* as one who has been directly taught of God, and therefore has a superior kind of knowledge to that of him who merely learns from others.

³ The literary activity of the *shaiḡhs* does not commonly extend beyond tracts or manuals of direction for the use of their disciples (*murids*). The disciple is cautioned sometimes against allowing others to see his books. The *shaiḡhs* often direct specially gifted pupils to study the works of the great mystical writers in order to attain more fully the advantages of the mystic life. Sometimes the *shaiḡh* himself will teach his disciple theology and subsequently initiate him into the *ṭarīqah*. This order of instruction is that approved by the *ulamā*.

⁴ The open opposition of the orthodox authorities to Sūfism is now directed for the most part against the cheap love of wonders, the hypocritical asceticism of the begging *fayḡs*, and the loose living of such as claim falsely to be above the common obligations of morality and law.

mind which result seem to the untrained observer to be of the nature of supernatural communications. Highly wrought feelings and ecstasy become themselves the most perfect apprehension of the real. Ineffable emotions, because of the intense pleasure which they afford, are in themselves the experience of the divine; and as, for the time being, they suspend deliberate attention and volition, except in relation to themselves, all knowledge and all being are swallowed up in the immediate consciousness of God, and God becomes the only reality. Every other thing is but phenomenal; the real is He. The discipline of the *shaiḡhs* seeks to bring the *murid* to the point where this inference from an absorbing emotional consciousness becomes a fixed belief furnishing a powerful and constant motive for life. In the greater number of cases the motive of those who follow the guidance of the *murshid* is a mixed motive. The emotional satisfactions are made an end in themselves and not merely an index of divine reality. In view of the moral danger involved in the dominance of this lower motive, al-Ghazālī taught that the true Sūfi should be careful to fulfil ethical obligations, and should make his mystical experiences subserve that end. The *shaiḡhs* of greatest influence to-day follow this rule.

5. The *shaiḡhs* and their circle of influence.—There are certain moral aspects of the Darwish life which, indeed, are rarely if ever wanting. The disciple chooses his spiritual director without constraint, binds himself to him freely, and holds to him to the end, though the relation between them is under moral sanctions only. The devotion given is complete, spontaneous, and marked by affectionate veneration amounting almost to worship. The *shaiḡhs* live for their followers, and inculcate on all the duties of brotherliness towards one another and general benevolence towards all. Hence the assistance given to wayfarers and needy persons at the *takiyyahs* (or *zāwiyaḡs*, Darwish houses), and the readiness of Darwishes to share even a meagre portion with those in want.

The greater *shaiḡhs* are men of agreeable and magnetic personality, and show conspicuous gifts of leadership and organization.¹ They do not impress one as fanatical or as lacking in practical wisdom in the direction of affairs. The success of the Sūfi *shaiḡhs* in providing for a real spiritual need has made them effective propagandists in the cause of Islām. They have been more successful in this regard than the *mullas* and other orthodox agencies. The mystical fellowship of the Darwish fraternities has been of itself an attraction to outsiders, but the *pir* himself, with what he has to promise, has been the indispensable factor.²

Among the *shaiḡhs* of a lower type are found some men of weak or unbalanced minds. Many of these are looked upon as saints (*walīs*) and *fayḡs*, and are consulted in sickness or other special need. Their influence lies in this direction and not in the control and guidance of a group of disciples.

The influence of the *shaiḡhs* touches women as well as men. Indeed, as far as occasional consultation of the *pir* goes, women turn to him more frequently than men. There is no prohibition against their being admitted to the *ṭarīqah*, and there is eminent Sūfi authority for the view that the female mind is more sensitive to mystical

¹ The temper of the Sūfi movement admits the assertion of individual leadership rather than the effective co-operation of leaders.

² The *shaiḡhs* have in their *khatīfahs* very effective agents to second their influence. The *murids* also actively recommend their own *shaiḡh* to others.

impressions than the male mind; still, the number of women Darwishes is not relatively great.¹

The *shaikh's* high standing with God is attested by the miracles (*karamāt*) with which God honours him. The *shaikh* is not said to perform miracles; God gives them to him.² In all parts of the Muslim world healing miracles are attributed to *walis* and *murshids*; they are a mark of their special holiness. The most famous instances of these healings occur in connexion with wounds or serpent-bites inflicted in the *dhikrs* (Darwish religious exercises) of the Darwish orders. *Shaikhs* of the soundest reputation do not favour the extravagant self-mutilations inflicted in the *dhikrs* of special orders, and in general give their approval only to the miraculous cure of disease or wounds resulting from accident. They are inclined to demand also that those to be cured shall be known to be of good character. There are as striking instances of cure by means of suggestive therapeutics in the Darwish circles as are to be found anywhere, and, similarly, the immunity from injury which may be secured through hypnotic suggestion is very strikingly illustrated in the self-inflicted woundings and burnings and the serpent-bites permitted, e.g., in the societies of the Rifā'iyyah order. In hundreds of instances neither pain nor permanent injury follows.³

The power to reveal the unseen and to predict the future is explained also as a gift with which Allāh honours the holiness of his servants. In certain cases the *shaikhs* show remarkable powers of mind-reading, telepathy, and clairvoyance, and some quite accurate verifications of their predictions are on record.

The *shaikh's* circle of influence includes those who are in the habit of consulting him when need arises; those who take part occasionally in the *dhikrs* which he directs, because they find it either pleasant or helpful to do so; those who have chosen the *shaikh* as their *murshid*, or spiritual guide, and either look forward to joining his order or are already members of it; and those who occupy a cell in the *zāwiyah*, or *takiyah*. The first three classes have not separated themselves from the world; the last have done so and are living a celibate life under the constant superintendence of the *shaikh*. It is possible to have such a class only where there is a *zāwiyah* that is large enough to provide lodging for a group of brothers in addition to the assembly room of the fraternity.

6. The vocation of the *shaikh*.—The *shaikh* may hold his position by nomination on the part of his predecessor, or, if the latter is his father or brother, possibly by right of inheritance, or he may be elected by the vote of the local group of Darwishes. His appointment will be confirmed by the *mufti* of the place, in rare cases by the Sultān himself, and regularly by the grand *shaikh* of his order. The celibate life is not binding upon him, and in certain cases the rule is that his office is inherited by his son. Where there is no *zāwiyah* with a resident group of disciples, the *shaikh*, unless he is a mendicant, will follow some secular vocation. If there is a Darwish hostel, it may have land attached to it, which will be cultivated by the resident *murids*. The *shaikhs* who do not follow any trade are supported by gifts from their disciples and others. The *zāwiyahs* over which

¹ There exist orders of women Darwishes, and among the outstanding Sūfi leaders of history one or two women *shaikhs* are named.

² The *karamāt* of the *shaikh* are of a different genus from the authenticating miracles (*mu'jizat*) granted to a prophet.

³ In the *Dawaa* ceremony, where a mounted *shaikh* rides over the prostrate bodies of his followers without injury to them, the immunity from harm is credited to their faith. Both the *shaikh* and the disciples in this instance are under the stress of intense religious excitement.

they preside are provided for by income from local endowment funds, grants from public endowment funds (*waqf*), or private gifts. The gifts which fall to the *shaikh* he regularly devotes to the purposes of his community.⁴

As the *shaikh* may arrange, meetings of the local fraternity are held in the assembly room of the *zāwiyah* from time to time. If there is no *zāwiyah*, the group meets regularly in a mosque. The usual meetings are a daily meeting, a more important weekly one (often held on the eve of Friday), a monthly observance in honour of the founder of the order, a similar service for the Prophet, and a yearly celebration of the birthday of the Prophet (*Maulid en-Nabī*). The assembly room serves not merely for the performance of the *dhikrs*, but as a meeting-place for the brothers and those interested in the order. Not all present are permitted to join in the religious exercises, and not all care to do so.

7. The *murid* and the *tariqah*.—The life of the disciple (*murid*) who has chosen for himself a spiritual guide is subject in all respects to the direction of the latter. He confides in him implicitly, and refers to him all his concerns and plans. The disciples resident in the *zāwiyah* take part in the regular *dhikrs* (religious exercises), and, in addition, are assigned special exercises for their own private observance. In a general way the *shaikh* instructs each *murid* how to conduct his life with a view to the attainment of the mystic goal. He may from time to time visit the *murids* in their cells. They visit him each week in his cell for the purpose of disclosing to him their religious progress and receiving from him necessary directions.⁵ The *shaikh* is one who is practised in noting the signs of spiritual advancement in his disciples.

The nature of the *shaikh's* relation to the *murid* in the *tariqah* is well illustrated in the typical instance of Tawakkul Beg's initiation at the hands of Mulla Shah.⁶ Tawakkul Beg chose Mulla Shah as his spiritual director and was accepted by him as a *murid*. The *tariqah* ("seeker") usually undertakes a long course of penitential discipline, such as that which Tawakkul Beg followed, with a view to securing an insight into the nature of the world of sensuous things and an detachment from it. The *murid* is then to receive the positive teaching of the *tariqah*. The *shaikh* then admits him as a *murid* and, by the way, he takes the *ahd*, or oath, declaring particularly his devotion to the founder of the order whose *qawā'id* he is following and to the special guide whom he has selected. These steps are not described by Tawakkul Beg, but in those who follow he shows how through private exercises of devotion⁷ and the hypnotic influence of Mulla Shah and his *khalifas* the initiate reached the goal of union with God.

The method of guidance is expressed by the term *dhikr*, 'recollection.' This implies the fixing in the mind of some object of thought. It is accomplished by concentrating the attention upon the conception and its name, or upon some religious idea and its corresponding formula of expression. To assist in fixing the notion the mental effort is accompanied by vocal repetition of the name or formula with varying tone, pitch, and force of voice. In the vocal exercises the breathing is timed and adapted to accord with the strict rhythm and time of the vocal utterance. In the collective *dhikrs* of the

⁴ Some *zāwiyahs* have endowments more than adequate to meet their expenses. The erection of *zāwiyahs* is provided for by gifts which may be supplemented by grants from the public religious endowments (*waqf*).

⁵ The formal instruction of the *shaikh* is called *talim*.

⁶ Cf. Macdonald, *Religious Attitude and Life in Islam*, pp. 106-200. Mulla Shah had attained the mystic goal without the aid of a *shaikh*. Nowadays it is held to be enormously difficult to do this, and the choice of a *murshid*, or spiritual director, is insisted on.

⁷ This 'repentance' (*taubah*) is for the purpose of eradicating the *shahwāh kadhībah*, or evil impulses.

⁸ The exercises include oral or silent repetition of formulas taken from the Qur'an, the recitation of longer sections from the Holy Book, the repeated thought or expression of one of the sacred names of Allāh or of a pronoun referring to Allāh. The repetitions may be assisted by means of a rosary of 33, 66, or 99 beads. Such is the usage of the Darwishes to-day.

Darwish fraternity the *shaiikh* fixes the programme of exercises and determines the number of repetitions of a given formula and the manner of recitation in each part (*dhurb*) of the *dhikr*. He or his *khalifahs* superintend the ceremonies, exercising constant and close control in order to secure perfect harmony of voice and movement among those taking part.¹ Each *shaiikh* holds to the traditions of his own order, but at the same time there is a large element that is common to the *dhikrs* of the various Darwish orders. It is in the exercises prescribed for the private use of individuals that particular *shaiikhs* feel free to adapt their spiritual directions to the needs of special cases.

The advancement of the *sālik* is in the hands of the spiritual director, who lays down the means by which it is to be realized, and decides when the respective stages of progress have been reached. There are four major objectives which are to be successively attained. The first of these is described by the technical term *fanā fi-l-shaiikh* ('disappearance' in the *shaiikh*). The disciple is directed to fix attention upon the thought and mental image of the spiritual director, while the director projects himself into the consciousness of his disciple.² By these means and by the help of various external exercises such as have been already referred to hypnosis is at last effected and the *sālik* feels that his identity is merged in that of the *shaiikh*. He declares to his instructor, no longer 'I am I,' but 'I am thou.'

When *dhikrs* have served their purpose in this way, the director introduces into the mystic discipline exercises in meditation (*murāqabah*) to fix firmly certain convictions and to intensify spiritual longing. The next major objective³ is designated *fanā fi-llāh* ('disappearance in God'), and the *shaiikh* declares it to have been attained when, through the hypnotic influence of his will exercised upon the *murād* and through assistance of the prescribed discipline, the *murād* feels 'I am He' (God). His own identity has become an element in his consciousness of God, and, similarly, his sense of the phenomenal world has ceased to be separately true and has passed over to be an element in his sense of God. The *sālik* who has travelled on the way (*ṭarīqah*) until he has attained to God in the way described is 'united' (*ittiḥād*) or 'attracted' (*majdḥūb*) and henceforth will travel on in God.⁴ He will be permitted to enter the circle of the initiated, may wear the characteristic garb of his order, and may receive authority to pass on the *ṭarīqah* to others as a *murshid*. Before the last objective shall have been reached he must still seek to reach *fanā ul-fanā* ('disappearance of *fanā*'), in which he loses all sense of 'union,' 'attraction,' or 'absorption,' and the sense of God which results from these processes is all in all. Beyond that is the ultimate goal, *baqā*, in which the heart returns to express itself in the relations of the phenomenal world, while never losing the true vision of reality, namely, that there is but one real being and that the world and self are but phenomenal manifestations of the one.⁵

¹ In many orders the actions of the participants in the *dhikrs* are accompanied by music rendered by attendant *murshids*. This accompaniment materially assists the process of hypnosis desired by the *shaiikh*. The motions of the body in time with the regulation of the breathing tend in the same direction.

² *Fanā* is an equivalent of *ghāibā*, 'disappearance,' 'absence.'

³ The process is helped forward by the novice fixing his eyes upon the face of his director.

⁴ Intermediate objectives may be placed before the *sālik* (traveller), namely, *fanā fi-l-ṭarīq* ('disappearance in the founder') and *fanā fi-n-Nabī* ('disappearance in the Prophet'). A synonym for *fanā fi-llāh* is *fanā fi-lḥaq* ('disappearance in the real').

⁵ When one has become *majdḥūb*, his soul and its motions are ruled by gnosis, the mystic knowledge of the real, and love, the mystic fulfilment of desire. Such an one has attained a status (*waqfah*).

⁶ In *baqā* the traveller has reached the *qutb*, the focal point in which the onward movement of the spiritual life rests. It

is obvious that this pantheistic teaching of the Sūfi *shaiikhs* is not logically consistent with the theology and law of Islām. Sane Sūfi teachers have explicitly said that one who was *majdḥūb*, or attracted, was above the law; and the division of the Darwish orders into Ba-Shar' ('within the law') and Bi-Shar' ('without the law') gives ground for the suspicion which the orthodox have felt towards certain of the orders. For most of the *shaiikhs* a reconciliation with the law has been possible. They have looked upon it as useful in the penitential preparation (*taubah*) for the mystic way, and they have regarded the observance of it on the part of the Sūfi initiates as a useful condescension for the sake of common believers (*ahlu-t-taglīd*). It may help them to gain paradise, though for Sūfis (*ahlu-lḥaq*) it may afford no help in their practice of the mystical life (*ṭasawwuf*).

In relation to the *sunnah* a large majority of the *shaiikhs* are Sunnis, but in Persia and N.W. India there is a substantial Shī'ah element. The movement is of Shī'ah origin, and much of the Sūfi teaching and method may be traced through the Shī'ah to Yoga and Vedāntist influences in India.

Finally, there are *shaiikhs* who look upon the desire to guide souls as a lingering attachment to the world and therefore something to be renounced in order to an unconditional oneness with God, the only reality.

W. M. PATTON.

PISĀCHAS.—In modern India a *pisācha* is a kind of ghou, usually the ghost of some one who has died an unnatural death, or for whom the requisite funeral rites have not been performed. He is classed as a *bhūta*, or ghost, and the term *bhūt-pisāch* is commonly used to indicate demons generally. *Pisāchus* haunt burial-grounds and places of cremation, and eat human flesh. Their speech is a kind of gibberish, and hence modern English is called *pisācha-bhāṣā*, or 'goblin language,' by those who cannot understand it.¹ In S. India the small circular storms, called 'devils' by Europeans, are called *pisāchīs*, or 'she-ghouls.'²

In ancient India *pisāchas* played a much more prominent part. They are frequently mentioned in Vedic literature. Here they are also called *kravyād*, a term which, like *pisācha*, is said to mean 'an eater of raw flesh.' Most scholars agree that these Vedic *pisāchas* were malignant demons,³ but A. Hillebrandt⁴ considers it to be quite possible

may be remarked that the discipline imposed by the *shaiikhs* quite frequently brings to those who subject themselves to it a weakening of the power of nervous resistance, a loss of will power, and a general weakening of character. Through self-absorption, and even autohypnosis, their social value and their value for work are lessened.

⁴ *Vedische Mythologie*, Breslau, 1902, iii. 426.

that they were ancient enemies who subsequently became traditional fiends, while Macdonell and Keith (*loc. cit.*) admit that in later times the name may have been given in scorn to human tribes. In one place (*Rigveda*, I. cxvii. 21) the commentator Sāyana explains the word *dasya*—generally explained as meaning non-Aryan aborigines—by 'the *asuras*, *piśāchas*, etc., who destroy.'

In the *Rāmāyaṇa* they do not appear very often, and then only as ghouls; but in the *Mahābhārata*, while the demon character is most often assigned to them, they also over and over again appear as a race or races of men inhabiting N.W. India, the Himalaya, and Central Asia. They are described as performing human sacrifices and as eaters of raw flesh. They have a form of marriage which consists in embracing a woman who is asleep or drugged, and are guilty of other abominable practices. Two *piśāchas* are specially mentioned as living by the river Vipāśā, who were progenitors of an impure W. Panjab tribe known as *Balikas*. On the other hand, individual *piśāchas* are here and there referred to as pious ascetics living by holy streams in N.W. India.¹

In later Sanskrit literature, with important exceptions to be noted below, the human nature of the *piśāchas* has disappeared, and they are merely demons. Sometimes they serve men for a *quid pro quo*. Thus, in the *Kāthāsaritsāgara* (11th cent. A.D.), I. ii. 262) a *piśācha* is possessed of surgical skill, and will cure a wound, provided he is always given a new wound to cure as soon as his present job is finished. Otherwise he kills his patient. With this we may perhaps compare the unknown science called *piśāchī-vidyā*, or *piśāchariṇīyā*, mentioned in two works of the late Vedic period.²

According to the *Purāṇa* legends, the valley of Kashmir was once a lake. When the water had been drained off by the god Śiva, it was peopled by the Prajapati Kasyapa. This Kasyapa had several wives. Three were Kadrū, Krodhavaśā, and Khasā. By the first he had as offspring the *nāgas*, or snake-gods, by the second the *piśāchas*, and by the third the cognate *mūkas* and *mūkasas*.³ In Buddhist literature the *yaksas* and *piśāchas* are confounded, and both had cannibal propensities.⁴ Similarly, Kallhana, the non-Buddhist chronicler of Kashmir (12th cent. A.D.), in the *Rājataranginī* (I. 184), uses the word *yakva* as equivalent to *piśācha*. At the present day, in Kashmir and the neighbouring countries lying south of the Hindū Kush, while the word *piśācha* has fallen out of use, *yakva*, under the form of *yakkh*, is still the name given to malignant demons who are cannibal.

This brings us to the work known as the *Nalāmata*, a legendary account of Kashmir certainly older than the 11th cent. and perhaps as old as the 6th or 7th. According to it, when the valley of Kashmir was formed, Kasyapa at first peopled it with his sons, the *nāgas*, who were the former inhabitants of the now dried-up lake. He wished to introduce men (i.e. people from Aryan India) also, but the *nāgas* objected, and he thereupon

¹ For further details and references see G. A. Grierson, 'Piśācas in the Mahābhārata,' in *Festschrift for Wilhelm Thomsen*, Leipzig, 1912, p. 188 ff. Cf. also G. A. Grierson, 'Piśācas, Piśācas, and "Modern Piśācas,"' in *ZDMG* lxi. [1912] 68.

² *Gopātha Brāhmaṇa*, I. i. 10; and *Āśvinyana Śrauta Sūtra*, x. viii. 6, both quoted by Macdonell and Keith, *loc. cit.*

³ The various Puranic accounts of these legends are conveniently summarized in H. H. Wilson and F. Hall's tr. of the *Vēda Purāṇa*, London, 1885, II. 74. The *nāgas*, of course, not only were mythical demi-gods, but also represented memories of a race of men so called. According to other legends, the name of the mother of the *piśāchas* was Kapiśā, with which may be compared the name of the ancient town Kapiśā at the southern foot of the Hindū Kush (see F. Thomas, in *JRAS*, 1891, p. 461). Kapiśā looks like a metathesis of Kasyapa, the feminine of Kasyapa.

⁴ See, e.g., *Jātaka*, tr. H. T. Francis, Cambridge, 1905, p. 128, note 2.

cursed them, so that thenceforth the country was peopled for six months of each year by his other sons, the *piśāhas*. These came from an island in the sand ocean, i.e. from an oasis in the Central Asian desert, possibly Khotan, where there are also found similar traditions of *yaksas* (i.e. *piśāchas*) superseding the *nāgas*. In after generations the Kashmir *piśāchas* were finally expelled, and the country became inhabited only by *nāgas* and men, as it is at present.¹ All over the so-called Dard country north and west of Kashmir, as far as Kafiristan, there are still told numerous legends, some of them intimately connected with the foundation of a tribe or of its religion, in which cannibalism plays a prominent and important part.²

F. Lacôte³ maintains that there is no sufficient reason for assuming that there was ever a tribe or tribes known as *Pisacha*, and this opinion is shared by S. Konow;⁴ but a consideration of the legends just recounted and of the references to *piśāchas* in the *Mahābhārata* entitles us to believe that (1) there were actual people whom the Aryan Indians called *Pisachas*—*śaśapāyā*; (2) this name and also the name *yakva* were possibly opprobrious epithets, derived from the names of demons; or, as an alternative, they were names of tribes, which later in later times converted into names of demons; (3) the *Mahābhārata* considered these people as inhabiting the north-west of India and the neighbouring mountainous tracts, and Kashmir tradition connected their original home with an oasis in the Central Asian desert.

The question next arises as to the language spoken by these *piśāchas*. There are two independent streams of tradition concerning this. In the first place, there is the great encyclopaedia of stories appearing in Sanskrit under various forms, the best known of which is the famous *Kāthāsaritsāgara*.⁵ All these collections come from the Himalaya—one from Nepal and two others from Kashmir.⁶ They purport to be translations into Sanskrit made from an older version, entitled the *Brhatkathā*, which is said to have been communicated to one Guṇadhya by a *piśācha*, in 'Paisachi.' 'Paisachi' means 'the *piśācha* language,' and is usually explained as signifying the language believed to have been spoken by these demons or by these people. Lacôte, however, maintains (p. 45) that the language was given this name simply because the original narrator was represented to be a *piśācha*, and that Paisachi was really a literary adaptation of the vulgar speech of the tribes of the north-west. As it has been shown above that there were people in the north-west who were called *Pisachas*—a fact denied by Lacôte—the point so far is of little importance. The other stream of tradition is contained in the works of the Indian grammarians. Several of their grammars of the Prakrit language contain sections dealing with *Pisachī*. The oldest of them Vararuchi (c. 6th cent. A.D.)—known only one *Pisachī* dialect, but, as time went on, the number of dialects mentioned increased till Markandeya (17th cent.) discusses no fewer than thirteen. Without doubt the later grammarians included under the name many local dialects spoken in various

¹ Nowadays the *nāgas* are the pressing destiny of the numerous springs in Kashmir. For full details of the *nāga* legends, and also for other legends of the supersession of *nāgas* by *yaksas* or *piśāchas* in other localities of the same tract of country, see G. A. Grierson, in *ZDMG* lxi. 70 ff.

parts of India which had nothing whatever to do with Pāṣācī; and it will be safest to accept the statement of Hēmachandra (13th cent.) that of the real Pāṣācī there were at most three varieties. The later grammarians gave lists of the localities where Pāṣācī was spoken, but these differ greatly among themselves, and the localities are very widely scattered over the whole of India, north, south, east, and north-west. They all agree in regard to one, and only one, locality—Kākaya, a country on the east bank of the Indus, in the N.W. Panjāb, i.e. in the extreme north-west of modern India. Moreover, Mārkaṇḍeya, in his treatment of this Kākaya Pāṣācī, which he calls the standard, or principal, dialect, and which closely agrees with the form described by Vararuchi, quotes in his examples a phrase that he specially says is taken from the *Bṛhatkathā*. We may therefore assume that at least this grammarian, who is our only authority on the point, considered that the Pāṣācī of this work belonged to N.W. India. Except the accounts of these grammarians, no traces of Pāṣācī have survived in Indian literature.

All scholars do not, or did not, accept the theory of a north-western origin for Pāṣācī. An account of the various theories will be found on p. 74 of the present writer's article on 'Pāṣācī, Piśācas, and "Modern Piśācha"' already quoted, and the following is a brief summary:

In 1850 A. F. Hoernle considered it to be the low Prakrit spoken by Dravidian aborigines. In 1886 E. Senart suggested that it was merely the name of the popular language of India. In 1900 R. Pischel claimed it as an independent Prakrit dialect of N.W. India. This theory was adopted by the present writer in 1906. In 1908 F. Lacôte argued that it was an Aryan language of N.W. India, but spoken by non-Aryan people. In 1910 S. Konow returned to Hoernle's opinion, and considered it to be an Aryan language spoken by Dravidians in Central India.

Konow's theory—ably argued in his article in *ZDMG* already quoted—is partly based on the fact that much of the main story of the *Bṛhatkathā* deals with events occurring in Central India, but the evidence for a north-western home for the language seems to the present writer to be overwhelming. It must at the same time be admitted that there is clear linguistic evidence of traces of Pāṣācī in the modern languages not only of Central but also of W. India, and this can best be explained by the assumption that the speakers of Pāṣācī spread from the north-west, as from a nidus, down the Indus, into Gujārat, Central India, and the Marāṭhā country of the western coast.

Konow has, on the other hand, made an important contribution to the discussion by pointing out the close connexion that exists between Pāṣācī and the Pāli language of the Buddhist scriptures. Pāli has been localized, without great success, in many parts of India, and, if Pāṣācī is, as Konow maintains, a Central Indian language, then the arguments favouring the localization of Pāli round Ujjayini in that tract would be greatly strengthened. But there is an alternative, and, to the mind of the present writer, a much more likely theory. In the country of Kākaya was situated the famous university of Takṣaśilā, a home and centre of Buddhist learning.¹ This at once explains the close connexion between Pāṣācī and Pāli, and will entitle us to consider the latter as the literary and polished form of the folk-speech of the country in which the university was situated.

It remains to consider whether Pāṣācī has left any traces of its former existence in the modern languages of N.W. India. This is denied by Konow; but the present writer, in his article in the *ZDMG* already quoted (p. 78ff.), has shown numerous points of agreement. The subject is of a character too minute to be discussed here. Suffice it to say that the writer considers that the inhabitants of the W. Panjāb and of the wild country to the north below the Hindū Kush may be taken as in the main representing the ancient piśācas, and that the many varying languages of these tracts, including Kāshmiri, though in later times much subjected to Iranian influence and possibly retaining peculiarities from the proto-Iranian stage of the Aryan language, have at their basis a form of speech not dissimilar from the ancient Pāṣācī. At the same time the extremely mixed character of all these tongues prevents him from calling them 'Modern Pāṣācī,' and he prefers to group them, under the name of the people, as 'Modern Piśācha.'²

LITERATURE.—This is indicated throughout the article.

G. A. GRIERSON.

PISTIS SOPHIA.—I. Characteristics.—The *Pistis Sophia* is a miscellany of weird, fantastic fragments which apparently voice the theosophy

¹ See, e.g., the *Jātaka*, *passim*.
² See also G. A. Grierson, *The Piśāca Languages of N.W. India*, London, 1906.

of some Gnostic Christian circles in Egypt (*ERE* iv. 115). The particular type of Gnosticism cannot be identified, however, as it exploits the mythological romance of Sophia's redemption; some critics have ascribed it to the Valentinians (q.v.) or even to (a disciple of) Valentinus himself,¹ others to the Ophites, others, again, to the Barbelo-Gnostics (cf. *ERE* vi. 239^a, 241^b). The first point to notice is that Coptic scholars generally agree that the extant MS represents the Sahidic translation of a Greek original. The MS itself, written in double columns on both sides of a parchment, cannot be dated earlier than the end of the 4th or the opening of the 5th century. How much earlier the original was composed it is impossible to say; the fact that the Epistles of the NT are quoted as Scripture seems to fix a *terminus a quo* not earlier than c. A.D. 140; but the internal evidence is too uncertain to allow any precise inferences to be drawn with regard to the period at which it was compiled. What is certain is that the *Pistis Sophia* is a product of the later Gnosticism, especially of Gnosticism as it grew upon Egyptian soil; and, as few of the Gnostic documents have survived in their entirety, this invests it with special value for a student of the movement; its contents are often tedious and occasionally trivial, but they are of first-rate importance for the comparative criticism of the scattered pieces which in most cases represent all that is extant of the rich Gnostic literature. We have here the morbid craving for an esoteric revelation, as well as the blending of mythology and ritual, which made some of the Gnostic circles more than mere schools of religious philosophy. We have sacramental rites combined with Christology,² in a form whose spirit is sometimes not far from Catholicism. We have theurgical elements fused with ceremonial (cf. *ERE* viii. 277). We have also astrological mysticism in a peculiar combination of Christian faith and intricate theosophical speculation, whose general outlook is most nearly parallel to the attempt of Bardesanes on more orthodox and sober lines. Finally, from the point of view of literary form, we have in the *Pistis Sophia* an illustration of how Gnostic writers could employ the dialogue and the hymn³ in order to convey their opinions, and of how they personified abstractions as Æschylus had done more dramatically in the *Prometheus Vincetus*, and the Hebrews in the *Sophia* of Proverbs and of the Wisdom literature more simply.

The affinities of the theosophy reflected in the *Pistis Sophia* are with that branch of Ophitism which is called Barbelo-Gnosticism (*ERE* vi. 238^a); the description of this sect, as given by Irenæus (*adv. Hær.* i. 29) in what seems an extract from the Gnostic 'Gospel of Mary' (cf. *DAC* i. 502^a), does not exactly tally with the details of the *Pistis Sophia*, but this is not surprising, as the latter reflects innovations and modifications of any Gnostic scheme. The Barbelo-Gnostics seem to have been originally Syrian, and to have passed south-west into Egypt. The characteristic feature of their occult speculations was the place assigned to the female principle (*ERE* v. 827 ff.), which led to an exploitation of the term 'Barbelo.' This was applied by them to the female deity, either as the supreme *ἑρμῶα* of the invisible God⁴ or as the

¹ Appealing incautiously to Tertullian's language in *adv. Valentin.* ii. ('porro facies Dei spectatur in simplicitate quaerendi, ut docet ipsa Sophia, non quidem Valentinus, sed Solomonis'). So F. Legge, 'Some Heretic Gospels,' in *The Scottish Review*, xxii. [1895] 183-182.

² Cf. E. Bevan, 'The Gnostic Redeemer,' *HJ* xi. [1912-13] 137-152.

³ On the development of the hymn in Syriac Christianity see *ERE* vii. 12.

⁴ According to Irenæus, Barbelo was 'an æon, in virgin-shape, who never aged,' existing with the 'innomminabilis Pater.' The

lower Sophia, and it gave them their distinctive name. It is this figure, not the serpent of the specific or narrower Ophites, that appears in the cosmology of the *Pistis Sophia*. The representation thus resembles the account of the Gnostics given by Epiphanius (*Hær.* xxvi.); whether or not the *Pistis Sophia* in its present form or in the original form of any part is to be identified with the 'Little Questions of Mary' which Epiphanius mentions as a document of that sect, the similarity of physiognomy is unmistakable. The insistence on the virgin-birth of Jesus, the salvation of the spiritual through initiation into the mysteries, and the identification of the Highest Being with supreme light recall these Ophites, and, even more so, the description of the tyrants who guard the portals of eternity (cf. Origen, *c. Cels.* vi. 30 f.); but the functions of Ialdabaoth (cf. *ERE* vi. 236) differ, and the adventures of (Pistis) Sophia are not quite the same as those of Sophia Achamoth in the Valentinian scheme or in the Ophite; in the *Pistis Sophia* she is not connected with the origin of matter, and she is represented as the object of redemption by Christ, not as a medium or principle of redemption, much less as a sister or as the mother of Christ. The conception of the light-maiden Barbelo, again, is variously defined in the extant notices of the Gnostic theosophies, and her ill-defined characteristics in the *Pistis Sophia* differ from the views which dubbed her Pruniceus or set her in the eighth heaven, as the mother of Sabaoth or of Ialdabaoth (= בְּרִיָּה, son of Chaos?), who, to her sorrow, usurped the seventh heaven. In the *Pistis Sophia* she is a great Power of the invisible God, but she does not produce Jesus as 'the Light'; she merely confers on Him His vesture of light, and Ialdabaoth is in the chaos of the under world, a torturing fiend instead of a demiurgus. The Barbelo-Gnostics were evidently not homogeneous, but the occurrence of Barbelo in the *Pistis Sophia* assigns that miscellany to some circle more or less allied to the pious theosophists of the 2nd cent. whom we know as the Ophites collectively, and as the Nicolaitans, Simonians, and Barbelo-Gnostics specifically. For the Ophites, though numerically insignificant, were influential, and the tenets which they started seem to have been capable of permutation and modification in several directions.

Five etymologies of the term 'Barbelo' (Βαρβηλό) have been proposed: (a) 'daughter of the Lord,' an equivalent for בְּרִיָּה; (b) 'God in the Tetrad,' בארבע אלהים, which is probably the most satisfactory explanation; (c) 'the supreme Limit,' *paravata*, from the Indian *vela*, 'limit'—a suggestion made by Julius Grill (*Untersuchungen über die Entstehung des vierten Evangeliums*, Tübingen, 1902, pp. 395-397), who connects it with the Valentinian *Opus*, the Barbelo being called 'the supreme limit' in relation to the *Harap* ἀκατονόμαστος on the one side and to the lower syzygies on the other; (d) Bousset (*Hauptprobleme der Gnosis*, Göttingen, 1907, p. 14 f.) suggests, on the lines of (a), that the word is a mutilation of *παρθένος*—the intermediate form, *παρβένος*, actually occurring in Epiphanius (*Hær.* xxvi. 1) as the name of Noah's wife; (e) finally, Hort's (*DCB* i. 236, 240) conjecture has to be chronicled, which regards 'Barbelo' as identical in meaning with its equivalent 'Bahel' in the Gnosticism of Justinus (Hippol. *adv. Hær.* v. 26), i.e. as the chaotic germ of manifold existence—though the seductive, cosmological functions of Bahel are very different from the celestial position of Barbelo and her Christological significance in the *Pistis Sophia*.

The only quotations are from the OT and the NT, the former including the Odes of Solomon among the canonical Psalms, the latter ranging over the four Gospels and most of the Epistles (with the exception of Hebrews). Instead of depreciating the OT, the *Pistis Sophia* believes in its inspiration; the divine power in Christ is traced in the OT as well as in the NT, and this absence of anti-Semitic bias differentiates the

miscellany from the general class of Gnostic (Ophite) speculations. Furthermore, it makes no appeal to outside myths, as did the Ophites and the other Gnostic sects described by Hippolytus. Whether this was intentional or not, whether the *Pistis Sophia* documents came from a circle less cultured than the rest or from Gnostics who were shy of syncretism, it is a feature which allies them, in spite of their fantastic cosmogony and kabbalistic expressions, to the main body of the Church. Nor is it the only feature of this kind. Belief in the absolute efficacy of the sacraments, a certain reserve in exploiting mythology, a real devotion to Christ, and an evangelical sense of 'God for all the world' shimmer through the coloured and wavering mists of theosophy in the *Pistis Sophia*, and suggest that a genuine faith lay behind the chimeras and amalgamated texture of these Gnostics' cosmology.¹

2. Contents.—The esoteric mysteries are as usual represented to be a revelation—in this case, as in many other Gnostic documents which we know more or less fragmentarily, a revelation made by the Ruler of the inner circle of His disciples. The precedent for this method had been furnished by the Catholic Church, in the interests of apostolic tradition. Thus Justin Martyr (*Apol.* i. 47) closes his account of the Christian sacraments and teaching by claiming that he was only setting before his pious readers what 'Jesus had taught when He appeared on Sunday to His apostles and disciples'—an amplification of Mt 28¹. In the *Pistis Sophia* the main purpose of Christ is to reveal and institute mysteries, and mysteries of a sacramental order, by which alone redemption from sin is possible for the elect. The starting-point is the same as in the uncanonical gospels which dealt with the Resurrection and passed into apocalypses, viz. the period of forty days which, according to Ac 13, Jesus spent with His disciples between the Resurrection and the Ascension. The communications which He was supposed to have imparted to His followers during this interval were shaped into fantastic revelations of heaven and earth. The *Pistis Sophia* (1-6)² starts also from the instructions given by the Risen Jesus to the disciples on Mount Olivet; but the remarkable and unique feature is that the writer extends the period to eleven years. Even this prolonged period did not enable the Lord to impart more than an elementary knowledge of the mysterious Light-world. Since He had not yet ascended, the esoteric meaning of the veils and spheres which intervene between the human soul and the supreme Light had still to be revealed, although the disciples complacently thought that they had already attained a perfect insight. Hence, after the ascension to the Prime Mystery (or Supreme Gaiion on the 15th day of the month Tybi³ (cf. *ERE* vi. 93) at full moon, when the passage of Jesus through the firmaments into the higher world had produced confusion among the powers of heaven and an earthquake which dismayed the disciples, He returned (cf. W. R. Newbold, *JHL* xxvi. [1912] 163-169) next day in dazzling glory and, to their delight, promised to complete their knowledge of the heavenly world, i.e. to describe the Ineffable One, who was above the Prime Mystery. The gnosis is practical; it is a revelation of the proper methods by which the disciples can attain, and help others to attain, the goal of their quest, viz. the attainment of the Light-world,⁴ instead of the present mixed (*κεκραμμένον*) world which is destined to perish at the end.

The remainder of the first book (6-62) is devoted to this exposition, Jesus being occasionally questioned in the course of it by Mary Magdalene, Philip, Peter, Martha, John, Andrew, Thomas, Matthew, James, Salome, and the Virgin Mary, all of whom not only put questions but reveal for the approval of Jesus what is in their minds. The literary quality is not high, but the setting of the dialogue is sometimes quaint—Mary 'gazing into the air for an hour' (17) before she ventures to ask a question, Philip sitting and writing down the words of Jesus (22), Peter angrily complaining that Mary talked too much (30), and James reverently kissing the breast of Jesus before he speaks a word (51). The exposition itself is from time to time linked to mystical interpretations of OT texts; e.g., one of the grotesque applications of Ps 85¹⁰ ('mercy and truth are met together') is that these words denote the meeting of the Virgin Mary and Eleuthero (Lk 19), since 'Mercy' was the divine

¹ Christ breaks the power of fate (*ειμαρμένη*) over the soul (22 f.); but this preoccupation with the problem of destiny, which haunted the early centuries (cf. Gilbert Murray, *HJ* ix. [1910-11] 16 f.) like a nightmare, was faced by Christian thinkers in the Church, like Origen and Bardesanes, as well as by Gnostics (cf. the *Excerpta Theodoti*).

² Schmidt's numbering of the chapters, in his standard ed. (see under Literature), is followed throughout this article.

³ Basilides and his school generally made this day the date of the baptism of Jesus (Clem. *Strom.* i. 21. 146) in the fifteenth year of Tiberius.

⁴ Cf. and cf. the basal idea of Manichæism (*HEE* viii. 307, 400), and the discussion in the second book (xliv f.) of the *Clementine Recognitions*. But the *Pistis Sophia* is prior to the rise of Manichæism, and less dualistic in tone.

latter produces the female tetrad of *ἐνοια, ἐργασία, ἀφάρα, και ζωὴ αἰώνιος*, while Barbelo produces the male triad of *φῶς, (= Christ), ποῦρ, και λόγος*.

Power in Mary which issued in the shape of Jesus, while 'Truth' in Elizabeth developed into John the Baptist, the herald of the Truth (62).

Jesus begins (7) by describing the origin of the twelve apostles not from the rulers of the zōons (i.e. the zodiac), as in the case of ordinary men, but from twelve Powers¹ taken by him from the twelve saviours of the Treasure of Light and placed in their mothers' wombs. John the Baptist's soul is similarly formed from a Power granted to Jesus by the beneficent 'little Iab' and from the soul of Elijah.² His own incarnation (8) is due to His implanting of 'the first power I had received from Barbelo, that is to say, the body (σῶμα) which I had borne in the height, and instead of the soul (ψυχή), the power I had received from the great Sabaoth, the beneficent,' in Mary His mother. He then describes His investiture with three robes of light and His ascension through the various compartments or spheres, His victorious conflict with the archons and hostile powers of the twelve zōons,³ who were organized to thwart the redemption of the light, and His discovery, behind the veils of the thirteenth zoon, of poor lonely Pistis Sophia (29) seated underneath that zoon and mourning over her exclusion. The story of this pathetic figure is now told. She was the last and lowest of the twenty-four emanations, and she had incurred the hatred of the twelve zōons by desiring the light of the Highest; furthermore, Arrogant (ἀνάρητος), who sought control of the thirteenth zoon, did his best to keep her out by issuing a lion-faced Power and other emanations in chaos (including Ialdabaoth), whose evil fascinations drew Pistis Sophia down through the twelve zōons until, harried and darkened by her foes, and having abandoned her consort (σῶζυρος), she reached chaos itself. Then, coming to herself, she repents of having mistaken the deceptive light of Ialdabaoth for the True, and cries to the Light of lights; by a twofold act of repentance, elaborately explained, she expiates the twelve zōons, succoured at every stage by help from on high against Arrogant and his allies, and finally (57), having repented for abandoning the thirteenth zoon,⁴ she is led from chaos by a Power of Light sent by Jesus,⁵ which crowns her with unquenchable radiance and inspires her to praise the Power of Light in a song.

An interpolated paragraph of alphabetical gibberish⁶ has been inserted at this point (62). The following section (63-148) is entitled 'the second book of Pistis Sophia', but the division is artificial and the name of the original document evidently was not 'Pistis Sophia' at all; at the close of 100 we read 'a portion of the books or texts (τέκνη) of the Saviour'—which covers 63-100. The next section (101) appears to be the conclusion of a different document altogether. Another 'portion of the books of the Saviour' follows (102-135), and the final section (136-148) has a later note appended, which recalls the contents of Mk 16^{29,30}.

The so-called 'second book of Pistis Sophia' continues the heroine's career. She is driven down by a fresh attack of her foes, but Jesus orders Gabriel and Michael to assist her by means of a stream of light against the archons and emanations who still thwart her progress; finally she is set in the centre of the Light itself, triumphing over the hostile zōons of darkness by the direct aid of Jesus, who paralyzes Arrogant and his emanations. Her songs of praise and the revelations made to her are expounded at length; she accompanies Jesus into the thirteenth zoon; then, after a hymn of praise, she passes suddenly, singing, out of the story. No more is heard of her. The remainder of the book (83 ff.) is occupied by an elaborate Gnostic survey of hierarchies, zōons, and spheres. The drama gives place to exposition, and the theme is the next world, with special reference to the destiny of the soul and its varying fortunes there. The literary method is the same as in the first book: Jesus invites His hearers from time to time to guess the meaning of what He has said, and praises the answer; or He allows Himself to be questioned. But Mary does nearly all the speaking in the second book, though she confesses (72) that

she is in terror of Peter—'I fear Peter, for he threatens me, and he hates our sex.'⁷ She even, by permission of Jesus, explains at a later stage the mystic sense of Ex 21:7 to Salome (132). The special feature of the dialogue is a severe rebuke of Andrew² for ignorance, but he is pardoned, at the humble request of the others (100). At this particular point the book becomes heterogeneous. The extract from 'the books (τέκνη) of the Saviour' gives place suddenly to the brief (101) conclusion of some lost Gnostic treatise or apocalypse of Jesus; this treatise on the members who are initiated into the mysteries breaks the thread of the story, and, when a second extract from these books (102-135) opens, we find ourselves in a different world. The bizarre element predominates. Conversations between Jesus and the group continue, but the topics are less ethereal and speculative, connected for the most part with the gnosis of the initiated—e.g., the power and limits of forgiveness, the influence of the living over the souls of the departed, the efficacy of baptism, the rules for imparting the mysteries of the faith, the meaning of destiny, etc. The sense of sin is deep, but the hope for sinners³ lies in the rites of the Gnostic faith thus revealed. Finally, Mary exclaims: 'My Lord, lo, we know plainly, openly, and clearly (φανερός) that thou hast brought the keys of the mysteries of the realm of light, which forgive the sins of souls and purify them and make them pure light, and bring them into the light' (135). The entire section is a blend of puerile speculation, austere ethics, and sincere piety of the sacramental order, which some critics have thought to connect with the Marcian sect.

The MS then contains a section which is usually called the fourth book (136-148). It has no connexion with the foregoing. Substantially it is a piece of Gnostic sacramentalism, couched in eclectic and often crude terms. The disciples, including the women (and, for the first time, Simon the Cananite and Bartholomew), come to Jesus after the Resurrection, as He stands, clothed in white linen, on the shore of the ocean; their cry is, 'Our Lord, have pity on us, for we have left father and mother and all the world and have followed thee.' Jesus, then, by a mystic incantation pronounced 'at the altar,' moves the spheres⁴ right and left, transporting Himself and the disciples to an aerial region lying between, where He discourses to them upon the celestial hierarchies and the various torments endured by souls before they are released from the different rulers of the spheres. He comforts them, in view of all this, by reaffirming His gift to them of 'the keys of the heavenly realm' (141). A fresh incantation raises them to a sphere of light, where they receive a vision of fire, water, wine, and blood, which is explained as the meaning of Lk 12:49. In 410:14, Mt 26:27, and Jn 1:9:4 'I brought nothing into the world, when I came, except this fire, this water, this wine, and this blood; the water and the fire I brought from the region of the Light of lights, from the treasure of light, and the wine and the blood I brought from the region of Barbelo. Shortly afterwards, my Father sent me the holy spirit in the form of a dove. The fire, the water, and the wine were for the purifying of all the sins of the world; the blood was a sign for me of the human body which I received in the region of Barbelo, the great Power of the invisible God. The Spirit, again, draws all souls and leads them to the region of light.' Jesus then transports them back to the mountain of Galilee, institutes (cf. *EBB* vii. 408*) a mystic sacrament (142) of water, wine, and bread, intercedes successfully with the Powers who remit sins, on behalf of the disciples, and explains the efficacy of the supreme Name as a charm against the rulers of the spheres. There is a gap in the MS at this point. When it recommences, we are listening to a recapitulation, uttered with gusto and gloating, of the Dantesque punishments inflicted on the soul guilty of cursing, the slanderer, the murderer,⁵ the thief, the scorner, the blasphemer, the sodomite, the obscene sorcerer,⁶ and the good man who has not been

¹ This may reflect a Gnostic claim for women in the prophetic ministry of the Church, as against an attempt on the part of the (Roman?) authorities to put them down.

² He gets the rebuke of Mt 17:17 for wondering how the disembodied soul can escape the archons and powers.

³ It is a free gospel. 'I have called and said to all men, sinners and just persons, "Seek that ye may find, knock that ye may be opened to you; for everyone who seeks in truth shall find, and to him that knocketh it shall be opened. For I have said to all men, that they are to seek the mysteries of the realm of Light, which will cleanse them and purify them and bring them to the Light"' (133).

⁴ This cry for more light than the old gospel could furnish on the problems of the universe marks, as Harnack observes, the common plea of Gnosticism and catholicism; the simple gospel of Jesus had to be expanded to meet the speculative problems of the age.

⁵ Among the grotesque semi-Egyptian colours of this sketch, it must be noted that the spherical powers include 'the basis (βάσις) of the moon, which was like a ship steered by a male and a female dragon, and drawn by two white oxen. On the poop of the moon there was the figure of a child who drove the dragons that had seized the light from the archons. At the bow was the face of a cat.'

⁶ At this point Peter again protests that the women (Mary and Salome) are putting too many questions, and Jesus bids them let the men have a chance of speaking (146).

⁷ These denunciations show how the *Pistis Sophia* abjured the libertinism which was rampant in some of the ultra-spiritualistic circles of Gnosticism. For the Egyptian basis of the Gnostic hell see E. A. Wallis Budge, *The Gods of the Egyptians*, London, 1904, I. 265 f.

¹ An indication of the Gnostic claim to apostolic authority and of the apostolic prestige in their theosophy. The treason of Judas is ignored.

² This is held to explain Mt 17:12-13 11:14. The older Gnosticism, described by Irenaeus, made John the Baptist and Jesus emanations of Sophia herself, through the unconscious agency of Ialdabaoth. Here, as elsewhere, the *Pistis Sophia* departs from the Christology of the earlier schools of Gnostic speculation.

³ Even in the medley of celestial figures Christ is supreme over these tyrannical lords of destiny (εἰσαγωγή). According to the *Pistis Sophia*, which tallies here with the Uphite system in general, the stars in their courses fight against the saints, and Jesus has to intervene in order to shorten the times for the sake of the elect.

⁴ This is held to explain Ps 51:1-4.

⁵ After His ascension. Her fall and preliminary rise seem to be prior to the advent of Christ; the completion of her rescue and uplifting is accomplished by the Ascended Christ.

⁶ The jargon of foreign syllables and names in the *Pistis Sophia* prompted this scribe to try such composition on his own account. In 137, e.g., we read a Word of Jesus to this effect:

'He (Jesus) drew another Power from φεραχουραχουραχ— who is one of the three gods of triple power—and bound it to Arés; and he drew a Power from χαιρουμεν— who is also one of the three gods of triple power—and bound it to Hermes; and again he drew a Power from Pistis Sophia, the daughter of Barbelo, and bound it to Aphrodite.' Cf. O. Bigg, *The Church's Task under the Roman Empire*, London, 1906, p. 63 f.

initiated. Each case is proposed by a disciple, and answered by Jesus. He closes by declaring that (145) a man is punished separately for every sin, but that the penitent initiate is sure of pardon; also, He describes the best time for those to be born who shall be initiated into the mysteries. The original MS then ends with the words, 'When Jesus spoke thus to his disciples in Amenti, the disciples wept and wailed: "Woe, woe to the sinners on whom the indifference and forgetfulness of the archons lies, till they leave the body and are led to these punishments! Have pity on us, have pity on us, Son of the Holy One, and take compassion on us that we may be delivered from these punishments and judgments prepared for sinners—for we too have sinned, our Lord and our Light!"' The entire fourth book is kabbalistic as none of its predecessors is; the moral demand, which counteracted the magical element (*ERE* iv. 116b) in the sacramental doctrine, begins to fall away, and the religious temper narrows as well as hardens.

3. Composition.—The problem of the *Pistis Sophia* is twofold—literary and religious. The literary problem is to analyze the structure of the miscellany. Even when the first three books are taken by themselves, their original title cannot have been *Pistis Sophia*. This designation¹ may be retained for the sake of convenience, but it is the addition of a later scribe, and is just as appropriate as 'The Book of Una' would be for the *Faerie Queene*; the miscellany is much more comprehensive than such a title would suggest. Either 'The Books of the Saviour' or 'Questions of Mary and the Disciples concerning Repentance and Forgiveness, with the Answers of the Lord' would cover the contents more accurately. Even this, however, does not explain the juxtaposition of the fragments. One theory (Schmidt) is that the fourth book, together with the allied books of Jeû in the Bruce MS, must reflect an earlier stage of this Gnostic theosophy, at which the 'lower' mysteries as yet consisted mainly of a baptismal sacramentalism (*ERE* ii. 388). The rival hypothesis (Liechtenhan) reconstructs an original document by omitting 64-80 as an interpolation. These theories are complicated by (a) the probability that the *Pistis Sophia* is based upon earlier Gnostic treatises of the 2nd cent. which are known to us, as far as they are known at all, mainly by their titles;² and (b) by the obvious connexion between our miscellany and the 'two books of Jeû',³ which happen to be preserved in the allied Sahidic MS of Bruce. The *Pistis Sophia* mentions these books (134) as containing the higher mysteries and as 'written by Enoch when I spoke with him from the tree of knowledge and from the tree of life.' But the books mentioned here can hardly be the books of the Bruce MS, for the latter do not profess to have been composed by Enoch. Nevertheless, there is a general similarity between the two MSS, which involves literary and religious questions that have not yet been answered definitely by experts. In the extant books of Jeû Jesus is also revealing the mysteries of the celestial spheres to His disciples, the sacramentalism is still more emphatic, the ascetic note is loudly struck, and the underlying aim is, as in the Egyptian *Book of the Dead*, to provide a safe passage for the initiated soul through the hostile regions of the other world. The latter aim, more explicitly than

in the *Pistis Sophia*, dominates the sacramental interest; it must be admitted that the entire scheme of both works presents a grotesque, weird elaboration of the sacramental mysteries, compared with which the later Catholic construction may be described as simple and sober (cf. *EEE* v. 548b).

LITERATURE.—The literature may be grouped under the successive stages of criticism. The MS of the *Pistis Sophia*, originally possessed by A. Askew, passed into the keeping of the British Museum (MS Add. 3114) towards the end of the 18th century. Some passages had been already copied and noticed by C. A. Woide, the Coptic expert (cf. J. A. Damer, *Beiträge zur Befahrung theologischer . . . Kenntnisse*, Kiel and Hamburg, 1775, p. 521), who assigned it, on palaeographic grounds, to the 4th cent.; and in 1843 it was discussed by J. Matter, *Hist. critique du gnosticisme*, Paris, 1843, ii. 411, 350f. E. Dulaurier (*J.A.*, 4th ser., ix. [1871] 534-519) ascribed the work to Valentinus; but his Fr. version was never published, and the first ed. of the MS did not appear till 1851, when M. G. Schwartz's Lat. tr. was posthumously ed. by J. H. Petermann (*Pistis Sophia, opus mysticum Valentinus adimicatum*, Berlin, 1851), who attributed the document to the Opinites, an opinion shared by K. R. Kostlin in his exhaustive essay on the Gnostic system of the *Pistis Sophia* (*Theologische Jahrbücher*, Nül. [1854] 1-101, 137-190), and by R. A. Lipsius (*Jahrb.* iv. 405-415). Portions were translated from Schwartz's version into Eng. by C. W. King, *Gnostics and their Rivalries*, London, 1847. A Fr. version by E. Amélineau followed (*La Pistis Sophia: Ouvrage gnostique de Valentin, traduit du copte en français, avec une introduction*, Paris, 1855), which was severely criticized by E. Andersson (*Sphinx*, viii. [1904] 237-253) and C. Schmidt (*GGA*, 1891, p. 640f., 1892, p. 201f.). An Eng. version, based on Schwartz and Amélineau, was published by G. R. S. Mead (*Pistis Sophia, a Gnostic Gospel . . . now for the first time Englished*, London, 1896). C. Schmidt's Germ. tr. (*Koptisch-gnostische Schriften*, Leipzig, 1905, i. 1-254) had been preceded by his ed. and study of the allied Gnostic documents in *TU* viii. 1-2 [1902] ('Gnostische Schriften in koptischer Sprache aus dem Codex Bezae Cantabrigiae'), as well as by A. Harnack's monograph, 'Ueber das gnostische Buch Pistis-Sophia,' in *TU* vii. 2 [1901]. Harnack's views are summarized in his *Gesch. der altchristl. Litteratur*, i. Leipzig, 1893, 171f., ii. 2. [1904] 193f. Schmidt's theory, that the two books of Jeû (in the Bruce MS) represent, along with the so-called fourth book of the *Pistis Sophia*, an earlier stage, is criticized adversely by E. Preuschen (*ThLZ* xiv. [1891] 183-187) and defended by Schmidt in *ZWT* xxxvii. [1894] 555ff.; Harnack tends to think that Schmidt has not proved his thesis at this point, and a similar scepticism, accompanied by an independent, positive reconstruction, is reflected by R. Liechtenhan in his 'Untersuchungen zur koptisch-gnostischen Litteratur' (*ZWT* ix. [1901] 236ff.) and in *PRE* xiv. 401ff. The discovery of the *Odes of Solomon*, five of which were already preserved in the *Pistis Sophia*, has reopened the problem of the latter book; cf. J. Rendel Harris, *The Odes and Pistis of Solomon*, Cambridge, 1900, pp. 10-25, and W. H. Worrell, 'The Odes of Solomon and the Pistis Sophia,' *JHAS* xiii. [1911] 9-16. The most recent discussions of the *Pistis Sophia* will be found in W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, which brings out the syncretistic features; E. de Faye, *Introd. à l'étude du gnosticisme*, Paris, 1903, pp. 109-139, and *Gnostiques et gnosticisme*, do. 1913, p. 247ff., the latter of which thinks highly—some will feel, too highly—of its religious value; P. D. Scott-Moncrieff, *Paganism and Christianity in Egypt*, Cambridge, 1913, p. 114ff., which elucidates the Egyptian character of the miscellany; and F. Legge, *Forerunners and Roots of Christianity*, Cambridge, 1915, ii. 134f.

PITRYĀNA.—See DEYĀYĀNA.

PITY.—Pity is pre-eminently a human emotion; it is either not shared at all or shared in a very inferior degree by the brutes. As a human emotion it is very widely spread, but affects men at different times and in different races in different degrees. Women are more moved by pity than men, civilized men than savages, and probably the northern more than the southern races. Among the Greeks and Romans pity was less felt than among Christian nations, in the mediæval life less than in the modern world. This is, perhaps, due to the increased ease of communication between one part of the world and another, and, as a consequence of this, to the growing solidarity of the human race. Hostility and anger are both apt to obliterate pity, or at any rate greatly to diminish it; on the other hand, affection for and contiguity to the sufferer enhance it.

1. Greek.—In Homer pity is recognized

¹ E. Dulaurier and E. Renan (*Marc-Aurèle*, Paris, 1882, p. 120f.) proposed to read *πιστις σοφία* ('faithful or believing Wisdom'), but 'Faith-Wisdom' is quite intelligible, especially when it is remembered that the twelve mones posited by Valentinus commence with *πιστις* and end with *σοφία*.

² The discovery of the *Odes of Solomon* (*ERE* vii. 138) has put one of these treatises in our hands; the *Pistis Sophia* quotes, among the canonical Psalms, from five of these Odes (i., v., vi., xxii., xxv.).

³ Jeû in the *Pistis Sophia* is the father of Sabaoth, and consequently (see above, p. 47) 'the father of the father' of Jesus. The pre-existence of Christ is assumed in the story of these books' origin; indeed, the pre-existence and the ascended activities of Christ in this literature are much more vital than the historical life and mission on earth, the main significance of the latter being that it inaugurated the sacramental rites. Jeû, in the *Pistis Sophia*, keeps the lower archons in order, but his principal mission is to transmit light from the higher Treasure to the regions below him, by way of revelation; he is more important as a medium than as a celestial potentate.

quality which prevails to some extent and ought to prevail among both gods and men. Yet no great stress is laid upon it, nor does its absence excite much indignation. In one passage (of doubtful authority) it or, rather, the respect which gives rise to pity is described as a quality 'which greatly injures and also greatly benefits men' (*Il.* xxiv. 45). In the tragedians the feeling of pity is more marked and occupies a more prominent place. Indeed, as Aristotle points out, tragedy could not exist and would have no point, did not human misfortune excite pity and were not people capable of being moved by the imaginary misfortunes of their fellow-men. He says that the object of tragedy is 'by means of pity and terror to effect a purging of such emotions' (*Poetics*, 1459^b, ed. Bywater, Oxford, 1909).¹ In some ways the most remarkable instance of pity exhibited in Attic tragedy is Prometheus's self-sacrifice for the good of mankind, brought about by the pity which he felt for their forlorn condition; with this is contrasted the pitiless inexorability of Zeus. This has in it some touch of the Christian doctrine of God's pity for man, though in spirit it stands greatly opposed to it. In Plato there is no formal treatment of the emotion of pity, though he recognizes it as a natural and proper human sentiment (e.g., *Phaedo*, 58 E). It is further characteristic of Plato that he thinks the condition of ignorance or mistake more to be pitied than that of those who fall into misfortune (*Rep.* 539 A). In Aristotle the emotion is treated more formally and at greater length. But in the *Ethics* he describes it along with desire, anger, and fear as a feeling (*πάθος*) (*Nec. Eth.* ii. 1105^b); in the *Rhetoric* he discusses at length the character of the emotion at least as it can be used for rhetorical purposes. Of course, as a simple emotion pity defies definition; no one could ever make the feeling of pity intelligible to a man who had never known it; but it is possible to analyze the circumstances in which it will arise and be felt, and this is what Aristotle attempts.

He describes it as 'a painful feeling arising on the sight of evil either destructive or painful, which happens to one who is unworthy of it, an evil of a kind which one might expect to suffer oneself or that one of one's friends should do so, and this when the evil appears close at hand. For it is clear that it is necessary that he who should feel pity should be such as to think that he might suffer the evil either in his own person or in that of one of his friends, and that the evil should be such, or very much such, as has been described in the definition' (*Rhet.* ii. 4).

The definition gives at first sight a somewhat selfish complexion to the feeling of pity; yet there can be no doubt that it lays the conditions down under which pity is most readily felt, and, though there is a pity which transcends this account of it, the definition accurately describes the pity by which the great majority of ordinary men are moved.

2. Roman.—In Latin literature the sentiment of pity occupies no prominent place; the Romans were not a compassionate people, and their literature faithfully reproduces this trait of their character. The passage where the feeling of pity is most finely touched upon in Latin literature is in Virgil:

'Hic . . .
Sunt lachrymas rerum, et mentem mortalia tangunt'
(*Æn.* i. 462).

There is also a striking passage in which Tacitus contrasts the pity felt by some of the rough soldiers after the battle of Bedriacum, at the horrors which the field of battle displayed, with the callousness of Vitellius and his entourage (*Hist.* ii. 70). Cicero also knew what pity was; he described it as 'ill ease of mind growing out of the misfortune of another' (*Tusc. Quæst.* iii. 10), and 'the ill ease excited by the misery of another who suffers wrongfully' (*ib.* iv. 8).

¹ What the precise meaning of Aristotle's definition of the object of tragedy is has been much debated, and need not be discussed here.

3. Biblical.—In the Bible it is to be observed that the terms 'pity,' 'compassion,' and 'mercy' are used as practically synonymous (being all used in different places as translations of the same Hebrew and Greek words), and that they occupy a position which is unique in the religious literature of any people. For God is represented in Hebrew as well as in Christian literature not only as a God of justice but as pitiful, compassionate, and merciful. That such are the characteristics of God was a conviction which grew upon the prophets of Israel and the religious leaders of Jewish thought till it culminated in the teaching of our Lord Himself.

In the earlier books of the OT the pity and compassion of God are comparatively little emphasized. The most important passage occurs in the decalogue in both of the forms in which it has come down to us:

'Shewing mercy unto thousands of them that love me and keep my commandments' (Ex 20⁸, Dt 5¹⁰ [ἡμεῖς ἐλεος εἰς χίλιας τοῖς ἀγαπῶσι με καὶ τοῖς φυλάσσουσιν τὰ προσταγμὰτά μου]);

but in the Psalms and in certain of the prophets the thought is very prominent—e.g., Ps 86⁵ 103^a. 13 130⁷ etc., Is 54^a. 10 63², Jer 12¹⁵, Hos 1⁷.

In the NT the belief in God's pity or mercy follows as a direct consequence from the doctrine of God's fatherhood and God's love (e.g., Lk 6³⁶). To St. Paul God is a God of mercy. God is the Father of mercies (2 Co 1³); He is rich in mercy (Eph 2⁴); mercy and peace come from God through Jesus Christ our Lord (1 Ti 1², 2 Ti 1³, Tit 1⁴, 2 In 3²).

Pity towards men is commended to us in the Bible as a consequence of the pity and mercy of God, and particularly of His pity and mercy as expressed by and revealed in the sending of Jesus Christ. Pity and mercy towards aliens and strangers were in early days perhaps no more recognized as a duty by the Israelites than they were by the Greeks and Romans; indeed, there is a passage (Dt 13⁸) in which it is expressly forbidden that pity should be felt or shown towards those who try to pervert God's people from the worship of Jahweh into the worship of any strange god; but throughout the OT mercy and pity are inculcated towards members of the house of Israel, and the failure to have pity on the widow, the fatherless, and the destitute is strongly reprobated. In the NT the command to be pitiful has no such restrictions. The teaching of the parable of the Good Samaritan implies that our acts of charity, pity, and mercy are by no means to be limited to those of our own nation, and, as a matter of fact, under the teaching of Christianity pity has been extended so as to embrace sufferers of the whole human race, and in our day embraces the animal world as well.

4. Augustine.—In Augustine's *de Civitate Dei* there is an interesting chapter (ix. 5) devoted to the manifestation of pity as exhibited by God and man. He maintains against the Stoics, who asserted that God could not be moved by pity, that, while the claims of pity must always be subordinated to justice, it is yet an emotion which is not unworthy of God and should be exhibited by men to their fellow-men, being naturally called out by the sight of distress. The pity of God, of course, must depend on the repentance of man; yet, granted this condition, God's pity can flow out towards man, and, it would seem, inevitably does so. The pitiful God of the Christians stands thus contrasted with the passionless God of the Stoics, just as the compassionate man under the Christian dispensation is opposed to the unfeeling man of the Stoical ideal.

Yet, in spite of what Augustine urges, the idea of a pitiful God is not altogether an easy one

to embrace. It has to be taken in close connexion with the teaching of the NT on repentance. The good will, the love, the fatherhood of God to man, is a permanent attitude which remains, whatever man's conduct. Sin turns man's thoughts and his affections away from God; repentance makes possible the renewal of the relation between God and man, which has been there potentially all the time, but has been interrupted. The changed attitude of God to man consequent on repentance expresses itself in pity. The bearing of this doctrine on the question of the Atonement is outside the present article (cf. EXPIATION AND ATONEMENT [Christian]).

5. English moralists.—In the English moralists the phenomena of pity and the cognate emotions held a considerable place. Hobbes started the investigation:

'Griefe, for the Calamity of another,' he says, 'is Pity; and ariseth from the imagination that the like calamity may befall himselfe, and therefore is called also Compassion, and in the phrase of this present time a Follow-feeling: And therefore for Calamity arising from great wickedness, the best men have the least Pity; and for the same Calamity, those have least Pity, that thinke themselves least obnoxious to the same' (*Leviathan*, pt. I. ch. 6).

This selfish doctrine of pity is vehemently opposed by Butler in his two sermons on compassion (*Sermons*, v. and vi.). Having stated Hobbes's definition of pity as given in his treatise on *Human Nature*, ch. ix. § 10, as 'the imagination or fiction of future calamity to ourselves, proceeding from the sense (he means sight or knowledge) of another man's calamity,' he proceeds to criticize it in the following way (*Sermon* v. 'Upon Compassion').

In the first place, he contends that it is no account of pity or compassion at all. The sight of a friend's misfortune might in some minds give rise to the feeling of fear for ourselves which Hobbes describes, but, if it gave rise to such a feeling, the feeling would not be one of pity or compassion, but something quite different. Again, there are objects which give rise to a sense of our own danger—e.g., a sudden sight or sound, or some association of ideas—but no one would say that we compassionate or pity such objects; it would be ridiculous to do so. Again, fear, pity, and compassion would be on Hobbes's showing the same sentiment and a fearful and compassionate man the same character—which every one immediately sees are totally different. Again, while compassion and pity exhibited towards others, and especially towards our friends, commend us to the favour of all good men, fear or anxiety on our own account by no means equally recommends us. Pity, then, and compassion, Butler concludes, are not forms of self-love, but original affections, being grief at the distresses or misfortunes of others, are a primitive sentiment in human nature, a sentiment implanted in us, intended to prompt us to relieve those many miseries and sufferings of which, in Butler's view, life is so full. The emotion does not supplant reason, but fortifies it, reason being often too weak to induce men by itself to alleviate or attempt to banish the sufferings of our fellow-men unless supported by those feelings of compassion and pity with which, as a matter of fact, the better class of men are endowed.

One other question Butler touches upon in the course of these two sermons. Pity and compassion were regarded by many of the Stoics in earlier days and by some of Butler's own contemporaries as a weakness which the 'wise man' will seek to get rid of. To this Butler replies that the gratification of the affection may be, and often is, a source of pleasure to him who indulges it, and certainly makes compliance with the dictates of the sense of duty and reason easier and more possible than without such a sentiment they are likely to prove to the majority of mankind. In this way he answered by anticipation the objections of Kant, who took up on this point a position even more extreme than most of the Stoics. Kant said: 'The passions themselves, being sources of want, are so far from having an absolute worth for which they should be desired, that, on the contrary, it must be the universal wish of every rational being to be wholly free from them' (*Grundriss zur Metaphysik der Sitten* [Samml. Werke, ed. K. Rosenkranz and F. W. Schubert, Leipzig, 1838-40, viii. 50]).

Hume has a good deal to say about pity and compassion. Pity is defined by him as 'a concern for the misery of others' (*Treatise of Human Nature*, bk. ii. pt. ii. § 7). He does not accept Hobbes's view, that it is an affection springing from the sight of others suffering which makes us apprehensive on our own account. It has its source in the imagination, in the power which we have of putting ourselves in the place of others and gaining an impression of the ideas which they

actually experience. It is a peculiarity of the passion, he continues, that the communicated passion of sympathy sometimes acquires strength from the weakness of its original feeling.

'A man who is not dejected by misfortunes is the more lamented on account of his patience' (*ib.*).

This principle of sympathy is largely invoked by Adam Smith to explain some of the phenomena which pity and compassion exhibit. Why is it, he asks, as Hume had also asked, that we feel more compassion for the man who exhibits greater magnanimity in his sufferings than for one who allows himself to be overwhelmed by them? The reason is, he answers, that we can more easily enter into, or sympathize with, the actual feeling which he displays.

'We wonder with surprise and astonishment at that strength of mind which is capable of so noble and generous an effort' (*Theory of Moral Sentiments*, Edinburgh, 1849, pt. I. sect. iii. ch. 1).

6. Conclusion.—Pity, then, is a universal or almost universal human feeling, of the existence of which as a fact of human nature there can be no doubt, though the explanation of the feeling itself, and still more of the phenomena which it exhibits, may be in doubt; it is a feeling the presence of which in men, and still more in women, we approve, the absence of which we blame and deplore, but on condition that it leads to active interposition on behalf of those who are in distress; it is a feeling, moreover, which we readily attribute to God Himself, because we recognize that it is a form which love takes, a proof not of weakness but of strength.

LITERATURE.—The authorities are cited throughout the article. W. A. SPOONER.

PLACES (Sacred).—In primitive religious conceptions the gods are not exempt from general limitations of space and time. Arguing by analogy, the savage ascribes to all material objects a life similar to that of which he himself is conscious, and he easily confounds the spiritual force with its visible embodiment. Hence in primitive myth we find animate and inanimate things equally capable of feeling and action, while transformations of men into animals are perfectly natural. The gods have a physical environment, on and through which they act. Nowhere ubiquitous, they are conceived of as bounded by certain local limits: the god's land is the land of his worshippers, and his immediate sphere of influence is his residence. Among the early Semites ideas of divine preference came to be associated with the fertility of particular places, whether from rainfall or from springs and watercourses, the local god-, or *h'atim*, being recognized and appeased by a tribute of firstfruits, and, by a natural extension of meaning, of firstlings of cattle and men. Thus the idea grew that the gods have their proper homes or haunts where the worshippers lay their gifts on sacred ground, hang them on a sacred tree, or, in the case of sacrificial blood, pour it over a sacred stone. Later the home or sanctuary of a god was a temple, which could be erected only in a place where a god had manifested his presence. A theophany was held to justify the act of sacrificing on the spot (Gn 12, Ex 17^a etc.). Hence came the idea of the sanctity of such places as Bethel, Mamre, Shechem, Boerkeba, etc. The theophany in Ex 3 took place on Sinai, because it is holy ground, Jahweh's habitual dwelling-place (W. Robertson Smith, *The Religion of the Semites*, London, 1894, p. 118). Thus we see that holy places are older than temples, and that places become holy as the natural haunts of a god, these being in their earlier forms a cave, a rock, a fountain, or a tree. These places and things, as

the favourite haunts of divine beings, come naturally to be regarded as holy, as opposed to common, and are reserved for the use of the god and his ministers. In relation to man such sanctuaries come to be surrounded by restrictions as to access, especially for such persons as are physically unclean or have shed blood. The right of asylum in the OT was limited to involuntary homicide, and confined to certain old sanctuaries—the cities of refuge. But at some Arabian sanctuaries all fugitives were admitted to shelter. The idea of holiness had thus come to involve restriction or prohibition, together with the idea of protection from encroachment, as may be seen in the root-meaning of the Hebrew word *hāmā*, a sacred enclosure or *temenos*. The god and his worshippers belong to a community of kinship, most probably on the basis of a totemistic conception of mutual relationship. Hence men naturally fell into the way of observing rules of holiness—a system of restrictions on man's arbitrary use of natural things, enforced by the dread of supernatural penalties' (*ib.* p. 152), as found among all primitive peoples. This is the primitive institution to which the name 'tabu' has been given, including both rules of conduct for the regulation of man's contact with propitious deities and precautions against the approach of evil spirits and the like. The distinction between the holy and the unclean is real enough, though it may not be always precise, and both may overlap, as in the Levitical legislation.

The sanctuary, being protected by rigid tabus, had of course to be clearly marked in its limits. The *hāmā* in Arabia sometimes included a large tract of pasture land marked off by pillars, and the *haram*, or sacred territory, of Mecca extends for miles on almost every side of the city. The whole mountain of Horeb was sacred ground. The customary symbol or permanent visible object at and through which the worshipper comes into direct contact with his god is sometimes a natural object, as a fountain or tree, or an artificial erection, as a pillar or pile of stones. It is easy for the primitive imagination to connect ideas of animate life and quickening energy with running water or with the rustling leafage of a tree. And we find ideas of sanctity attached to rivers, as the Belus and the Adonis, and to springs at shrines with healing qualities, as the seven wells of Beersheba, etc., into which propitiatory gifts were cast with a view to divination or prophetic inspiration. The extension of the idea of sanctity to purposes of adjuration and ordeal is obvious enough. Trees were adored as divine among all the Semitic peoples, and still are as *manāhil* by the modern Arabs. The local sanctuaries of the Hebrews were altar-sanctuaries erected under trees, but the altar had an *āshērāh*, or pole, beside it (Dt 16²¹). Again, grottoes or caves were supposed to be specially sacred, and the oldest Phœnician temples took this form. The holy cave was the original sanctuary of the temple of Apollo at Delos, and the *adytum*, or dark inner chamber, was common alike in Semitic and in Greek temples, being frequently the place where oracles were delivered. The sacrificial stone or altar in the Semitic sanctuary was the locality of most intimate communion between the worshipper and his god, on which sacrifices were burned and offerings set forth. The Arabian form was usually a cairn or heap of stones, upon which, or at the base of which, the sacrificial blood was poured out, as was the case also with the Greeks and Romans. We read in the OT of monoliths (*massēbhōth*) at sanctuaries, as at Shechem, Gilgal, etc.

'It seems clear that the altar is a differentiated form of the primitive rude stone pillar, the *naqb* or *massēba*. But the

sacred stone is more than an altar, for in Hebrew and Canaanite sanctuaries the altar, in its developed form as a table or hearth, does not supersede the pillar; the two are found side by side at the same sanctuary, the altar as a piece of sacrificial apparatus, and the pillar as a visible symbol or embodiment of the presence of the deity, which in process of time comes to be fashioned and carved in various ways, till ultimately it becomes a statue or anthropomorphic idol of stone, just as the sacred tree or post was ultimately developed into an image of wood' (*ib.* p. 204).

Such sacred stones are found in connexion with the worship of the most various gods, in all parts of the world, as among the Ainu, the Brazilian tribes, the Samoans, etc. The *āshērāh* develops into the wooden idol, the primitive unheavened monolith into the marble statue of the god, with which the altar still continues to be associated, and from these elements eventually the temple was built. The primitive altar grew out of totemistic ideas, and there is in the earlier stages no need to suppose that the stone or image in front of which the rites of worship are performed actually contained the god. The identification of the god and the abode in which he may be pleased to make his resting-place is, however, an easy transition. Thus among the American Indians the place of national worship for the Oneidas was the Oneida stone from which they claimed descent. The Dakotas and Ojibwas had similar stones, which they called 'grandfather.' The shaping of a likeness to the human face was natural enough, but by no means universal, as we see in the unchanged idol of Astarte at Paphos. It must be clearly understood that the idea of the stone becoming the permanent rather than an occasional dwelling-place of the god represents a later stage of development. The existence of sacrifice implies an earlier totemistic stage, in which the blood sprinkled is that of the totem-animal, and the object is the renewal of the blood-covenant between the totem-clan and the totem-god (F. B. Jevons, *Introd. to the Hist. of Religion*, London, 1914, p. 141). This superstition lingered long. It was condemned by the Council of Nantes in 895, but it survives to this day in some corners of France and Norway.

In ancient Rome, in the earliest times, there was no temple or image representing a deity. Certain places were regarded as *religiosa*, affected by tabu, as distinguished from *loca sacra*, places made over to the deity by certain formulae, under the authority of the State, by the processes of *consecratio*. Such a place, in which a deity had taken up his abode, was a *fanum*, containing a *sacellum*, or small roofless enclosure, with an *ara*. Among *loca religiosa* were the spots where thunderbolts had fallen and burial-grounds. This feeling or scruple (*religio*) as applied to places finds expression in Virgil's lines describing the visit of Æneas to the site of the future Rome:

'Hinc ad Tarpeiam sedem et Capitola ducit,
Aurea nunc, olim silvestribus horrida dumis.
Jani tum religio pavidos terrebant agrestis
Dira loci; jam tum silvam saxumque tremebant.
"Hoc nemus, hunc," inquit, "frondoso vertice collem,
(Quis deus, incertum est) habitat deus."
(*Æn.* viii. 347 ff.).

The temple on the Capitol, with its statue of Jupiter, and that of Diana on the Aventine, with its reproduction of the *Écavon* of Artemis at Mæssa, were the earliest statues of the gods in roofed temples at Rome. From the earliest times the Roman boundaries, house, burial-place, and spring were considered as in a special sense sacred, needing constant religious care. The hearth (*focus*) was the 'natural altar of the dwelling-room of man' ('Aust's admirable expression,' as Warde Fowler styles it, quoting E. Aust, *Die Religion der Römer*, Münster, 1899, p. 214), and the seat of Vesta, the spirit of the fire. Behind the hearth was the *penus*, or storing-place of the household, inhabited or guarded by spirits, the *dī penates*,

who together with Vesta represent the material vitality of the family (W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, lect. iv.). The protecting door-spirit was Janus; and in the *Janus bifrons* in the symbolic gate of the Forum Fowler sees a developed form of the spirit of the house-door. The *Iar* was originally the presiding spirit, not of the house, but of an allotment, or the whole of the land of a *familia*, including that on which the house stood. The *terminus* was the boundary-mark of the land belonging to the *familia*, or the *pagus* (an association of farms and homesteads), and its care was marked by detailed religious ceremonies. The *lustratio*, or purification, of land, city, etc., was carried out by means of a solemn procession accompanied with sacrifice. And, as the *ager* of the city-state had its boundary made sacred by a *lustratio*, so the city had its *pomerium*, or boundary-line between the sacred and the profane, like that of the farm, within whose limits alone the *auspicio* of the city could be taken. See, further, art. LANDMARKS AND BOUNDARIES.

The earliest Teutonic word for temple means also wood, and the primitive shrine of the deity was a holy place untouched by human hand, a grove. A god may inhabit a mountain-top, a cave, or a river, but the general worship was a forest cultus, its seat a sacred tree (cf. Tac. *Germ.* ix.). This is not pure nature-worship, for the gods dwelt in these groves, although as yet no walls were built or images set up. Among the Saxons and Frisians the veneration of groves long survived the introduction of Christianity. At the beginning of the 11th cent. Bishop Unwan of Bremen had all such woods cut down in his diocese, and Grimm (*Teutonic Mythology*, i. 73 f.) tells us of a holy oak near Wormeln, Paderborn, to which even in his time the neighbouring peasants made a solemn procession every year. The earliest temples were built on the sites of the more ancient trees or groves, and, later, Christian churches were erected on the same spot, so that the old sacredness did not depart from the place, but merely passed into a higher relation.

PLAINS INDIANS.—1. Distribution and history.—The region that gives a geographical name to this group of American Indians is of an irregular oblong shape, some 2500 miles from north to south and 1000 to 1500 miles from east to west. Roughly speaking, the Plains extend from the Rio Grande in S.W. United States to the Saskatchewan River in Canada, and from the base of the Rocky Mountains to Lake Winnipeg in Canada and the Missouri and the Mississippi in the United States. Down the long easterly slope of this broad stretch of land flow many streams that take their rise in the Western mountains. Trees border these numerous waterways, but the country is barren of forests. This was formerly the home of over twenty different tribes, belonging to six different linguistic stocks. They were as follows:

(1) Algonquian: Arapaho, Blackfoot (or *Siksika*), Cheyenne, and Cree; (2) Athapascan: Apache; (3) Caddoan: Arikara and Pawnee; (4) Kiowan: Kiowa; (5) Shoshonean: Comanche; (6) Siouan: Assiniboin, Crow (or *Abasroka*), Dakota, Hidatsa, Iowa, Kansas, Mandan, Missouri, Omaha, Ojibwa, Ponca, and Quapa.

To and fro over the wide Plains formerly moved vast herds of buffalo, which gave abundant food

and furnished the Indians with pelts for clothing as well as covering for their tents. The tribes regarded these animals as specially provided for the sustenance and welfare of the native people, and this gift was gratefully recognized in their religious rites.

The Indians of the Plains had been attracted thither by the buffalo herds. Some of the tribes had come from the woods on the north, east, and west, where the game, although plentiful, was more or less difficult to secure; others had come up from the south for similar reasons. After the settlement of the white colonists on the Atlantic coast a new force was felt over the land. A gradual displacement of the native tribes formerly dwelling on the eastern littoral and its streams began and went on increasing, until it was felt as a westward pressure up to the eastern border of the Plains. This steady displacement, added to the influence of the white traders, the adventurers, and the 'opening up of the country,' brought to the Indians new diseases, intoxicants, and many other evils which greatly reduced their number.

The horse reached the Plains with the expedition of Coronado in 1541. Later, strays multiplied rapidly, and finally formed the herds of wild horses that became the principal source of the Indian supply. What tribe introduced them on the Plains and used them for hunting is not known, but they were first met by tribes of the Siouan stock, among the Comanche, who were famous for their horsemanship, and from that tribe knowledge was obtained of the use and care of the horse. Not only did the horse modify hunting methods, but it introduced a new species of property, changed social customs, and led to foraging expeditions and to wars.

Although the Plains was never a peaceful country, the changing conditions increased its turbulence until it became a great battle-field as well as a hunting-ground. The greatest blow that the native life of the Indian ever received came during the first decades of the latter half of the 19th cent., when, in the interests of trade, the buffalo were slaughtered by the thousand, until within a few years they were practically extinct. What that catastrophe meant to the Indian it is difficult for one of our race fully to appreciate. The present writer can never forget the occasion, some thirty years ago, when its meaning was really borne in upon her.

The aged Omaha keeper of the sacred rites that inaugurated the annual tribal buffalo-hunt consented to recite the rituals, for historic preservation; he stood alone in his little cabin before the graphophone to voice for the last time the words that told of the birth of the buffalo-herds. When he came to the promise given by Wakonda, in answer to man's appeal, that the herds should come to the people from all directions, the tears rolled down his withered cheeks as he sobbingly murmured: 'Not now, not now!' To him, Wakonda had abandoned the Indian and the world had become desolate.

The old man did not long survive this recital.

2. Religious and social ideas.—The social organization and religious ceremonies of the Plains Indians varied in a number of particulars. Those tribes belonging to the Algonquian linguistic stock had formerly dwelt under sedentary and agricultural conditions, and many of the habits then formed were lost under the stress of hunting; the binding force of a close social organization also gave way, with the result that religious rites and social customs were modified. With the affiliated Arapaho and Cheyenne tribes the 'Sun-dance' became the principal ceremony of the people. This composite rite spread to some tribes of the Siouan linguistic stock. It was not directly connected with the worship of the sun, as its name might imply. It is true that the 'dancer' turned towards the sun, but it was viewed as a symbol of the unseen Power that had granted the prayer of

the dancer—usually a supplication for the recovery of a sick relative, the sincerity of the request to be proved by the suppliant going through the torture of the Sun-dance. The Sun-dance witnessed by the writer in 1882 was the fulfilment of a vow made that the life of a sister might be spared to her family. There was therefore an altruistic teaching in this seemingly barbarous rite.¹

Among the Cheyenne there is an ancient ceremonial connected with four sacred arrows that have been preserved time out of mind, which was related to the teaching of the sanctity of life within the tribe. Little is known of this rite, as no one having any white blood has ever been allowed to witness it. See art. CHEYENNE.

The tribes of the Caddoan linguistic stock had long been familiar with the cultivation of the maize which figured in their tribal rites. These were elaborate, and presented phases of anthropomorphism that were not met with elsewhere.

The tribes of the Siouan linguistic stock dwelt on the eastern border of the Plains, along the banks of the Missouri River and the lower part of some of the tributaries of the Mississippi. The people lived in villages and cultivated maize, beans, and a few other plants; they went out to hunt buffalo and other game, returning home with their supply of meat and pelts. Early in the 17th cent. these tribes came into touch with French traders from the south, by way of the Mississippi, and across country to the north and east from the lakes and the St. Lawrence River. With the influx of wares during the 18th and 19th centuries, the native arts of weaving, pottery-making, and the manufacture of implements and weapons from stone, bone, and wood declined and finally ceased altogether. Under these influences hunting grew to be more or less a mercantile pursuit, and the religious rites formerly connected with it began to lose their power.

During the latter half of the 19th cent. the life of the tribes became greatly modified and at its close hardly a tribe was practising its ancient vocations and rites, or was dependent for social order upon its tribal form of government. The entire country was under the control of the white race, railroads stretched from the Atlantic to the Pacific, the mountains were no barriers, and portions of the Plains once regarded as a desert yielded to modern methods of land cultivation, so that the old life passed for ever out of sight. The native race survived under the new conditions, nor were their ancient beliefs wholly obliterated; these had too long been vital to the race to yield to mere external pressure. What those beliefs were has assumed new importance to the student of the development of the mind and thought of man while under the direct and sole tutelage of nature.

The American Indians belong to an observant, thoughtful, out-of-door people who for generations have lived on intimate relations with an unmodified environment. All animals pursued their own untrammelled mode of life, only the dog being domesticated. With few exceptions, the plants were undisturbed in their manner of growth; there were no highways to break the wide expanse of grass, or bridges to span the streams. There was nothing to suggest any break in the continuity of the natural relation between man and his surroundings. It is difficult for one of our race to conceive of that once unbroken stretch of country, giving no sign of the master-hand of man or of his permanent occupancy. It was amid such untouched, unforced conditions that the American Indian attentively watched the various phases of life about him and pondered upon what he saw.

¹ For a description of the Sun-dance see art. PHALISM, § 2.

Everywhere he seemed to discern that dual forces were employed to reproduce and so to perpetuate living forms. The fructifying power of the sun was needed to make the earth fruitful, and only on the union of the two, sky and earth, was life in its various forms made possible. Upon these two opposites he projected human relations and made them, to a degree, anthropomorphic; the sky became masculine, the earth feminine. Finally, by thinking along these lines, as his rituals reveal, he was led to conceive of the cosmos as a unit, permeated with the same life force of which he was conscious within himself—a force that gave to his environment its stable character, to every living thing on land and water the power of growth and of movement, to man not only his physical capacities but the ability to think, to will, to bring to pass. This unseen, undying, unifying force is called by the Omaha and cognate tribes Wakonda. Through Wakonda all things came into being, are ever related, and made more or less interdependent. Consequently, nature stood to the Indian as the manifestation of an order that had been instituted by Wakonda, of which man was an integral part. To this order he turned for guidance when establishing those means, religious and secular, that would ensure to him, individually and socially, safety and continuous life.

Finding himself to be one of a wide-reaching cosmic family, the Omaha (and his cognates) planned the tribal organization upon the type of that family. The people were divided into two great sections, one to represent the sky, the other the earth. Each section was composed of a number of kinship groups, called by a general term meaning 'village.' (These are spoken of by our students as 'clans' or 'gentes.') Each village stood for some one of the forms of life seen in Wakonda's instituted order. The sky was the abode of the sun, the stars, the winds, and the storm-cloud with its thunder and lightning, and to each village of that section was committed something regarded as symbolic of one of these manifestations. The earth, with its land and water, was the abode of the trees, grasses, and the various animals so closely allied to man and his needs, and to each village of that section was committed something typical or symbolic of one of these manifestations of life. In this way the tribal organization aimed at mirroring man's environment, as ordained by Wakonda, and was primarily religious in character, and secondarily political in its function. The tribal rites were instituted to emphasize that which the tribal organization portrayed, and to provide means by which the people should together acknowledge the order inaugurated by Wakonda, of which man was a part. In these rites all the villages of the two sections had a share, as well as the symbols committed to their keeping, so that the people, standing in the appointed order, with one voice appealed to the invisible Wakonda for help to secure food, safety, and long life.

A few words are necessary regarding the symbolic objects committed to the villages, as there has been considerable misconception of these and the Indian's use of them. Each village, according to the section to which it belonged, had charge of one of these symbols. The term by which it was designated in the Omaha language meant 'that by which they make themselves known as a people.' It is to this object that the term 'totem' has been applied. The symbol, representing, as it did, one of the forms of life in the sky or on the earth, as created by Wakonda, had a sacred significance to the people of the village and held the central place in their ceremonies. It bound the people together by a sacred tie, made them

distinctive among the other villages, and was a link between them and the invisible Wakonda. The symbol belonging to a village was always metaphorically referred to in the name of the village, and also in the personal name ceremonially given to every child born within the village. The symbol might be an animal (*e.g.*, the buffalo) or a force (*e.g.*, the wind), and the people might be spoken of by the name of the symbol of their village (*e.g.*, the buffalo people, or the wind people). This form of speech never meant to imply that the people were descended from the buffalo or any other symbolic object. Certain articles were regarded as associated with the different symbols; these were always treated with marked respect, and the people of a village never touched the articles associated with their own sacred symbol.

The tribal rites of the Omaha and cognates were composed of dramatic acts, the recitation of rituals, and the singing of ritualistic songs. In these are embodied the myths setting forth the genesis of man and his relation to nature. The stories, symbols, and metaphors are often highly imaginative and not infrequently touched with poetic feeling. These formed a nimbus about the rites that both illuminated and made elusive their meaning.

In the tribal rites can be traced the gropings of the Indian's mind to find that power, greater than man, which was the source of visible nature, to discover a way for man to approach it and receive help from it, and to search for the meaning of the activities that were everywhere apparent. The religious and social ideas developed through this search, extending through generations, as evidenced in the rituals, were gradually evolved and formulated in the tribal rites, wherein were clearly set forth the importance of the perpetuation of human life and the recognition that Wakonda is ever present in all things that surround man.

There were no specially designated persons in the tribe whose duty was to teach religion or ethics, nor were there any succinct, practical commandments as to the beliefs or actions. Religious and ethical teachings were embedded in the tribal and other rites. The duty of explanation and instruction to the laity, concerning the meaning and the teaching of these rites, devolved on the thoughtful elders of the tribe, who generally belonged to those eligible for the office of keeper and who formed a kind of hereditary priesthood.

3. *Wakonda*.—The term *wakonda* is not modern and does not lend itself to analysis. It is distinct from the word meaning 'spirit' and has nothing in common with it. *Wakonda* is not a synonym of 'Great Spirit,' of nature, or of an objective god, a being apart from nature. It is difficult to formulate the native idea expressed in this word. The European mind demands a kind of intellectual crystallization of conceptions which is not essential to the Indian and which, when attempted, is apt to modify the original meaning. *Wakonda* stands for the mysterious life-power permeating all natural forms and forces and all phases of man's conscious life. The idea of *wakonda* is therefore fundamental to the Indian's relation to nature and to all living forms, including man. While the conception of *wakonda* may appear vague, certain anthropomorphic attributes were ascribed to it, approximating to a kind of personality. Besides the insistence on truthfulness in word and deed, there were qualities involving pity and compassion, as shown in certain rites. All experiences of life were directed by *wakonda*—a belief that led to a kind of fatalism.

PLATO AND PLATONISM. —1. Life.—Aristocles, known always in after life as Plato (Πλάτων), was born at Athens (or, as some say, at Aegina) on 26th or 27th May 427 B.C. (or, as some say, 5th or 6th June 428 B.C.). He was well born, his father, Ariston, being of the family of Codrus, and his mother, Perictione, or Potone, of that of Solon; he was well bred; he was well-to-do. In his youth he received the customary education in music and gymnastic, and he performed the usual military service. He is said to have had poetical aspirations—dramatic, epic, lyric. In all probability he looked forward to a political career. Having been in early years introduced to the Heraclitean philosophy by Cratylus, he became acquainted about 407 with Socrates, and henceforward was one of his 'familiaris' or 'associates' (ἑταῖροι). Presumably Plato shared Socrates' political unorthodoxy; that is to say, he was a 'moderate' of the type of Theramenes, and, whilst he had no sympathy with Critias and the extreme oligarchs, desired a stringent reform of the 'unmixed democracy.' Accordingly, he was one of those Socratics who, on the death of their master in 399, withdrew from Athens and found a refuge with Euclides at Megara. It is possible that Plato returned to Athens in or about 394. Then came a time of travel, when he is said to have visited Egypt, Cyrene, Magna Græcia, and Sicily. At Syracuse he made acquaintance with Dion, and with Dion's brother-in-law, the 'tyrant' Dionysius the Elder. It is said that Dionysius, taking offence at remarks made by Plato about the ethics of tyranny, revenged himself by delivering Plato to one Pollis, a Spartan diplomatist; that Pollis sold Plato in the market-place of Aegina, as though he were a prisoner taken in war; that Anniceris of Cyrene bought him and set him free; that Plato's friends proposed to repay to Anniceris the sum which he had expended; and that, when Anniceris declined their offer, the money was spent in the purchase of the garden of Academus. Whatever may be thought of this curious story, Plato, when he returned to Athens about 387, established, first in the gymnasium of Academus and afterwards in the garden hard by, the school known henceforward to all time as the Academy. Here he lived, thought, taught, and wrote. It may be conjectured that in the earlier days of the Academy Plato not only delivered formal lectures, but also gave personal instruction to his abler pupils, using his written dialogues as texts for catechetical teaching; and that he shared the common life of the school. But there is reason to believe that in later years he delegated the personal teaching to others, and that towards the end of his life his public lectures were few and far between. In 367 he made a second journey to Syracuse in the vain hope of winning the younger Dionysius to philosophy, and thus realizing his scheme of an ideal polity governed by a philosopher-king. A third journey to Sicily in 361, having for its object the reconciliation of Dionysius with his uncle, Dion, was conspicuously unsuccessful. Plato died at Athens in 347.

2. Writings.—In the age of the emperor Tiberius the grammarian Thrasyllus framed a canon of Plato's writings, and included in it the *Apology of Socrates*, which purports to represent the unpremeditated defence addressed by Socrates

LITERATURE.—HAI (=Bull. 30 *BE* [1907-10]): J. Mooney, 'Calendar Hist. of the Kiowa Indians,' 17 *RBEW* [1898], pt. 1, p. 141 ff.; 'The Ghost-Dance Religion,' 14 *RBEW* [1896], pt. 2; A. C. Fletcher, 'The Iako,' 22 *RBEW* [1904], pt. 2; A. C.

to his judges; the *Epistles*, a collection of letters supposed to have been written by Plato to his friends; and 34 dialogues on philosophical subjects. There has been, and there still is, controversy about the epistles, some thinking that all are genuine, others that some, and in particular vii. and viii., are genuine, and others again (with whom the present writer ranges himself) that all are spurious. Doubts have been raised about certain of the 34 dialogues; but no serious critic of the present day questions any of the more considerable of them. It is easy to see why Plato gave to his writings a conversational form. Socrates had held that the teacher should elicit and suggest rather than inculcate and dogmatize, and had therefore preferred spoken to written discourse, question and answer to continuous exposition. Plato accepted his master's principle; and accordingly, though he deserted his example so far as to make use of writing, he was careful in so doing to imitate conversation. In most of the dialogues Socrates is the chief speaker; but Plato's Socrates is an idealized Socrates, who has an urbanity foreign to the Socrates of history, and he sometimes propounds physical and metaphysical doctrines which could not have found favour with a philosophical agnostic. In the *Parmenides* Socrates takes the second place; in the *Sophist*, the *Politicus*, and the *Timæus* he retires into the background; and in the *Laws* he does not appear. The dialogues differ in structure, inasmuch as the conversation is sometimes written down in the words of the supposed interlocutors; sometimes is reported by X, who has taken part in the discussion or has been present at it; once is reported by X, who heard the story from Y; and once is reported by X, who heard it from Y, who heard it from Z. They differ also in literary character and treatment. Some are lively and dramatic; some are eloquent and poetical; some are severely dialectical. Though in general the conversational form is studiously maintained, there are upon occasion great stretches of continuous discourse; and in particular there are imaginative interludes called myths (*μῦθοι*), which, making no pretension to exactitude of statement, claim notwithstanding to be substantially true, and, where experience fails, to fill a gap by provisional hypotheses (*Phædo*, 114 D). Thus, the making and the maintenance of the universe, prehistoric society, the day of judgment, and the future state are mythically described. In a word, the myth is a profession of faith. The introductions prefixed to some of the dialogues and the description of the last hours of Socrates in the *Phædo* are the very perfection of continuous narrative. The style is always the best possible for the occasion; for Plato's harp has many strings.

3. The grouping of the dialogues.—Assuming that, when Plato began to write, the fundamentals of his system were already settled, and that accordingly the order of the principal writings was determined by the needs and the conveniences of exposition, Schleiermacher,¹ the father of the modern study of Platonism, recognized three groups of dialogues: elementary, transitional, and constructive. The *Phædrus*, he thought, was the earliest of the dialogues; the *Republic*, the *Timæus*, the *Critias*, and the *Laws* were the latest. On the other hand, K. F. Hermann,² denying that the system came into existence full-grown, saw in the several dialogues the results and the evidence of Plato's doctrinal development, and distinguished three periods of his literary activity: (1) the years

immediately following the death of Socrates; (2) the residence at Megara; and (3) the years 387–347. Subsequent inquirers, however much they differ in detail from one another and from Hermann, seem on the whole to agree in accepting his principle of interpretation.

It will be convenient to note, first, the principal points in which the critics are agreed; secondly, the principal points in which they differ. The critics are for the most part agreed in recognizing a group of dialogues in which Plato, despite certain differences of nomenclature and method, has not yet advanced beyond the Socratic standpoint; and it is obvious to assign these to an early date. Again, tradition ascribes to the *Laws* the last place; and modern scholarship readily assents, adding that the *Timæus* and the *Critias* come next before it. Further, on internal evidence it is obvious to suppose that certain dialogues which are critical of educational methods—*Protagoras*, *Gorgias*, *Phædrus*, *Euthydemus*, *Symposium*, and *Meno*—preceded the *Republic*, in which Plato propounds his own educational theory. Thus far there is little disagreement. But there is an eager controversy about certain dialogues which have been described as 'dialectical' or 'professorial,' namely, the *Parmenides*, the *Philebus*, the *Theætetus*, the *Sophist*, and the *Politicus*, and about their relation to the *Republic*, some regarding them as dialectical exercises preparatory to the dogmatic teaching of that great dialogue, whilst others find in them a style later than that of the *Republic*, reasoned criticism of its metaphysical doctrine, and substantial contributions to a revised and reconstituted system. The present writer, who holds that the five dialogues called dialectical or professorial look back to the *Phædo* and the *Republic*, forward to the *Timæus*, and together with the *Timæus* represent Plato's philosophical maturity, would arrange the principal dialogues in five groups corresponding to successive stages in Plato's intellectual development, namely: (1) Socratic dialogues, (2) educational dialogues, (3) *Republic*, *Phædo*, *Cratylus*, (4) professorial dialogues, *Parmenides*, *Philebus*, *Theætetus*, *Sophist*, *Politicus*, together with *Timæus*, (5) *Laws*. An attempt must now be made to characterize these several stages of Plato's intellectual development, and to show how the principal dialogues illustrate and elucidate them.

4. The five stages of Plato's intellectual development.—(1) *The Socratic dialogues*.—About the middle of the 5th cent., say 450 B.C., the philosophers who sought knowledge for its own sake were faced and baffled by three questions: (a) What is being? (b) What is knowledge? (c) What is predication?; and, for the moment, philosophical inquiry seemed to be at a standstill. Democritus indeed had not abandoned the attempt to provide a scientific cosmology and cosmogony; and, towards the end of the century, the neo-Heraclitean Cratylus, recognizing that, if all things are in flux, there is nothing to be perceived, looked to etymology for evidence of something permanent underlying the perpetual process of phenomena. But Democritus belonged to the past, and the etymological theory of Cratylus never established itself. Accordingly, in the latter half of the 5th cent. (450–400) the main stream of thought set strongly in the direction of philosophical agnosticism, and the intellectual aspirations of central Greece found expression for the most part in humanism—that is to say, the literary humanism of the Sophists and the ethical humanism of Socrates. Plato's youthful study of Heraclitean flux had made him a philosophical agnostic; for, even in early days, he must have recognized the futility of Cratylus's etymological

¹ *Platons Werke*, Berlin, 1855–62, i. 1. 82–83.

² *Geschichte und System der platonischen Philosophie*, pt. I. (do. 1889) p. 834, etc.

theory. He was then ready to receive and assimilate the positivism of Socrates; and for a time he found a refuge in dialectical theory and practice. But, whereas Socrates had seen in the study of ethical consistency a sufficient occupation for his energies and had rested in it, Plato, taking his departure from the logic of consistency, proceeded to build upon it, first, a philosophy, secondly, a science, and, thirdly, a sociology. Moral error, Socrates had thought, is largely due to the misapplication of general terms which, once affixed to a person or an act—possibly in a moment of passion or prejudice—stand in the way of a sober and serious judgment. In order to guard against error of this sort, and to secure in the individual at any rate consistency of thought, and, in so far, consistency of speech and action, Socrates spent his life in seeking, and helping others to seek, 'the what,' or the definition, of the words by which the moral quality of actions is described. This statement of the aim which Socrates had steadily pursued exactly describes the end which Plato proposed to himself in the Socratic dialogues of his first period. But Socrates had talked, and Plato wrote. Consequently, whereas Socrates, who talked, having satisfied himself that the *ἔργος*, or cross-examination, had made the hearer aware of his ignorance, might, and did, point the way to a definition, Plato, who wrote, if he was not to sacrifice the advantage of the elenctic stimulus, was obliged to stop short of dogmatic reconstruction.

E.g., in the *Euthyphro* Socrates invites his interlocutor to define 'piety' or 'holiness.' At first Euthyphro does not understand what Socrates means by a definition. Socrates explains. Then Euthyphro propounds in succession several definitions, and Socrates shows their insufficiency. Again and again confuted, but in no wise abashed, Euthyphro pleads an engagement, and the dialogue ends. We may perhaps conjecture that Plato intends to define piety or holiness as 'that part of justice which is concerned with the service of the gods'; but, in order that the reader may be compelled to think for himself, Plato carefully refrains from formulating his result.

The Platonic dialogue of this period is, then, an exercise in Socratic dialectic; but, whereas the destructive process is set out at length, the constructive process is left to be supplied by the reader. Contrariwise, Xenophon, who, being apologist rather than educator, cares little for the *ἔργος*, and is chiefly anxious to justify his master's morality, neglects the destructive process and dwells upon the constructive results. Besides the *Euthyphro* (piety), the *Charmides* (temperance), the *Laches* (courage), the *Lysis* (friendship), and the *Hippias Major* (beauty) are characteristic dialogues of the first or Socratic period. In this period Plato uses the terms 'form' (*εἶδος*) and 'idea' (*ἰδέα*) to mean the characteristic or characteristics included in a Socratic definition, i.e. 'the one in the many,' the element common to a plurality of things which we propose to call by the same name. But, inasmuch as the Socratic definition of a term of morality or art does not presume, either in or out of nature, any objective unity corresponding to it, the 'form' or 'idea' has no separate existence, it is not *χωριστὸν τι*. In this stage, then, the forms or ideas are moral and æsthetic concepts framed by the individual in order that he may be consistent in thought, word, and deed, and that he and his interlocutor may not misunderstand one another.

(2) *The educational dialogues.*—The dialogues of the second period show a notable advance upon the dialogues of the first both in their style and in their doctrine: in their style, for they are more complex, more literary, and more dramatic; and in their doctrine, for Socrates, the protagonist, propounds doctrines unknown to the Socrates of history, the Socrates of Xenophon, and the Socrates

of Plato's Socratic writings. These dialogues are primarily concerned with the criticism of earlier and contemporaneous theories of education. Thus the *Protagoras* brings the educational methods of Protagoras and the Sophists face to face with the educational method of Socrates; the *Gorgias* and the *Phædrus* deal respectively with the moral and intellectual aspects of the forensic rhetoric of Gorgias and the political rhetoric of Isocrates; the *Meno* criticizes the makeshift method of those who, despising systematic teaching, regarded the practical politician as the true educator; the *Euthydemus* caricatures the contemporary eristic; and all these dialogues, together with the *Symposium*, whilst they demonstrate the superiority of Socratic dialectic to the current sophistries, show a growing consciousness of its limitations and insufficiency. If education is to do what we expect of it, surely it should have for its basis, not personal consistency, but objective truth. Where, then, is truth to be found? Not in objects of sense, which are confessedly imperfect, but in the type or form with which we instinctively compare them. In the words of John Stuart Mill:¹

'All the objects of sense are that which they are, in only an imperfect manner, and suggest to the mind a type of what they are, far more perfect than themselves; a "something far more deeply interfused," which eye has not seen nor ear heard, but of which that which can be seen or heard is an imperfect and often very distant resemblance. . . . What, then, could be more natural than to regard the types as real objects concealed from sense, but cognisable directly by the mind? . . . The self-beautiful, the self-good, which not only were to all beautiful and good things as the ideal is to the actual, but united in themselves the separate perfections of all the various kinds of beauty and goodness—must not they be realities in a far higher sense than the particulars which are within sensible cognisance? Particulars which indeed are not realities: for there is no particular good or beautiful or just thing, which is not, in some case that may be supposed, unjust, evil, and unbeautiful.'

This paragraph is not indeed what Mill meant it to be, a complete and final summary of Plato's theory of ideas; but it cannot be bettered as a statement of the imaginative speculation out of which that theory was afterwards to grow; i.e. as a description of the process by which Plato arrived at the conception of a sole reality, eternal, immutable, perfect, whereof perishable, mutable, imperfect things are, in the language of Goethe, no more than 'likenesses.'

For the exposition of this imaginative speculation in its primitive and poetical form the *Phædrus* and the *Symposium* are all-important. There are, we are told in the *Phædrus* (247-250), certain real existences (*ὄντως ὄντα*), such as self-justice, self-temperance, self-knowledge, of whose transcendental perfection, revealed to us in a previous existence, we are reminded by their imperfect earthly counterparts. This rudimentary theory of being becomes a rudimentary theory of knowledge when we are further told in the *Symposium* (210 A ff.) that the lover of beauty rises from the sight of persons, souls, and institutions, which are imperfectly beautiful, through the corresponding universal or Socratic definition, to the knowledge of the eternally existent self-beautiful (*αὐτὸ δὲ ἑστὶ καλόν*). In a word, Plato postulates really existent unities, of which unities phenomenal pluralities are imperfect likenesses, and supposes the really existent unities to become known to us, through Socratic definitions, by means of *reminiscence* (*ἀνάμνησις*). But he makes no attempt to explain how the imperfectly beautiful particular is related to the perfect self-beautiful; nor does he define the content of the world of ideas. In this second period, then, the forms or ideas are moral and æsthetic unities, eternal, substantial, separately existent; but we are not told how their particulars participate in them, nor what the things are which have ideas corresponding to them.

¹ *Dissertations and Discussions* London, 1867, iii. 248.

(3) *The earlier theory of ideas.*—And now, in a third period, taking his departure from the rudimentary conception of eternally existent unities, Plato proceeds to develop a systematic theory which shall afford answers to the three great questions, What is being?, What is knowledge?, What is predication? This systematic theory, the earlier theory of ideas, may be summed up in four propositions—a fundamental proposition and three supplementary articles. The fundamental proposition is the proposition already indicated in the poetical speculation of the second period, and henceforward steadfastly maintained: beside pluralities of phenomena, transient, mutable, imperfect, which become, and are objects of opinion, there are unities, eternal, immutable, perfect, which really exist, and are objects of knowledge. The supplementary articles which convert the poetry of the *Phaedrus* and the *Symposium* into the philosophy of the *Republic*, the *Phaedo*, and the *Cratylus* are: (a) wherever a plurality of particulars are called by the same name, there is a corresponding idea or form (*Republic*, 596 A; cf. *Phaedo*, 65 D); thus there are now ideas, not merely of good, just, beautiful, but also of bad, unjust, unbeautiful; of chairs and tables; of fever; of hot and cold; in short, of every common term; (b) it is the presence, immanence, communion (*παρουσία, κοινωνία*) of the form or idea in the particular—or, in other words, it is the particular's participation (*μέθεξις*) in the idea—that makes particulars what they are (*Phaedo*, 100 D; cf. *Republic*, 476); that is to say, a thing is beautiful because the idea of beauty is present in it; a thing is unbeautiful because the idea of unbeautiful is present in it; a thing is both beautiful and unbeautiful because both the ideas are present in it; (c) foremost of the ideas is the idea of good.

'For,' says Socrates (*Republic*, 600 B), 'just as the sun furnishes to the objects of sight not only their capacity for being seen, but also their generation, growth, and nutrition, even so the objects of knowledge derive from the good not only their capacity for being known, but also their existence and their reality, though the good is not reality, and is on the other side of it, transcending it in majesty and power.'

With the help of these supplementary articles, the fundamental proposition becomes a theory of being, a theory of knowledge, and a theory of predication. It is a theory of being inasmuch as the ideas are eternal, immutable unities. It is a theory of knowledge inasmuch as in the *Republic* (vi. *ad fin.*) Plato hopes to ascend from observed particulars through Socratic definitions to a definition of the self-good, and thus to convert provisional definitions of things into certified representations of ideas. It is a theory of predication inasmuch as it affords or seems to afford an answer to certain logical paradoxes which had sorely perplexed Plato's contemporaries and for the moment himself. For, whereas the proposition 'Likes cannot be unlike, nor unlikes like,' which Zeno had regarded as a truth, seemed to his successors to cut at the root of all predication, Plato in this stage conceived that, though the unities like and unlike cannot be affirmed the one of the other, a particular can be simultaneously like and unlike in the sense that the ideas of like and unlike are simultaneously present in it. That this was the origin of the hypothesis of the particular's participation (*μέθεξις*) in the idea is plainly affirmed in the *Parmenides*; and it would seem that, when Plato wrote the *Republic*, he was not yet aware of the limitations and inconsistencies which were speedily to prove fatal to this, the earlier theory of ideas.

(4) *The later theory of ideas.*—Plato's fourth period, in which his philosophy reached its consummation, is represented by six remarkable dialogues, of which three—*Parmenides*, *Philebus*, and *Timæus*—are chiefly ontological, and three—

Theatætus, *Sophist*, and *Politicus*, or *Statesman*—are chiefly logical. In all of these, unmistakable references to the *Republic* and the *Phædo* show that Plato has now finally renounced the supplementary articles of the earlier theory of ideas; but the critical or destructive element is especially conspicuous in the *Parmenides* and the *Philebus*, which may be placed respectively first and second at the beginning of the series. The *Theatætus*, the *Sophist*, and the *Politicus*, which deal with the logical problems of the time and clear the way for the reconstruction of the system, naturally follow; cf. Aristotle's statement (*Metaphysics*, A. vi.) that Plato's theory of ideas, i.e. the later theory, rested upon a logic which was all his own. The series ends with the *Timæus*, which, if it does not formulate a dogmatic ontology, at any rate lays the foundations of what R. D. Archer Hind has well called 'a thorough-going idealism.' Of each of these dialogues something must now be said.

In the *Parmenides* Plato takes up again the proposition 'Likes cannot be unlike, nor unlikes like.' Socrates, a mere stripling, disputes Zeno's supposed truth, and maintains that the same thing may be at once like and unlike by reason of the immanence in it of the ideas of like and unlike, or, in other words, by reason of the particular's participation in those ideas. That is to say, he attempts to dispose of the contemporary paradox of predication by an appeal to the characteristic doctrine of the *Republic* and the *Phædo*. Hereupon Parmenides—not the Parmenides of history, but an anachronistic Parmenides; in fact, Plato himself in the fullness of his powers—intervenes, and shows (a) that, whereas by assumption the idea is a unity (for otherwise the difficulties which beset the particular would beset the idea also), if two or more things are called by the name of the idea in virtue of their common participation in it, the unity of the immanent idea is sacrificed, either by multiplication or by division, in the world of sense (*Parmenides*, 130 E ff.); (b) that, if without participation in the idea there is no predication, the unity of the idea is sacrificed in the world of ideas; for the particular man and the idea of man are both called man, and by assumption this common predication implies the existence of a secondary idea of man, and so on *ad infinitum* (131 E, 132 D); (c) that the theory of the *Republic* and the *Phædo* does not explain how the idea, which is a unity, can be the subject of predication; for by assumption the subject of predication is not a unity, but a complex or bundle of ideas (129 C, E); (d) that the dogma 'Every common term has an idea corresponding to it' conflicts with the theory of the idea's perfection (130 C); (e) that, while without ideas there can be no knowledge, the unconditioned idea can no more be apprehended by man than the conditioned phenomenon can be apprehended by God (134 A ff.). That is to say, the theory of immanence, by which Plato in the earlier time had sought to explain the supposed paradox of the one thing and its many predicates, involves another paradox, the paradox of the one idea and its many particulars; and it will be necessary for us, if we are to attempt a reconstruction of the theory of being, to provide a new solution of the paradox of diverse attributions. For this new solution, so far as *relations* are concerned, we must look to the latter part of the dialogue. Here, at the instance of the other two, Parmenides proceeds to investigate his own doctrine of the existence of the one; but he extends the scope of the inquiry so that it shall take account of the antithesis of the one and the many whether that one or that many is supposed to be or not to be, and not only as the antithesis was understood by himself and by Zeno, but also as it was interpreted by their successors. and in particular by

Plato himself both in his earlier theory and in his later. In the course of the inquiry the antithesis of the one and the others, i.e. of the one thing and its many attributions, is brought before us in eight hypotheses; and in each case we ask ourselves, How does this particular hypothesis deal with the paradox of likeness and unlikeness? Does it recognize that the same thing can be like and unlike, old and young, and so forth, in which case cognition of some sort is possible? Or does it deny these attributes, and thus bring philosophy to a deadlock? The eight hypotheses and their results may be briefly stated as follows:

(i.) If the One is one, that is to say, in a strict sense a unity, the attributes like and unlike, great and small, resting and moving, old and young, etc., cannot be predicated of the One, and there can be neither knowledge nor sensation nor opinion of it.

(ii.) If the One participates in existence and, through a finite many (πολλά), becomes an infinite many (ἄπειρα), diverse predicates such as like and unlike, etc., can be affirmed and denied of the One in its relations to itself and to the others; and the One can be known, opined, perceived.

(iii.) If the One is, and, through a finite many, an infinite many can be conjoined in the One, diverse predicates such as like and unlike, etc., can be affirmed of the others in relation to themselves and to one another.

(iv.) If the One is, but, inasmuch as there is no finite plurality to mediate between the others and the One, the others are wholly dissociated from the One, diverse predicates such as like and unlike, etc., cannot be affirmed of the others.

(v.) If the One is not, i.e. if the One is negatively determined by its otherness from what is, diverse predicates such as like and unlike may be affirmed about the One and it can be known.

(vi.) If the One is not, i.e. if the One is absolutely non-existent, diverse predicates cannot be affirmed about it, and it cannot be known.

(vii.) If the One is not, and yet there are others—i.e. things other than one another—the others may have the semblance of grouping, even if there is no finite plurality to determine the groups, and in this way diverse predicates may be affirmed of the phenomenal others, and opinion, though not knowledge, is possible thereof.

(viii.) If the One is not, and there is no semblance of grouping, the others being no more than disconnected particulars, diverse predicates cannot be affirmed of them.

Now of these eight hypotheses four, namely i., iv., vi., viii., give negative results only; that is to say, there can be neither predication nor knowledge either of the One or of the others as here described. But (a) of the One and the others as conceived in ii. and iii., where the finite many mediates between the unity and infinite plurality, and (b) of the One of v., which is negatively determined, there may be predication and knowledge, and (c) vii. permits qualified predication and opinion in the region of sense. Accordingly, we shall find that ii. and iii. are the foundation of the *Philebus* and the *Timæus*, and that v. and vii. find a place in the three logical dialogues, *Theatetus*, *Sophist*, and *Politicus*. In a word, the *Parmenides* not only rejects the earlier theory of ideas, but also maps out the later. And this is not all. From the eight hypotheses *Parmenides* draws the enigmatical conclusion:

'Whether One exists or does not exist, both One and the others are, and are not, all things in all ways, and appear to be, and do not appear to be, all things in all ways, both in relation to themselves and in relation to one another.'

This summary of the eight hypotheses is Plato's resolution of the paradox of likeness and unlikeness. For he has shown practically in many particular instances that, whether we suppose the One to be existent or to be non-existent, and howsoever we conceive it, we can affirm and deny, of it and of them, in *its* and *their* relations to *itself* and to *themselves*, diverse predicates such as like and unlike, resting and moving, small and great, etc. Thus, when we affirm diverse predicates of any thing, there is no inconsistency such as Antisthenes had supposed; because what is affirmed or denied is always a *relation*, and the same thing can be like in one relation and unlike in another. And this resolution of the contemporary difficulty carries with it an important corollary; it is now open to us to expunge relations from the list of the εἶδη, and in this way to escape, so far as relations

are concerned, from the paradox of the multiplication or the division of the idea. Or, if we prefer still to recognize εἶδη of relations, distinguishing between εἶδη which are ἀνὰ καθ' αὐτά and εἶδη which are not ἀνὰ καθ' αὐτά, we may relegate εἶδη of relations to the latter class.

But again, as has been said, the *Parmenides* affords hints for reconstruction: (1) the second and third hypotheses show that, if exact predication and knowledge are to be possible, a finite plurality must needs intervene between unity and infinite plurality; i.e., as is affirmed in the *Philebus*, a finite number of kinds must needs intervene between the unity of existence and the infinity of particulars; (2) from the fifth hypothesis we learn what is shown at length in the *Sophist*, that a member or members of the finite plurality can be negatively described; (3) the seventh hypothesis shows that, where there is no finite plurality, there may still be a finity of apparent, artificial groups, by which inexact predication, and opinion, but not knowledge, become possible. It would seem, then, that the *Parmenides*—which some have regarded as a dialectical exercise preparatory to the *Republic*, and most have deliberately neglected—not only disposes of the earlier doctrine, and maps out the later, but also announces that withdrawal of ideas of relation which Aristotle plainly regarded as a notable characteristic of Plato's maturity (*Met. A. ix. 990^b 16*).

The work of reconstruction begun in the *Parmenides* is continued in the *Philebus*. Here Socrates reverts to the question propounded in *Republic*, vi. 505 A ff., What is the *summum bonum*? Is it pleasure? Is it intelligence? This ethical question is quickly and summarily disposed of: the chief good of man is a mixed life of intelligence and pure pleasure. But a new question, wider in its scope, arises out of it and takes its place. What is it that makes the mixed life, or anything else, good? In the *Republic* and the *Phædo* Plato had made answer: 'A thing is good because, side by side with the constitutive idea, the idea of good, the ἀνὰ ἀγαθόν, is present in it.' But in the interval the theory of the immanent idea has been discredited, and now in the *Philebus* we start anew from the dogma foreshadowed in the second and third hypotheses of the *Parmenides*: 'All things which are or exist in our universe are combinations of *finity* (πέρας), and *indefiniteness*' (ἀπειρία); and we call them good or bad according as they approximate to, or diverge from, the πέρας ἔχοντα, their constitutive ideas. Whence it would seem (1) that, inasmuch as the particular is good by reason of its approximation to its formative idea, the intervention of the idea of good is no longer required to account for the particular's excellence, and (2) that, inasmuch as particulars approximate to, and diverge from, their respective ideas, the particular imitates (μιμνῆσκει) the idea and no longer participates in it (μετέχει). Incidentally it appears that we no longer need ideas of 'hot' and 'cold,' inasmuch as these qualities are divergences from an indifference point which is neither the one nor the other.

The *Theatetus*, the *Sophist*, and the *Statesman* are a trilogy, not only in the sense that the conversation begun in the first of the three is continued in the other two, but also inasmuch as the *Sophist* and the *Statesman*, though ostensibly they discuss a new question, Are sophist, statesman, and philosopher one, two, or three?, resume and dispose of the question left unanswered in the *Theatetus*, What is knowledge?

According to Aristotle (*Met. A. vi. 987^a 32*), Plato, who in early years had been the pupil of the Heraclitean Cratylus, was true in later life to the Heraclitean principle, 'All sensibles are in

flux and therefore cannot be known,' whence he inferred the existence of things other than sensibles, and these things he called *forms* or *ideas*. The *Theaetetus* is Plato's justification of the Heraclitean principle; and, if the corollary is not explicitly formulated, at any rate the way to it is made plain. Knowledge, we find, is not sensation, which has sensibles for its object; nor is it true opinion, opinion being judgment about sensibles; nor is it true opinion supported by a definition, Socratic or otherwise. Hence, if there is to be any knowledge—and Plato does not despair—there must be things other than sensibles, and such are the ideas, which, in the second and third hypotheses of the *Parmenides*, mediate between the unity of being and the infinity of particulars.

In the *Sophist* and the *Statesman* the interlocutors of the *Theaetetus* together with an Eleatic stranger, who now appears for the first time, discuss the question, 'Are sophist, statesman, and philosopher one, two, or three?', and come to the conclusion that the true statesman is identical with the philosopher, and the mere politician identical with the sophist. Thus in our search for the sophist we stumble upon the philosopher (253 C); and it is therefore unnecessary either to suppose that a dialogue about 'the philosopher' was planned but remained unwritten, or to find a 'philosopher' in one of the extant dialogues. Incidentally, the definition of the philosopher carries with it a definition of knowledge, and in this way the *Sophist*, hereafter to be supplemented by the *Statesman*, resumes the discussion raised and dropped in the *Theaetetus*, and the unity of the trilogy is assured.

In the search for a definition of 'sophist' the Eleate finds himself obliged 'in violation of the principle of our father Parmenides,' to attribute existence to the non-existent or non-ent. An investigation of the non-ent (*μη ὄν*) thus becomes necessary; and, as in the *Parmenides* the investigation of the existent unity involves that of unity which is non-existent, so here the study of the non-ent involves that of the ent also. In the investigation of the two taken together the following discoveries are made: (1) beside *αὐτὰ καθ' αὐτὰ εἶδη*, which are incommunicable, incapable of being predicated of one another, there are *γέννη* or *εἶδη*, not *αὐτὰ καθ' αὐτὰ*, which communicate, some within narrow limits, others generally but not universally, such as 'rest' (*στάσις*) and motion (*κίνησις*), and others, again, universally, namely ent (*ὄν*), same (*ταυτόν*), other (*ἕτερον*); (2) there is no *αὐτὸ καθ' αὐτὸ εἶδος* of sophist; (3) the function of dialectic is classification according to kinds (*τὸ κατὰ γέννη διακρίσθαι*), whereby we are preserved from thinking that which is the same different or that which is different the same; and he who can thus classify is the philosopher whom we seek; (4) ent (*ὄν*) and non-ent (*μη ὄν*) are intercommunicable, if by non-ent we mean, not that which is contrary (*ἐναντίον*) to ent, but that which is different (*ἕτερον*) from it, and accordingly *μη μέγα* and *μη καλόν* may be as truly existent as *μέγα* and *καλόν* (cf. the fifth hypothesis of the *Parmenides*, and cf. *Republic*, v. ad fin.); (5) the troubles of contemporary logic principally depend upon misunderstandings in regard to the negative. The merits of this great dialogue cannot be exaggerated.

The method of *division* (*διαίρεσις*) announced in the *Sophist* is developed and illustrated in the *Statesman* (*πολιτικός*). Division is indeed no new thing; but the use now to be made of it is novel and important. In the *Philebus* (16 B) Socrates professes himself enamoured of it, though it has often left him stranded; and as early as the *Phaedrus* (263 A) he has employed it in framing Socratic definitions with a view to consistency in

the use of debatable terms (*ἀμφισβητήσιμα*) such as just, unjust; in other words, in making artificial groups where nature does not give us definite kinds. In the *Sophist*, when we seek definitions of *ἀσπαλιευτική* and *σοφιστική*, and even in the *Statesman*, when the stranger starts upon his inquiry, division has no more ambitious aim than *ὁμολογία*. But at 261 D ff., and especially at 266 A ff., we find ourselves applying it to animal kinds with a view to the discovery of incorporeal *αὐτὰ καθ' αὐτὰ εἶδη*. That is to say, *διαίρεσις* is now used, not with a view to the creation of artificial groups in the region of *ἀμφισβητήσιμα*, but as a means of ascertaining the likenesses and the unlikenesses of nature's fixities, the *αὐτὰ καθ' αὐτὰ εἶδη*. In other words, the natural types, or *αὐτὰ καθ' αὐτὰ εἶδη*, are the proper objects of knowledge, and what can be known about them is their mutual resemblances and differences. And, when it is understood that the end of *διαίρεσις* is now the determination of the affinities of *εἶδη*, and not a mere definition 'per genus et differentias' of a single *εἶδος*, certain precepts here added and exemplified become for the first time intelligible. *E.g.*, the longer dichotomy is, as such, the better, because we obtain by it fuller information about an *ἐπιστητόν*. We have then here the foundation of the classificatory science which was for a time to play so great a part in the Academy. The latter part of the dialogue prepares the way for the reconstituted sociology of Plato's fifth period.

The *Timaeus* is the keystone of the later theory of ideas. Here, in a cosmogonical myth, Plato shows that the universe, as we know it under conditions of time and space, may be conceived as the thoughts of universal mind together with the thoughts of those thoughts. The ideas are the thoughts of God (*νοήματα θεοῦ*), or, in other words, the laws of universal mind's thinking. But, whereas universal mind, the subject, thinks a plurality of thoughts, it thinks those thoughts, its objects, in space; and, in so far as it thinks them under spacial conditions, it thinks them in terms of certain regular geometrical figures—pyramid, octahedron, eikosaedron, cube—and these regular geometrical figures are respectively the ideas of fire, air, water, earth, the elements which go to make (a) the body of the universe, (b) the bodies of the stars, which are the first-born thoughts of creative mind, and (c) the bodies of the animals and vegetables, which creative mind thinks, not directly as it thinks the stars, but indirectly through the minds of the stars, its first-born thoughts; and, whereas God, or mind, the creator, thinks humanity or caninity, as an eternal unity, the stars, His first-born thoughts, when they think humanity or caninity corporealized under spacial conditions, conceive it, not as an eternal unity, but as a transient plurality. Thus particular men or dogs are, as it were, reflexions of the idea of man or dog, invested with bodily form under conditions of time and space; and in this way, in virtue of the hypothesis that 'that which superior mind conceives as a subjective thought is perceived by inferior mind, however imperfectly, as an objective thing,' Plato is able to show, at any rate, the possibility of expressing in terms of mind the materiality and the externality of things. And these results carry with them an important corollary. If particular men and particular dogs owe their respective existences to eternal, immutable ideas of man and dog, it should be possible for us—even if we cannot apprehend those ideas—to study by the method of division (*διαίρεσις*) announced in the *Sophist* and the *Statesman* the bodily resemblances and differences of natural kinds. In a word, the proper function of the man of science is the study of classificatory zoology and botany, because in these subjects the

ideas of the respective animals and vegetables assure us of the existence of natural kinds. On the other hand, where there are no ideas, and therefore no determinate natural kinds, though we may 'study the subject as a recreation, and derive from it a sober and sensible amusement (59C), there can be no exact science. *E.g.*, mineralogy, inasmuch as the several minerals are irregular, indeterminate, combinations of the four simple bodies, combinations which are not definitely marked off from one another by nature, is not an exact science. Nevertheless it would seem that Plato by no means confined his attention to the exact sciences, the sciences founded upon ideas; for in the latter part of the *Timæus* he has much to say both about inexact sciences, such as mineralogy, and about the parts and organs of the body and their several functions. His pronouncements on these subjects are highly speculative; but, as indications of his scientific aims, they are by no means unimportant.

We may now tabulate the later theory of ideas with a view to a comparison of its supplementary articles with those of the earlier theory. The fundamental proposition is still—as it has been ever since Plato freed himself from Socratic limitations—'Beside pluralities of phenomena, transient, mutable, imperfect, which come into being, and are objects of opinion, there are unities, eternal, immutable, perfect, which really exist, and are objects of knowledge.'

The supplementary articles are as follows: (a) there are substantive, self-existent ideas (*αὐτὰ καθ' αὐτὰ εἶδη*) of the universe; of fire, air, water, earth; of the several stars; and of the several animal and vegetable species; but of nothing else. (b) It is not the idea's immanence in particulars, but the imitation or reflexion of the idea in matter—i.e. in space—that brings particulars into existence and makes them what they are. (c) Unity = mind = good = God is the cause, the sole cause, of all things; it is the cause of the ideas, of particulars, and even of its own correlative—plurality = space = evil = necessity. (d) The ideas are the thoughts of the sole cause, namely, unity or mind. (e) Infinite mind develops within itself a complete universe of thoughts, primary and secondary; and this universe of thoughts, as seen from within by a finite intelligence included in it, is our universe of things.

In this stage, then, the forms or ideas are unities from which nature's fixities—the universe, the four simple bodies, the stars, and the animal and vegetable kinds—are respectively derived; they are substantial and eternal; they are the thoughts of universal mind; they are not immanent in particulars, but are imitated or reflected as particulars in space.

(5) *The Laws*.—We now come to the fifth period of Plato's philosophical and literary activity. Having given to his metaphysic its final shape, and having shown how, through the doctrine of natural kinds, it affords a foundation for the scientific study of animal and vegetable species, Plato leaves to his nephew Speusippus the direction of the biological studies of the school, and himself, reverting to ethics and sociology, revises his earlier conclusions about those subjects from the standpoint of his later philosophy. When he wrote the *Republic*, he had hoped to attain through the self-good to the knowledge of the ideas, and thus to establish a 'philosophical morality.' If man could know the self-good and the ideal virtues which spring from it, he would no longer—except in early years when he had not yet completed his education—require that 'popular and civic virtue' which society artificially builds up by means of rewards and punishments; the knowledge of the self-good would be his one and only end and his

exceeding great reward. Such had been Plato's aspiration when in a burst of enthusiasm he wrote the *Republic*. But since that time he had become aware of the limitations of human nature. Man cannot know the self-good; and, what is more, inasmuch as man has a bodily nature, the self-good and the human good are not identical. This being so, we cannot dispense with 'popular and civic morality,' and it becomes necessary to do what we can to strengthen and improve it. Hence, whereas in the *Republic* he plans a constitution and provides for its maintenance, but commits to his trained magistrates all the responsibilities of administration, in the *Laws*, recognizing that under existing conditions legislation is indispensable, he seeks to provide for the guidance of his countrymen a complete code of enactments. In this remarkable treatise Plato leaves metaphysics and science behind him; but there is one metaphysical pronouncement, and at first sight it flagrantly conflicts with the teaching of the *Timæus*. Whereas in that dialogue Plato claims to have found in universal mind the one and only cause of the infinite variety of things, here, in the *Laws* (896 E), he confidently affirms that there are two world-souls, the one beneficent, the other maleficent—God and devil. The truth is that, writing popularly, he stops short of his final analysis. The good world-soul and the bad world-soul of the *Laws* are the providence (*πρόνοια*) and the necessity (*ἀνάγκη*) of the *Timæus*; and the fact that in the unmetaphysical *Laws* Plato rests in the penultimate dualism of the great metaphysical dialogue is no reason for supposing that he had abandoned his ultimate henism.

Never perhaps was any other philosopher as progressive as Plato. In his early years he had studied the two philosophies which were afterwards to be the foundations of his own system—the Heraclitean theory of flux and the Socratic doctrine of ethical universals. In the first period of his independent thought he attempted no more than to carry on by written discourse the oral teaching of his master and thus to secure a greater consistency in the use of those terms of morality which have so great an influence upon actions. In the second, noting that, in moral and æsthetic practice, we find ourselves perpetually referring to an ideal standard, he conceives that in a previous existence we have known certain suprasensual realities such as goodness, beauty, and justice, of which their counterparts in this world imperfectly remind us. In the third, bewildered by Zeno's axiom that likes cannot be unlike, nor unlikes like, he assumes that for every predicate there is a suprasensual reality, and that this suprasensual reality, though separately existent and a unity, is present in every particular which bears the same name. In the fourth, having in the interval realized that things which are like in one relation may be unlike in another, and having disposed of other logical difficulties of the time, Plato now postulates ideas only where he finds fixities in nature. Such fixities are the universe itself, the four so-called simple bodies, the stars, and the animal and vegetable kinds. These are natural fixities because they derive their existence from the ideas, which are the eternal immutable thoughts of universal mind. Universal mind is the sole cause of the universe and all that is in it. In the fifth period, having learnt to limit his intellectual aspirations, Plato revises and supplements the sociological schemes of his third period.

5. *Ethical teaching*.—Plato's ethical teaching can hardly be called systematic. In his first period he is a Socratic, pure and simple. In his second he indicates, but does not develop, the theory of ideas upon which he at that time hoped to build a transcendental ethic. In the third, if we look to

the *Republic* for a positive morality, we find ourselves disappointed; for this great treatise, in which Plato discusses the well-being of the state and the well-being of the individual, merges ethic in education, and makes the educated man a law to himself and to his inferiors. In the fourth period the *Philebus* and the *Statesman* do something to correlate the earlier morality with the later theory of ideas. Finally, the *Laws* is written, not from the standpoint of the professional moralist, but from that of the legislator, who, recognizing the importance of political institutions and the value of rewards and punishments, endeavours to improve the contemporary methods. See, further, art. ETHICS and MORALITY (Greek), § 12.

6. The school of Plato.—It has been seen that Plato in his maturity was not only philosopher but also man of science. That is to say, the metaphysical theory of ideas carried with it the physical theory of natural kinds and thus provided a basis for the classificatory sciences of zoology and botany. But the two theories were not inseparable. Plato's nephew, Speusippus, who in 347 succeeded him as head of the school, rested his biological researches upon the theory of kinds, while he rejected the theory of ideas as a superfluous hypothesis. Aristotle, while he impatiently and peremptorily dismissed the theory of ideas, was careful to reconstitute the theory of kinds, taking his departure from the two principles οὐδὲν ἀτελὲς ποιεῖ ἡ φύσις and ἄνθρωπος ἄνθρωπον γεννᾷ. Xenocrates, indeed, who succeeded Speusippus in 339—a moralist rather than a metaphysician—attempted to maintain the idealist tradition; but his arithmetical interpretation of the phrase 'ideal number' shows a strange misconception of his master's teaching. Polemo, who followed Xenocrates in 314, took definitely the ethical direction. With Crates, who succeeded Polemo in 270, the so-called Old Academy ended. Platonism, i.e. the idealism upon which Plato rested the theory of kinds, ceased to be a living force when Plato died. For the subsequent history of the school see art. ACADEMY.

LITERATURE.—The following editions of Plato's writings deserve special mention: (1) whole works: I. Bekker, Berlin, 1816-23; J. G. Baiter, J. O. Orelli, and A. W. Winckelmann, Zurich, 1830-42; K. F. Hermann, Leipzig, 1851-53; F. W. Wagner, Leipzig, 1841-77, with German translation and commentary; J. Burnet, Oxford, 1901-06 (an excellent conservative text); (2) selected dialogues: L. F. Heindorf, Berlin, 1802-23; (3) particular dialogues: W. H. Thompson, *Phædrus*, London, 1868, and *Gorgias*, do. 1871; H. D. Archer, *Phædo*, do. 1883, and *Timæus*, do. 1888. The best-known English translation of the whole works is that of B. Jowett, Oxford, 1871.

For Plato's philosophy see E. Zeller, *Die Philosophie der Griechen*³, Leipzig, 1869-81, II. 1, tr. S. F. Alleyne and A. Goodwin, *Plato and the older Academy*, London, 1876 (not always to be trusted); F. Ueberweg, *Grundriss der Geschichte der Philosophie*³, Berlin, 1894-97 (Eng. tr., H. P. Smith and P. Schaff, London, 1880), contains, together with a useful summary of Plato's teaching, a very valuable bibliography.

The writer of the present article has occasionally used in its sentences and phrases borrowed from a sketch of the history of Greek philosophy down to Aristotle which he contributed to *A Companion to Greek Studies*², Cambridge, 1906, pp. 163-187. His present statement of the later Platonism set forth in 'the six dialogues' is largely based upon papers published in *JPA* x, [1881-82] 253-298, xi, [1882] 1-22, 237-331, xii, [1884-85] 1-40, 242-272, xiv, [1885] 178-230, xv, [1886] 280-306, xxv, [1897] 4-25, but the views there indicated, while they have in some respect modified themselves, have for the most part become more definite with the lapse of time. For certain recent speculations about Plato and the relation of his teaching to that of Socrates see A. E. Taylor, *Varia Socratica*, Oxford, 1911, and J. Burnet, *Plato's Phædo*, do. 1911, *Greek Philosophy*, pt. I., London, 1914.

HENRY JACKSON.

PLAY.—See DRAMA, GAMES, DEVELOPMENT (Mental).

PLEASURE.—Both pleasure and pain are too well known to require description and too elemental to admit of analysis. They are experiences which are co-extensive with all other forms of mental life

—sensations, images, memories, reasonings, willings, emotions, all being capable of taking on these pleasant or unpleasant colourings, although all, apparently, except perhaps the last, are able to exist in a neutral phase. Yet in spite of the familiarity and prominence of these states, both in daily life and in ethical controversy, the more exact determination of their nature is one of the most confused problems in modern psychology. As a problem it was seriously considered by Plato and by Aristotle, but it was not until the intellectualist tradition had been questioned by Rousseau, and interest in the more inarticulate phases of mental life had been quickened by evolutionary biology, that the feelings were made objects of exact investigation. Within the last twenty years, however, much has been done, and, while it is impossible to say that conclusions have been established, it is at least true that many facts have been determined and alternative theories defined.

1. The term 'pleasure' itself has been recognized as too ambiguous for technical use, and there has developed a tendency to substitute for it 'agreeableness' or 'pleasantness,' and to include both it and its opposite, pain or unpleasantness, under the common term 'affection' as denoting the non-cognitive aspect of mental life. Pleasantness and unpleasantness would thus be recognized as affective phases of mental complexes into which any of the other elements or phases might enter. For those complexes in which the affective phase is most prominent or characteristic the term 'feeling' has been suggested, as the feelings of gladness or depression. Pleasure, in popular usage, is generally identified with one of these complex processes of feeling and not with the abstract affective phase of pleasantness. It is the whole process of eating a good dinner or of enjoying a reunion that is called a 'pleasure.' Much of the confusion in ethical discussions of the good has arisen from failure to make this distinction between pleasure as affective tone and as complex feeling, the value recognized by common sense in the latter being identified by hedonistic theory with the former.

2. The historic problem of quality of pleasure also has light thrown upon it by this distinction. John Stuart Mill's revival of the Platonic doctrine of differences of kind in pleasures involves the failure to make this analysis into pleasantness and pleasant object, with the consequent apparent ascription to the one of the moral worth found in the other, the differences in the pleasures of the fool and Socrates lying not in the affective element but in the total feeling. So, too, the common popular classification into higher and lower kinds of pleasure is really a distinction between higher and lower forms of experience as a complex whole rather than between kinds of pleasantness as such.

Yet, even on the basis of this analysis, modern psychology is not a unit as to the quality of affection. Wundt insists upon a threefold distinction within affection itself—upon three pairs of opposites: pleasantness and unpleasantness, excitement and depression, tension and relaxation. Within each of these pairs, again, he recognizes an indefinite number of qualitatively distinct affective elements. This tri-dimensional theory of feeling involves the concept of pleasure mainly so far as concerns the recognition of varieties of pleasantness and unpleasantness, although undoubtedly much of what popular consciousness includes in pleasure would, under this theory, be assignable to excitement or relaxation. In his main contention for the greater complexity of the affections Royce agrees with Wundt, though seeing his way as yet to the recognition of only two antagonistic lines of difference—pleasantness and unpleasantness, restless-

ness and quiescence, with their included minor distinctions.

On the other side are those who recognize only two antagonistic aspects of affection—pleasantness and unpleasantness—analyzing the other two dimensions into organic and muscular sensations. Certainly, when we have eliminated our sensations of muscular strain, the feeling of tension vanishes, and, equally, excitement seems to have little meaning apart from sensations of tension and respiration and consciousness of rapidity in the flow of ideas. On the whole, the dual theory seems to have the weight of testimony, both lay and expert, in its favour.

Incidentally, it may be remarked that the unpleasantness recognized in this analysis is not to be identified with the sensation of organic pain, which, while usually existing in an extremely unpleasant complex, may yet, when of slight intensity, have the pleasantness of interest.

The question as to whether pleasantness itself admits of qualitative differences is not to be answered with any positiveness. Introspection gives varying testimony on the point, and whereas, if we assume that the phases of affection correspond to a general central process, we are inclined to expect only differences of degree, when we also assume that every element in a complex varies with the changes in the total complex, we tend to look for qualitative differences in pleasantness according as the total process varies. Certainly the burden of proof seems to rest heavily on those who affirm such differences in quality.

3. As to the psychological status of pleasure—its place among other mental processes—three theories hold the field.

(1) *The qualitative theory* (Stout, Marshall).—Pleasure and pain are general qualities or attributes of mental process, either of which may be attached to any mental element. The term 'quality' is here explained as used in the same sense as when applied to intensity as a quality of sensation. Pleasantness thus has no substantive standing, but is always pleasantness of something, just as intensity never exists by itself but always as an essential attribute of another state.

(2) *The sensational theory* (Stumpf).—Pleasure and pain are sensations of the organic type. Pleasure is a diffused sensation of tickling or a weak sensation of lust. If pleasure were a mere attribute of sensation, it would not itself have attributes such as intensity and duration, nor would a sensation persist in the absence of its attributes as is the case relative to pleasure and pain.

(3) *The affective element theory* (Titchener).—Pleasure and pain are the two phases of a simple affective process which forms one of the two elementary constituents of mental life, if we group sensation and image together as the second. Affection is similar to sensation in possessing quality, intensity, duration, but it lacks clearness, and shows an antagonism and incompatibility of its opposite qualities which mark it off from sensation. Tickling has its own sensory quality, which may be either pleasant or unpleasant, but which is not synonymous with pleasantness.

While no consensus of opinion can be invoked on the questions involved in these theories, it may be remarked that the point at issue between (1) and both (2) and (3) seems to resolve itself into the somewhat profitless logical distinction between substance and quality. As between (2) and (3), while one may not be satisfied with the form in which the latter theory is usually stated, one cannot but feel that, in its recognition of the distinctness of pleasantness as an elementary aspect of mental life, it has in its favour the almost unanimous testimony of introspection.

4. As to the conditions of pleasure, our knowledge is still more incomplete. From the genetic point of view, it has been suggested that affection is undeveloped sensation or a mode of experience of which sensation is a later phase, and that the free sensory nerve-endings may be its organ (Titchener). We have also the biological generalization that pleasure is the accompaniment of actions useful to the organism (Spencer), but such a generalization needs qualifying conditions which it is beyond our present power to supply. A widely applicable psychological formula is that pleasure is the accompaniment of uninterrupted activity, of progress towards an end, whatever the end may be (Stout, Angell). This end may not be useful for life as a whole, and hence the activity may not have survival value, but in so far as it is an actual end the progressive realization of it gives pleasure. Such a formula seems more adequate for the more active type of pleasures but hardly for pleasure in its whole extent. From the physiological point of view, there is a general tendency to consider the conditions for affection as central rather than peripheral, but guesses differ as to whether it is a matter of general nutritive condition or of motor preparedness, as well as to whether a special cortical region is involved or the whole cortex.

5. For the place of pleasure in ethical systems see art. HEDONISM.

NORMAN WILDE.

PLEROMA.—This term has acquired a certain celebrity from its use in the later NT books, in relation to deity, and in one of the most fully developed systems of Gnosticism, as a designation of what may be called the Gnostic heaven—that supersensible spiritual sphere in which the Godhead was thought to exist and manifest itself above and apart from the material world. There were, of course, many fantastic and extravagant notions in the Gnostic idea, but every careful student who follows the course of Christian thought in the 2nd cent., at the time when Christianity came face to face with the advanced conclusions of speculative religious philosophy, will see how significant a phenomenon the Gnostic heaven is. This article will deal exclusively with the conception embodied in the word 'Pleroma,' and will endeavour to follow its use from the NT up to the form in which it finally appears in the Valentinian system of Æons. The various elements of thought which are there united, and which form a fairly well rounded system of God and the world, had grown up out of, and had been gathered from, the great systems which dominated the ancient world; but these appear here fused and blended with the new ideas that Christianity had introduced. It was the first great attempt to exhibit Christianity as a part of the system of the world—and no mean effort either, as we shall readily see, if we are able to thread our way through the tangled maze of grotesque and mythical phraseology in which the Gnostic teachers indulged. In its most fantastic shapes, however, there are usually visible some gleams of rational thought.

1. NT use.—The NT use of the term 'Pleroma,'

in relation to deity, is given in Col 1¹⁹ 2⁹, Eph 1²³ 3¹⁹ 4¹³, Jn 1¹⁶. The word is found in other parts of the NT in the ordinary sense of 'fullness' variously applied, but in these passages it stands in a context which seems to require a special theological connotation with which the reader is supposed to be already familiar. In St. Paul's language two great conceptions are affirmed or implied: (1) that the whole fullness of deity, the entire plenitude of divine excellences, energies, and powers resides in Christ; and (2) that, through union with Him, the Christian Church is destined to share in the fullness which dwells in Him. Both these conceptions appear in the subsequent phases of Gnostic thought, but they are placed in new connexions and relations, and in the handling of them the lead of Scripture and the limits within which they are viewed in Scripture are soon lost sight of. In the views which St. Paul combats at Colossæ we recognize some incipient forms of Gnosticism which are easily identified with well-known features of popular Jewish beliefs characteristic of the age—an undue prominence given to angels as mediators between God and the world, and the false authority ascribed to various ascetic practices. The revelation of God which was given in the incarnation and mission of the Son had for ever set aside the necessity for inferior mediators, whether angels or men; and the Apostle's contention is that all the energies and powers of deity, all divine functions in the order and government of the world, reside in Him, all things visible and invisible, thrones, dominions, principalities, and powers being subject to Him. The Jewish teachers at Colossæ had doubtless taken their stand upon the common belief that there were many mediators through whom God communicates His will to men, and that to each of these a measure of divine honour or worship might be due. They had not yet discovered that in Christianity was given the final and absolute revelation of God to the world.

The idea that the entire fullness of the Godhead is manifested in Christ is fundamental to Christianity, and is, indeed, a wide-reaching conception, difficult to grasp by the intellect—a mystery profoundly significant and precious to faith. The Christian recognizes in Him the embodiment of all divine excellence, the full glory of the Father. In the later books of the NT we note an important advance upon the Christology of the Acts and earlier Epistles. In the latter the chief aspects of His Messianic dignity and glory are set forth as the ground for faith in Him as the Mediator of the Messianic salvation. The full content of the Messianic idea was not laid open, and was probably not called for in the earlier preaching. But at a later stage, with the advance of thought and a growing faith, the doctrine of the person of the Son became richer and fuller. It was seen that He is the full and complete expression of the Father's nature and glory, 'the image of the invisible God,' 'the effulgence of His glory,' 'the very impress of His being.' The Fourth Gospel, the latest phase of NT teaching, exhibits this conception in relation to the earthly life of the Redeemer, showing that the Son is the entire and complete manifestation of the Father. It is doubtless the spiritual and ethical perfections of deity that are chiefly in view in the passages in which the Pleroma of the Godhead is ascribed to the Son, since these chiefly will be thought of as constituting the great essentials of the eternal life, which was with the Father, and which the Redeemer conveys to men. Yet, though we have difficulty in believing that all the recesses of deity are open to the knowledge of men, it is manifest that in the NT conception of the Incarnation there is given, besides the ethical perfections of the God-

head, a universal cosmic principle—the energies and powers which produce and sustain the course of the world. It is not easy to separate in thought the cosmic and ethical elements in the idea; in reality the two must meet and blend to form a complete whole. The ethical perfections of the Godhead are manifested not in empty space, but in the complex life of the material world, in which they must be sustained and vindicated by physical energies and powers. The Pleroma of the Godhead, therefore, contains not merely the totality of all ethical perfections, but all divine energies which the cosmos displays; and, all these being ascribed without limitation to the Son, there arises the necessary inference that He is the final and absolute manifestation of deity to men.

2. The Valentinian system.—From the various contexts in which the term 'Pleroma' is used in the NT it is to be gathered that the idea was new in the sphere of religion, and that towards the close of the Apostolic Age it was denied or opposed by other and contrary hypotheses, viz. that there were many mediating agencies between God and men, and that the whole fullness of deity could not be communicated to any one being or person, however eminent.

The last thought appears in various shapes in all the forms of Gnosticism, and it is usually implied that no entire or perfect revelation of deity is possible in material things, that all perfect manifestations of God are confined to the sphere within which deity is to be found—the sphere to which they apply the term 'Pleroma' in a local or topographical sense. In some passages where the word occurs incidentally we see that the idea is of capital importance, and we are prepared for the bold effort which is made in the Valentinian system to reach a definite and rounded doctrine in regard to it. Among the earlier Gnostics the attempt was made to obviate the difficulty involved in the incarnation and passion of the Son, either by assuming that our Lord's body was not real flesh and blood, but a form assumed for a time, or by saying that Jesus was the son of Joseph and Mary by ordinary generation, and that the Christ who descended upon him at his baptism, being a spiritual being and, as such, impassible, departed from him at the Crucifixion.

Irenæus describes this party as maintaining that Jesus was 'merely a receptacle of Christ upon whom the Christ, as a dove, descended from above, and that when He had declared the unnameable Father He entered into the Pleroma in an incomprehensible and invisible manner' (*Her. iii. xvi. 1*). The same view appears in another passage, where it is said that 'the Christ from above . . . continued impassible,' and that, though He had descended upon Jesus the Son of the Demiourgos, He 'flew back again into His own pleroma' (*iii. xi. 1*).

These two examples serve to show the point at which the Gnostic view diverges from St. Paul and the NT. He teaches that all divine powers and energies reside in Christ in permanent form, while they maintained that only a single power—the Christ from above—had dwelt in Jesus for a time, and afterwards returned to the Pleroma, from which thought it is clear that the Pleroma is viewed as the special sphere or abode of deity, separate from the rest of the world and not homogeneous with it.

Turning now to the system of Valentinus as it is expounded by Irenæus and Hippolytus, we find that the Pleroma forms the centre of an elaborate theory of the world—of divine emanations, of creation, and redemption. It is the exclusive sphere of deity within which the evolution of the Æons is accomplished. It has over against it the *kenoma*, the 'void,' the sphere of matter which includes all that is outward, corporeal, physical, sensible. These two spheres include the totality of being real or conceivable, and there is an absolute difference and antithesis between them.

such that the one is the home of all that is perfect, godlike, eternal, imperishable; while in the other things are corrupt, perishable, shadowy, unreal. The Æons which are begotten from the unfathomable abyss of deity are the divine energies, the functions of infinite life which manifest themselves in a definite order and succession; but towards the end of the series, where presumably their strength and purity have diminished, the last being far from the centre and source of life, one of them, Sophia, somehow passes out into the void beyond, and out of her tears, sorrows, and distresses the material creation arises. The antithesis between these two spheres as conceived by Valentinus himself is probably better expressed by the term *ὑστέρημα*, 'defect,' than by *κένωμα*, 'void,' since the view of matter or the world which is prominent in the teaching of the school regards it as having its origin in some disturbance in the life of deity itself, and therefore not of an opposite or contrary nature. The sphere of the Æons is marked off by definite bounds from the sphere beyond, but the movement implied in the generation of the Æons in some of its remoter effects passes over the limits into the sphere in which the world arises, so that an affinity is established between the two from the first. The later Æons—Sophia, Christ, and the Holy Spirit—carry over the living and redeeming energies of the Pleroma into the lower sphere where, divine seeds being already sown from the tears and labours of Sophia, all that is kindred with the Pleroma, after being redeemed and purified, returns to it at last as its ultimate home.

3. The Gnostic reconstruction.—From this outline we are in a position to see how far the Gnostic conception has parted from the NT standpoint, and where it passes over into a region unknown and unknowable to man. It has already lost sight of the spiritual and ethical quality of the concept of God, characteristic of Scripture, in which omniscience and omnipresence are implied, and sets about establishing bounds between the sphere appropriate to deity and an outer world. In this respect it still keeps to the old contrast of God and the world which dominated all the ancient systems. A parallel to this drift of thought is seen in the strong tendency towards the unknown and the marvellous exhibited in the apocryphal Christian literature which was contemporaneous with the great Gnostic movement. Yet the speculative effort to reach an adequate idea of God, in harmony with the new data which Christianity had established, has much interest and significance. It was really the first great attempt to construct a philosophy of religion with Christianity taken into account. In the Valentinian Pleroma there appear the chief conceptions regarding the nature of deity which speculative thought had then reached, but they are blended with the new view of the world which Christianity had established. In the doctrine of God taught in the Palestinian school the action of God in the material world was thought to be effected by various mediating agencies and powers of a supermundane angelic character, personal and impersonal. God Himself was too highly exalted in majesty and glory to come into immediate contact with man's world. Hence it was thought that the purposes of His will and government were carried through by various orders of ministering angels. This view had grown out of the earlier OT doctrine of the holiness and exaltation of Jahweh, which at first was preached mainly with reference to sin and the imperfections of man's life, but in the later theology of the schools it had practically separated the Godhead from all contact with the world, leaving only the abstract idea of a Being exalted above

all human thought, inscrutable and unnameable. With Philo and among the Alexandrians the same result was reached by much the same process, partly also by the help of Platonic conceptions. Here also God in Himself is defined in terms of absolute being, mostly negative, without attributes or qualities. His agency in the world is represented and sustained by His Logos, or reason, and the vast multitude of inferior *λόγοι* which determine all particular things. Among the Greeks, since Plato and Aristotle, God was defined as the highest good or the supreme cause far removed from the actual world, who leaves the care of it to inferior agencies or powers. With Plato (*Timæus*) the demiourgos, or creator of the world, acts the part of an inferior deity, since he must build the world on the patterns furnished by the eternal ideas and from material already existent.

Now, having such an idea of deity to start from, and with the conviction that Christianity had brought something new in the sphere of religion—that in fact it was revelation from the highest God, as was held in all the phases of Gnostic speculation—Gnosticism set itself to a reconstruction along the whole line of the theistic conception, to provide for the passing of deity from the primal silence of a past eternity into a process of self-manifestation in a series of Æons, in a Pleroma, or spirit-sphere, to constitute an ideal world, from and after which the existing system of material things arose, in such wise that the creative and redeeming agencies which Christianity reveals are found to be not only in accord with the laws of the higher sphere, but also the immediate revelation of them. The Gnostics all seem to have been greatly troubled with the imperfections of all earlier conceptions of God, Jewish as well as heathen, and, by assigning the various defects of the world and of earlier religions to inferior beings or agencies, they doubtless thought to secure a clear field for the new world which they saw in the new religion. To be thorough, they began their reconstruction from the beginning, and assumed a movement from within the depths of the Godhead outwards, towards a world different from itself, to arise out of itself, and destined in its purer parts to return to it again, by the process of redemption which Christianity reveals and accomplishes.

4. The process of emanations.—A tolerably clear account of the Pleroma in the system of Valentinus is given by Irenæus and Hippolytus. Their eagerness to expose the absurdities of the system has often led them off the points of greatest interest for us, who want to understand, and are outside the sphere of danger.

First of all, then, there exists in 'the invisible and ineffable heights above' a certain perfect pre-existent Æon whom they call Proarche, Propator, Bythos, invisible, incomprehensible, eternal, and unbegotten, remaining throughout innumerable cycles of ages in profound serenity and quiescence. Along with Him there existed Ennoia ('thought'), called also Charis or Sigé ('grace,' 'silence'). At last this Bythos determined to produce from Himself the beginning of all things. From the union of Bythos and Sigé ('depth' and 'silence') was produced Nous ('mind,' 'intelligence'), called also Monogenês ('only-begotten'), father and the beginning of all things. Along with Nous was produced Alêtheia ('truth') as his mate. These four constitute the first tetrad, and are called the root of things. From Nous and Alêtheia arise Logos and Zoë ('reason' and 'life'), and from these again Anthrôpos and Ecclesia ('man' and 'church'), ideally conceived. Here, then, we have the first ogdoad, called (let us be careful to note) 'the root and substance of all things, the beginning and fashioning of the entire Pleroma.' In this ogdoad we have given the essential, the determining, part of the conception, the source or ground from which the others proceed according to the same principle. The first movements of life within the hidden recesses of deity give birth to the ideal forms of all rational life—mind or intelligence, truth or reality, reason, life, man, church. These must first exist in God, and be evolved in the divine self-consciousness as the essential and primary functions in the inner life of deity, the patterns or models of life also in man's world.

The first ogdoad, then, must be primary, since all the Æons

which follow are contained or given in them by implication. From Logos and Zoë arise other ten, from Anthrōpos and Ecclesiā twelve. Reckoning Bythos and Sigē as the first in the series, we have thirty in all—the complete number of the Æons. But, since Christ and the Holy Spirit are sometimes spoken of as Æons, they would have to be added as later developments, and probably in some computations Bythos and Sigē are not reckoned within the thirty, as being the fountain of all the rest. The language of our sources varies a good deal on this point. Sophia is repeatedly spoken of as the last of the Æons, through whom confusion was begun in the Pleroma, which confusion was afterwards allayed by Christ and the Holy Spirit projected by the will of the Father for this purpose. It would seem, then, that these two should be regarded as later developments which arise in view of the sorrows of Sophia and the world, which should arise out of her tears. Christ and the Holy Spirit undoubtedly belong to the Pleroma, but they differ from the earlier Æons in this, that, though belonging to the Pleroma, they are intermediate with it and the sphere of the world (for the significance attaching to them see below). Meanwhile, reckoning the thirty as complete without them, we have three series—an ogdoad, a decad, and a dodecad, thus:

The primary ogdoad:

Bythos (= Proarchē = Propator) and Ennoia (= Charis = Sigē),
Nous and Alētheia,
Logos and Zoē,
Anthrōpos and Ecclesiā.

The decad produced by Nous
and Alētheia (with some by
Logos and Zoē):

1. Bythios, 'deep,'
2. Mixis, 'mixture,'
3. Agēratos, 'undecaying,'
4. Henosis, 'unification,'
5. Autophyēs, 'self-grown,'
6. Hēdonē, 'pleasure,'
7. Akinatos, 'unmoved,'
8. Syncrasis, 'composition,'
9. Monogenēs, 'only-begotten,'
10. Macaria, 'blessedness.'

The dodecad by Anthrōpos and
Ecclesiā:

1. Paraclētōs, 'comforter,'
2. Pistis, 'faith,'
3. Patricos, 'paternal,'
4. Elpis, 'hope,'
5. Metricos, 'temperate,'
6. Agapē, 'love,'
7. Synesis, 'understanding,'
8. Ecclesiastikos, 'ecclesiastical,'
9. Ainos, 'praise,'
10. Macariotēs, 'felicity,'
11. Thelōtos, 'volition,'
12. Sophia, 'wisdom.'

In the sources there are some small variations in the lists of the Æons, as also a difference of opinion as to the pairs by whom the decad or the dodecad were produced. From the outline it will be seen that the terms in some cases overlap. A more rigid logic could easily reduce the number. It is probable that the symbolism implied in the numbers 4, 8, 10, and 30 may have suggested 30 in all, as the number denoting the highest perfection. All the Æons taken together were meant to represent an ideal outline of things, to be realized in the material sphere, for which reason their perfection as a whole is more in prominence than the logical proportion of the parts, if, indeed, we should speak of logic at all in a construction so largely mythical. The conception offers an outline of the supposed life of deity, within the sphere of the eternal, according to which the life of man is to be modelled, the decad and the dodecad being an ideal sketch of the Gnostic Church from different standpoints. It will also be seen that the emanations or projections follow a descending series in such manner as to show that each series in the succession is a further unfolding of the essential content of those above, and the entire company constitute a fellowship in which each is necessary to all, and the felicity of each is dependent on the felicity of all. It is an image of the life of deity, not in the abysmal solitude of a bygone eternity, but at the stage when it has entered on a process of self-manifestation in which all the life powers and functions latent from the beginning take their place in an order of being which constitutes a heaven self-sufficing and eternal.

But our view of it is not complete till we see how the process of emanation, begun in the depths of deity, terminates in the production of the world and the redemption of man. The process is not conceived in the manner of pantheism. It has definite bounds, and terminates at a point where a *δρος*, 'limit,' is placed at the boundary where the *κένωμα*, or the *ὁστέρημα*, a sphere of another nature, begins. The Æons are not nature-powers which

follow a necessity of nature; they are rather ethical personalities, and they constitute a spirit realm whose arrangements and working follow a Christian ideal. The frame for the conception was probably suggested by Platonism, from the place assigned to the eternal ideas in the building of the world, but the content is essentially Christian, and the heaven which they constitute is a Christian heaven. They furnish the model for the life of the lower world from which all that is purified and perfected at last ascends to dwell with the Æons. The first eight represent the great conceptions which underlie all forms of rational life. The next ten, which arise from Logos and Zoē, represent chiefly cosmical principles or powers which are necessary as a basis of ethical life. The last twelve, produced from Anthrōpos and Ecclesiā, are mostly the qualities of the perfected humanity which Christianity is destined to produce.

A scheme for a Pleroma was contained in the earlier system of Basilides, but the term does not seem to have been applied to it. Basilides confined the evolution of the divine life within deity to the seven powers—mind, reason, thought, wisdom, might, righteousness, and peace. But from this point the evolution continued through numberless grades of existence in a descending series—a conception which abandons the problem raised by Christianity.

5. The Pleroma and the world.—Returning, then, to the Valentinian Pleroma, how did the system account for the origin of the world, and what is the relation of the Pleroma to the world? The passage from spirit to matter, from the absolute and the perfect to the finite and the imperfect, is the great problem that confronts all philosophies which attempt to explain the origin of the world. The Gnostic attempts on this problem show great constructive skill and profound conceptions of what Christianity was expected to effect in the transformation of the world. Considerable difference of view appears, however, as to the manner in which the life of the Pleroma passes over into the region beyond. The myth of Sophia, which generally covers the origin of the world from the Pleroma, is put in various shapes, and it is not easy to gain a definite picture of the process as the Gnostics conceived it, if that was possible even to them. To a certain extent the myth of Sophia—i.e. the wisdom, or constructive skill, which had laboured to bring about the world—had taken various shapes before speculative thought had attempted the bolder task of picturing the life of deity in itself. We have seen that schools of opposite tendencies were agreed in placing supreme deity at the farthest possible distance from the world. But Jewish thought, while agreeing with the results of Greek speculation on this point, sought to explain the action of God in and upon the world by assuming the agency of various semi-divine mediating beings. Among these high prominence was assigned to wisdom (Sophia) as a world-building and world-ruling power. Closely allied to this conception was that of a demiourgos, or world-builder, which was introduced by Plato in his account of creation in the *Timæus*, and which became a favourite figure with the Gnostics. These personifications represented agencies more or less inferior to the highest deity, and, by ascribing the existing world with its many defects to these or similar beings, Gnosticism maintained a direct antithesis between God in Himself and all inferior agents who might have sway in the world. Deeply penetrated with the thought that Christianity was something absolutely new, that the Jewish dispensation which preceded it was mainly the work of inferior beings, that the mission and work of Christ were a revela-

tion from the highest God, the Gnostics sought for a conception of the Godhead which should stand in closer harmony with Christianity and explain the present anomalies of the world. To some extent, then, their speculative construction of the world had preceded their attempt at the heaven of the Æons, and the myth of Sophia had probably grown into some of its forms before the Æons of the Pleroma were fully established. The problem was, not to construct a material world by a process of emanation from the Pleroma, but to form a bridge between two systems of thought which had grown up apart and from the opposite ends of existence. Already in Christianity Christ and the Holy Spirit had been revealed as ethical and cosmic powers. They had come from the great unknown, and place must be found for them in the Pleroma of the Æons. The conception of the Pleroma would not be complete till it was shown how the life of the Godhead, already perfect in itself in the higher sphere, is reproduced in the lower, and draws up into itself all that is susceptible of redemption.

The passage of creative life from the Pleroma over the *ëpos*, 'limit,' into the region beyond is represented somewhat thus:

The life of the Æons was not one of perfect rest and quiescence like that of the Eternal and the Unbegotten in the beginning; for the desire arose among the Æons to search into the depths of the uncreated which remained invisible and incomprehensible to all except Nous alone. He alone exulted in the greatness of the Father and he sought how he might reveal to the rest how mighty the Father was. The rest of the Æons also had a wish to behold the author of their being. However, this was not the will of the Father, and Nous was restrained in his desire. Yet the last of the Æons (Sophia), conceiving this passion by contagion from the others, desired to comprehend the greatness of the Father. But, aiming at what was impossible, she became involved in great agony of mind, and was with difficulty restored to herself, by the power of *ëpos*. By another account, a fuller and larger part of the myth, Sophia, through the excess of her desire, gave birth to an amorphous spiritual substance which, being separated by *ëpos* from the circle of the Æons, constituted the beginning of the material world. Thus arose three distinct kinds of existence, the spiritual, the psychical, and the material—distinctions which play an important part in Gnostic teaching.

Now these movements of desire within the circle of the Æons showed how disturbance might arise even in that world. Accordingly, by the forethought of the Father, Nous or Monogenés gave origin to another pair of Æons—Christ and the Holy Spirit—lest any similar calamity should happen again, and to fortify and strengthen the Pleroma, and to complete the number of the Æons. By Christ and the Holy Spirit the Æons were instructed as to the knowledge of the Father, since such knowledge was given to Monogenés alone. Being thereby restored to rest and peace, out of gratitude they brought together the best of what each possessed of beauty and preciousness, and, uniting the whole, they produced a being of the most perfect beauty, 'the very star of the Pleroma, Jesus, whom they name Saviour Christ, and everything, because he was framed from the contributions of all.'

Returning now to the offspring of Sophia, which was separated from the Pleroma and constituted the beginnings of the world, the myth represents the world as a growth from seed which has fallen from the Pleroma. It describes the effects produced upon it by the action of Christ as one of the heavenly Æons and Jesus the Saviour. The lower world is shown to be of a kindred nature with the higher. Spiritual men, who are the seed of the Pleroma in greatest perfection, yet share in the benefits secured by the heavenly Logos and the Saviour, and rise to the Pleroma, chiefly in virtue of their nature. Psychical men, who form the majority of ordinary Christians, stand in special need of the redemption which Christianity provides, while those who yield themselves to the seductions of the material world are subject to the destruction which awaits it.

6. Conclusion.—In this brief outline the reader will see much that is fantastic and strange to the Western mind. Yet there are many gleams of profound thinking. The nearest parallels in modern systems of thought will be found in those of Boehme and Schelling. For fuller details see art.

GNOSTICISM, and the literature mentioned below. A few general remarks may still be added.

The underlying conception of the Valentinian Pleroma implies a modified or weakened form of dualism. The antithesis to the heaven of the Æons is not a world of dead matter which resists and opposes the creative action of spirit. It is rather one of emptiness or defect which is waiting to be filled with the overflowings of divine life, which yet needs to be redeemed by powers that go forth from the heavenly sphere. The life of the world is an ethical process. The spiritual portion of mankind, having the largest share of pneumatic life, is already within the sphere of salvation. The psychical men, still wavering between flesh and spirit, are in need of redemptive help and ethical trial, while those who are buried in the life of sense are left to destruction.

It should also be noted that the life of deity within the Pleroma was liable to disturbance and had to be restored by the heavenly Logos and the Holy Spirit. The perfect felicity of the Æons lies in each keeping within the assigned limits. The fullness of deity does not belong to them as individuals, but as a whole. Disturbance arises when they desire to pass the limits assigned to each. Individually, therefore, they are beset with limitations, and exhibit the life of the absolute only in their totality. They present the manifold life and energies of the Godhead in a process of self-manifestation that results in an ideal spirit-realm, in which the life of each is perfected, not in itself, but in the whole. The original part of the conception does not lie in the view of an inscrutable fountain of unknown deity, for that was common to all the speculative systems of the time. It lies in the construction of a heaven of Æons which shall constitute the ideal of, and supply dynamic for, the world that Christianity reveals and creates. The Gnostic Pleroma is distinctively a creation of Christian thought, and was meant to exhibit a general scheme of the world on which Christianity was thought to be based, and which it was destined to realize and perfect. This fully appears in many other parts of Gnostic thought which aimed at reaching a comprehensive view of the whole scheme of revelation and the course of the world. It did, in fact, offer a special philosophy of the nature of revelation in the pre-Christian time, of the manner in which deity was given in the person of Christ, and of the perfecting of the susceptible portion of mankind through the Holy Spirit.

PLOTINUS.—See NEO-PLATONISM.

PLURALISM.—Pluralism is currently defined as the metaphysical doctrine that all existence is ultimately reducible to a multiplicity of distinct and independent beings or elements.¹ So defined, it is the obvious antithesis to monism (*q.v.*), and differs from dualism not only in emphasizing many as distinct from two realities, but also in providing for greater qualitative diversity among the many. Dualism (*q.v.*) is primarily a doctrine of two substances, one material and the other spiritual, and

¹ See, e.g., Baldwin's *DPHP*, s.v.; *Bull. de la société française de philosophie*, xii. [1901-05] 182; and R. Eisler, *Wörterbuch der philosophischen Begriffe*, Berlin, 1899. The *Bulletin*, however, recognizes in a *remarque* another form of pluralism which will be considered in the last section of this article.

is commonly stated in terms of the contrast between body and mind. It is apparent, however, that the material and the spiritual substance may each be regarded as reducible to many separate elements which, in spite of their likeness in kind, are really independent and self-existent. There may be many independent atoms of matter, and there may be many independent spirits or minds. In a case like this, dualism is essentially pluralistic. Even monism may be similarly pluralistic if it is conceived as only a doctrine of one substance, either material or spiritual, as opposed to more than one. For it is evident that the one substance may be considered as reducible to many elements independently existing although qualitatively alike. The possible forms which pluralism may take are, therefore, many. It is not important, however, either to attempt to classify them or to discuss them, because only materialistic pluralism and spiritualistic pluralism have had any significant presentation in the history of thought.

1. **Materialistic pluralism.**—Materialistic pluralism has been represented by the consistent atomists from the time of Democritus. The atom and the medium in which the atoms move have, however, been variously conceived. The view usually ascribed to Democritus, and held by many subsequent thinkers, is apparently the simplest statement of the theory. The atoms are very small particles of matter, so hard that they resist division or change. They are qualitatively alike, but differ in size and shape, i.e. in their geometrical properties. They have always existed and are indestructible. They move freely in space by their own natural motion. Space is mere emptiness, the void, and consequently offers no resistance to the movement of the atoms. The motion of each atom, if left to itself, would be rectilinear, but, since the atoms differ in size and shape, they collide with one another, and the motion of the whole mass is, consequently, turbulent. As a result the geometrically similar atoms tend to congregate and form selected and ordered systems, first the 'worlds' in space and then the particular things of each world. But the general instability of the whole mass keeps any particular combination of atoms from persisting indefinitely. There is, consequently, perpetual combining and recombining among the atoms; and, on account of the many geometrical differences between the atoms, the number of permutations and combinations is practically limitless. With Democritus, as with most of his followers, this view of the atomic structure of all things seems to have resulted from the attempt to generalize, solely in terms of the geometrical properties involved, the empirical fact of the divisibility of concrete masses of matter. The qualitative diversity which the world obviously presents is usually either disregarded or viewed as a consequence of our way of perceiving. Democritus is reported to have said that, while we commonly speak of colours, sounds, etc., in reality there is nothing but atoms and the void.

The atomic theory (*q.v.*) admits of many variations, but its pluralistic character is not affected so long as the atoms are kept intact and the medium in which they move is equivalent to empty space. The atoms may be qualitatively different or the ultimate elements of a limited number of different material substances; they may expand and contract; they may have natural affinities and repugnances; they may be acted on by forces exterior to them or be impelled by forces resident in them; they may be so closely packed as virtually to exclude the necessity of a medium, and yet be conceived as in themselves permanent and undervied. When, however, the medium in which the atoms operate is not conceived as empty

space or its equivalent, the pluralistic character of the system is affected. For it is evident that the new medium—the ether, *e.g.*—cannot be atomic in structure, but must be continuous. The atoms cannot break the continuity. The medium must, therefore, penetrate them, but this penetration robs the atoms of their original simple character, and tends to make them appear as modes, rifts, involutions, or concretions of some sort in the medium itself. Such a direction as this recent chemistry and physics have taken, impelled thereto not only by speculative considerations, but also by experiments, like those of Sir William Ramsay, which have done much to make current once more the notion that material substances are convertible. The doctrine of relativity in physics moves in the same direction. Judged, therefore, by contemporaneous tendencies, materialistic pluralism as above defined does not represent the progressive ideas of the sciences which deal with matter. The tendency is rather towards a monistic conception or a complete relativism.

2. **Spiritualistic pluralism.**—The leading historical representative of spiritualistic pluralism is Leibniz (*q.v.*). Although thinkers in all ages have believed in the existence of many independent minds, few of them have, like him, made this belief the dominant and controlling factor in metaphysics. His philosophy, although among those which have had considerable historical influence, was not the result of the generalization of empirical fact such as marked the theory of atoms. It was the result rather of his attempt to avoid the monism of Spinoza, on the one hand, and atomism, on the other. In place of the atom he puts the monad—an ultimate, simple, and self-existent spiritual being. The monads do not have geometrical properties, nor do they exist in space as in a void. Their independence and metaphysical exteriority to one another constitute a kind of quasi-space in which they may be said to exist. Their properties are spiritual or psychical, such as appetite, desire, perception. Each is self-contained, 'windowless,' and neither influences nor is influenced by another. Each has its own inherent law of life or development, so that all the monads may be represented in a series from the lowest, or 'sleeping,' monads to the highest, or self-conscious, each differing from its neighbour by the least possible difference. They are thus all in a kind of 'pre-established harmony,' each reflecting, as it were, the whole range of possible development from its own peculiar position in the series. All things are made up of monads. The highest monad in the body is the soul, and the highest monad in the system is God. But God's relation to the other monads is not always clear. At times He is one of the monads, at times their creator, at times the unity in the system. Among the monads there is no spatial motion, for their life is not that of physical movement, but that of purposeful development. It is their externality to one another combined with their concerted life that gives us the phenomenon of physical movement in physical space.

This doctrine of monads may be taken as representative of spiritualistic pluralism generally. It has never had the influence on scientific procedure which the doctrine to which it is opposed has had. For the atomic theory is an attempt to generalize the empirical fact of the divisibility of matter and to employ the apparatus of mathematics to make this generalization workable. As a result it has been embraced by many who are not materialists, but who have found it a potent instrument in scientific investigation. The theory of monads—and similar attempts to construct a pluralistic system of spiritual entities—is, as already noticed,

fundamentally a protest against materialism. When it addresses itself to the concrete facts of nature, it amounts to little more than the attempt to make the atoms spiritual—to substitute psychical properties for physical, and internal purposeful development for external physical motion. That is why it appears to be more an ingenious speculation than a fructifying hypothesis.

3. The new pluralism.—Although philosophical usage has recognized in the theories just considered the two classical forms of pluralism, it should be observed that neither of them denies the fundamental unity and wholeness of the universe. There may be many atoms or many minds, but in either case there is only one universe, and this universe is a coherent and self-contained whole. The resulting speculative opposition between the one and the many has probably done more to keep philosophical interest in these systems alive than any genuine illumination which they afford. For this opposition has proved itself repeatedly to be a potent stimulus to philosophical reflexion. In terms of it a different form of pluralism may be defined which has many supporters among contemporary philosophers.

This new pluralism is not a doctrine of many substances opposed to monism conceived as a doctrine of one. It is rather the doctrine that there is no absolute unity in the universe, and it is opposed to the controlling absolutistic—and in that sense monistic—systems of the greater part of the 19th century. Absolutism in some form had as its supporters nearly all the leading thinkers of the world, and had become almost a settled dogma in philosophy. In the face of an absolutistic logic and of the principle of the conservation of energy, few philosophers had the courage to deny that the universe is a thoroughly coherent system in which, by virtue of its unity, a place and time and cause are, at any moment, implied for every event that has taken place or can take place. Thinking was constrained by the principle so eloquently set forth, *e.g.*, in Emil du Bois-Reymond's famous essay, *Ueber die Grenzen des Naturerkenntnisses* (Leipzig, 1872), that, did we know completely the state of the universe at any one moment, we should be able to calculate its state at any other moment. Opposition to this dogma was not very effective until towards the close of the century, when the writings principally of William James, John Dewey, F. C. S. Schiller, and Henri Bergson effectively challenged it and put it on the defensive.¹

James was, doubtless, the protagonist in the movement. He named his philosophy 'radical empiricism,' and occasionally 'pluralism.' In the preface to *The Will to Believe* (1897) he gives this general statement of his position:

'The crudity of experience remains an eternal element thereof. There is no possible point of view from which the world can appear an absolutely single fact. Real possibilities, real indeterminations, real beginnings, real ends, real evil, real crises, catastrophes, and escapes, a real God, and a real moral life, just as common-sense conceives these things, may remain in empiricism as conceptions which that philosophy gives up the attempt either to "overcome" or to reinterpret in monistic form' (p. ix).

Dewey's insistence that thinking is a real instrument which brings situations essentially inde-

terminate into determinate form, Schiller's rather individual and peculiar type of pragmatism, and Bergson's insistence that evolution is essentially creative and discontinuous, all exhibit this new tendency in different forms, but to the same end.

There has not yet, however, so far as the writer is aware, appeared any systematic presentation of the metaphysics underlying this new movement in philosophy. What is here called pluralism represents a tendency rather than an achievement. The general direction of this tendency in various departments of human interest is indicated below, but here an attempt may be made to suggest the basal conceptions which this tendency seems to imply. Emphasis falls on change, adaptation, reorganization, or action as an original and genuine fact wherever and whenever it occurs. Accordingly there is no moment in the world's history when all possible changes may be said to be determined. All things are in process of becoming determined, and what that process will be is contingent, not simply on what has already happened, but on what may happen. But what may happen is a genuine possibility with nothing fully to determine it before it arrives. The world is thus never fully made, but always in the making. The fact that it perpetually has a future negatives any absolutistic conception of it. Our inability to grasp the world as a single, unified, and complete system is, therefore, due, not to our incapacity or ignorance, but to its essential nature as a genuine time-process which reaches many concrete and specific ends, but which implies no absolute end that limits and closes the process as a whole.

We have in these considerations not, as might be superficially supposed, a revival of the doctrine of freedom as opposed to necessity, but the beginnings of a genuinely constructive metaphysics of activity. That is, pluralism does not start with a self-contained system of terms and relations which is, in general, responsible for everything that happens, and then claim that there may be free and spontaneous infractions of the system. It starts rather with the conception of activity as empirically exhibited in any change, and tries to generalize this conception and draw out the implications that seem to be empirically involved. As every action takes time, the course of the action when followed out empirically in detail gives us, not the effect of causes all operative at the moment when the action begins, but the interplay of causes operative only from moment to moment as the action proceeds. It is only where the action is viewed retrospectively from some specific point of view in its career that it can be construed absolutely; *i.e.*, only then can any of its issues be construed as the necessary effect of causes which have determined it. Such retrospective views can give us formulae and laws of accomplished fact and thus afford a basis for prediction in similar cases, but they cannot give us any action in its concrete vitality and operation, because every action is forward-moving. Now, the generalization of this view of activity naturally forbids a monistic or absolutistic view of the world as a whole. For, if we now speak of the world as a whole, or of the 'universe' in any intelligible sense, we must speak of it, not as something already accomplished which can be viewed retrospectively, but as something moving forward with a genuine future and real possibilities. Yet, even so, we could not conceive it as a single movement, but only as the interplay of many movements. Otherwise the movement of the universe would be only movement abstracted from its concrete setting. It could not be itself a concrete movement illustrating the interplay of factors which operate only from moment to moment as the movement pro-

¹ For other writings of the same general tenor see the bibliography at the end of this article. The opposition under consideration has not always borne the name of pluralism. One finds the same general tendencies in the supporters of pragmatism (*q.v.*) and the advocates of personal idealism. The latter doctrine, represented principally by Henry C. Sturt in England and George H. Howison in America, is a reaction against absolutism in the interest of personality conceived as spiritual and free. Howison is frankly pluralistic and exhibits close similarities with Leibniz's doctrine of monads. Sturt bases all speculation on the principles that personal experience should be the basis of all philosophical synthesis and that personal experience is spiritual; but he believes in a 'totality of goodness,' a 'noetic totality,' and that the cosmos must be dominated by a single intelligence.

ceeds. Such appears to be the general metaphysical groundwork of the new pluralism.

In psychology these tendencies had their initiative, and here they have been most effective. During the past thirty years the attempt to construe the mind or consciousness as a substance or as a complex of elementary sensations united by fixed laws of association has progressively yielded to the attempt to construe mental life in terms of activity and response. Although many psychologists have independently contributed to this progress, the publication in 1890 of James's *Principles of Psychology* may justly be cited as critical. Here was the first effective and systematic attack upon the older view. To-day the idea that 'to have a mind' means 'to act in a certain way' has become a commonplace in psychology. To think has become an adventure and a real instrument in adaptation. Knowledge has ceased to be regarded as simply the mental counterpart or image of an objective order, and knowing has become an active participation in the order of events. In other words, to be conscious of objects does not mean to possess their psychical equivalents or imply a possible consciousness which might possess the equivalents of all objects whatever, and so be the perfect and complete representative of the world. It means rather to operate with objects effectively, to seek and avoid, to work changes—in short, to organize experience. This newer conception of the mind has spread beyond psychology and markedly affected anthropology and sociology. Primitive peoples and society are studied more in terms of what they do and less in terms of the supposed 'consciousness' that they were once credited with possessing.

In logic the new movement has been more equivocal in its success. It has illuminated in a brilliant way the concrete procedure of thinking, showing how distinctions like object or thing and idea arise in its course and are not the constituent elements of thinking itself. It has given us the logic of 'how we think.' But the opposition to formal logic which has too frequently accompanied this service has obscured many logical issues and problems. The structure of accomplished thought has been too much neglected. The older logic, especially in the form set forth by Bertrand Russell, is still an active and constructive opponent of the newer tendencies.

In morals and religion it is premature to attempt to state with conclusiveness the effects which the new movement is likely to produce. Yet, so far as morals are concerned, the general direction is fairly clear, as may be seen from the *Ethics* of Dewey and Tufts (1908). The tendency is away from fixed, *a priori* principles, and towards the concrete exigencies of life. Morality is conceived, not as a system of rules which should be obeyed, but as the type of life which characterizes beings who desire and wish, hope and fear. Responsibility is conceived, not in terms of an obligation imposed upon living, but in terms of an increasing sensibility of the value of human relationships. There are no absolutes. Justice, *e.g.*, is not such. It is rather the attempt to deal with human adjustments in a progressively effective manner. In brief, morality is not an absolute ideal which, being somehow imposed on man, orders him to be moral. It is the kind of life that man conceives to be most adequately expressive of his natural impulses and his ideal hopes.

There is in these considerations a close resemblance to the more refined forms of utilitarianism, but the doctrine is not utilitarian as commonly understood. No simple or elaborate computation of pleasures and pains is implied. No attempt is made first to estimate the greatest good of the

greatest number, and then to act accordingly. There is rather the attempt to take human relationships as they are empirically given—the family, friends, the State, love, property, marriage—to see towards what they point, what desires and hopes they engender, and then to bring the resources of knowledge to bear upon the perfecting of them or the elimination from them of that which makes communal living difficult and unlovely.

In religion the tendencies are not as yet well defined. It is possible, however, to recognize among religious writers influenced by the new movement a growing appreciation of religion as something humanly characteristic, rather than as a matter beginning with the gods. There is, too, as in the ethical tendencies, the denial of absolutistic ideas. Consequently there is recognized no one religion which can be judged valid as over against all others. In estimating the worth of any religion moral instead of logical or metaphysical standards are employed.

It is mainly as a new and potent stimulus to fresh philosophizing that current pluralistic tendencies are to be estimated. Under the absolutistic systems of the last century, philosophy had largely lost its vitality. It had become almost exclusively historical, a comparative study of systems, and was not an intimate companion of living or a vivid aid to reflexion. It was largely an intellectual interest set apart from the sum of intellectual interests generally. Pluralism has effected a change in this regard. There is to-day a genuine revival of philosophical interest which is making its impression not only upon the traditional 'problems of philosophy,' but also upon the whole domain of inquiry. It is common to hear of the 'new chemistry,' the 'new physics,' the 'new biology,' the 'new history.' When we inquire generally what is the underlying motive of this 'newness,' we almost invariably find a desire for the recognition of real possibilities and a revolt against absolutistic systems.

There is, doubtless, some confusion and disadvantage in grouping under the name of 'pluralism' the tendencies which have just been considered, although the grouping has warrant in contemporary usage. There is some confusion because these tendencies are motivated not simply nor always by metaphysical considerations growing out of the opposition between monistic and pluralistic speculations. They are motivated also by obvious empirical considerations. A thinker who takes the world as he finds it, and, in reflecting on it, follows the lead of concrete tendencies as they arise and come to an issue, will doubtless be led to view the world as a process involving many different factors and not as an already completely unified and permanently organized whole. He might find some disadvantage in calling his view of things pluralism, because he might feel that, in so doing, he was affirming kinship with some form of the substantial pluralism noticed in the beginning of this article, or with the leading motives and principles of that philosophy. Substantial pluralism is a positive doctrine. The new pluralism is as yet largely negative. It is not so much the affirmation that the world is many as it is the denial that the world is one. That is the main reason why it represents to-day a tendency in philosophy much more than a systematic metaphysics.

LITERATURE.—For the older form of pluralism it is sufficient to refer to the standard histories of philosophy and to introductions to philosophy. For the newer form the following will be found illustrating the tendencies set forth in the article, by way both of support and of opposition: H. Bergson, *Matière et mémoire*, Paris, 1896, *Essai sur les données immédiates de la conscience*, do. 1898, *L'Évolution créatrice*, do. 1907; J. H. Bœx-Borel, *Le Pluralisme*, do. 1909; J. Dewey, *Studies in Logical Theory*, Chicago, 1903, *The Influence of Darwin on*

Philosophy, and other Essays in Contemporaneous Thought, New York, 1910, *How We Think*, Boston, 1910; J. Dewey and J. H. Tufts, *Ethics*, New York, 1908; G. H. Howison, *The Limits of Evolution*, do. 1901; W. James, *The Will to Believe and other Essays in Popular Philosophy*, London, 1897; A. Pluralistic Universe, do. 1909, *Essays in Radical Empiricism*, do. 1912; P. Laner, *Pluralismus oder Monismus*, Berlin, 1905; A. W. Moore, *Pragmatism and Its Critics*, Chicago, 1910; J. B. Pratt, *What is Pragmatism?*, New York, 1912; C. B. Renouvier, *La nouvelle Monadologie*, Paris, 1897, *Les Dilemmes de la métaphysique pure*, do. 1901, *Le Personnalisme*, do. 1903; F. C. S. Schiller, *Studies in Humanism*, London, 1907, *Riddles of the Sphinx*, do. 1910, *Humanism*, do. 1912; H. C. Sturt, *Idola Theatri*, do. 1906, *Principles of Understanding*, Cambridge, 1915; *Personal Idealism*, *Philosophical Essays by eight Members of the University of Oxford*, ed. Sturt, London, 1902; J. Ward, *The Realm of Ends, or Pluralism and Theism*, Cambridge, 1911; F. J. E. Woodbridge, *The Purpose of History*, New York, 1916.

FREDERICK J. E. WOODBRIDGE.

PLUTARCH.—1. Life.—Plutarch was born about A.D. 46, as may be inferred from the statement that in 66, the year of Nero's visit to Greece, he was a pupil of the Academic philosopher Ammonius in Athens (*de EI opud Delphos*, l, p. 385 B). He was a native of Chæronea in Boeotia, and showed a constant affection for his birth-place, which he ultimately made his home. Belonging to a family of good position, he received the best education open to a young man of his time. He was instructed in medicine and natural science by the physician Onesicrates (*de Mus.* 2, p. 1131 C); and, though there is no direct evidence of his public profession of the art of declamation, his rhetorical training is manifest in such of his early writings as the *de Fortuna Romanorum* (pp. 317-326) and the *Aquane an Ignis sit utilior* (pp. 955-958).

While still a young man, he was sent as an envoy representing his native town on a mission to the proconsul (*Præc. ger. Reip.* 16, p. 816 D). It seems that political business was also at any rate the ostensible cause of his visits to Rome (*Demosth.* 2), the earliest of which must have taken place in the reign of Vespasian (*de Sollert. Ann.* 19, p. 974 A). It is a legitimate assumption that he made several visits (cf. *Quest. Conv.* viii. 7. 1, p. 727 B), and that they occupied a considerable time; for he shows an intimate acquaintance with Roman topography (e.g., *Poplic.* 8), and was so well known there that he was accustomed to deliver lectures in public (*de Curios.* 15, p. 522 E). Among the chief of his Roman friends may be reckoned C. Sossius Senecio, who was four times consul under Trajan, and to whom several of the *Parallel Lives* were dedicated, and Mestrius Florus, another consular, in whose company he visited the historical sites of Gallia Cisalpinga (*Obh.* 14). During his residence in Italy he acquired a high reputation as a teacher of moral philosophy, and was rewarded with the devotion of a large band of pupils. It is evident that in this intercourse the medium of communication was the Greek language; for Plutarch makes the interesting confession that he was well advanced in years before he commenced to study Latin (*Demosth.* 2), and the errors which he makes in his incidental references to the language (e.g., *olive μέρις, olive δὲν μέρις* [*Quest. Rom.* 103, p. 288 F]) are such as to prove that his acquaintance with it was never more than superficial.

Subsequently, if we may trust the authority of Suidas (s.v. Πλουτάρχος), he enjoyed the favour of the emperor Trajan, by whom he was elevated to consular rank, while the governor of the province was enjoined to take his advice upon all matters of importance. It is probable that he survived to witness the early part of the reign of Hadrian, but died not long after 120; for he speaks of the Olympium in Athens as unfinished (*Solon*, 32), whereas we know that it was completed by Hadrian between the years 125 and 130.

In the latter part of his life Plutarch seems to

have settled permanently at Chæronea, where he was uninterruptedly engaged in literary labour, except during the performance of the duties attached to his municipal offices. At Chæronea he filled the post of overseer of buildings (*Præc. ger. Reip.* 15, p. 811 B), as well as that of archon ἐπὶ οὐρανοῦ (*Quest. Conv.* ii. 10. 1, p. 643 F). He was also an associate of the college of priests to Apollo at Delphi (*ib.* vii. 2. 2, p. 700 E), and was a member of the council which superintended the organization of the Pythian games (*ib.* v. 2, p. 674 E). Notwithstanding these activities, he gave lectures from time to time both on philosophical subjects and on others of wider interest (cf. *de Rect. Rat. Aud.* 1, p. 37 C). In his domestic life his relations with his wife and children were strikingly tender and affectionate, and are charmingly illustrated in the letter of consolation addressed to his wife Timoxena on the death of their infant daughter, who was named after her mother. From this letter a single sentence may be quoted:

'As she was herself the dearest object for her parents to fondle, gaze upon, or listen to, so should her memory remain to us as a joy far exceeding its pain' (*Consol. ad Uxor.* 3, p. 608 E).

From the same source (5, p. 609 D) we learn that two of the four sons born to Plutarch and his wife died at an early age. The names of the two sons who survived, Autobulus and Plutarchus, are recorded in the dedication to them of the treatise *de Animæ Procreatione in Timæo* (p. 1030 D); and they are mentioned as taking part in the various discussions which arose at their father's table (cf. *Quest. Conv.* viii. 10. 3, p. 735 C). We read also of the marriage of Autobulus (*ib.* iv. 3. 1, p. 666 D), who appears again as the narrator of the *Amatorius*, and as a character in the dialogue *de Sollertia Animalium*. But it was not merely within the family circle that the kindness and geniality of Plutarch's character were displayed. There is abundant evidence from his *Table Talk* (*Questiones Convivales*) and the other dialogues that to his friends he was an object of affectionate regard no less than of respect for his moderation and common sense. His writings have made a similar impression upon posterity. Among many testimonies to his worth we may instance the judgment of Mahaffy, who happily remarks:

'We feel him, as we feel Sir Walter Scott, not only the originator of an inestimably instructive form of historiography, but also essentially a gentleman—a man of honour and of kindness, the best type of the best man of his day' (*Greek World under Roman sway*, p. 293).

2. Works.—The most celebrated of Plutarch's works is his *Parallel Lives*, intended to exhibit a comparison of the greatest men whom Greece and Rome had produced, by the publication of their biographies side by side in pairs. Forty-six of these lives have come down to modern times, and their world-wide celebrity makes it the less necessary to describe their characteristics, especially as we are more nearly concerned with the other branch of his writings, which is conveniently but inaccurately labelled the *Moralia*. It is enough to say that the *Lives* were not so much the fruit of historical research as an endeavour to illustrate the moral writings of their author by depicting the characters and dispositions of men who have actually lived.

The collection of the *Moralia* (ἠθικά) is so described because most of the treatises which it comprises deal with what may be called 'moral' subjects, although not with the principles of formal ethics. The writings are actually a miscellany, containing discussions on religion, literature, politics, education, philology, folk-lore, archaeology, and natural history, as well as some of a severely philosophical type. Plutarch is less a philosopher than an essayist, and the most characteristic of

his writings are those which, in dealing with such subjects as garrulousness, false shame, restraint of anger, or flattery and friendship, display, together with a profusion of illustration and anecdote, the good taste, common sense, and genuine humanity of their author. Not the least of their merits for the modern world is that, apart from a wealth of information on literary history, the *Moralia* are a plentiful storehouse of quotations from the lost writings of early poets and philosophers.

3. Leading ideas.—(a) *Philosophical and religious*.—By his adoption of the dialogue form for most of these treatises Plutarch acknowledged himself as much a follower of Plato's literary methods as he was formally an adherent of his teaching (cf. *de Def. Or.* 37, p. 431 A). The latest tendency of the Academy had been in the direction of eclecticism. Philo and Antiochus had abandoned the extreme scepticism of Arcesilaus and Carneades, and, while laying greater stress upon ethical doctrines, had made an approach towards the positions of the Stoics and Peripatetics by advocating life according to nature, and the plurality of virtue as well as its self-sufficiency. In the 1st cent. of the Christian era the beginnings of a new movement, of which Plutarch was the most distinguished representative, gradually become apparent. Its leading features are two—a closer application to the study of the Platonic writings, and the growth of a spirit of religious mysticism, which ultimately issued in Neo-Platonism. Not that the accretion of alien doctrine was entirely repudiated; for it has even been said of Plutarch that 'it would be hard to say whether the number of Stoic dogmas which he rejects exceeds that which he quotes with approval' (Mahaffy, p. 301). At the same time the most important of Plutarch's strictly philosophical writings are those directed from an Academic standpoint against the Stoics (*de Stoicorum Repugnantis*, *de Communibus Notitiis*) and against the Epicureans (*adversus Coloten*, *Non posse suaviter vivi secundum Epicurum*). His positive contributions towards the elucidation of the Platonic text are contained in the *de Anima Procreatione in Timæo*, and are of much less importance to the student of philosophy than the controversial writings previously mentioned. Plutarch adopted from Plato as his two ultimate first principles the One and the Indeterminate Dyad (ὅντας ἀόριστος). The latter, as the element of shapelessness and disorder, is called Infinity (ἀπειρία), whereas the nature of the One, by defining and occupying the Infinity, which is empty, irrational, and indeterminate, endows it with form, and so makes it capable of supporting and containing the determination which is a necessary accompaniment of sensible objects (*de Def. Or.* 35, p. 428 F ff.). The combination of these two principles, unity and duality, is seen most clearly in the production from them of numbers (ib.). The creation of the world was the result of the concatenation of three factors—God, matter, and form. Matter is the shapeless underlying substratum; form is the fairest model; and God is the best of causes. God, in His desire to leave nothing indeterminate, but to organize nature with proportion, measure, and number, produced a unity by a combination of His material. This was the universe (κόσμος), equal to matter in extent, and similar to form in quality (*Quæst. Conv.* viii. 2, 4, p. 720 A, B). It must be remembered, however, that, according to Plato's doctrine, matter, being itself formless and inert, is not the cause of evil, which proceeds from a foul and malignant necessity struggling with and rebelling against God (*de Anim. Procr.* 6, p. 1015 A, *de Is. et Osir.* 48, p. 370 F). The war of these opposing principles is especially to be detected in man's

chequered existence, and in the region of inequality and change which lies between the earth and the moon (*de Is. et Osir.* 45, p. 369 D). God exists not in time, but in eternity, which for His unity is an everlasting present, without beginning or end, past or future. As being absolute unity, He is incapable of differentiation (ἐτερότης [*de EI apud Delph.* 20, p. 393 A, B]). God sees, but cannot be seen (*de Is. et Osir.* 75, p. 381 B). He is absolutely pure and undefiled by any form of existence liable to destruction and death; hence our souls, which are encompassed by the body and its attributes, cannot reach God, save only in so far as, by the exercise of pure reason and through the medium of philosophy, they may attain to an indistinct vision of His image (ib. 78, p. 382 F). Life in the body upon earth is an exile of the soul (*de Exil.* 17, p. 697 D). It has come from the gods and will return thither, so soon as it is discharged from the trammels of the body. It is like a flame which shoots upwards in spite of the misty vapours that cling round it and seek to bind it to the earth. Hence it is not the bodies of good men that go to heaven; but their souls pass into heroes, from heroes into demons, and, when at last they have been mysteriously cleansed and sanctified, so that they are free from any mortal affection, then in no merely conventional sense, but in very truth and by a blessed consummation, they are caught up to join the gods (*Rom.* 28, *de Def. Or.* 10, p. 415 B). Some souls are not entirely imprisoned within the body, but, by keeping the purest portion in external association with the topmost surface of their owners' heads, who are thus lifted upwards and saved from complete submersion, they preserve their immortality free from bodily taints. This part, called the intelligence (νοῦς), and generally supposed to be innate, is actually external, and would more properly be known as 'demon' (*de Gen. Soc.* 22, p. 591 D). It is unreasonable to disbelieve in the inspiration of certain individuals, if we retain our belief that God is a lover of mankind. The ordinary man learns the commands of God by signs, which the prophetic art interprets, but there are a few who on rare occasions have direct intercourse with the divinity. Further, when souls freed from the body have at length become demons, they still retain their interest in the world which they have left, as Hesiod was aware (*Op.* 120), and are allowed by God to assist the final struggles of those aspiring souls which are yet in the last period of their incarnation (*de Gen. Soc.* 24, p. 593 A ff.). There are, however, bad demons as well as the good; and they are elsewhere described as belonging to the borderland which separates gods and men, and as subject to mortal affections and the changes wrought by necessity (*de Def. Or.* 12, p. 416 C; cf. 17, p. 419 A, *de Is. et Osir.* 25, p. 360 E). These passages are typical of much in Plutarch, and their Platonic character is unmistakable. At the same time, it should be observed that, in emphasizing his belief in demons, he was echoing the teaching of the Stoics (see art. DEMONS AND SPIRITS [Greek]). The same remark applies to his treatment of *μαντική*. Divination is the gift of God to man (*de Def. Or.* 8, p. 413 C), but the decay of oracles is not on that account to be attributed to Him, but rather to the failure of matter (ib. 9, p. 414 D, E). In a curious passage (ib. 40, p. 432 D) he speaks of the prophetic capacity as resembling a sheet of white paper, ready to receive impressions from the warnings of sensation, when the seer is withdrawn (ἐκστῆ) from the influences of the present and is filled with the spirit of prophecy (ἐνθουσιασμός). This inspiration may come from the inner constitution of the body, but is frequently conveyed either through air or through water at particular

places in the form of flowing water or breath. Elsewhere (*de Pyth. Or.* 7, p. 397 D) he says more simply that God does not inspire the voice of the prophetess or the words which she uses, but merely provides the sense-impressions (*phantasias*), and gives light in the soul, enabling it to look upon the future. Thus, though agreeing with the Stoics in upholding the truth of *μαντική*, Plutarch refused altogether to countenance the Stoic doctrine that the divine spirit permeated every stone and piece of metal in the world (*ib.* 8, p. 398 C). His whole attitude towards religion is guided by a spirit of conservatism, seeking to uphold each venerable institution, while finding elements of truth in the various devices by which philosophers sought to remove traditional difficulties (*ib.* 18, p. 402 E, *Amat.* 13, p. 756 B). Thus he would steer a middle course between superstition and atheism, recognizing that there is not so much difference in the nature of the gods as the various conceptions of them by Greeks and barbarians, and the names given to them, might seem to imply, but that there is only one Reason that sets in order and one Providence that controls the world (*de Is. et Osir.* 67, p. 377 F ff.). The elaborate discussion of Egyptian religion (*de Iside et Osiride*) is a testimony to the progress of these foreign cults in the estimation of his fellow-countrymen, and is so constructed as to show that the ideas which underlay them are essentially the same as those which are recognized by the theologians of Greece. The leading motive of the short essay *de Superstitione*, which is, however, regarded by some merely as a rhetorical exercise undertaken in defence of a paradox, and not therefore characteristic of its author's real view (Malaffy, p. 318), is to show that a perverted and ignorant belief respecting the nature of the gods and their attitude to mankind is more harmful to the peace of the soul than an obstinate refusal to believe in their existence. While he had no sympathy with Epicurean rationalism, which destroyed the value of piety (*ut v. Colot.* 27, p. 1123 A), he was no less disinclined to accept the reckless allegorizing of the Stoics, which, by making Ares a mere synonym for combativeness, Aphrodite for desire, and Athene for intelligence, destroyed the individualities of the old gods and plunged their worshippers into a gulf of atheism (*Amat.* 13, p. 757 B). It was therefore quite consistent with his general attitude towards religion that Plutarch, as we have seen, himself exercised priestly functions, and attended with his wife to take part in the sacrifice offered on the occasion of the festival of Eros at Thespie (*ib.* 2, p. 749 B). The same moderation may be detected in his attitude towards Orphism. While he wholeheartedly condemns the follies of excess attendant upon the popular celebration of its rites, the modes of cleansing and purifications which were themselves filthy, the wearing of ragged garments, the wallowings in the mud, the ridiculous importance attached to the eating or drinking of particular solids or liquids (*de Superst.* 7, p. 168 D, 12, p. 171 B), he was himself the advocate of a reasonable abstinence and asceticism (*de Truend. Sanit.* 19, p. 132 E, *de Is. et Osir.* 2, p. 352 A), and, by his abstention from eggs for a season in consequence of a dream, laid himself open to the suspicion of having adopted Orphic tenets (*Quaest. Conv.* ii. 3, 1, p. 635 A).

We have seen that Plutarch regarded the existence of evil as an outcome of necessity, but he has much more to say on the kindred problem why the gods permit the existence of moral evil without exacting appropriate punishment. To this subject he has devoted the important dialogue *de Sera Numinis Vindicta*. The occasion is provided by a supposed lecture of Epicurus, and various answers

are given to the objection raised against what is assumed to be the ordinary dealing of Providence, namely, that the delay in punishment encourages the sinner and disappoints the injured. Thus it is said (1) that the gods wish to give time for repentance, and thus set an example to others, teaching them to beware of hasty resentment, and (2) that by this delay they are able to distinguish those who are incurable and require extirpation from those who, having erred rather through ignorance than of deliberate choice, are deserving of remedial treatment (5, p. 550 C ff.). Again, since it is always possible that a wicked parent may beget a virtuous offspring, it is natural that God should not immediately root out an evil stock, without waiting to see whether it will not produce a good fruit (7, p. 553 B). But the best answer of all is that the delay is only apparent, since sin, by the misery which it causes to the sinner, brings its own punishment with it, so that length of life becomes an aggravated unhappiness (9, p. 554 A ff.). We are then introduced to the topic of punishment in the next world, and the dialogue concludes with a myth concerning the experiences of one Thespesius, who, during a trance, was permitted to be a witness of the treatment accorded to the souls of the dead. The myth is obviously modelled on the story of Er in the tenth book of Plato's *Republic*, and serves once more to illustrate Plutarch's admiration for his great predecessor. The same tendency appears in the parallel case of the myth of Timarchus in the *de Genio Socratis*, where an account is given of the supernatural visions granted to him after his descent into the cave of Trophonius at Lebadeia (*de Gen. Soc.* 21, p. 589 F ff.).

(b) *Ethical*.—The strictly ethical treatises are in the nature of short essays on moral subjects, based upon psychological observation, and designed to effect the moral improvement of their readers. Here we find Plutarch in the character of a physician of the soul, a public preacher who, so far from being inspired with the fervour of a new revelation, sought, by means of copious illustration and apt quotations from the poets, to instil a reasonable exercise of the humaner virtues. The practical aim of his advice may be seen in the three treatises belonging to the consolatory type (*παραινητικοί*), acknowledged by the schools as a special branch of casuistry (*παραινητικός τόμος*; see the present writer's notes on Cleanth. frag. 92 f. [*Fragments of Zeno and Cleanthes*, Cambridge, 1891]). These are the *de Exilio* and the *Consolatio ad Uxorem*, which have already been mentioned, and the more elaborate *Consolatio ad Apollonium*, which was largely indebted to Crantor's *περί Πένθους*. In fact, a considerable number of these writings are open to the suspicion that they are dependent upon unacknowledged, principally Stoic, sources.

As an example we may instance the short treatise *de Virtute Morali*, which contains comparatively little of Plutarch's characteristic manner, but, while designed to support the Platonic psychology by advocating the sublimation of the emotions to reason rather than their entire eradication, is constructed to serve as a compendium of moral doctrine with material drawn from the severer text-books of the Peripatetics and Stoics.¹

He had no sympathy with the formal dogmatism of the schools, but did not hesitate to borrow from them whatever approved itself to his common sense as conducive to moral welfare. When we turn to those passages where he seems more especially to give utterance to his innermost convictions, we find him inculcating self-control, patience, and cheerfulness as the surest defences against the jars and worries of social and domestic life. Thus,

¹ M. Pohlenz, in *Hermes*, xxxi. [1896] 332, 338, finds the original source of the treatise in a work of Hieronymus of Rhodes.

after mentioning the advantages of various forms of abstinence, he continues:

'I put beside them a vow no less acceptable to the gods: I resolved, as if I were making a wineless oblation of milk and honey, to keep myself free from passion first of all for a few days; then, to extend the period by gradual experiment to one or two months, so that I continually made progress in the tolerance of evil, exercising an unceasing control upon my tongue in order to appear cheerful and void of resentment. I refrained consistently from base talk and extravagant action, and repressed any emotion which provoked violent agitation or shameful remorse for the satisfaction of a mean or trifling pleasure. By these means I am contented, and, by the favour of heaven, experience has confirmed the truth of my conviction that the spirit of cheerfulness, gentleness, and kindness is to none of his associates so gracious, welcome, and comforting as to its possessor' (*de Cohib. Ira*, 16, p. 464 C).

In another passage he deduces a similar moral from the contemplation of the glories of the physical world, which, following ultimately a Peripatetic model (I. Bywater, in *JPh* vii. [1876] 80), he compares with an august temple, where the most exalted mysteries are being continually celebrated:

'Yet men debase this festival which God has provided for them by unceasing lamentation and dejection, permitting themselves ever to be harassed by wearisome anxiety' (*de Tranq. An.* 20, p. 477 E).

Just as in religion he endeavoured by compromise to adjust extreme views, so in ethics he sought to reconcile the divergencies of the dogmatic schools by refusing to accept in their entirety the tendencies with which he partly sympathized.

'He will not adopt with Plato the equality of the sexes, or with the Stoics the injustice of slavery, or with the Pythagoreans the rights of the lower animals to justice at the hands of men, yet he goes a long way with all three—magnifying the position and the dignity of the house-mother both by example and precept, inculcating everywhere kindness and consideration to slaves, adopting even vegetarian doctrines in some of his earlier treatises, and upholding with satire and with paradox the superior insight and intelligence of the animals we patronize or oppress' (Mahaffy, p. 801).

(c) *Political*.—In regard to politics, Plutarch repudiated the Epicurean advocacy of abstention (*Pyrrh.* 20) as expressed in the formula 'Live in retirement' (*ἀδὲ βίωσας*), against which he directed a short treatise (*de Latenter Vivendo*, pp. 1128–1130). But he lived in an age in which the limits of political activity were severely narrow, and he was the last man to waste himself in chafing against a restriction which it was neither wise nor possible to break down. Thus he sincerely believed that monarchy was the most perfect of all forms of government (*An Sen sit Resp. ger.* 11, p. 790 A), but that the wise ruler must be careful to observe a mean between laxity and severity, so that he may not incur either the hatred or the contempt of his subjects by aiming at despotism or making concessions in favour of popular government (*Thes. et Rom. Comp.* 2). He recognized that it was idle to rebel against the imperial dominion or to cast wistful eyes upon the historic battlefields of Marathon and Plataea (*Præc. ger. Reip.* 17, p. 814 C). The chief political virtues are not pride and stubbornness, but patience and tolerance, which are the fruits of a well-trained reason (*Coriol.* 15). He has even a good word to say for Theramenes and his proverbial 'boot which fitted either leg' (*Præc. ger. Reip.* 32, p. 824 B), and holds that the politician should make it his chief aim to avoid a crisis. Thus, if the greatest blessings which communities can enjoy are taken into account, it will be found that, in regard to peace, the Greeks have nothing left to desire, since every form of warfare, domestic or foreign, has come to an end; while, in respect of freedom, they enjoy as much as their masters allow them, which is perhaps as much as is good for them (*ib.* p. 824 C). What sort of politics other than the petty activities of municipal government was it possible for Plutarch to recommend? His own life is now seen to furnish a near approach to the only ideal

which he regarded as attainable. A public lawsuit or a deputation to the emperor is the chief opportunity for a courageous and prudent man to seek his own advancement (*ib.* 10, p. 805 A). We should not always be striving after the highest offices, such as that of *strategus* in Athens, *prytanis* in Rhodes, or *Boeotarch* in Boeotia; but rather we should endeavour to impart lustre to those of less account, and preserve a mien suitable to the sphere of authority assigned to us by the responsible powers (*ib.* 17, p. 813 D, E). Such was the temper of the man whose chief title to fame is as the biographer of the heroes of the ancient world. Nevertheless, Plutarch was far from being a time-server, or one who would put his private interests before his country's good (*ib.* 18, p. 814 D). His quietism was founded on the reasoned conviction that, as resistance is impossible, a cheerful submission is wiser than an inopportune struggle against overwhelming odds (*cf. Philop.* 17). But, whereas the folly of ill-judged patriotism may at least claim the sympathy of a generous heart, the conduct of those who make the welfare of Greece of no account as compared with their own comfort and enjoyment deserves our profound contempt (*Non posse suaviter*, 19, p. 1100 D).

LITERATURE.—The chief texts of the *Moralia* are by D. Wyttienbach, 8 vols. in 15, with notes and *index verborum*, Oxford, 1795–1830; by F. Dubner in the Didot series, Paris, 1830–42; and by G. N. Bernardakis in the Teubner series, 7 vols., Leipzig, 1888–96. For the life and opinions of Plutarch the following may be consulted: R. Volkmann, *Leben, Schriften und Philosophie des Plutarch von Chaeronea*, 2 vols., Berlin, 1869; J. P. Mahaffy, *The Greek World under Roman sway*, London, 1890, pp. 291–350; J. Oakesmith, *The Religion of Plutarch*, do. 1902; R. Hirzel, 'Plutarch,' *Heft iv. of Das Erbe der Alten: Schriften über Wesen und Wirkung der Antike*, ed. O. Crusius, O. Immisch, and T. Zielinski, Leipzig, 1912.

POINTS OF THE COMPASS.—I. *INTRODUCTORY AND GENERAL*.—Owing to the marked way in which, in several lands, notably in ancient Greece and in Christendom, sacred buildings have been placed with their most important front towards the east, this subject is generally known as orientation, and that term will be used in this article. As a title it might, however, in some cases be open to the charge of begging the question, and the one here chosen is non-committal and more comprehensive.

The religions of many peoples—perhaps of most—have taken account of the cardinal points of the compass, though the importance attached to them may have varied. The feelings aroused by sunrise and sunset must always have been very much the same all the world over, and they are in some degree expressed by the terms used for the cardinal points. Skeat (*Etymological Dictionary*², Oxford, 1884) traces the word 'east' to the Aryan root *us*, 'shine,' 'burn.' Bradley (*OED*) gives the root *aus*, 'dawn.' Skeat derives 'west' from the Aryan root *was*, 'dwell,' and says that the allusion is to the apparent resting-place or abiding-place of the sun at night. 'South' seems to mean simply the 'sunned' quarter; the derivation of the word 'north' is unknown (Skeat).

The Hebrew imagines himself to be facing east and describes east, west, north, south by the expressions 'before,' 'behind,' 'left,' 'right.' This nomenclature, even more than the Aryan tongues, suggests ideas about the four quarters of the horizon that were definite and important, and it is therefore not surprising to find that the point of the compass is stated with precision in the story

of the Fall and elsewhere. This precision is not really inconsistent with the inaccuracies in Gn 11th and other passages. The Indo-European peoples picture themselves as facing north and call the hand towards the rising sun the better hand, the dexterous one, and the other (although the Greek veiled it by euphemisms) the sinister. The Etruscans, on the contrary, thought of themselves as looking south; the Roman augurs continued the tradition and considered the left the lucky hand. Thus it will be seen that the Indo-European peoples really had the same notions about the east as the Semitic. Walter Johnson gives useful examples of this habit (*Byways of British Archaeology*).

The subject may be said to have been neglected if not ignored till within the last decade or two. Most books on architecture, even those dealing with countries in which orientation is a marked characteristic of the buildings, make no reference to it; the most comprehensive general encyclopedias have short and perfunctory articles or none at all; works on folk-lore, which are of necessity much concerned with ritual, seldom record any observations or offer any explanations, while very often neither the word 'orientation' nor the names of the cardinal points are to be found in the index. This neglect, at least so far as Britain is concerned, is no doubt due to the belief that the custom of orientation has no historical significance, that it was even in the earliest historical times inherited from a long-buried past and had comparatively little relation to the beliefs of the age that practised it. Hence many published plans of buildings have no compass at all; of the others most have but a rough indication with nothing to show whether true north or magnetic north is intended. It is still more rare to find a plan which, while stating that the observation is magnetic north, gives also the date of the observation, although it is well known that the variation between the magnetic and the true north changes rapidly and irregularly. In the south of England the needle now points about 15° W. of polar N.; this difference is diminishing six or seven minutes a year, so that, if the decrease were constant—which it is not—the variation would be reduced by a degree in about nine years. In works of the highest scientific value we find such errors as the plan of St. Peter's at Rome turned round so as to bring the altar to the east; the magnetic variation shown east instead of west; while a third goes to the opposite extreme and carries accuracy so far as to give not only the date of the observation but the hour also. Descriptions are often loose; to say that a church 'faces east' may mean either an east door or an east altar; burial 'to the east' is equally vague; when Guiderius says, 'Nay, Cadwal, we must lay his head to th' East,' he certainly meant 'to the west' (Shakespeare, *Cymbeline*, act iv. sc. 2). The only unambiguous descriptions are 'altar to east (or west),' 'feet to east (or west)'.

Lately the architectural side of the subject has been approached by a few observers in a scientific spirit in Germany and in England, and some records of the customs of savage races have been made.

In this article we shall deal with the following questions: (1) ritual acts: the direction in which the suppliant looks while praying or sacrificing, during baptism, or while performing other ritual acts; (2) the aspect of buildings: the direction of the main axis, or the aspect of the door, altar, or other feature of the temple, using that word in its widest sense; (3) burial: the direction in which the grave is made, or the body of the dead is placed in the tomb, and consequently the planning of the tomb itself; (4) beliefs unclassified (called for brevity 'superstition'): points of the compass from which attacks of evil spirits are most to be feared, and the like.

It is clear that all these, especially the three first, are in a great degree interdependent. They should therefore be discussed together wherever possible. But in some cases this would be inconvenient, and it will be necessary to consider separately the orientation of the more important classes of temples.

1. Ritual acts.—The practice of orientation has been very generally observed in ritual acts, although from the nature of the case it has not in the past left such a clear record as have temples and burials.

The direction in which the suppliant looks when at prayer or performing ritual acts has had, we shall find, in almost every form of religion a direct relation to the sun, his beliefs about it and the

emotions which it arouses. Those beliefs and those emotions range through every shade from sun-worship and totemism to perhaps mere wonder at the never-fading impressiveness of the phenomenon of sunrise. In the relatively few cases in which ritual is independent of the position or course of the sun it is governed by simple and easily ascertainable facts, such as the Muhammadan's prayer towards Mecca.

It is probable that some peoples who did not orientate their buildings did face a particular direction when in the act of adoration; some savage races who have not reached or have scarcely reached the stage of temple-building observe an orientation in their ritual; the Jew and the Muhammadan observe what may be called a 'local' orientation in prayer; the Christian still retains a considerable amount of traditional orientation in his ritual.

2. Temples.—The aspect of buildings must almost inevitably have a close relationship with the direction in which the prayer is uttered or the rite performed, for it is governed by the same ideas—this notwithstanding the very varying degrees in which the building, in different religions, can be regarded as a house of prayer or as the home of a god. But, whereas a more or less correct general position sufficed or suffices for the private person at prayer, the temple is the work and the instrument of the professors of religion and for the most part of somewhat elaborate religions, each acknowledging and dedicating its buildings to many different gods, as the ancient Greeks, or in honour of special patron saints, as in the Christian Church. This consideration complicates, or has been thought to complicate, the inquiry into this part of the subject. We shall also have to bear in mind that in the case of the building, to a greater extent than in the attitude of prayer, tradition counts for much, as in the Christian Church at the present day, long after the matter has ceased to be thought important or indeed to have any meaning at all.

3. Burial.—The position of the body in relation to the points of the compass varies much, but the underlying idea which dictated it is in the main fairly general. Expressed briefly, it is that a dead person is laid in the grave in that position which will make the journey of the spirit as easy as possible. The journey is usually to a home of the dead. Consequently the position varies according to the conception of that home.

This idea of facilitating the journey of the dead is, however, sometimes found acting in an opposite direction: it may be desirable to keep the spirit in the grave. Thus the soul of the chief should continue to reside among and to protect the tribe; that of the wicked man should be prevented from returning to the village and disturbing the peace of the surviving relatives. J. G. Frazer sees a survival of the latter feeling in the custom in this country, not long since given up, of burying a suicide with a stake through his body (*The Belief in Immortality*, London, 1913, i. 164). The further opinion may perhaps be hazarded that the selection of cross-roads as the place was suggested by the thought that, if the spirit did make its escape, it might be puzzled as to which road led home; in the same way it is still believed that the sick are cured by being taken to the cross-roads, the original idea probably having been that, when the evil spirit was expelled from the patient, it was liable to lose its way.

The journey of the spirit may be made (a) to the land of the forefathers, (b) to an underworld, (c) to the isles of the blest, (d) to the place where the totem of the dead person resides. There are some doubtful exceptions to this rule, namely burial towards one

of the cardinal points or in the path of the sun—doubtful because they may after all prove to be connected with a journey. We shall have to consider these classes more at large. Meanwhile we must bear in mind Frazer's warning not to expect uniformity even among people of one tribe; modes in the disposal of the dead vary according to sex, rank, moral character, and manner of death.

(a) *The land of the forefathers.*—The journey to the land of the forefathers is the hypothesis of Herbert Spencer. The land of the dead is the land from which the tribe migrated. The idea may be summed up in the words, 'The dead man has gone home.' The body is laid with the feet in that direction. It is this hypothesis that now finds favour as the one which best fits the facts, rather than that of Tylor, to which further reference is made below. But it will none the more bear too general an application. It appears to express the most common conception among savage tribes at the present time.

(b) *The under world.*—The most familiar instance of this conception is that of mediæval Christianity. The belief appears to be shared by some primitive peoples of to-day. A. C. Kruyt, whose observations are used by Perry, maintains (see art. *INDONESIANS*, vol. vii. p. 245) that an idea common to all conceptions of the hereafter is that the soul has to cross the sea, and that this belief found its origin in the theory that the sun crossed the sea every day on its way to the land of souls under the earth; he points out that the word meaning 'setting of the sun' is used for dying, and states that many of the tribes think that the land of souls is under the earth.

(c) *The isles of the blest.*—There are two remarkable examples of belief in the happy islands. They are from opposite ends of Europe. The first is that of the Greeks. Of the second W. Ridgeway says:

'There is some evidence that the northern cremationists, like the Achæans, believed that the Spirit-land lay in the West. Perhaps the ordinance of Odin that the ashes of the dead should be sent out to sea points in this direction, but it is clear from Procopius [*de Bell. Goth.* iv. 20] that in the sixth century of our era, the peoples of north-west Europe held that the soul of the departed journeyed westward . . . into the western part of Britain. A peninsula opposite Britain was inhabited by a folk (probably the Veneti of Armorica [Brittany]), who . . . were subject to the Franks, but paid no tribute by virtue of the ancient service of ferrying the souls out into the Ocean to Britain' (*The Early Age of Greece*, Cambridge, 1901, i. 517).

The expression 'to go west' for 'to die' is still in use and has been extended to include anything that is lost.

(d) *Totemism.*—Two instances will be noted below in which a man is buried with his head to the point of the compass appropriate to his totem; but these may prove to be cases of class (a), the journey of the spirit to the land of the forefathers.

Each of the above classes presupposes a journey to be made by the soul. It remains to notice the apparent exceptions referred to above. Burials, chiefly pre-historic, occur which seem to have a direct relation to the course of the sun and do not suggest a reference to a journey. Thus the graves of Teutonic peoples on the Continent and in England often, if not generally, have the foot towards the N. but occasionally to the S.; sometimes they are E. and W. with the foot sometimes E. and sometimes W., but with the body laid on its side and facing S. The idea may have been a desire for comfort, and seems to take the form of a wish to lie in the path of the sun. It lends some weight to Tylor's hypothesis, applied by him no doubt too generally, viz.:

Orientation originates in 'the association in men's minds of the east with light and warmth, life and happiness and glory, of the west with darkness and chill, death and decay, [which] has from remote ages rooted itself in religious belief' and has affected the position alike of temple and of grave (*PC²* ii. 421).

To the ancient Egyptian the west was the land of souls; he complains:

'The West is a land of sleep and of heavy shadows. . . . Let me be placed by the edge of the water with my face to the North, that the breezes may caress me' (G. Maspero, *The Dawn of Civilization*, Eng. tr., London, 1901, p. 113).

The legend that Christ was buried with His head to the W. is attributed by Tylor to wide-spread solar ideas. We have an instance of Australian tribesmen who prefer to lie 'in the path of the sun' (Johnson, p. 274). The Tlingits, a people of Alaska, bury with the head to the sunrise (Frazer, *Totemism and Exogamy*, London, 1910, iii. 274); the reason given, namely to allow the spirit to return, makes it doubtful whether this class is really an exception to the general rule that position is determined by desire to facilitate a journey. As a doubtful case we may perhaps class with it the instance mentioned below of the Egyptian buried in a cramped position in the hope, it is suggested, of facilitating the re-birth of the body.

4. *Superstition.*—No generalizations can at present be made on this branch of the subject. Most of the beliefs may presumably have some connexion, now lost, with ritual and ideas of death. A few examples will be noted below (VI. 12, X. 1, and table at end of art.). Probably a good deal of material still remains to be collected.

II. *EGYPT.*—1. *Temples.*—The Egyptians appear to have been indifferent as to the direction in which their temples lay; at least, if they had a system, it is by most people considered to be unknown to us. J. Fergusson expressly states (*Hist. of Architecture*³, London, 1891-93, i. 119) that they did not orientate their buildings; but in his day no system had been suggested, and he accepted the obvious reading of the evidence. The evidence is that the temples face in all directions. The silence of other writers on Egyptian architecture may be assumed to mean that they take the same view as Fergusson, and students of the elaborate religion of the Egyptians give us little help.

Attempts have recently been made, however, to reduce the apparent confusion to a system. Two of these attempts—those of Nissen and of Lockyer—were apparently made more or less independently of one another, but they may be considered together. Nissen discusses eleven examples.

Every temple is directed towards the point on the horizon at which the sun or the star to which the temple is dedicated rose or set on the feast-day at the time when the temple was founded. When the axis of a temple lies nearly E. and W., it necessarily points to sunrise on some day of the year and to sunset on some other day, and the temple is then called a sun-temple. If, however, the axis points to a spot on the horizon outside the limits of sunrise and sunset at midsummer, the temple is considered to be a star-temple. The point on the horizon at which the sun or a star rises on any particular day of the year is constantly changing, owing to the movement of the pole of the earth round the pole of the heavens, and it is pointed out by Lockyer that in 13,000 years this point for a star may shift 47°. Some star is then looked for which rose or set at that particular spot at some time during the epoch in which the temple must be supposed, on archaeological grounds, to have been founded. A likely star having been found, the exact date, to within a very few decades, at which it rose or set at the point in question is easily calculated. This date is the date of the building. A likely star is one which can be shown to have some possible connexion with the temple, and great ingenuity is shown in finding such connexions; e.g., the temple of Sebak-Ra at Ombos seems to point towards the setting of Arcturus, which was sometimes represented by the Egyptians as a crocodile, and the god Sebak-Ra was also represented as crocodile-headed (Nissen, *Orientation*, p. 52). Inscriptions from Annu, Denderah, and elsewhere are quoted by both Nissen and Lockyer describing the foundation of temples, a ceremony of the greatest importance: the king himself stretches the measuring-cord and directs his glance to the course of the rising stars, his eye is fixed on the Great Bear, and he gives the corners of the temple. But it is admitted that the Denderah inscription is very late; it refers to the emperor Augustus, who, it is said, was never at Denderah; nor did the Great Bear set at Denderah in his time; it must therefore reproduce an earlier inscription (Lockyer, *The Dawn of Astronomy*, p. 178). An exact orientation was of the greatest importance, and Lockyer suggests that the long series of halls and courts which formed an Egyptian temple would make an

excellent telescope of a sort; the halls, especially those at the farther end, were dark, and the dividing walls were each pierced by a central doorway; a priest standing in the dark at the farther end, looking through this long series of doorways, would have a good view of a star at heliacal rising, i.e. rising a little before sunrise, and would thus be warned that it was time to prepare sacrifice; the fairway to the horizon was always carefully preserved uninterrupted. True, later temples were sometimes built right across the fairway, but that was done on purpose by the later priests to spite those of the old temple. The sun-temples make admirable observatories for ascertaining the exact time of the summer solstice; the measurement of time was a most important matter in an agricultural country; it was a duty monopolized by the priests. The orientation of star-temples is often what we may call indirect, i.e., it is not the long axis, but the short, that points to the rising of the star, as at Denderah and Edfu (Nissen, pp. 28, 43); and the Egyptians had the habit of building neighbouring temples at right angles to one another (Lockyer, p. 168, 316; Nissen, p. 50).

These views have been accepted by R. Phené Spiers (*EBR*¹¹, s.v. 'Orientation'), E. A. Wallis Budge, and F. C. Penrose. They are strongly controverted by a writer in the *Edinburgh Review* (clxxx. [1894] 418 ff.). The weak points of the theory, besides those indicated above, are that, owing to the movement of the earth's axis, the same star would not serve for more than 200 or 300 years, as Lockyer admits; that that is a very short space of time in Egyptian history, so that the fact must have been observed comparatively soon; that the very late inscriptions describing the setting out of the temple with a cord by the king, inscriptions rewritten and indeed freely 'edited,' should not be accepted as plain statements of fact, devoid of poetic or religious fervour. The writer in the *Edinburgh Review*, indeed, points out that the older inscriptions say nothing about the star, while in the later instances 'the Great Bear' simply means 'the north.' Lockyer does not support his views of Egyptian sacerdotal history by reference to authorities. Nissen is less fanciful, but scarcely more convincing.

The sun and stars entered so largely into Egyptian religion and the observation of their movements was so important for making the calendar that the case can at most be said to be not proven. This would seem to be the view of W. M. Flinders Petrie (art. ARCHITECTURE [Egyptian], vol. i. p. 722 ff.), who, however, appears to avoid a definite statement of opinion. He does, indeed, give interesting facts about the temple of Abydos (p. 723^a), but no explanation of them or even a hint as to whether he thinks an explanation is required. In the earliest plan the entrance is a passage between walls 4 ft. apart and 35 ft. long, facing S.; it is probably of the 1st dynasty; in the new temples of the Vth dynasty the principal door is to the N. and the lesser to the S.; later still it was several times rebuilt or remodelled facing N. and then E.; in all there are seven (*sic*) different plans, dating from the 1st to the XXVth dynasty and facing successively S., N., N.?, N., N.?, E., E., E.

2. Burials.—In the earliest burials in Egypt the body is said to be laid on the left side, lying N. and S. with face towards the E. (Maspero, pp. 112 A, 361). Budge, referring apparently to the same period, says that the skeleton is laid on the left side with limbs bent and the face generally to the S., adding, however, that no invariable rule seems to have been observed as to the points of the compass. At a somewhat later but still pre-historic time and before the days of embalming, the graves are 'oriented either north or south' (*Egyptian Ideas of the Future Life*, p. 159). Budge thinks that the cramped attitude, the ante-natal position of the child, may perhaps have been adopted in order to facilitate the re-birth of the body (p. 162).

The royal tombs of the 1st dynasty at Abydos are made parallel to the river valley and hill line,

and not true to the cardinal points, the nominal N.S. line being really N.W. and S.E. But the builders recognized this diagonal direction (*Egyptian Explor. Fund Report*, London, 1900, pt. i.).

The pyramids of Gizeh are of the IVth dynasty (variously estimated at 4000 to 6000 B.C.). They are accurately set out so that one side faces due N. They are not absolutely accurate; the sides of the Great Pyramid, which should point N., do actually bear 4' W. of N. Petrie (*The Pyramids and Temples of Gizeh*, London, 1893, pp. 40-42) thinks that this discrepancy is due, not to a fault in the setting out, but to a movement of the pole; he thus tacitly assumes that absolute accuracy was desired. Six of the nine remaining pyramids at Gizeh have a N. entrance passage sloping down towards the centre at a mean angle of 26° 47'; and at Abousseir, of the only two which are sufficiently well preserved, one has a passage at an angle of 27° 5', and the other at 26°. All these must have given view of the then pole star at its lower culmination—'a circumstance which can hardly be supposed to have been unintentional' (J. F. W. Herschel, *Outlines of Astronomy*², London, 1867, p. 205 f.).

Opposite to the middle of the E. side of each pyramid there was a temple, where the worship of the deified king was carried on.

The temple, says Petrie (p. 81), looked 'towards the pyramid which stood on the W. of it (the "blessed West," the land of souls).'

In connexion with the second pyramid temple there is a granite temple about a quarter of a mile away. A paved causeway leads from one to the other. This granite temple is duly orientated to the E., but it is about E. by S. of the pyramid, this position evidently being decided by the lie of the ground. A causeway also runs E. from the third pyramid temple.

Most of the other pyramids of Egypt face N. with greater or less degrees of inaccuracy, and all have the entrance to the N. Of that at Sakikara the N.S. line is, according to Fergusson, 4° 35' E. of N.

In the Sūdān, however, there are some important groups of pyramids which are placed diagonally to the meridian. These are at Gebel Barkal and at Meirō, east of the Nile, and at Nuri or Belal, west of the Nile. The shrines are against the S.E. faces. Budge, who made observations, accepts the views of Lockyer and Penrose [and Nissen], and holds that these pyramids are orientated to the sun or, where its rays could not enter the shrine, to some star (*Proc. Royal Soc. London*, lxx. 333).

The Sphinx seems to have been called Har-em-khu by the ancient Egyptians (the Harmakhis of the Greeks and Romans), equivalent to 'Horus on the horizon' or the sun in the act of rising. The sun-god Horus takes several forms, one of which was 'Horus of the two [i.e. E. and W.] horizons.' Horus in one of his qualities is primarily the god of the sunrise, and as such is the counterpart of Hathor, the god of the west, who received the dead. It is this eastward gaze of his that has made the Sphinx so impressive to all who have beheld him, and that long ago gained for him the name of 'the Watcher.' The work is usually attributed to the XVIIIth dynasty (c. 16th and 17th centuries B.C.), by which time the origin of all forms of religion was sought in sun-worship, and nearly every principal deity became amalgamated with the sun-god (A. Wiedemann, *Religion of the Ancient Egyptians*, Eng. tr., London, 1897, p. 12).

But, though theology may have changed during the course of ancient Egyptian history, we may safely guess that ritual, with which we are here concerned, remained very much the same in that

most conservative land. Egypt was a land of sun-worship in one form or another from the earliest pre-historic times till the dawn of the present era. The worship centred in Pa Rā (the house of Rā), the Greek Heliopolis. Thither a Pharaoh of the XIIIth dynasty went in procession, and on the sandhill sacrificed before the god Rā at his rising and, returning to the great temple of the sun, went alone into the holy of holies to see the god, his father, Rā himself (*ib.* p. 21).

The *mastabas*, or private tombs of dynasties III. to X., have generally the entrance to the E., sometimes to the N. or S., never to the W. There was also a sort of blocked-up door facing E.; this was for the use of the dead; the spirit could enter or leave by it. An inscription is recorded invoking blessing on the dead 'that burial might be granted to him in Amentit the land of the West' (Maspero, p. 250). At the far end of the building, set back in a recess in the W. wall, is a stele.

Wiedemann thus describes a funeral:

'When the tomb had been reached, the coffin was set up on end, with face turned towards the south, on a small sandhill intended to represent the Mountain of the West—the realm of the dead' (p. 236).

III. *ASSYRIA, CHALDEA, PERSIA: TEMPLES AND BURIALS*.—Our knowledge of these regions in ancient times is still marred by serious lacunæ. The old Chaldeans had their theory of a world of the dead—either an under world or one lying E. or N. Of burial places other than those of royal persons nothing seems to be known, and even of those the authorities do not tell us much.

The temple, a succession of terraces about three in number, forming a sort of irregular stepped pyramid, was placed with its corners to the cardinal points—*e.g.*, the temple of Nannar at Ur in Chaldæa (Maspero, p. 629) and Nin-mah at Babylon (T. G. Pinches, art. *ARCHITECTURE* [Assyro-Babylonian], vol. i. p. 689^b). This may be chance, but, in describing the precinct of the temple-tower of Belus at Babylon, Pinches says:

'In accordance with the usual Babylonian custom, the angles indicated the cardinal points, and each side had an entrance. Inside the enclosure . . . stood some kind of erection 200 ft. square, connected with the *zigurat*, or tower, and having round its base the chapels or temples of the various gods, on all four sides, and facing the cardinal points' (p. 691^c). The principal buildings, with the couch of the god and the throne, were to the W. (p. 691^c). Sippara and Larsa, cities where the sun-god was worshipped, have not been thoroughly investigated. Persepolis was orientated to the cardinal points. The palace of Sargon in Mesopotamia has its diagonals pointing to them.

IV. *GREECE*.—1. *Temples*.—The normal position of a Greek temple is approximately E. and W., and it was an E. aspect that was aimed at. But an E. aspect meant the opposite of what we now mean. A religion like Christianity which has developed an indoor congregational worship considers the position of the altar within the temple and the attitude of the worshipper as the essential points; the position of the door is a corollary. But in a religion such as that of the ancient Greeks, where the temple is a mysterious home of the god entered by the few while the people remain in the *temenos* to see the sacrifice, it is the entrance front and the altar before it that are the first considerations. Greek temples therefore generally have the entrance to the E.; the altar (see art. *ALTAR* [Greek], vol. i. p. 343^a) is, if possible, placed in front of it on the main axis and so that the person sacrificing faced E. with his back to the temple—*e.g.*, temples of Aphæa at Aigina, of Apollo at Delphi. If this was difficult or impossible, the altar was elsewhere, as that of Zeus at Olympia and of Athene on the Acropolis at Athens.

By far the greater number of temples face

towards the E. Nissen's useful list of 113 Greek temples (pt. ii. p. 224) shows that 75 per cent are within an arc of 50°, or 25° on either side of true E., while more than half are within an arc of 20°, or 10° on either side of E. Of the remainder there are four principal groups with the entrance facing approximately N.E., N., W., and S. There are several large gaps: no temples have the entrance to S.S.E., N.N.E., N.N.W., or W.N.W., while there is a gap of no less than 65° from about W.S.W. to nearly due S. containing only two temples. This distribution is partly geographical and partly according to cult, but never directly chronological.

Geographically all temples on the mainland, with but five exceptions, face between N.E. and S.E., the bulk of them either just N. of E. or about E.S.E.; those in Sicily and Italy are for the most part just S. of E.; the islands and Asia Minor form three nearly equal groups facing E., S., and W. fairly accurately.

Grouped under cults, the temples of Zeus, Athene, Asklepios, and Hera face fairly uniformly E., except when in some Asia Minor examples the door is turned to W. or S. The temples of Artemis, Dionysos, and Demeter show rather greater variation. Temples to Apollo point in many directions. Among the temples of unknown dedication there is singular uniformity: they all face nearly due E., except one, which is nearly due S.

Although no general classification according to period can be combined with a classification according to direction, yet dates of buildings cannot be ignored: thus the Asia Minor temples of Zeus and Athene facing W. and S. are late, those of Artemis early; we shall have occasion to notice the Delos temples in this connexion. Still less can we neglect the period of the cult in examining the direction, as we shall see in considering the temples of Isis and Serapis. Most important of all will be the original seat of the cult, as in the cases of Apollo and the Ephesian Artemis.

The normal aspect of the entrance to a Greek temple is therefore E. Deviations from it are abnormal and are of varying degrees of importance. The reason of the E. aspect must be sought in sun-worship of some sort; the time and perhaps the place of its origin are obscured by distance. Statues of gods before house or temple doors were called *δαίμονες ἀντὶ ἡλίου*, 'deities facing the sun.' In Homer's poems, says L. R. Farnell (art. *GREEK RELIGION*, vol. vi. p. 401^a), the sun was anthropomorphized, but it is doubtful if it was so for the average Greek, who merely kissed his hand to it every morning or bowed to it on coming out of his house. The same author points out that the earliest temples—Homeric and pre-Homeric of the Minoan-Mycenæan culture—are, with one exception, domestic chapels in royal palaces and mark the sacred character of the king (p. 397^b). Of the palaces themselves those that are known to us do not face E.: Tiryns and Phylakopi face due S.; Mycenæ about W.N.W.; Troy S.E.; Knossos seems to have had several fronts, one about S. by W. and others to the corresponding points. Some of these sites are too cramped to have afforded a choice of aspect.

Some light is obtained from literature, but it is not conclusive.

In the *Ion* of Euripides the great tent set up by Ion, the son of Apollo, is scrupulously orientated—for it is a *ἱερόν*, a sacred or tabu place—so that it should not face the mid shafts of the sun's fire nor its dying rays (lines 1182–1187). On the roof were embroidered pictures of the sun, moon, and certain stars. There is nothing to connect the tent with Apollo-worship and the orientation seems to aim not so much at facing N. and E. as at avoiding S. and W.

Hesiod (c. 800 B.C.) has some passages in *Works and Days* referring to the movements of the stars and the time for reap-

ing and other agricultural work, and other ancient authors refer to the means of measuring time by the heavenly bodies.

Deviations from true E., where these are slight, as in the case of dedications to Zeus and Athene, may be explained in one of two ways: they may be due to indifference as to exactness, or we may, with Nissen and Penrose, see in them deliberate intention in conformity with an elaborate system.

These authors suggest that the axis is directed to the point of sunrise on the feast-day; that the variations among temples having the same dedication are due to the varying customs in different states, and to the varying position of the place of sunrise caused by the movements of the earth's axis; that the latter cause incidentally gives us an indication of the date of the temple; that it was important for the priest to have warning of sunrise so that he might prepare the sacrifice; and that this was given to him by the appearing of a star which was known to rise a little before the sun. Both Penrose and Nissen, by calculating from the known movement of the earth's axis (the precession of the equinoxes), have arrived at dates at which the axes of most of the extant temples would point to a heliacal star. They have thus fixed the dates of the foundations of the temples. Penrose points out that the dates thus deduced are in most cases clearly earlier than the existing remains. His explanation is that the temple has been rebuilt on an old site, and the direction of the old axis has been followed. Lockyer agrees in the general theory, and it has been accepted by J. B. S. Holborn (art. *ΑΙΟΝΙΟΤΗΤΑΣ* [Greek], vol. I. p. 73a) and by Spiers (*EB*¹¹, s.v. 'Orientation'), who both state that temples of gods face E. and those of heroes W. It is opposed with force by a writer in the *Edinburgh Review* (clxxx. 418) in an article on Lockyer's *Dawn of Astronomy*.

The theory indeed seems to require a broader basis of evidence. Penrose himself points out that the same star would not serve for more than 200 or 300 years, and he finds that at the rebuilding of a temple the axis has sometimes followed the star and sometimes not.

The fact that most temples point nearly due E. may be due to an old tradition having been adhered to and fairly accurately carried out. On the other hand, we may, with Nissen, find the explanation in the Greek calendar: the chief festivals were equinoctial—March, April, and early May (from the opening of navigation to the beginning of harvest [May]), and August, September, and the beginning of October, interrupted by vintage and ended by the closing of navigation.

Certainly the importance of accurate observation of the movements of the stars for the regulation of the calendar and for timing agricultural operations was fully realized. The terms 'heliacal,' 'acronychal,' and 'cosmical' rising and setting were used by the early astronomers.

After this general indication we may take a closer view. The temples of Zeus and Athene show, as stated above, a general agreement, but there is considerable difference between the two limits—some 36° in the case of Zeus and 21° in the case of Athene, not including the early temple at Miletus, Asia Minor. In Asia Minor Zeus has a temple at Magnesia with the door due W. (220 B.C. [Nissen]); Athene has two at Miletus at right angles to one another, E.S.E. and S.S.W., and one at Pergamon due S. With these exceptions, there is no connexion between direction of axis and geographical position. There is a difference of nearly 4° between the early temple of Athene on the Acropolis and the Parthenon: they are respectively 260° 55' and 257° 7', given S.=0° and going sunwise (Nissen, Penrose).

Athene, Asklepios, and Demeter keep their E. door at Priene, Asia Minor. The two temples of Artemis in Asia Minor, at Ephesus and Magnesia, have the door approximately to W., though they differ considerably in direction of axis. This reversal is perhaps due to the confusion of the Greek Artemis with the Asiatic goddess.

The Erechtheum points rather N. of E., being nearly parallel with the Parthenon. The Theseum is 13° S. of E.; Nissen holds with the view that it

has nothing to do with Theseus, but connects it with Iacchus, son of Demeter, and the Eleusinian mysteries (p. 177).

This brings us to Demeter. Her temples are mostly not far from parallel with one another and with one of the two Persephone temples, while they are only 12° removed from the Theseum on one side, and 14° from the second Persephone temple on the other side, their axis pointing 295° or about E.S.E. These Demeter temples are widely scattered—Eleusis and Sicily. But in Asia Minor there is one temple of Demeter at Priene, and in Arcadia a temple of Despoina, the Arcadian name of Persephone, both facing due E. In Sicily at Selinus there is a temple said to be of Demeter facing almost N.E.; this is remarkable because all the eight other temples at Selinus are exactly parallel with one another and face somewhat S. of E., or not far from the direction of the other Demeter temples.

The temples of Apollo present perhaps the greatest problem in Greek orientation. Even Nissen, who has an explanation for most things, admits that they are difficult. They point in many directions. This is probably due to the foreign extraction of the god: he has been thought to have come from Asia, from Egypt, from the north. Farnell says (art. *GREEK RELIGION*, vol. vi. p. 395^b) that he was no doubt a cult figure of tribes other than Achæans, and that in the Hyperborean ritual, which reflects at points the earliest days of Hellenism, we can follow the track of Apollo's invasion from the north. Nissen ingeniously suggests that the simple mountain shepherds of Arcadia and Aetolia accepted with the foreign god his foreign ritual and gave to his temples at Bassæ, near Phigaleia, and at Thermion the N.S. axis with the door at the N. end (that at Bassæ has also a door in the E. side); but advanced city communities with a popular theology adjusted the axis to suit their own views; thus the temples at Selinus and Syracuse face due E., and that at Corinth nearly so. But on this hypothesis the temple at Delphi facing N.E. and that at Didyma in Argolis a little S. of N.E. are difficult to place. The temple at Metapontum on the south coast of Italy, with the entrance to the S.E., may be said to conform with the custom of the country; that in the Aegean island of Thera is parallel with it; that at Letoon has its door to the S.S.W. There remain two temples of Apollo at Delos, one facing due E. and the other due W.; these must be purely political, faced according to the dictates of the times to which they belong, as Athens or Asia Minor was in the ascendant. Besides these there are in Delos two old temples facing W. which, Nissen says, Wilhelm Dörpfeld is inclined to dedicate to Apollo; finally there is the nameless temple at Mycenæ with the doorway to the S., which is perhaps more likely to have been dedicated to Apollo than to any other god.

The Delos temples were first built facing W.—the rock-cut, the Leto, two which are nameless, and one dedicated to Apollo. The aspect is perhaps due to the influence of Asia Minor—except of course the rock-cut. Then, under the influence of Athens in the 4th cent., the temples of Zeus and Apollo were built with the door to the E., and finally, according to Nissen, when the island passed away from Athens, the temple of the foreign Isis looked W.

A foreign god, as Nissen points out, may retain or may yield his native ritual. We have seen that Apollo illustrates both processes. At Alexandria the parent temple of Serapis faces S.; the daughter at Taormina is turned E., while in Delos she keeps the door to the S. The temple of Isis is turned to the W. at Delos, but keeps its S. door at Priene.

It is probably a mistake to suppose that the aspect of temples was much more than a fashion, that it expresses any definite idea in theology. We have an exactly parallel case in the Christian Church; most of our buildings have the door to the W., but in some of the most famous it is to the E. Probably few people are aware of the latter fact, even when they are attending service, although it sometimes requires a slightly different ritual. Perhaps to the Greek the matter was a little more important, but not much.

The temple with the door to the W. did not face W., any more than St. Peter's in Rome faces W.; it only faced E. in a different manner. Nissen thinks that it did face W., and that this aspect symbolizes 'world empire.' So it does, but the symbolism is of the 20th cent. and Teutonic. It is generally thought that on the feast-day the rays of the rising sun were to fall through the open door and light up the statue of the god, and the northward-facing temple at Bassæ has indeed the famous side door to the E., opposite the spot where the statue stood. But how could this have been arranged in a westward-facing temple? A hypothetical opening would throw only a reflected light on the figure. Vitruvius has some remarks on the subject which we shall presently notice.

2. Burials.—The Greek idea of death is complicated by many cross-currents, but the notion of a voyage or a journey of some sort enters largely into it. S. Baring-Gould says (*A Book of Folklore*, London, n.d., p. 160) that the ancient Greek inscribed the word *επιλοια*, 'favourable voyage,' on a gravestone and that his descendant carves a pair of oars.

In five shaft graves on the Acropolis at Mycenæ two bodies lie N. and S., with feet to S., and all the others, eleven or more, lie E. and W. with feet to W. At Vaphio the chief is laid E. and W. with feet to E.; possibly this is only in order that he should face the door of the tomb, which is to E.

Ridgeway (i. 490) thinks that we may infer that burial with feet to W. was the characteristic orientation of the autochthonous race. He points out (i. 516) that Odysseus did not descend into Hades as did Æneas and Dante; he sailed west; and in post-Homeric belief there was no under world, but isles of the blessed, which lay in the west. At Phylakopi in Melos the orientation of the tombs depended wholly on the conformation of the ground (Hellenic Society, suppl. paper no. 4 [1904], p. 234).

In later times the position of the body varied. Thus Solon proved the justice of the claim of Athens to Salamis as against the Megarians by pointing out that the tombs which he opened faced E., and that the corpses in them were turned to the E. in the Athenian fashion. We have therefore the tradition at least that in the days of Solon (c. 600 B.C.) there were in different parts of Greece two well recognized positions for the body. Such customs 'probably . . . depend on the ideas which each people has formed of the direction in which lies the land of the dead' (Frazer, *Totemism and Exogamy*, iv. 214).

V. ROME.—1. Temples.—It is generally agreed among modern writers that the Romans, whatever their theories, did not orientate their buildings (W. J. Anderson and R. P. Spiers, *Greek and Roman Architecture*, London, 1907, p. 188). The silence of Fergusson, of Middleton (*Remains of Ancient Rome*, 2 vols., London, 1892), and of Lanciani is perhaps as eloquent on the same side. E. A. Gardner (art. ALTAR [Roman], vol. i. p. 349) says that, the orientation of the temples being varied, that of the altar varied also, and that, from the position of the altar, the sacrificer appears to

have stood with his side to the temple, and in some cases with his back to it. J. Durm lays it down that the Etruscan rule required that the temple axis should be N. and S.; that the Roman turned to the E. during prayer; therefore either the temple statue had to face W. or the axis of the temple had to lie E. and W. (*Handbuch der Architektur*, Stuttgart, 1905, sect. 431).

Of the Etruscan practice we know almost nothing. The Roman augurs inherited as the basis of their ritual the Etruscan idea of the natural or normal attitude; i.e., they imagined themselves as facing S., so that the lucky side—that towards the E.—was the left, and the unlucky side the right. But with the Roman populace the opposite was the rule: they faced N., and the right was the lucky side. Both these notions show that, whatever was the practice with regard to buildings, there was in early times a special veneration for the east.

Vitruvius, who lived and wrote in the 1st cent. B.C., is a useful link between Greece and Rome. He was an architect with a practical knowledge of work in Rome in his own day and with some outside book-knowledge of Greek lands. He has a chapter on 'The Position of Temples according to the Regions':

'The sacred temples of the immortal gods should be so disposed, that, if there is no impediment and the use of the temple permits, the statue which is placed in the cell may seem to look towards the evening region of the heavens; so that those who approach the altar, to make their offerings, or perform sacrifices, may look towards the eastern sky and to the image which is in the temple. By this means the temple, the eastern sky, the supplicants and sacrificers making their vows, and the image seeming to rise to behold them will all be seen at one view: for it is proper that the altars of the gods should be disposed to the east.

But, if the nature of the place prevents that position, then the temple is to be turned to the view of the greater part of the city walls and temples of the gods; or should sacred fane be built near a river, like those near the Nile in Egypt, they should look towards the banks of the river; so likewise, if near a public way they should be so situated that the passengers may behold it, and pay their salutations' (*de Architectura*, tr. W. Newton, London, 1791, bk. iv. ch. v.). Pseudoperipteral temples 'are appropriated to the use of sacrifices, for the same kinds of temples are not erected indiscriminately to all gods, because the sacred rites performed to each are different' (bk. iv. ch. vii.). 'Altars should regard the east' (bk. iv. ch. vii.).

In these passages, it appears, Vitruvius combines unconsciously what he had learned from books about Greek work with his practical knowledge of Roman custom in his own day. He had not travelled, and clearly the Greek architecture about which he had read was, as we might perhaps expect, chiefly that of Asia Minor. As to Roman work, he seems to consider the W. orientation to be a counsel of perfection, which was to give way before considerations of architecture and convenience.

In practice temples face in every direction; a glance at a plan of Rome or at a table of orientations makes this clear, and an attempt to work the data into a system would indeed be bold. But it has been made by Nissen; his lists contain 33 Roman temples and 34 temples in Italy outside Rome.

That the Romans and the Etruscans before them were very susceptible to outside influences—Greece, Egypt, and Asia—is a commonplace of history. It would be remarkable, then, if in the placing of their buildings even in Rome itself they never followed the practice of countries where orientation was general—countries within whose borders they themselves were building temples carefully orientated in accordance with native custom.

But, if we would look for truly orientated buildings, it must be on open sites or among the early buildings of a town before the place had become congested, or at least among those which, if not

early, might be expected to preserve early traditions. In Rome the circular temple of Vesta in the Forum faces E.N.E. (R. Lanciani, *Forma Urbis Romæ*, Milan, 1893-1901, pt. iv. pl. xxix.) or due E. (O. Richter, *Topographie der Stadt Rom*, Munich, 1901, pl. x.). The old *Domus Publica* (Middleton) and the Regia, neighbouring buildings associated with the temple, have also the E. direction—a direction contrasting strongly with all the buildings round them. The temple of Vesta was one of the most sacred of buildings, and it owed both its form and its sanctity to its extreme antiquity. The house for keeping alive a fire for the use of the community was probably the earliest building which primitive man attempted, earlier even than the shelter for his own head. The actual building in the Forum was destroyed and rebuilt more than once, and even its position had been slightly moved, but the old round form was preserved. The plan came to receive a symbolical meaning, but there can be no doubt that it was simply the natural form in which primitive man built, and that it was perpetuated in a specially sacred building by a well-known tendency just because it was primitive. It is suggested that the E. direction also is that of the primitive building, and that it points to a true orientation having been observed in early times. The well-known round temple to Mater Matuta, of early foundation, opposite S. Maria in Cosmedin has its door almost due E. (Lanciani, pt. viii. pl. xxviii.). The door of the Tullianum also looks due E. This building has, like the Regia, the trapezoidal plan which is believed to be the mark of a very primitive tradition. The Lapis Niger over the grave of Romulus is trapezoidal, but its axes run N.W. to S.E. and N.E. to S.W. The early quadruple temple on the Capitol faced about S.S.E. (*ib.*), and the early temples on the S.W. corner of the Palatine face S. by W. Outside Rome: the temple of Vesta at Tivoli has the door facing S.W. by S. (G. L. Taylor and E. Crusy, *Archæological Antiquities of Rome*, London, 1821-22, pl. lxvi. [vol. ii.]) probably for local reasons. The Artemisium at Nemi runs N. and S. with the door to the S. Thus it is difficult to detect a system even among the early buildings, unless it is perhaps a tendency to make buildings face approximately either E. or S. But much could not be expected from so few remains.

It is possible that other buildings might be found in which there might be discovered a cause for the direction of the axis other than practical or architectural considerations. Contact with neighbouring or distant nations may more than once have had its influence; the third legion of the army, for instance, learned during its stay in Syria the custom of saluting the rising sun (*GB^s*, pt. vi, *The Scapegoat*, London, 1913, p. 416).

The orientation of buildings in Rome in historical times seems to have been made to conform to the lay-out of the city generally, as Vitruvius suggests. The lay-out of the city must be considered in areas. In the earliest town the Forum Boarium may have been truly orientated, either from ritual tradition or because of the relative positions of the Capitol and the river. The Palatine, on the other hand, is laid out on a line running N.E. and S.W.; this was probably determined by the limits of the hill and by the valley which formerly crossed it. To the N. of it were the Forum Magnum and the Via Sacra running from N.W. to S.E. Some early buildings in these parts and on the Capitol have been referred to above. The buildings of later times, such as the temples of the Forum Magnum, face in all directions, seemingly without system. Outside this primitive area and within the wall of Servius Tullius, the planning generally is determined by the run of the hills and valleys. But

the greater part of the flat Campus Martius between the wall and the river, as well as the Vatican district beyond the river, is methodically laid out on lines due N.S. and E.W. The Mausoleum of Hadrian facing S., four circuses, and most of the other important buildings have this orientation. Included among these are the Pantheon, which faces N., the baths of Alexander Severus and of Agrippa, and the Porticus Argonautum, containing the Neptunium with door to E., and the Basilica Matidies with door to E. But the buildings in the north part of the Campus Martius, north of the Via Recta, conform to the Via Flaminia (practically the Corso). The important group of buildings forming the imperial Fora (of Trajan, etc.), with their temples, are symmetrically arranged on an axis running N.W. and S.E. Three of the four remaining great baths—those of Diocletian, Titus, and Caracalla—are on an axis running N.E. and S.W., perhaps partly to fit the hill-tops and to suit the principal streets, and partly from considerations of sun and weather. The baths of Constantine face N.S. and E.W., and appear to conform intentionally with the Campus Martius scheme. Although this planning is chiefly secular, it is in different quarters so definitely orientated that it can scarcely be neglected. Temples seem to be invariably built to suit the road, as, for instance, that called of Fortuna Virilis facing N., a group of three just south of the theatre of Marcellus facing E., and those west of the Capitol which face S.W.

Outside Rome the same probably holds good—that orientation was observed to some extent, and often gave way to practical considerations. Nissen finds a system at Naples and Pompeii. The Forum at Pompeii runs N. and S., and its two temples of Jupiter and of Apollo face S. The temple of Vespasian and the sanctuary of the city Lares face W.

But, if Rome herself was influenced more by architectural effect and considerations of convenience than by religious or ritual motive, we find in the countries which she conquered a very different result, produced perhaps by the same causes. The Roman buildings in other lands are definitely orientated, though not always to the E. The determining influence may have been a desire to conform to the custom of the country or to the surrounding buildings, though in some cases the axis seems to have been fixed by religious influences, for the temple is at an angle with the street. The temple of Zeus Olympius in Athens is fairly true E. and W., with the door to E. The temples of the sun and of Zeus at Baalbek have the door to E., while that of Venus faces N.; the temple of the sun at Palmyra has a N. and S. axis, with the door in the long W. side.

At Silchester there are two square buildings near the present church which are believed by the discoverers to be temples, and are compared by them with similar buildings in Gaul. These temples do not conform with the general lines of the Roman city, but they are nearly parallel with one another and also with the mediæval church, which, it is suggested, may itself stand on the site of another pagan temple. The axes of the church and temples seem to be a little S. of E., but the point is somewhat obscured because the magnetic variation in this plan and in others, where it is given at all, is shown as E. instead of W., which has not been the case since the year 1656 (*Archæologia*, lii. [1890] pl. xxx.).

2. Burials.—The Romans for the greater part of their history cremated their dead, so that the orientation of their monuments had not to be considered.

VI. CHRISTENDOM.—I. Early ritual.—Orienta-

tion in some form was probably practised, if not in the time of the apostles, at least in that immediately following, for we learn from Tertullian that it was observed at prayer in his days (A.D. c. 160-240). He says that the Christians were thought to be sun-worshippers because they prayed towards the E. (*Apol.* 16). If this attitude was general and its objections realized and its abandonment considered possible at such an early time, and if, as was the case, the temples of both Jew and Gentile had from time immemorial faced E., the inference is that the practice was continuous. But Tylor says that orientation was unknown in primitive Christianity and was developed in the first four centuries (*PC*³ ii. 427).

The *Apostolical Constitutions* are very clear both as to ritual and as to buildings:

'After this, let all rise up with one consent, and looking towards the east, after the catechumens and penitents are gone out, pray to God eastward, who ascended up to the heaven of heavens to the east; remembering also the ancient situation of paradise in the east'; and, as to the church, 'let the building be long, with its head to the east' (*Apost. Const.*, ed. J. Donaldson, Edinburgh, n.d., ii. 57).

Cyril of Jerusalem in the 4th cent. not only explains that turning to the E. in prayer was symbolical of the situation of paradise (*Catech. Lect.* xix. 9), but also describes the actual ritual:

We are to remember that at baptism we entered the outer hall [porch] of the baptistery and there, facing W., heard the command to stretch forth the hand and, as in the presence of Satan, renounced him (*ib.* xix. 2).

The rite is said to be still retained in the Greek Church.

Pope Leo in the 5th cent. complains that people turned to salute the rising sun as it shone through the E. door of St. Peter's, and it has been suggested that this was one of the causes of the reversal of churches to their present aspect with the door to the W., though at St. Peter's itself no alteration was made.

It appears, then, from the evidence of the earliest writers and of the earliest buildings (1) that orientation was strictly followed—i.e., a symbolical meaning was attached to the attitude of the individual, and the E.W. direction of the main axis of churches was preserved; (2) that the ritual was not without its inconvenience (as Leo complained); and (3) that the E.W. axis sometimes means that the door faced E. and sometimes that it faced W.

This result is scarcely surprising when we consider the various facets from which the light of the gospel was reflected. There were customs both Hebrew and pagan to be utterly reversed, on the one hand, or, on the other, to be retained and infused with new meaning. Of buildings there were the Temple at Jerusalem and most of the Greek and Asiatic-Roman temples with the door to the E., while there were notable exceptions at Magnesia, Ephesus, and Delos.

2. Early buildings.—It may be that there was always variety in the buildings owing to the various influences at work: Greece proper, Greek work in Asia Minor, Palestine, Syria, Egypt, Rome. On the one hand, there is (1) the church of the Holy Sepulchre in Jerusalem with an E. door, of which the earliest work begins in A.D. 326 (though here the site hardly left a free choice); (2) a statement by Paulinus of Nola († 432) that the façade to the E. was more usual (though this is ambiguous); (3) the description of the early church with E. door at Antioch, not later than the first half of the 5th cent.; (4) important churches in Rome, many of which still exist, while records remain of others, including the old basilica of St. Peter, first built early in the 4th cent.; and (5) a considerable number of early churches in Northern, Central, and Western Europe.

On the other hand, there is (1) the undoubted

fact that, if churches were originally built with W. altar and E. door, they were reversed in the Eastern Church at least at a very early period; (2) Socrates the historian, writing in the first half of the 5th cent., says that the door was generally to the W.; (3) the church at Antioch is described as being exceptional; (4) the churches of Constantine at Byzantium either were all built with the E. altar or were all reversed by about the time of Justinian; (5) moreover, there is the obvious inconvenience of prayers towards the E. and the altar to the W.

The churches of Southern, Northern, and Western Europe retained the W. altar long after the E., while some still retain it. That the conservative East should have changed—as it probably did—while the progressive West kept to the old plan is perhaps an index of the theological activity of the Eastern Church in early times. It may have been due, to some extent, to a dread of the influence of Asiatic sun-worship.

The turning round of churches from what seems to have been the normal aspect with the W. altar to the present direction of altar to the E. is somewhat obscure. It seems that all the churches built by Constantine (272?-337) himself had the W. altar and E. door. Besides the church of the Holy Sepulchre already mentioned, there is a church at Tyre 'restored' by him and several churches in Rome: St. Peter's (Vatican), W. altar; St. Peter in Montorio, N.N.W. (since rebuilt); St. Chrysogonus in Trastevere, W.N.W.; St. Sebastian on the Appian Way, W. (Scott, *Essay on the Hist. of English Church Architecture*, p. 18). It must be remembered that in addition to these other churches in Rome built under the direct influence of Constantine, though not nominally founded by him, such as St. John Lateran, also have the E. door.

3. Eastern Church.—No work of Constantine remains above ground in Constantinople, and the orientation which he there adopted must remain a secret until some foundations of his churches are exposed. All the present buildings have the door to the W. A. van Millingen (*Byzantine Churches in Constantinople*, London, 1912) gives the plans of 22 churches; two of these have the door to N.W.; all the rest lie between W.N.W. and W.S.W., and about six of them are practically due W. (The observations are probably all magnetic, though they are not always stated to be so.)

The churches of Syria, Armenia, and Cyprus, with scarcely an exception, have the door to the W. Many of these are very early. All the Jerusalem churches, with the exception of one with a S. door, have the door to the W. The churches of Salonica, some of them of the 5th and 6th centuries, and of Mount Athos have the W. door, except the early church at Salonica, probably late 4th cent., now the mosque Eski Juma, which had the altar at the W. end. The church of St. Felix at Nola and a church at Trieste have the W. altar.

Probably many Greek temples became Christian churches. The Parthenon was converted into a church and an apse was built at the E. end.

In like manner the churches of Greece which were built for Christian worship all have an E. altar and a W. door—e.g., the 'small metropolis' of Athens (8th or 9th cent.), the Kapnikarea (9th cent.?) in the middle of Rue d'Hermès, the church at Daphne (12th or 13th cent.), and the coupled 10th cent. churches of the monastery of St. Luke of Stiris in Phocis (due W.) and that of St. Nicholas near Skripou in Boeotia (N.W.).

The Coptic churches in Egypt, whatever their age, may be taken to represent very ancient practice. They all have the altar to the E., and the door is at the W., although it does not open directly into the main body of the church. The priests sit in a semi-circular apse behind the altar, thus facing W.

4. **Western Church.**—The orientation of the churches of Rome forms a strong contrast with the rest of Christendom, for a large majority of the old buildings have the altar to the W. and the door to the E. In this connexion we must remember that, from the circumstances of early Christianity, the church plan of every type must have been developed outside of Rome.

In early times, when Christians worshipped where they would attract least attention, the orientation of buildings cannot have been observed, though it would often be possible to preserve it in ritual even in private houses. Churches were indeed built before the time of Constantine, but thenceforth services were held in all sorts of buildings, and, large as was the increase in the number of Christians, the buildings available for worship would be adequate from the time when the removal of the government to Byzantium left, as it must have done, many buildings deserted. The early Christians did not object to making use of any sort of building. The smaller buildings, such as temples, were converted bodily into churches; of the larger buildings, such as *thermae*, theatres, and the like, a part only was used. Lanciani (*Pagan and Christian Rome*, London, 1892, p. 160) states that he has hardly found an ancient pagan building in Rome that has not evidence of having been used as a church at some period.

The Christian adapters of most of these buildings must have ignored orientation. But they probably regarded most of them as temporary, and few pagan buildings are still used as churches; the best known are the round temple of Romulus with the adjoining *templum sacrae urbis*, since the 6th cent. the church of SS. Cosmo and Damian, in which the altar is to the E.N.E., and the Pantheon, the door of which is to the N.

Of the churches actually built by Constantine or under his auspices almost all have the W. altar and the E. narthex. When this is not the case, there is generally some obvious explanation. Scott (*Essay on Eng. Ch. Arch.*, p. 18) gives very useful lists of the old churches of Rome showing approximately their direction. Of the 53 churches recorded only 11 have the E. altar, the aspects lying for the most part between E.N.E. and E.S.E. Of these three may have been reversed and two, the important churches of S. Lorenzo without the walls and S. Paolo without the walls, certainly have. Some of them owe their foundation to Constantine. But the churches which (in Scott's list) have the W. altar number 42. These include St. Peter's and the small church of St. Stephen near the apsidal end, now removed, each with its altar to the W.; the great basilicas of St. John Lateran with altar to the W.; Sta. Maria Maggiore, N.W.; S. Lorenzo without the walls, in its original state, W.; and to them must be added S. Paolo without the walls, before it was rebuilt by Valentinian II., W.; all these except Sta. Maria Maggiore are attributed to Constantine. Three other Constantinian buildings are included in the list as well as the important churches of S. Clemente (the lower building perhaps 6th cent.), W.N.W., and Sta. Maria in Trastevere, W. Many of these, like the first and last, have been rebuilt or remodelled in late times, but preserve the old orientation. Half of them point approximately due E. and W.; about a quarter have the altar N.W. and the door S.E.; one has the altar facing S. of W.

The turning round of the two great churches outside the walls happened in different ways. The W. apse of S. Lorenzo, as built by Constantine and partly rebuilt by Pope Pelagius II., was taken down in 1216 by Pope Honorius III., who built a large nave to the west of it. Honorius then made a raised floor, in what had been the nave, to form an elevated presbytery; this accounts for the way in which the ancient columns of the original nave are partly hidden. S. Paolo, on the other hand,

was a case of entire rebuilding. Constantine built a very small church over the tomb of St. Paul on the W. side of the road to Ostia, the atrium reaching right up to the road. In the 4th cent. this little church was taken down, and a very large one built in its place. But it was impossible to move the tomb of the Apostle, and there was not room between it and the road for a large church. The body of the new church was therefore built W. of the old church, with the door at the W. end; the site of the old church with the tomb below it occupies that part of the transept of the present church immediately in front of the apse. We shall find evidence of something analogous to each of these processes of revolution in England.

In these early churches the altar stood on the chord of the apse; against the walls of the apse there were seats for the presbyters, the central one being for the bishop. The clergy therefore looked E. over the altar towards the people; the people looked W. towards the altar and the tomb of the blessed martyr; for many of the churches of Rome, including the most important, were built over the tombs of martyrs or on the places where they suffered death or torture. Lanciani says that 58 churches originated thus. The conditions which he lays down are these three: (1) the tomb-altar was not to be moved vertically or horizontally; (2) the tomb was to be in the centre of the apse; (3) the [concavity of the] apse and the front of the edifice were to look E. Durandus, in the first book of the *Rationale*, is clear as to the ritual of the second half of the 13th cent.:

'The priest is to pray towards the E. whence in churches which have a W. door he turns in the Salutations to the people; but in churches which have the entrance to E., as in Rome, there is no need in the Salutations for turning round, because the priest is always turned to the people.' Durandus gives several reasons for praying towards the E. (*The Symbolism of Churches and Church Ornaments*, tr. J. M. Neale and B. Webb, Leeds, 1843, v. ii. 57, app. B).

Scott gives the following facts with regard to present day use:

The priest faces E. and away from the people when the altar is to the E., except in two cases in which the altar arrangements have clearly been modernized; he faces E. towards the people in 17 cases out of 40 where the altar is at the W. end, including the most important and those which have best retained their early arrangements.

Scott fairly claims that from the point of view of mediæval and modern ecclesiology this position of the priest facing the people is so singular that 'we may well be surprised, not that in many Roman churches, having western sanctuaries, the primitive orientation of the celebrant has been lost, but that it has been preserved in so many instances, in defiance of the fashion of mediæval and modern times' (*Essay on Eng. Ch. Arch.*, p. 22).

The early churches of Italy outside Rome were built under Byzantine influence and date from a later time than the adoption of the E. altar at Byzantium. All accordingly have the E. altar. Ravenna possesses the most remarkable buildings of this class. They are of the first half of the 6th century. The basilican church which preceded the present church of St. Mark at Venice faced in the same direction; its altar was to the E.; but it was of comparatively late date, being of the 9th century.

5. **Roman missions.**—We have seen that Rome occupies an almost unique position in preserving the W. altar. But some at least of her early missions observed the same orientation. The Romano-British church recently brought to light at Silchester (*Archæologia*, liii. [1892] 26) is a small basilica with a W. apse and transepts, clear indications of an altar on the chord of the apse, and an E. narthex. The evidence that this was indeed a Christian church only stops short of absolute proof. Its date is very uncertain, but it is thought to belong to the 4th century. Other churches of a later date with the same orientation are not uncommon. No example is to be found in England now, but it has been thought that both the earliest church at Canterbury, to which reference is made below, and Wilfrith's church at Ripon had their altars to the W. There are several instances on the Continent: Great St. Martin's at Cologne

(12th cent.) and St. George's, Dinkelsbühl, of which the present building is 15th century. St. Stephen, Mayence, appears to have a choir at the W. end. St. Sebald, Nuremberg, a collegiate church, has a choir at each end, but the E. choir is an addition of the 14th century. At Verdun the cathedral has E. and W. choirs, but that at the W. end is called the old choir.

6. Double-apse churches.—There is a remarkable type of early church which it remains to notice. It has an apse and an altar at either end. It is found over a very wide area, and the place and manner of its origin do not seem to have been conclusively explained. W. R. Lethaby (*Medieval Art*, London, 1904, p. 29), quoting Strzygowski, derives it from Egypt and Syria. The importance of the N. African churches lies in the fact that they were so planned from the first. Another well-known example is the monastic church of St. Gall in Switzerland, near Lake Constance.

A 9th cent. plan of the whole monastery of St. Gall has been preserved; it seems clear that this does not represent what was already in existence; it is a scheme in contemplation, and it was not exactly adhered to in execution. It is therefore valuable as showing the ideal of the 9th century (R. Willis, *Archaeological Journal*, v. [1848] 85). There is an apse at either end. That to the E. contains the high altar and the altar of St. Peter. In front of it is the monks' choir. The W. apse contains another altar of St. Peter, and before it is another choir, on either side of which are entrances for the public. There is no bishop's throne. The side altars are so placed that the officiating priest faces E. The chapels of the infirmary and of the novices' hostel are placed back to back, the altar of one being at the E. end and that of the other at the W. end.

There are not a few double-apsed churches on the Continent, and they are known to have been used in England. But a great proportion of these reached their ultimate double form by receiving additions to the original plan. They therefore come under a different category from those which were so planned from the first, and they may perhaps be taken to show one phase in a transition—an abandonment of the W. altar for the E.

Double-apse churches are found at the following places among others: Gernrode, in the Hartz; St. Cyriac's (collegiate); Hildersheim, St. Michael's; Laach, St. Mary (Benedictine); Worms Cathedral; Trèves Cathedral (the W. apse is said to be the latest); Mayence Cathedral (probably both choirs entered into the original scheme; the W. choir is called the parish choir); Naumburg Cathedral (the W. apse appears to be a creation of the 13th cent. and not to continue an early tradition); Bamberg Cathedral (the E. apse is rather the earlier and has a crypt, but the church is thought to follow an earlier plan); Augsburg (the W. choir is called the parish choir); Oppenheim, St. Catherine's (the present W. choir is later, but probably occupies the site of an early church); Reichenau on the Lake of Constance.

Outside Germany double-apse churches are rarely met with on the Continent. J. T. Micklethwaite ('Something about Saxon Church Building,' *Archaeological Journal*, liii. [1896] 293) suggests that in Germany they may possibly be due to the English tradition taken thither by St. Boniface. In England we know of three: Abingdon (7th cent.), Lyvinge, and Christ Church Cathedral, Canterbury. Of the last-named we have a description of the building that was burnt in 1067. Below the E. apse, which contained the high altar (of Christ), there was a crypt, but the W. apse contained the bishop's throne behind the altar of the Virgin. About the middle of its length the church was flanked by a tower on either side. It is thought that St. Augustine found an old building (Bede [*HE* i. 33] says Roman) with a W. apse, and with a narthex and towers at the E. end, that he restored this, and that after his time the nave was lengthened eastwards and a second apse built. At Lyvinge the foundations of a W. apse have been found; the work is said by Scott (*Essay on Eng. Ch. Arch.*, p. 20) to be Roman.

7. Position of altar in later Middle Ages.—The turning round of the churches of Western Europe so that the altar should be at the E. end instead of at the W. probably happened in different places at

different times. Micklethwaite thinks that in double-apse churches a monks' choir at the E. end gradually overshadowed the people's choir at the W. end, till in the 11th and 12th centuries the W. altar came to be looked upon as abnormal, and at the general rebuilding of churches in that age the W. altar was put against the rood screen. A simpler explanation would be that it was a gradual conforming tendency to what had become the orthodox practice at a much earlier period.

Probably the direction of the altar was at no period held to be of very great importance. We have noticed a great amount of variety. At all times minor altars seem to have been often placed against side walls so that they faced N. or S. There are several in the plan of St. Gall which might apparently have been placed with as great convenience against the E. walls of their respective chapels. There are a few striking instances of churches with a N.S. direction. At Siena Cathedral the altar is at the E. end, but we may see the beginnings of a great 14th cent. scheme for a new cathedral which was to run N. and S. and was to absorb the old building (the present church) and convert it into a transept. Naples Cathedral is another instance; the old and new buildings are at right angles to each other.

In England it was natural that Augustine († 604), Birinus († 650), and Wilfrid (634–709), under Roman influence, should place their altar to the W. It might also be expected that the Scottish mission of Aidan († 651) should use the E. position. This we find to be the case. But at an early date the E. altar predominated and became universal.

8. Deviation from due E.—English churches generally have their axes near enough to true E.W. for deviation to be unnoticeable to most people. But the orientation is by no means accurate, and occasionally the deviation is very considerable. This deviation has been explained by the pretty theory that the axis is in the direction of sunrise on the day of the particular saint in honour of whom the church is dedicated. But this theory has not found favour with serious ecclesiologists in England. It is just possible that this direction was adopted occasionally, and in the aggregate such instances might be numerous, though those who hold the theory have never been at the pains to compile a list. But it is open to serious objections. There are in ancient writers no directions or orders for so placing churches and no hint that they ever were so placed, while Durandus distinctly says that churches are to point to sunrise at the equinoxes and not at the solstices (i. 8). And the exceptions are so numerous as to be in the majority. We may notice a few well-known buildings (see table at end of article). These and all observations must be corrected to suit the unreformed calendar. The calendar was reformed in England in 1751, when we had to omit eleven days. If we take the year 1100 as an average date for the foundation of our churches, the calendar would then be seven days wrong. This would not make a difference of 2°. It will be seen that most buildings face nearly E., regardless of their dedication. Rochester Cathedral is fairly correct for its feast-day, but there can hardly be a doubt that it is turned so far to the S. to accommodate it to a cramped site. At Westminster there are three notable buildings—the Abbey, St. Margaret's Church, and St. Stephen's Chapel of the old royal palace, now absorbed in the Houses of Parliament. The feasts are 29th June, 20th July, and 26th December. But the axes of the three are nearly parallel and point E. or slightly S. of E., instead of almost N.E. and S.E.

Ely Cathedral, an instance favouring the theory, may be quoted to show the rashness of holding it

without very careful inquiry. The dedication is to the Holy and Undivided Trinity. As it is a cathedral church, its history is preserved and we know that before the Reformation the dedication was in honour of the Blessed Virgin (25th March), of St. Peter (29th June), and of St. Etheldreda (whose feast was 23rd June, and whose translation in 695 and in 1106 was on 17th Oct. and in 1252 on 17th Sept.). It is not known whether St. Etheldreda dedicated her church in honour of the Blessed Virgin or of St. Peter or of both. The feast of the translation of a saint's relics was no doubt a great occasion, but it is difficult to conceive of its giving the orientation of a building, because it would be hardly possible to foresee, on the fixing of the axis, when the new building would be ready for the translation. Thus the building probably does not derive its direction from the first translation of 17th Oct. 695. But it is to sunrise on about 17th Oct. that the axis points, and it may be argued that the present building was made to suit sunrise on the anniversary of the first translation. But it is more probable that, if any day fixed the axis, it would be either St. Peter's Day (29th June) or Lady Day (25th March). We have seen that the direction does not suit 29th June. It would indeed suit Lady Day fairly well, though not exactly.

We may test the theory further by applying it to a group of small churches taken at random in one district. None of the following churches deviates more than 5° N. of true E. or 5° S. of true E., except one which is about 10° N. of true E. (it will be seen that the dates of the feasts vary from mid-summer to nearly mid-winter, at which seasons the points of sunrise are about 80° apart): St. Margaret, Norwich and Swannington (20th July); St. John Baptist, Alderford (24th June); St. Andrew, Attlebridge (30th Nov.); St. Agnes, Cawston (21st Jan.); St. Nicholas, Brandiston (6th Dec.); All Saints, Weston (1st Nov.).

A point to be borne in mind in this connexion is that the dedications of churches have not infrequently been altered; some earlier dedications have been changed to that of the Blessed Virgin Mary; this was common in the 14th cent.; others were changed to that of the Holy Trinity at the Reformation. Some places still preserve, it is said, a primeval solar feast.

In Rome, out of 45 churches (nearly the whole number in Scott's lists) 15 point reasonably near to the sunrise on the feast-day, and 30 are quite wide of it.

9. *Bend in axis of churches.*—Another popular theory is this: when the axis of a chancel is found not to be in a straight line with that of the nave, the deflexion was intentional and was meant to symbolize the drooping of the head of our Lord upon the Cross. Here again we have no authority from the ancient writers, and we have no right to attribute to them a meaning which they do not acknowledge. F. Bond (*Dedications and Patron Saints of English Churches*, London, 1914, p. 249) indeed quotes the case of a 14th cent. architect who died of grief on finding that a church that he had built at Metz had a bent axis.

Bond says that the theory has been supported recently by Emile Male, Victor Mortet, J. A. Brutails, Anthyme Saint-Paul, and to some extent by de Caumont, Viollet le-Duc, and Camille Enlart, but rejected by Auguste Choisy and Robert de Lasteyrie. Johnson (p. 238) suggests that the bend was intended to produce an agreeable optical illusion. He states that deviation is generally to the S.; Bond says that it is to the N.

A little consideration will show that the deflexion must always be accidental. When a chancel is to be rebuilt, the chancel arch is blocked by a temporary wall so that the nave can continue in use. Unless the axis of the nave is carefully found and continued eastwards before this wall is built, and unless the stakes in the ground are carefully preserved, the chances are that the axis of the new chancel will not be in the same straight

line, because it is difficult to make it exactly perpendicular to the short base afforded by the piers (perhaps themselves irregular) of the chancel arch. And it is not going too far to say that the deflexion is never found except where one part of the church has been rebuilt. It is, moreover, seldom found in the best buildings—more often in the churches of country towns and villages than in cathedrals and great churches, and more often in great churches which are in other respects irregular and of various periods than in those which are of fairly uniform style and are acknowledged masterpieces.

No bend is found in Winchester, Durham, Salisbury, Wells, Norwich, Lincoln, Peterborough, Exeter, Hereford, Gloucester, Worcester, Chester, Llandaff, Oxford, Southwell. This list contains all the buildings of the first rank except a few notable cases of partial rebuilding. It would be strange indeed if Canterbury with its complicated plan and its long history showed no bend, or Chichester, which is notoriously irregular. Moreover, the evidence of symbolism in these and other buildings is vitiated by the fact that each has several deviations: Canterbury has four axes; Chichester appears to have seven; Rochester has several axes, but the deviations are very slight. And again, when there are two bends in the axis, they are sometimes in different directions. The only important buildings with a deviation which will serve for symbolism are therefore Lichfield, Bristol, St. Albans, and Ripon, with an inclination of the choir to N.; and Ely and York, to S. In each of these either the choir or the nave has been rebuilt.

The force of even these few instances is lessened still more when we see that the bend in the axis is only one irregularity among the many found in old buildings; e.g., in six cathedral churches the W. door is not in the centre, and in one, Manchester, the axes of nave and choir are parallel but not in the same straight line; only the irregular Lady chapel at the E. end deviates.

It may be that the above analysis is subject to correction, because plans, however carefully measured (like the *Builder* series here used), may occasionally omit a slight deviation. But, if the deviation is so slight as to escape the notice of the surveyor, it can have but little value as a symbol.

It is true that the cruciform plan of our great churches symbolizes the Cross. But it was a symbolism read into the cross-form after it had been evolved on other grounds. Exactly the same process is happening now in regard to the inclination of the head of the Cross.

10. *Details of orientation in buildings and furniture and in ritual.*—The site chosen for the English parish church was usually to the N. of the village; perhaps it would be more correct to say that a site was chosen such that the village should be S. of it. There may have been some now unknown motive in this, or it may be simply that it was preferred to approach the church through the burial-ground, which was usually to the S. Similarly, there are two possible explanations of the burial-ground being to the S. There is a prejudice against burial on the N. side. J. Brand records (*Popular Antiquities*, new ed., London, 1900, p. 475) that it was formerly appropriated to unbaptized infants, the excommunicated, the executed, and suicides. This prejudice may be due to an old belief or simply to a natural dislike of a cold, damp place with rank herbage. Thus the principal door of the church is generally to the S., but there is almost invariably a N. door opposite to it, which is often nearly or quite disused.

Tombs in the aisles are on either N. or S. side indifferently. But in the chancel the place of honour was on the N. side; this was undoubtedly in order that the tomb might be used as the Easter Sepulchre, which was on the N. side, presumably because our Lord was pierced on the right side.

In early churches the Gospel ambo was on the N. side; from it sermons were preached and decrees and excommunications read; hence there is still a

slight tendency in Anglican churches to place the pulpit on the N. side. The Paschal candlestick also was on the N. side. The Epistle ambo was on the S. side. The sedilia of mediæval type are believed to be a relic of the presbyters' seats round the apse of the early churches. They have been kept on the S. side and not on the N., doubtless because it is more convenient for the assistant to approach the celebrant, who is facing E., on his right hand. Close to the sedilia was placed the piscina. The bishop's throne is also on the S. side. There was a custom, very commonly if not generally kept up in country places till the beginning of the 19th cent., of separating the men and women, the men sitting on the S. side of the church and the women on the N. This custom had doubtless continued without a break from the earliest days of Christianity, and it is perhaps of pre-Christian origin. It is noted by Durandus (i. 46).

The dissenting bodies from the Anglican Church do not observe orientation.

11. Burial.—Christianity no doubt inherits the custom of burial with feet to E. from paganism. The reason for it given by the early Christians was that Christ at His second coming will appear in the E. and the dead will rise to move towards Him. In practice graves are made parallel with the church without any attempt at accuracy.

12. Superstition.—Few definite beliefs in this country about the points of the compass are recorded. The following has not previously been published:

An old gentleman who had to undergo a slight operation declined to allow it to be performed until the sofa on which he was lying had been placed N. and S. It is thought that he held some views about magnetism.

It is said that in Scotland there is an idea that if the passing of the soul is to be easy the floor-boards of the sick room should not run N. and S.

The association in Ireland of colours with the points of the compass will be noted presently in describing similar ideas in other parts of the world (see below, X.). Green is said to be an unlucky colour in England (Baring-Gould, p. 15).

VII. *JEWES*.—The Hebrew word for east means literally 'the front,' and that for west 'the back,' so that south is on the right hand and north on the left. This suggests some form of sun-worship at an early period. The supposition is supported by evidence from a later time: the Tabernacle had its door facing E. ('and for the hinder part of the tabernacle westward thou shalt make six boards' [Ex 26²² RV]). This true orientation was notwithstanding the ban of sun-worship by Moses (Dt 4¹⁹).

Lapses into worship of sun, moon, and stars are frequent all through Jewish history: Manasseh 'worshipped all the host of heaven' (2 K 21³); Josiah 'took away the horses that the kings of Judah had given to the sun' (23¹¹); Amos upbraids Israel with carrying with them 'the star of your god' (Am 5²⁶); Ezekiel sees 'between the porch and the altar, about five and twenty men, with their backs toward the temple of the Lord, and their faces toward the east; and they worshipped the sun toward the east' (Ezk 8¹⁶). The custom of saluting the moon by kissing the hand referred to in Job 31²⁶ may have been learned in Assyria (see *JE*, s.v. 'Star-Worship').

The Jewish attitude of prayer is an instance of what may be called 'local orientation'; it was not a turning to a point of the compass, but a turning to a place. We have a suggestion of this in Solomon's prayer at the dedication of the Temple: if a man 'spread forth his hands toward this house: then hear thou in heaven thy dwelling place' (1 K 8³⁵). And, when Daniel prayed, 'his windows were open in his chamber toward Jerusalem' (Dn 6¹⁰). This became the law; a wor-

shipper out of Palestine should turn towards Palestine, one in Palestine towards Jerusalem, in Jerusalem towards the Temple, in the Temple towards the Holy of Holies (*JE*, s.v. 'Mizrah'). In *JE*, s.v. 'East,' however, facing to the E. is said to have been the attitude of prayer, and reference is made to *Apost. Const.* ii. 57, which the writer maintains to have a pre-Christian Hebrew foundation.

In regard to buildings the custom of a true orientation, which had been established by the arrangement of the Tabernacle, was continued. It was followed in Solomon's Temple and in all subsequent rebuildings. Ezekiel is very precise on the orientation of the temple of his vision (40-47). Comparison may be made with the Apocalypse (Rev 7² 16¹²). Synagogues (apparently those of the pre-Christian era) are said by A. W. Brunner (R. Sturgis, *Dict. of Architecture and Building*, 3 vols., New York and London, 1901, s.v. 'Synagogue') to have had 'the holy ark or sanctuary' at the E. end, but no authority is given. Those of the 2nd cent. A.D. in Galilee all faced S. (*ib.* s.v. 'Syria'). Synagogues are now planned so that the ark may be towards Palestine (*JE*, s.v. 'Mizrah').

VIII. *MUHAMMADANS*.—The Muhammadans, like the Jews, observe a 'local orientation'; they turn in prayer towards a place, Mecca. The Ka'bah at Mecca, adapted by Muhammad as a mosque, had been a pagan temple with its entrance to the E. (J. Gwilt, *Encyclopædia of Architecture*, ed. W. Papworth, London, 1867, § 118).

The essential feature of a mosque is the *qiblah* or *mihrab*, a niche or recess in a wall, the direction of the wall being at right angles with a straight line to Mecca. In front of the *qiblah* is an area covered by a roof supported on columns which form a series of aisles running towards the Mecca wall. These form the prayer chamber; in front of it is an open court with covered walks at the sides leading from the entrance, which is generally opposite the Mecca wall. As the Jews had but one temple, synagogues being but houses of prayer, so the Muhammadans had only one temple, that at Mecca (Fergusson², ii. 516); mosques are places of prayer arranged so as to show the direction of Mecca, though they have acquired a sanctity of their own, not less than that of the shrines of other faiths.

Orientation of a kind was therefore of the first importance in a mosque. At Ispahan the axis of the great bazaar runs N. and S. The front of the mosque occupies the S. side of this, but the axis of the porch is bent at an angle of 45° so as to suit the mosque itself, the main axis of which is duly pointed to Mecca.

Private prayer on the housetop is also directed towards Mecca.

In burial the Muhammadan is laid on his right side facing Mecca (see art. DEATH [Muhammadan], vol. iv. p. 502^a).

IX. *THE EAST*.—Orientation in ritual observance is perhaps most pronounced in Asia, which may be more or less indirectly the source from which the European observance is derived. Tylor holds that the adoration of the sun in the ancient Aryan religion is revealed in ritual orientation.

The Brāhman turns E. at sunrise, says Tylor, and at noon, after adoration of the sun, he turns again E. to read his daily portion of the Veda and to make his daily offering.

'It is with first and principal direction to the east that the consecration of the fire and the sacrificial implements, a ceremony which is the groundwork of all his religious acts, has to be performed' (*PC* ii. 425).

An example of the orientated altar is given in art. ALTAR (Hindu), vol. i. p. 345^b. Hindu temples are sometimes dedicated to the sun-god, but the

moon-god has none (art. BRÄHMANISM, vol. ii. p. 805^b). Temples seem to be duly orientated in the wider sense of the word.

The Indian Buddhist generally orientated his buildings fairly closely to the cardinal points, and seemed to prefer to make his entrance face E. But the Jain temples did not follow a rule, 'the Jains being indifferent apparently to any particular direction for their buildings' (H. Cousens, in *Archaeological Survey of India*, Calcutta, 1907-08, p. 195).

The Thugs, on the other hand, are worshippers of Kali, the death-goddess. In her honour human victims were murdered; to her the sacred pickaxe was consecrated with which the graves of slain were dug, and the elaborate ritual of this consecration was performed facing W. The mediaeval Tatars made a mound over the grave and placed on it a statue facing E. (*PC* ii. 423).

Buddhism varies much in different countries, and presumably its buildings and ritual vary. In China it appears that the temples are truly orientated (see ARCHITECTURE [Chinese], vol. i. p. 695^b) and there is therefore, it is to be supposed, some orientation of ritual. There is a paradise of the dead in the W., and the chief book read in the presence of the departed person is 'the "Sūtra of Amitābha," or the Buddha representing the sun in the west, behind which lies paradise' (art. CHINA [Buddhism in], vol. iii. p. 554^a; cf. art. CONFUCIUS, vol. iv. p. 19^a).

In the Confucian religion there are many sacrifices offered with an elaborate ritual. The most important of these is described in art. CONFUCIAN RELIGION (vol. iv. p. 13), and the points of the compass are carefully mentioned, but their religious significance, if they have any, is not indicated. The sacrifices of the second rank are made at altars and temples in and about Peking. The sun-god has an altar-terrace outside the main E. gate towards the region of the sunrise; the moon-goddess has an altar outside the W. gate, because the W. is the region where the new moon is born.

X. SAVAGE RACES.—I. Ritual acts.—The ritual of primitive races is with difficulty ascertained, and not very much has been recorded. The Pangin, one of the tribes of the Indian Archipelago, on all ceremonial occasions salute and invoke the directions of the rising and setting sun; the people sleep with their faces to the E., and on cremating the dead they place the body to face in the same direction; the land of the dead is in the E., and it seems that that is the direction to which most importance is attached:

'The only disturbing feature is the fact that the "setting sun" is said to be invoked. This may be due to the influence of a solar cult' (W. J. Perry, *JMAL* xliv. 285).

Another tribe, the Toraja of Central Celebes, place their houses in an E. and W. direction with the door at the W. end, thus facing the land of the dead; but this is really religious.

A neighbouring tribe, the Tobada, build their 'village-house' N. and S., 'so that, as they say, on entering, one faces to the north, the direction whence they have come, and in which direction they place the land of the dead. The holy place of the house is the north centre-pile . . . and there the ghosts come to live in bunches of leaves of the aruru palm' (*ib.* p. 290).

This seems to be a first, but very important, step towards temple-worship. The largest and most important temple of the Tonapoe has a door on the E. side, thus facing towards the land of the dead and in the direction whence the tribe came. A number of cases are recorded in which houses are built with due regard to the direction of the land of the dead, and of others in which a place is provided as a residence for the ghost, or an entrance into the house is made for it.

In ritual observances the following may be noted:

In old Mexico, where sun-worship was the central doctrine of a complex religion, men knelt in prayer to the E. and doors of sanctuaries looked mostly W. (*PC* ii. 424). The Pueblo Indians of New Mexico, though they are now Christians, have preserved their ancient practice of turning to the sun at his rising, just as the Christians of Europe turn to the E. at certain parts of their worship. The cave-temple of the sun-worshipping Apalaches of Florida had its opening to the E., and the priest stood in the opening early in the morning of the fast-days waiting for sunrise. The Comanches, also sun-worshippers, when preparing for the war-path, place their weapons over night on the E. side of the lodge to receive the morning sun's first rays. The ancient Peruvians were sun-worshippers, and had in their capital, Cuzco, a temple duly orientated, with a great golden disk on the W. wall to reflect the rising sun as it shone through the E. door (*ib.* ii. 424). The Hopi mother, on the twentieth day after the birth of her child, presents it to the sun at the moment of sunrise (see BIRTH [Introduction], vol. ii. p. 612^b, and *Journ. Amer. Eth. and Arch.* ii. [1892] 162).

The following symbolic orientation is characteristic (A. C. Haddon tells the present writer) of the Pawnee, but to a greater or less extent applies to the Plains Indians generally. The 'earth lodges' are built in the traditional manner according to a divinely inspired plan, and serve for ceremonial purposes as well as dwelling-houses; the same symbolism is found in the summer tents, or *tipis*. The entrance always faces E. The central circular fireplace represents the sun, and the cleared space round it the horizon. For certain ceremonies an altar of rugs is placed to the W. of the fireplace, and on it is deposited the sacred bundle; behind it, in the place of honour, sit the priests; the space between the altar and the fireplace is holy ground, over which no priest can pass till purified by purification. This region in the W. is sacred to the evening star, the beneficent guardian of fertility, and to her four attendant messengers: wind, clouds, thunder, and rain. To the N. of the fireplace there should be a bison's skull to represent at once the gods in the heavens and the home of Irrawa, the high god, the all-embracing, the morning star, the blood-thirsty controller of the heat of the sun in the E., who prevents his brother, the sun, from burning up the world. The S. is the land of death and the receivers of the souls of the unfortunate dead, while the malevolent deity of sickness is stationed in the S.W. In ceremonial pipe-smoking puffs of smoke may be blown in various directions as offerings to these and other heavenly bodies.

J. W. Fewkes (*Journ. Amer. Eth. and Arch.* ii. 14-22) says that the underground *catafals* or *kib-nas* (ceremonial chambers) in the Tusayan (Hopi) Pueblo of Walpi in Arizona 'are generally placed with their walls corresponding to the conception of the primary points but not to our cardinal directions. . . . The variation of their N. is W. of the true N. (varying from 42° to 50°); consequently the N.S. lines of their *kib-nas* are in reality N.E. and S.W. lines.' The orientation 'is probably intentional, but it may be determined by the possibilities in direction of the recesses in which they are constructed.'

R. M. W. Swan considers that the temples of Mashonaland were orientated (J. T. Bent, *Ruined Cities of Mashonaland*, London, 1892).

We may here notice the wide-spread association of certain colours with the various points of the compass. A table is appended showing some of the recorded observations. It will be seen that these are from N. and S. America, China, and other parts of the world, including Ireland. There is no approach to uniformity and only a few tendencies can be faintly traced, as, e.g., that black is practically never associated with the S. or E. It is just possible that the well-known liturgical colours of the Christian Church, although of late use, are not entirely unconnected with these ideas.

2. Burial.—Practically all peoples who practise inhumation follow some rule as to the direction in which the body is to be laid.

A journey to the land whence the tribe migrated is probably the most general conception at the present time. The dead are laid in the direction of the land of the dead, and this, when both can be ascertained, is found to coincide with the direction of the land of the forefathers.

Perry gives many instances from the E. Indian Archipelago. One tribe makes the grave parallel to a river up which the spirit must travel, the tribe having migrated down the river; another, which believes that the land of the forefathers is to the S., lays the body on its side with head to W., feet to E., and facing S.; another places the body in a sitting position facing the land of the dead. In one case the direction of the grave is towards the land of the dead and in the direction of those places where the first chiefs procured their wives; in another the dead are buried on the S. side of the village, the land of the

dead is situated in the S., and it is from the S. that the people believe themselves to have come. Cases are recorded where the bodies of the dead are definitely orientated to the land of their forefathers, the situation of the land of the dead being unascertained. An exceptional and special case may help to illustrate the belief in the journey which the spirit was to take: the body of a man whose head had been cut off by a member of another clan was brought in and placed sitting on the ground against a pile of the house and facing the land of his enemy; when buried, it was placed in a sitting position still facing in the same direction (*JRAI* xlv. 280); presumably the first business of the ghost was to go and have his revenge. A tribe in E. Africa buries a man who dies in a strange place with his face towards his mother's village (art. *DNATH* [Introductory], vol. iv. p. 425b).

A man of the Wotjobaluk tribe of Vetona, Australia, is buried with his head towards the point of the compass appropriate to his totem (*ib.* p. 425a).

Among the Battas of Sumatra men of different totems are buried with their heads in different directions, but the reasons for these differences are not always manifest. On the analogy of the Hot-Wind totem and the Sun totem among the Wotjobaluk we may conjecture that the direction in which the body was buried was the direction in which the totem was supposed especially to reside, so that the intention of interring the bodies in these positions may have been to enable the released spirits of the dead to rejoin their totems' (Frazer, *Totemism and Exogamy*, iv. 213). But, as Haddon points out, since the people are supposed to be related to or descended from their totem, this seems to be but another form of the journey of the spirit to the land of the forefathers.

The orientation of the graves of some primitive peoples is recorded without any indication of the beliefs which decided the direction; burial with feet to the W. is observed by races of N. America, Central Africa, Samoa, Fiji, and Australia. Tylo mentions some Australian tribes who bury their dead in a sitting position facing E., even while believing that the land of the dead is in the W.

XI. PRE-HISTORIC WESTERN EUROPE. — 1. Temples.—Under this heading brief reference will be made to the great well-known megalithic monuments. They are included in this article because they have been called temples and tombs, and have been said to be orientated in the sense that their aspect was decided by religious considerations. But as a matter of fact we do not know their use, or what determined their direction, their age, or the religion of the folk who built them. If we knew any two or even any one of these facts, it might be possible to deduce the others. But we have no working base, not even any uniformity among the remains.

The two most famous examples are Carnac in Morbihan and Stonehenge in Wiltshire. Carnac is a series of immense parallel avenues running roughly E. and W. along the coast of Brittany. Stonehenge is a horseshoe within three concentric circles, two of stone and one of earth. From the outer circle runs a straight depression between earth banks. A line drawn down this depression and continued through the horseshoe divides it symmetrically and passes through a flat slab called the 'altar.' This line points to the place of sunrise on mid-summer day about, according to Lockyer (*Stonehenge*, p. 67), the year 1680 B.C. It may be that Stonehenge is a sun-temple, as Lockyer argues, and that it was built about that time. But it may not be a sun-temple, and, as to the date, A. R. Hinks points out (*NC* liii. [1903] 1002ff.) that, if the first glimpse of the sun is observed, we get the year A.D. 3000; if the middle of the disk is observed, the conditions are right for to-day; if we wait for the completion of the sunrise, the date must be put back about 2000 years.

The works at Avebury consist of a large circle enclosing two others; there is an avenue leading from the outer circle in a S.E. direction. On Halken Hill there is a circle with indications of an avenue leading N.W. The circles forming 'King Arthur's Round Table,' Penrith, are broken towards the N.E. and S.W. The work at Arbor Low, Derbyshire, seems to be orientated

almost due N. and S. (Fergusson, *Rude Stone Monuments*, London, 1872).

Callernish in the island of Lewis is a circle with a stone in the centre. From the circle single lines of stone stretch out S. and E. and W., while a wide avenue runs to the N. (These directions appear to be approximate only.) A tomb within the circle has an axis roughly N.E. and S.W., the entrance being towards the N.E.

There are considerable remains in Ireland. Those around Lough Gur, Limerick, have been described by B. C. Windle, who made careful observations of the bearings in those cases where they 'might possibly be significant' (*Proc. Royal Irish Acad.* xxx. [1912] sect. C, p. 283). The monuments near Lough Swilly, Co. Donegal, have been recorded by H. Boyle Somerville, who detects several systems of orientation, monuments being orientated for the solstitial sunrises or sunsets or both, for sunrise or sunset at the equinoxes, for sunrise or sunset at a point equidistant in time between solstice and equinox, for rising or setting of a star or of the moon (*Journ. Royal Soc. of Antiquaries of Ireland*, xxxix. [1909] 192, 215, 343).

2. Burials.—Until recently burials both on the Continent and in Britain appeared to be haphazard. But recent research seems to show that two or perhaps three definite systems were followed, though in each of these there were not a few exceptions. In some cemeteries the skeletons are found laid on their backs E. and W. with feet to E., while in others they are N. and S. with feet to N., but occasionally to S. Others again are laid on the side E. and W. with the feet sometimes E. and sometimes W., but always looking S. In some cases a single group contains skeletons pointing to all four cardinal points, as at Broughton Poggs. At the Saxon cemetery at Fairford the feet were almost invariably to the N., and W. M. Wylie thinks that this was the prevailing pagan practice among Teutons (*Archæologia*, xxxvii. [1857] 459). In Sussex and Surrey and in the south of England generally the feet are most commonly E., but, when they are not, they are almost invariably to the N. In the round barrows of Wiltshire the tendency is for the bodies to be facing S.

One of the most remarkable examples of orientation (taking the word in its wide sense) is the 7th or 8th cent. Christian cemetery at Hartlepool, the first monastic seat of Hilda of Whitby. Here were found a dozen bodies with memorial slabs incised with crosses and Christian inscriptions; yet all were lying N. and S.

There seems good ground for believing that the Teutons held the north sacred. The classical passage in mediæval literature is in *Reineke Fuchs* and is quoted by J. Grimm (*Deutsche Mythologie*, Göttingen, 1854, i. 30). Here the fox turns in the Christian direction, while the wolf is content with the heathen orientation towards the N. G. B. Brown (*The Early Arts in England*, London, 1915, iii. 161) points out that this orientation cannot have formed an important item in Teutonic paganism or it would have left a more decided mark in literature. On their conversion to Christianity the Teutons for the most part seem to have abandoned this direction in their burials for that of E. and W.

The general conclusions are as follows, though we must not expect uniformity even in the same race. Burial with the feet to the N. was probably the practice of the pagan Saxons, though this was not universal. For the most part they adopted the E. and W. position on conversion to Christianity. On the other hand, some Christian burials are, as we have seen, N. and S. Some burials on the side with feet to E. or W. but with the face

always to the S. suggest a desire to face, or lie in the path of, the sun. These general tendencies are interfered with by the survival or overlap of more ancient customs, by indifference and ignorance, and by local conditions such as a steep slope in the ground.

List of English churches showing direction of axis, dedication, and date of festival, with direction of sunrise on the festival (see above, VI. 8).

	Violet	White or, for Passion, Easter and Love, red	Black	Green

LITERATURE.—The only work dealing comprehensively with the subject is Heinrich Nissen, *Orientation*, Berlin, 1906–10 (only pts. 1–3 [Egyptian to early Christian] have been issued). Egypt is dealt with partially by E. A. Wallis Budge, *Egyptian Ideas of the Future Life*, London, 1899, and 'The Pyramids and Temples in the Sôdan,' in *Proc. of Royal Society of London*, lxxv. [1899], and more fully by J. Norman Lockyer, *The Dawn of Astronomy*, London, 1894. Greek temples are discussed by F. C. Penrose, in *Proc. of Royal Society of London*, liii. [1898], lxxv. [1899], and early Christian churches by G. G. Scott, junr., *Essay on the Hist. of English Church Architecture*, London, 1881. An important contribution on primitive races is W. J. Perry, 'Orientation of the Dead in Indonesia,' *JRAI* xlv. [1914] 281 ff. He opposes the hypothesis of E. B. Tylor, *PC*, London, 1891. Lockyer has expounded his theories on Stonehenge in his *Stonehenge and other British Stone Monuments*, London, 1906. James Fergusson's *Rude Stone Monuments in all Countries*, London, 1872, is still valuable. Pre-historic work is discussed by G. Baldwin Brown, *The Early Arts in England*, 4 vols., do. 1903–16, and by Walter Johnson, *Byways of British Archaeology*, Cambridge, 1912. Both these authors give useful references to recent research. J. G. Frazer's works, although, curiously enough, not dealing directly with the subject, must of course be studied.

T. D. ATKINSON.

POKOMO.—I. Distribution.—The Pokomo are a Bantu people inhabiting the Tana Valley, in the north-eastern part of the British E. Africa Protectorate. Their proper tribal name is Wa-Fokomo (*f* representing the 'bi-labial *f*' which in this language corresponds to Swahili *p* and Giryama *h*), but they are called Wapokomo by the Swahili and Munyu by the Galla. A recent official estimate gives their number at about 18,000. They are divided into thirteen tribes (*vyeti*, plur. of *keti*), occupying definite areas with recognized bound-

aries. None of their villages is found at any great distance from the river, with which their tribal life is so closely bound up that they have a saying 'The Tsana is our brother' (they call it Tsana, Tana being the Swahili pronunciation; the Galla name is Galana Maro). Their farthest north-western limit appears to be about 39° 30' E., on the bend of the river; this is the district of the Korokoro tribe; the rest, in order, going down the river, are Malankote, Malalulu, Zubaki, Ndura, Kinakomba, Gwano, Ndera, Mwina, Ngatana, Dzunza, Buu, Kalindi. The first nine of these are known as the 'upper' tribes (*Wantu wa dzuni*); the Ngatana (whose district is about 3° 30' S. by 40° E.), Dzunza, Buu, and Kalindi are the 'lower' (*Wantu wa nsini*). These two sections differ considerably in dialect and customs; they are sometimes said never to intermarry, but the rule is not absolute. On the confines of the Kalindi area, between Chara and Kau, and on the Ozi estuary, are some villages of 'Mahaji'—Pokomo who have become Muhammadans and more or less adopted Swahili dress and customs. The Zubaki are the most numerous tribe, numbering about 2000.

The first European to mention the Pokomo is probably Boteler, who was at Lamu in 1823, and says:

'Above the town of Kow [Kau], at every twelve or fifteen miles, there are large villages on the northern bank inhabited by the Pokomas, a tribe dependent on it, and at the distance of fifteen days' journey in a canoe, . . . is situated the town of Zoobakey, beyond which the current of the river is too strong to proceed against it' (*Narr. of Voyage of Discovery*, i. 393).

The 'town of Zoobakey' is probably a mistake for the Zubaki tribe; the distance is approximately correct.

Krapf, though he never visited the Tana, heard of this tribe, and mentions their kinship with the 'Wanyika' (see art. NYIKA). He obtained a good deal of information from two Muhammadan Pokomo settled at Takaungu, who, among other things, gave him a list of the 'principal places' on the Tana, most of which are the names of the tribes already given; others may be those of villages which have since been removed. The Pokomo, though not nomadic, like the Galla, have at various times been forced to migrate by changes in the course of the Tana, the last of which seems to have taken place about 50 years ago, the river being deflected near Marfano from its old bed, which ran to the north-east of the present one.

Von der Decken was at Kau in the early part of 1865, and speaks of the Pokomo as 'friedliche und fleissige Ackerbauer,' whose villages begin above Chara (*Reisen in Ostafrika*, ii. 271). His companion, R. Brenner, returned in 1867 and ascended the Tana as far as the Malankote district. Between these two dates the Tana had been visited by New and Wakefield, of the United Methodist Free Church Mission, who founded a station at Golbanti, primarily for the benefit of the Galla, though the Pokomo were found to be more promising converts. This station has long been without a resident European, but is in charge of a native teacher; and there is a small number of Christian Pokomo at other stations of the same mission. Brenner's estimate of these people, it may be remarked, is unduly severe. The Tana was explored in 1878-79 by Gustav and Clemens Denhardt, who ascended as far as Masa, in lat. 1° 15' S. The former gives some account of the Pokomo in the *Journal of the Berlin Geographical Society* for 1884. Subsequent information is derived chiefly from the German missionaries belonging to the Neukirchen body, who began work on the Tana in 1887, soon after the proclamation of the German Protectorate over Witu, which lasted till 1890.

2. Origin, language, etc.—The traditions of the Nyika tribes seem, on the whole, to import that

the Pokomo came, like them, from Sungwaya, though they moved southward considerably earlier. They were already settled in the Tana Valley when the Wanyika were driven from their homes by the Galla invasion. The Kauma version of the matter is that 'we refused to be conquered by the Galla, but the Pokomo consented,' and retained their country at the price of their freedom. They have been, in fact, more or less tributary to the Galla ever since—or at least till the Galla power was reduced by the attacks of the Somali on one side and the Masai on the other. According to Von der Decken (ii. 271), the Pokomo were, in 1865, dependent on the Galla 'ohne jedoch von ihnen gedrückt zu werden.' The Korokoro tribe have, like the Wasanye, ceased to use their own language and adopted Galla instead.

Krapf records the fact that the inhabitants of the Taita hills call the Wanyika 'Ambakomo,' because they believe them to be descended from the Pokomo on the Tana. It also appears, from independent traditions preserved by both peoples, that some of the Rabai tribe at one time took refuge among the Pokomo, who have derived one of their 'my-steries,' the 'great *ngadzi*' (see below), from them (Krapf, *Dict. of Swahili*, London, 1882, s.v. 'Mutsi mwiru'). The Pokomo traditions, together with various features of their language and customs, indicate a composite origin: (1) a Bantu immigration from Sungwaya, (2) the hunter tribes (Wasanye and Waboni) previously in occupation of the Tana forests, (3) the backward migration from Rabai (Werner, *Journ. of Afr. Soc.* xiii. 364 f., *FL* xxiv. 457; Böcking, *Zeitschr. für afrikan. und ocean. Sprachen*, ii. 33). The tribes seem to have reached the Tana Valley separately. Some say that the Buu and Ngatana were the first to arrive, coming from the north or north-east; others that the Mwina, Dzunza, and Kalindi were there before them. A legend given by Böcking (p. 36), and independently by the present writer (*Journ. of Afr. Soc.* xiii. 363 f.), derives the Buu from a single ancestor, Vere, who 'appeared' in the country near the 'old Tana' and was taught to make fire (by friction) by a Musanye named Mitsotsozini. As this man is claimed as a direct ancestor by the Katsae clan of the Buu, it seems that either Vere himself or his children intermarried with the Wasanye. The traditions go on to state that, when the Pokomo were attacked, first by the Galla and afterwards by the Swahili (Watsawaa), some of them emigrated (but subsequently returned), others dug pits (*dindi*) and retired underground; hence the name Kalindi (Böcking, p. 36; [Krafft], *Grammatik der Pokomo-Sprache*, p. 137). The subjugation by the Galla is here spoken of as prior to that by the Swahili, but other accounts indicate that the latter came first—i.e., if the accounts are to be trusted which place Liongo Fumo in the 13th century. That legendary hero (whose story is given in E. Steere, *Swahili Tales*, London, 1870) is said to have made the Pokomo tributary 'from Chara to Mwina'; he went no higher up the river. Some say that he imposed the 'tribute of heads' (i.e. four slaves from every large village and two from every small one), which was afterwards commuted into a payment of so many sacks of rice. This was received by the Sultans of Witu till quite late in the 19th century (Würtz, in *Zeitschr. für afrikan. und ocean. Sprachen*, ii. 89). The Pokomo tradition about Liongo agrees quite closely with the Swahili one given by Steere, which still lives at Kipini and Lamu—his grave and other sites connected with him are pointed out at the former place. Some say that he warred against the Portuguese, which would make him much later; but the matter is still involved in much uncertainty. Some of the

Pokomo make him contemporary with Yere, and others, while not asserting this, are positive that there were Swahili towns on the coast when this ancestor came to the Tana Valley, which may indicate that the Pokomo settled there at any rate later than 689, the date generally accepted for the foundation of Pate. It seems probable that the Pokomo were the earliest Bantu with whom the Arab settlers came in contact, and that their language forms the groundwork of Swahili—or at least of the Lamu dialect.

The Pokomo language contains, as might be expected, a great many Galla words and also a number of others which do not seem to be Galla, but are difficult to parallel in any other Bantu language. Considering the traditions above referred to and other points which make it highly probable that these people are partly descended from the Wasanye, we may not be far wrong in assigning these words to the language of the latter. It is difficult to establish this point at present, because most of the Wasanye have disused their own language, and (like the Korokoro) speak Galla; the few who still know the old speech are to be found in the neighbourhood of Witu.

The Pokomo, though cultivators of the soil, are also hunters and fishermen; and their hunting customs, tabus, and traditions show that the practice is of great antiquity. Their burial customs also seem to connect them with the Wasanye, for, instead of burying in the village, or even in the dead man's own house, as do most Bantu tribes, they carry the dead away into the forest. One of their 'mysteries,' the *fufuriye*, is avowedly borrowed from the Wasanye, as the great *ngadzi*, or sacred friction-drum, is said to have been derived from the Warabai. We have therefore every right to assume a composite origin for the Pokomo; and this seems also to be borne out, e.g., by the numerous gradations of skin-colour met with, 'black' and 'red' (i.e. darker and lighter) individuals being frequently seen among the children of the same father and mother. As a rule, they are of sturdier build than the Wasanye, but not often tall. Otherwise their physical type calls for no special remark. Denhardt (p. 145) says that cicatrization was common in 1878, but it is not often seen now. The two middle lower incisors are sometimes removed, or partly chipped away, but this is not universal, and seems to have, nowadays at least, no ritual significance. Denhardt, although he found that all boys underwent this operation about their eighth year, was repeatedly assured that this and the cicatrization were 'nur Schönheitsmittel.' The tribes of the Lower Tana do not practise circumcision (except such individuals as have adopted Islam); those of the Upper Tana do.

3. Social organization.—The Pokomo *vyeti* consist of exogamous clans (*masindo*, plur. of *sindo*). Many of them bear Galla names (e.g., Uta, Meta, Ilani, etc.); but these are of later adoption, and some have their old Pokomo name side by side with the Galla one—e.g., Kinakaliani of Zubaki, which is also Garijela (=Gardied). The clans of the Wasanye also have Galla names. Traces of totemism, though no doubt it once existed, are not very obvious at the present day. The tribal organization is similar to that of the Giriama and other Nyika tribes, and also to that of the Galla, the Masai, and apparently the Wasanye. The system of 'ages' (Giriama *marika*) is known by the Galla name of *luvu*. Circumcision, as above stated, is not practised by the Pokomo of the Lower Tana; but all the boys who enter the 'young men's house' (*gane*, or *nyumba ya woorani*) at the same time (which they do about the age of 14 or 15) constitute a *luva*. They remain in the *gane* till they marry,

the next *luva* entering a few years after them, so that there are always two 'companies' (*ufaro*) in the house at the same time. There is a twofold division of the tribe, apparently corresponding to the 'right-hand' and 'left-hand' circumcision of the Masai, the two halves being called Honge and Vibare, and the senior *luva* in the *gane* belonging to each of these alternately. Apparently the *luva* does not receive a name till it has passed into the highest stage of eldership. In 1912 the young married men of the Bun tribe at Ngao were *wana wa magomba*, belonging to the Vibare section; the men of the previous *luva*, older, but not old enough to be their fathers, were *wana wa mperuya*, and the *luva* before that (to which belonged Nyota, the senior chief, then almost incapacitated through age) was *magomba*. The *magomba* are the fathers of the *wana wa magomba*, and the sons of the latter are at present known as *wadukuu* ('grandsons') *wa magomba*. The *luva* before *magomba* was *mperuya*, of which few, if any, were still living in 1912. The duration of a *luva* would seem to be about fifteen or sixteen years—roughly, half a generation.

The word *rika* is used by the Pokomo, but is applied to a feast given to the whole tribe by the members of a new *luva* on their admission.

These age-classes must not be confused with the 'degrees' or 'orders' to which men and women are admitted at various stages of their existence, and which correspond to the *habasi* and *kambi* of the Giriama. Boys are supposed to be bought into the *mukombe* by their fathers as soon as possible after birth, but the ceremony may be delayed if the family cannot afford the fee. The initiate is entitled to wear a coronet of palm-leaf (*tama*) and ear-ornaments called *vipuli*. The next step is *nyere* (Giriama *nyere*), followed by *kundya*, which a man is supposed to have entered before he marries. Married men are initiated into the *kiroo*, whose badge is an ostrich-feather worn in a little clay 'holder' plastered on the head, like the nest of the mason-wasp (whence its name, *nyumba ya nyiro*). After this comes the higher grade, *ngadzi*, with three divisions: the *fufuriye*, lesser *ngadzi*, and greater *ngadzi*. The special 'mystery' of the *fufuriye* (derived, as already stated, from the Wasanye, who strictly keep the secret from the Galla) consists of two flutes (called 'male' and 'female'), differing in diameter and in pitch, which are played together. They are kept at a lodge in the forest and shown only to the initiated. The lesser *ngadzi* has three stages and the greater six, one of which is called *mwanja* (=Giriama *mwanza*). The *ngadzi* itself is a huge friction-drum made of a hollowed log, 12 ft. long and weighing half a ton. There is one *ngadzi* for the Wantu wa dzuu, and another for the Wantu wa nsini, with whom are included the Wasanye.

The members of the *ngadzi* are all called 'elders' (*wakiyo*), though those belonging to the greater *ngadzi* enjoy most consideration. The government of the tribe is in their hands, and from them the two chiefs (*mahaju*) are chosen. One of them belongs to the Honge and one to the Vibare section. They appear to hold office till they die or are incapacitated by age. The name *haju* is the Galla *hayu*, 'chief.'

The *wagangama*, or sorcerers, form a distinct gild, with their own rules and initiation. There are five grades of them, the lowest called *mwanu wa mpefo*, 'son of the spirits.' A man who has passed through all but the highest is supposed to be eligible for that when his son enters the lowest. Both *wakiyo* and *wagangama* are buried with special honours, and the face and breast of the corpse are painted in three colours, with soot, ashes, and red clay (*zazi*).

Women have two orders, the *vara*, corresponding to the *makombe* of the youths, girls being brought in by their fathers as soon as they can afford it, and the *nkaku ya mumio* (also called *nyoroshu*), which they join after marriage, their husbands paying the fees. It is probable that they have a *ngulzi* (or some equivalent) of their own, but the present writer was never able to ascertain this point.

An arrangement as yet insufficiently investigated is the division of each village into 'upper' and 'lower' sections (*danda ya dzuu* and *danda ya nsini*), which appears to have no relation to either clans or *luras*. At Ngao, in 1912, each section had two elders (one of the four being the junior *haju*).

4. Material culture. — Pokomo huts are very much like those of the Galla; they are hemispherical, or beehive-shaped, thatched with grass on a framework of poles, which are planted in a circle and tied together at the top (not, as by the Zulus, bent over to form arches). Rice was formerly the staple crop cultivated, but, since the Tana has had a freer outlet to the sea through the Belezoni canal and the Ozi estuary, the cultivation of rice has diminished and that of maize increased, owing to the smaller area now covered by the annual inundations. All Pokomo are expert swimmers and canoe-men; the craft generally used (*uaho*, plur. *maho*) is the usual African dug-out, but for long journeys performed by a large party they have the *sungala*—two canoes lashed together, with a platform of sticks between them.

Fishing is carried on with hook and line, by spearing (the fish-spear, *yutsoma*, is distinct from the hunting-spear, *fumo*), or by means of wicker traps (*mono*) and weirs. The most important animals hunted (before the game-laws were in force) were the hippopotamus, the elephant, and the crocodile. Each has its appropriate ceremonies and is celebrated in special songs. No hunt could take place without the permission of the *wakija*, who chose a lucky day, performed incantations to ensure success, and insisted on the observance of the complicated etiquette regulating the distribution of the meat. The chief hunting weapon is the spear; bows and arrows (with iron heads, or poisoned ones, with reed points) are sometimes seen, but are commoner among the Wasanya. The crocodile is a favourite food, and is therefore to a certain extent preserved; the Pokomo are always reluctant to destroy its eggs. Other items of food, especially in times of scarcity, are wild fruits and roots—e.g., the fruits of the *mkoma*-palm (*Hyphaene thebaica*) and the tubers, the receptacle, and upper part of the stalk of the blue or white water-lily (*jumji*).

As might be expected from their being largely a hunting tribe, the Pokomo have an interest in animals and a knowledge of their habits which recall the S. African Bushmen. Böcking has recorded some of their hippopotamus and elephant songs, and many others might be gathered from the lips of the people. A specially noteworthy point is the fondness of the women for improvising songs about birds, many of which are remembered and handed down. The Tana is unusually rich in bird-life, and the creatures celebrated in the songs (the osprey, a kind of plover, etc.) seem to have attracted attention by their beauty and grace and are not, so far as one can discover, considered from a utilitarian point of view.

5. Customs, etc.—So far as the Pokomo are differentiated from other Bantu, it appears to be firstly by their affinities with the hunting tribes, and secondly by the specialized life consequent on their riverine habitat. In many ways their customs do not call for separate remark—e.g., those con-

nected with marriage are much the same as those of other Bantu, except, perhaps, that it is more usual than elsewhere for a man to bespeak his friend's daughter in infancy or even before birth. This may be due to a comparative scarcity of women; and it was the present writer's impression that men with two wives at once—and certainly with more than two—were not common; but she gives this with hesitation, as her observation of natives not under missionary influence was limited. The rules of *hlonipa* are strictly observed, applying to a prospective as well as an actual mother-in-law, to her sisters, and, in a less degree, to other members of the family.

Pokomo folklore is of the usual Bantu type, but has interesting points of contact with that of the Galla, while the latter shows striking parallels with the Nama and Masai.

POLABIANS.—See SLAVS.

POLES.—See SLAVS.

POLES AND POSTS.—In many parts of the world poles and posts have had a religious or magic significance. There is reason to believe that in many countries the post or pole has gained its significance as the representative of a once sacred tree, the spirit of the tree being supposed to have passed into it. Whether this explanation will hold for all parts of the world is problematical.

1. Babylonia and Assyria.—One of the oldest Babylonian inscriptions known¹ (so old that its writing is almost pictographic) bears on one side the picture of a man who wears a feathered head-dress and stands before two pillars or posts. These have each a globular enlargement near the top; and just beneath this enlargement there are on one pole four horizontal marks, and on the other eight. The inscription, of which no translation has ever been published, refers to the building and dedication of a temple. It begins:

¹ Wood unworked, reeds unworked, Ennamag,

suitable for a dwelling, brought.

Uninjured was the chief, uninjured was the officer Ennamag. Ennamag with firmness laid the bricks; the princely dwelling made.

By it was a tall tree; by the tree he planted a post.²

The association of trees and posts to which this ancient text bears witness is confirmed by a number of early Babylonian seals, on which, in connexion with the picture of a god, a tree and a post are also pictured. Thus one seal² represents the sun-god stepping over the mountain of the eastern horizon, and behind him is a palm-tree. Before

¹ E. de Sarzec, *Découvertes en Chaldée*, Paris, 1885-1912, pl. i. bis.

² W. H. Ward, *Seal Cylinders of Western Asia*, Washington, 1910, no. 260.

him stands the moon-god, and between the two gods is a post having at the middle a globular enlargement similar to that of Ennamag. Another¹ represents the seated sun-god, behind whom is a tree, while two posts, one before and one behind him, are carved at the top into a slightly tree-like form. It thus appears that the sacred tree and the sacred posts were associated.

The sacred tree was in Babylonia usually a palm-tree. This is shown by the pictures on many seals.² The fact that the god resided in the tree is graphically shown by two seals, on which the tree is portrayed as an anthropomorphic deity whose head is surmounted by the horns of divinity, and from whose body the branches of a tree protrude.³ This was the spirit which, it was thought in early times, could be persuaded to go and reside in a pole or post that could be transported from place to place. The conception was analogous to the idea that the spirit of a crag could be persuaded to reside in a smaller movable stone and then in an idol.

The posts were often surmounted by the symbol of the deity to whose worship they were attached. The symbol of Ishtar was a star, and on many seals this symbol is pictured as resting on the top of a post.⁴ Out of this combination the sign was evolved by which the goddess's name was expressed in later Babylonian writing.⁵ A late seal, bearing an Aramaic inscription, actually has a form of the post practically identical with the sign.⁶ The post was sometimes surmounted by a sun-disk;⁷ at least once it is surmounted by both the star and the crescent moon;⁸ sometimes it bore a triangle, and sometimes a bird.⁹ When thus surmounted, it became the symbol of different deities. Thus, when it bore the head of an eagle or a hawk, it was the symbol of Zamama, the god of Kish; when it bore the head of a lion, of some unidentified deity; when the heads of two lions, it was the symbol of Ninib.¹⁰ Sometimes the post terminated at the top in a crook which turned to the right hand or the left, and in one instance it bore horns like those of a cow turned downwards.¹¹

Representations of the post, when so curved, easily pass into representations of the *caduceus*, which, according to Ward, was a serpent emblem. Sometimes objects which he designates as *caducei* seem more like posts.¹² It seems probable that the posts were sometimes carved to resemble serpents, and that the two emblems merge at times the one into the other.

Another object on the seals is of a puzzling nature. It looks like a post with a projection on one side.¹³ Frequently, though not always, a vase is pictured above it. Ward calls the vase the symbol of Aquarius, and suggests that the object in question may be the balance of Libra.¹⁴ This suggestion seems most dubious. Why should a balance always stand on end? The balance-signs in the Babylonian writing are never made like this picture. The pictures of the posts on the earlier seals, which represent them with a globular enlargement towards the top or above the middle, indicate that this, too, is a post, though why it should be made in this form it is impossible to conjecture.

There is reason to believe that the primitive Semitic name for a sacred post was expressed by the consonants 'sr, for in S. Arabia it was known as *athirat*, in Phoenician and Hebrew as *āshērāh*, and in Akkadian as *ashirtu* or *eshirtu*.¹ Apparently in early times such posts marked the limits of a sanctuary, for in course of time *ashirtu*, or *eshirtu*, became the Akkadian word for 'sanctuary,' and so passed into Assyrian. If we are right in supposing that the post was a surrogate for an earlier tree, it would follow that the limits of the earliest Babylonian sanctuaries were determined by the position of sacred trees. F. Hommel suggested² several years ago that the name of the god Ashur was derived from *ashirtu*, 'sanctuary'—a view that Barton afterwards accepted.³ If this be so, not only the name of Ashur, but the city that bore his name, as well as the warlike empire that grew out of it, all bear witness to the popularity of the cultus-post in early Mesopotamian religion.

No shrine was thought to be complete without such posts. Thus, when the Assyrian armies erected temporary shrines in order to propitiate by sacrifice a river-deity before crossing the river, they set up not only a temporary *massēbhāh*, but two posts. This is shown in the case of the army of Shalmaneser III. in the pictures on the Bronze Gates of Balawat. The *massēbhāh* here has a broad base so that it will stand on the ground; the two posts, surmounted with sun-disks, are provided with a base in the form of a tripod. Friedrich Delitzsch calls these 'candelabra,'⁴ but in view of the evidence of the seals and the Carthaginian *cippi*, cited below, they are probably representatives of the older posts. As Shalmaneser does not inform us of the nature of these objects or of the material of which they are made, we are left to conjecture. The object that we have designated a *massēbhāh* may have been made of wood. If so, it was also an *āshērāh*. In any event it has near the top some of the horizontal lines borne by the post of Ennamag already mentioned.

Whether sacredness attached to the posts of doors and gates is problematical. If H. C. Trumbull's explanation⁵ of the origin of the sacredness of the threshold is correct, the door-post, which represented the male, should be as sacred as the door-socket or threshold, which represented the female. Possibly this was the case in Assyria, since at Khorsabad foundation deposits were found, not only under the corners of the city which were sacred (see art. CORNERS), but under each gate-post of the eight gates of the city. This seems to show that the gate-posts shared in the sacredness of the corners. It is possible, therefore, that some sacred symbolism attached to the gate-posts pictured on the seals of the sun-god Shamash.⁶ He is represented as stepping over the mountains of the east and through the gate of the morning by which he emerged from the subterranean passage which was supposed to lead from the west to the east. There are, however, no symbols at the top of these posts, as on some Phoenician gate-posts, to indicate that they were sacred, and the point cannot now be determined.

The Assyrian kings sometimes savagely boast that they impaled their captives on stakes round the cities which they had conquered.⁷ Such victims were at times killed before they were impaled. It has been customary to ascribe these acts to the savage brutality of the Assyrians; but, in view of a method of sacrifice by impaling cited below (§ 8), it is possible that we have in this custom the

survival of a primitive sacrifice by impaling on a post. Such a sacrifice could originate only in a period when men were in a very savage state. The Assyrians were the most brutal of all the Semites, and it is possible that such a primitive custom may have survived among them. It was exercised only in war, when persistent resistance especially enraged them. As all their wars were carried on in the name of Ashur, such resistance was impious to him, and he would take pleasure in the sacrifice of the victims. If this view be true, the stakes or posts on which the victims were impaled were a kind of rude altar.

2. Arabia.—Nearly all direct evidence of the use of the sacred post in Arabian heathenism has disappeared along with the rest of the cultus of the 'times of ignorance' which Islām supplanted. The one bit of evidence that has survived is contained in a Minæan inscription published by Hommel, which mentions a goddess Athirat as the consort of the god Wadd.¹ Athirat is the S. Arabic equivalent of Ashera (Assyr. Ashirtu). As in N. Semitic lands the word designated first the name of the post and only later that of a deity, it is probable that the same was true of Arabia, especially as the palm-tree is shown by historical² and archaeological³ evidence to have been sacred in Arabia as well as in Babylonia. The only heathen shrine of Arabia of which we have a tolerably full description is the Ka'bah at Mecca, and, while in the descriptions of that the sacred stone is mentioned, there is no mention of the sacred post.⁴

3. Phœnicia and her colonies.—Most of our knowledge of sacred posts in the Phœnician world comes from Cyprus and Carthage. The word *asherath* in the sense of 'sanctuary' occurs in a Phœnician inscription from Masub that was discovered in 1885.⁵ This use of the word accords with the Akkadian. A seal, possibly Babylonian (in any case it reflects Babylonian influence), seems to represent the limits of a sanctuary as marked by two posts similar in shape to one of the Babylonian forms.⁶

There is much evidence that in Phœnician religious thought the palm-tree held the same place as it did in Babylonian thought. In Cyprus terra-cotta figures of three women dancing round a palm-tree have been found in considerable numbers.⁷ Although these are broken, a reconstruction of the original is possible and furnishes proof of the devotion of women to this tree. Evidence of the sacredness of the tree is also afforded by many of the votive *cippi* from Carthage, on which it is drawn in more or less realistic fashion.⁸ The transition from the tree to the sacred post is shown by a terra-cotta object from Cyprus now in the museum of Bonn University.⁹

As to the forms which the post assumed in the Phœnician cult we cannot always speak with definiteness, since from the drawings on the votive *cippi* it is not possible to distinguish in every case which objects were made of wood and which of stone. The *āshērāh* is once represented as a slender post surmounted by the crescent moon,¹⁰ and several times as a slender post surmounted by curved lines which form a kind of sun-disk, or two

sun-disks one above the other; in some instances two wavy lines branch out below the sun-disks.¹ These are clearly rude representations of the palm-tree made by using as few lines as possible. Another series of figures, more elaborately made, affords the transition to the more common sort of post. These are in the form of posts surmounted by the curves which resemble the sun-disks, but they still have the horns or streamers which represent the hanging date-fruit.² The post as most commonly represented on these *cippi* is identical in form with this conventionalized date-palm, except that the lines which represented the hanging dates are absent. Sometimes two globular curves are represented at the top, sometimes one, and at times even one curve is so incomplete that the post appears to be surmounted by two horns. This series of pictures demonstrates the date-palm origin of the cultus-post for the Semitic world.

The posts appear on the *cippi* in various connexions. At times they stand by the triangular figure of the goddess Tanith; this is the most common representation.³ Sometimes with the figure of the goddess there stands a hand which represented at this time the *massēbhāh*, or pillar.⁴ This hand appears also on various seals made under the mingled influences of Babylonia and other countries of W. Asia.⁵ The hand was a euphemistic symbol of the phallus, which the pillar was believed to represent. This is its meaning in Is 57⁹ in the phrase 'thou savest the hand' חַיִּי יָרֵךְ. That this is the significance of the hand on these *cippi* is indicated by a picture in which the posts appear together with the figure of the goddess and a phallus.⁶ At times it is accompanied by two hands. Various conjectures have been made as to the significance of the posts. It seems clear from these combinations, and from the dance of the women of Cyprus about the palm-tree, that in the Phœnician religion they represented the female principle of fertility as the pillars did the male principle.

In some representations of Phœnician temples which have survived the door-posts are surmounted by curves similar to those at the top of some of the cultus-posts.⁷ Apparently, when such posts were of wood, they had a significance similar to that of the cultus-posts. Sometimes, however, they were of stone, like those at Tyre described by Herodotus.⁸ Perhaps, in that case, the sacredness of the *massēbhōth* attached to the pillars. In any event the sacredness of the doorway was connected with the two sets of symbols.

A number of the *cippi* are dedicated to Tanith and to Ba'al-Shamin, or the sun-god. Naturally it was thought that the female principle would appeal to the god, just as the male principle did to the goddess. The rude representations of the top of the palm-tree appear, as already noted, somewhat like sun-disks. In time, then, these posts were known as 'sun-pillars' (cf. Is 27⁹, Lv 26³⁰, where RV renders 'sun-images').

4. Amorites.—As was the case with Arabia, no archaeological evidence of the use of the cultus-post has come down to us from the Amorites, and yet we know that they not only used the post, but, like the Arabians, gave its name to a goddess. When the El-Amarna Letters were written, in the first half of the 14th cent. B.C., a compact group of Amorites were living in N. Palestine. Their

⁸ H. 44.

habitat stretched from the sea-coast at Acccho, across the territory afterwards occupied by the tribe of Asher, up into the great valley between the ranges of the Lebanon. The chieftain of this tribe was called in the letters Arad-ilu-A-shi-ir-ti, the Akkadian form of Ebed-Ashera, a name meaning 'the servant of Ashera'.¹ The presence of this name is proof of the antiquity of this phase of the cult among the Amorites, and of its close association with deity. The memory of this name of the Amorite goddess lingered long in the Orient, for in a Babylonian hymn of the Greek period we read:²

'Unto the god Amurru, lord of the mountain,
Unto Ashrat, lady of the plain.'

5. Canaanites and Hebrews.—There is abundant testimony in the book of Deuteronomy that the pre-Israelitish inhabitants of Canaan equipped their high places with both pillars (*massēbhōth*) and wooden posts (*āshērīm*). The Hebrews are strictly admonished to break down the one and to cut down the other (Dt 7⁹ 12³ etc.). It has often been inferred from 16²¹, 'Thou shalt not plant thee an Asherah of any kind of tree,' that the *āshērīm* were trees. In accordance with this view, the AV translated the term 'groves.' More recently G. F. Moore³ and K. Budde⁴ have endeavoured to show that the *āshērāh* was always a wooden post, and that the verse in question should be rendered 'an Asherah of any kind of wood.' It is true that the *āshērīm* were sometimes erected under living trees (2 K 17¹⁰), but it was the opinion of some of the rabbis of the Talmud that it was a living tree (*Abōda Zārā*, 45ab); and, from what we have learned of its origin, its resemblance to the living tree may sometimes have been closer than at other times. The Canaanitish post must have at times been quite large, since the one cut down by Gideon (Jg 6²⁵) furnished fuel with which to burn the sacrifice of a bullock.

Such posts were a part of the cultus-equipment of the temple of Jahweh in Jerusalem down to the reign of King Josiah, for he removed them at the time of his reform in 621 B.C. (2 K 23⁶). The sanctuary at Jerusalem was not peculiar in this respect, since the posts existed at Bethel (2 K 23¹⁵), Samaria (2 K 18⁶), and doubtless at all other shrines. It is worthy of notice that *āshērāh*, which represented the female principle, formed in Hebrew a masculine plural, *āshērīm*, while the *massēbhāh*, which represented the male principle, formed a feminine plural, *massēbhōth*. Possibly this occurred because of the supposed affinity of male deities for the female principle and *vice versa*. As noted above, this would account for the fact that the surrogate of the feminine sacred tree became the emblem of the masculine sun-god (cf., e.g., Is 27⁹).

In the Hebrew cult the posts were sometimes carved into the semblance of the human form or of its reproductive organs; when carved into such forms, the posts were sometimes draped; down to the time of Josiah there were connected with the temple women who wore hangings for the *āshērāh* (2 K 23⁷). There are several passages, as the Hebrew text now stands, which indicate that, as in Arabia and among the Amorites, the *āshērāh* became a goddess, or rather a group of goddesses. Thus Jg 3⁷ speaks of 'the Baalim and the Asheroth,' and 2 K 23¹ of 'vessels that were made for Baal, and for the Asherah.' We also hear of 'the

prophets of Baal . . . and the prophets of the Asherah' (1 K 18¹⁹). Moore¹ holds that it is probable that in these cases the text of the OT has been glossed, and that the presence of a goddess Ashera is due to a confusion between Ashtoreth and her symbol. It is probable that, wherever the name of the post became the name of a divinity, it was because of such confusion, but it is certain that among the Amorites and in Arabia the name of the post passed into the name of a goddess, and it is quite possible that it was so in Israel. We sometimes are too suspicious of the Massoretic text.

In view of the form of the cultus-post as it is shown on Phœnician votive *cippi*, and in view of the analogy of this form with the shape of the pillars at the doors of Phœnician temples, it is tempting to see in the *āshērāh* the origin of the pillars (*ammudīm*, not *massēbhōth*) that stood on either side of the entrance to Solomon's temple, and which were named Jachin and Boaz. They were constructed of bronze, and their tops were carved into lily-work. The writer is disposed to believe that they were transformed cultus-posts. As already noted, such posts were found in Cyprus made of terra-cotta, shaped to imitate the natural wood. It is not improbable that the form of Jachin and Boaz originated from a much conventionalized palm-tree. W. R. Smith thought² that they represented the oldest type of fire-altar; but this is most doubtful.

Cf. also art. MASSEBHĀH.

6. Egypt.—It appears that in Egyptian worship Osiris was the only god with whom a cultus-post was associated. The Osiris-post was of medium height and carved so that the upper part (about one-third of the whole) resembled four cups or four lotus-blossoms standing one within the other.³ Remembering how the palm-tree was conventionalized in Babylonia and Phœnicia, we readily see in this post also a conventionalized palm-tree. So closely was the post associated with Osiris that it became the hieroglyphic symbol for his name in all periods of Egyptian writing.⁴

While other gods appear not to have been associated with post-, standards borne upon rods played a great part in their cults. Thus on the palette and mace head of Nār-mer, a king of the 1st dynasty, if not a pre-dynastic king, four divine symbols are borne aloft on poles, each about three times the height of a man.⁵ Not only were these symbols borne in procession, but they are frequently represented in Egyptian reliefs as planted in the ground, so that they seem like posts surmounted by the symbol of the god. These are found from the time of the Middle Kingdom⁶ down to the latest Egyptian dynasty.⁷ They appear in many combinations; at times they seem half-humorous, as when one of the divine sceptres and the sign *nh*, signifying life, are pictured with hands supporting such standards.⁸

Similar to these standards are the rod-like sceptres carried by most Egyptian gods. Possibly there was originally some connexion between them, though it cannot now be traced.

7. Indo-Europeans.—Posts and poles do not play so important a part in the religion of the Indo-European peoples as they do among the Semites; nevertheless they are not wholly wanting.

(1) In the Vedas of India we hear of the 'sacri-ficial posts' which apparently stood before every

altar.¹ Oldenberg believes that in Rigveda I xiii. 11 such a post is addressed as a 'tree.'² To these posts the sacrificial victims were tied before they were slain.³

In the *Mahābhārata* (xii.) these stakes are described thus :

'Sacrificial stakes of timber with their golden fastenings graced,
Consecrated by the *mantra* are in sumptuous order placed.'

Further on we read :

'Six good stakes of *vilva* timber, six of hard *khatva* wood,
Six of seasoned *sarvavarun*, on the place of *yajna* stood.

Two were made of *devadaru*, pine that on Himalay grows,
One was made of wood of *slesha*, which the sacrificer knows,
Other stakes of golden lustre quaint with curious carving done,
Draped in silk and gold-brocaded like the constellations shone! . . .

Bulls of various breed and colour, steeds of mettle true and tried,
Other creatures, full three hundred, to the many stakes were tied.'

At least in poetry a certain personification of the stake occurred.⁴ Whether the post became specially sacred in earlier Hinduism is problematical, though it was such a constant accessory of sacrificial places that, in a hymn in the Atharvaveda, in which the burning sun is apostrophized as sacrificial fire, the mountains of the earth are described as the 'sacrificial posts.'⁵

In later Hinduism the symbol of Śiva, the *linga* or phallus, is usually a smooth post of stone or wood. Whether this is an evolution from the sacrificial post of earlier days, or an intrusion from the Dravidian population of India, cannot now be determined.

(2) Among the *Persians* trees were apparently sacred in early times, for there is in the *Bundahishn* a myth of a tree that was supernatural and generated all seeds.⁶ Worship of trees combined with sun-worship appears to have survived among the Magi, but it found expression in the use of 'rods' or the branches of trees, rather than in the consecration and veneration of posts.⁷

(3) Among the *Greeks* and their Cretan fore-runners there are traces of a sacred post. Plato describes⁸ a sacrifice of a bull that is said to have been offered in the sunken island of Atlantis, by which it has been conjectured⁹ that he meant Crete. The bull was led to a pillar or column on which the law and a curse were inscribed, and was slain 'against the top of the column over the writing.' His blood was thus brought into contact with the column or post on which the laws were written.

Some coins from Ilium bear witness to the existence there of a cultus-post not unlike the sacrificial posts of India. One of these coins pictures¹⁰ Athena Ilias with her fillet-twined spear and owl, and on her right a pillar to which a bull is hung. Evidently the pillar was connected with the sacrifice in some way, though not in the manner described by Plato. Another coin shows the goddess standing on a post, while before her is a cow, apparently waiting for sacrifice. A third coin pictures the goddess standing on her post, and before her is a cow hanging head uppermost from a tree.¹¹ Miss Harrison thinks that the post was once the goddess, and that the representation of an

anthropomorphic figure standing on the pillar is a later development.

The Greek god Hermes apparently developed out of a post or pillar.¹² In the early art he is represented as a square post with a human head.¹³ Gilbert Murray¹⁴ holds that the phallic post was placed at the head of graves to symbolize the renewal of life, and that its spirit came to be regarded as a means of communicating with the dead. Such a post was called a 'Herm,' and in time the collective totality of such posts became the god Hermes, the messenger of the gods. Later the post form of Hermes was discarded for more artistic anthropomorphic representations, and the post was even regarded with aversion.

(4) There are many survivals of tree-worship in the customs of *modern Europeans*, and among these the May-pole celebrations and dances hold a prominent place.¹⁵ In one form or another they are found in Bohemia, Swabia, among the Wends of Saxony, and in various other parts of Germany; also in Corfu, Sweden, Alsace, Provence, and Ireland; and nowhere do these customs appear in such completeness as in England. They are found in all parts of the country, have persisted almost to the present, and have found a considerable place in literature.¹⁶ The idea that the May-pole prevents sterility in women and cattle is almost universal among these peoples. In Saxony May-trees or May-poles were set up before houses, stables, and cattle-stalls, and even before the chambers of sweethearts; in Sweden, where the celebration comes in midsummer, young fir-trees are set up at the doorway and elsewhere about the house; in Suffolk, according to an old custom, a servant who first brought a branch of hawthorn on the 1st of May was entitled to a dish of cream—a custom that until recently continued with some modification in Cornwall.

In many of these countries the May-pole was brought into the village each year with great rejoicings.¹⁷ In some cases bands had been seeking it in the woods all night. Philip Stubbes, writing in the time of Queen Elizabeth, says that the May-pole was brought home with twenty or forty oxen, each ox having a nosegay of flowers on his horns, while the pole was also decorated with flowers. It was raised in all the countries with rejoicings in which old and young shared. In England, as in many places on the Continent, dancing was an important feature of the celebrations. In Northumberland, in the 18th cent., after the dancing there was a feast for which a sillabub was made of milk warm from the cow, sweet cakes, and wine. A wedding-ring was dropped into this, and the young people fished for it with a ladle. The finder was supposed to be wedded first. The customs and superstitions associated with the May-pole indicate that it was a surrogate for a divine tree, and that the sacredness of the tree was connected with the idea of fertility.

8. *Native races of India*.—In Hinduism the god Śiva is not represented by an idol, but by the *linga*, or *lingam*, a phallic post. It is generally supposed that the *linga*, of which there is no trace in the Vedas, is a contribution from the Dravidian peoples. The *lingam* are generally made of stone¹⁸

and painted red,¹ though possibly at times of wood. The use of this symbol seems now to be co-extensive with the Śiva-cult. Of other religious uses of posts in India there seems slight trace.

On the fourth day of the festival of Ankamma, a Dravidian village-goddess, 'a man disguised as a woman carries a paper balloon in procession on the end of a long pole. Above the balloon is a pot, and above that a drinking-cup, while the royal staff and snake hood are carried behind accompanied by drumming and shouting. On the last day the cruel features of the worship take place. The village carpenter prepares a rude cart on which are set stakes sharply pointed at the upper end. The usual number of the stakes is nine. On these are impaled alive a goat, a pig, a lamb, a chicken, and other small animals. The story-teller . . . rides to Ankamma's temple in the midst of the suffering animals. . . . After they have arrived at the temple, a live sheep is impaled on a stake set for that purpose in the ground in front of the temple. All of these animals of course die in their agonies.'² It is believed that Ankamma is propitiated by this suffering and shedding of blood.

In this case the stakes or posts become practically altars for the offering in a most horrible way of such sacrifices as are supposed to appeal to the savage god. According to Dravidian legends, men have sometimes been put to death by being impaled on such stakes.³

9. Burma.—The Red Karens hold a festival every year in April at which the principal ceremony is the erection of a post on ground, in or near each village, set apart for the purpose. A new post is set up every year. The old ones are left standing, but, when they decay, are not renewed. The posts are really poles, 20 to 30 ft. high. The tree from which each is made is selected each year by omens obtained from chicken-bones. When the pole is set up, the people join in rude dances not unlike the May-pole dances of Europe. They feast on pork and drink quantities of liquor.⁴

10. China.—While in China there is evidence of a semi-sacredness attaching to trees because they are supposed to be the abodes of spirits that must be propitiated,⁵ no evidence of the employment of a sacred pole or post in that country is known to the writer. The nearest approach to anything of the kind is the system of poles by which a coffin is carried from the house to the grave.⁶ The coffin is placed on a frame-work which is attached to a heavy pole or beam. At each end of this there are cross-poles, which rest on the shoulders of the bearers. There are never fewer than four bearers, and, by increasing the system of cross-poles, there may be eight, sixteen, or thirty-two. These poles have no sacred significance, except in so far as everything connected with burial is to a degree sacred in China. The pole device may have been dictated by convenience, since the frame on which the coffin rests is attached to the large pole by a swivel and can be turned in any direction at will—a great convenience in passing through the winding alleys of Chinese cities.

Brooms and bundles of twigs are employed to drive away evil spirits,⁷ but this is a development from the primitive sacredness of trees different from that represented by sacred poles and posts.

11. Japan.—Trees among the Japanese might be considered *kami*, 'wonderful' or 'divine.' *Kami* was the nearest Japanese equivalent to 'god.' Trees, accordingly, were often sacred. This is shown in the Shintō ritual, where it is directed that heavenly twigs be clipped at the top and bottom, 'making thereof a complete array of one thousand stands for offerings.'⁸ Apparently each

twig became a little post for the support of an offering, and was thus a temporary sacred post. More significant are the many phallic emblems in Japan that were formerly connected with the Shintō ritual.¹ Down to 1872 phallic symbols were to be seen at many Japanese shrines. They were usually made of stone, though often of wood, and in later times of terra-cotta, iron, and gold.² In connexion with Shintō there were, accordingly, many sacred posts kindred in significance to the sacred posts of the Semitic peoples. In Japan they represented the male principle, the female being indicated by an emblem of different shape.

12. Kamchatka.—Among the Koryaks, when a pestilence is raging, a dog is killed and his entrails are wound round two poles. The people then pass between the poles, which are supposed to have power to prevent the demon of pestilence from following them.³

13. Celebes.—(1) Among the *Tokoelawi* in the interior of Central Celebes it is customary to hold a sacred festival on the eighth day after the death of a man and on the ninth day after the death of a woman. On the way home from the festival the guests pass under two poles placed in a slanting direction the one against the other, and they must not, while doing this, look round at the house where the death occurred. In this way, with the supernatural or magic aid of the poles, they take leave of the soul of the departed.⁴

(2) Among the *Toboengkoe*, another tribe of Central Celebes, when a man buries his wife, 'he goes to the grave by a different road from that along which the corpse is carried, and on certain days afterwards he bathes, and on returning from the bath must pass through' a structure shaped like an inverted V. The structure is formed by splitting a pole up the middle and separating the two parts widely at one end, while they adhere at the other. The ceremony is believed to protect the man's second wife, if he has one, from soon following the first.⁵ The leaning poles form an archway, somewhat similar to that made of boughs by the people of Borneo, beyond which a spirit is supposed to be unable to pass. Among the *Toboengkoe* it is the spirit of the dead wife, who is believed to be jealous of her living rival, against which protection is sought.

14. Melanesia.—Among the Melanesians there are few traces of sacred posts. (1) In *Santa Cruz* stocks or posts are set up as memorials of the dead.⁶ They are of the rudest sort, and have only such sacred character as attaches to the dead. In the *Banks' Islands* tree-trunks cut into very rude figures of men are frequently seen at funeral feasts. They are memorials of the dead, but have no sacred character.⁷ In the same islands rough idols are carved out of tree-trunks, varying from the rudest stock to elaborately carved images. The posts of houses are also carved into *nules*, the setting up of which is attended by a celebration called *kolekole*.⁸

(2) In *Lepers' Island* they have a way of communicating with ghosts by means of a bamboo pole.

They build a little hut in the forest near their village, adorning it with leaves and coco-nut fronds. The hut is divided by a partition, through which runs a bamboo pole 12 or 15 ft. long. To ascertain whether a ghost is present, the men sit at night on one side of the partition with their hands under one end of the pole and call the names of people who have recently died. When the bamboo rises in their hands, they know that the ghost of the last called is present. When they name one of

themselves, asking the ghost where the man named is, the pole rises and strikes the man named. After this they go out singing, with one end of the pole in their hands, and the ghost leads them whither it will. If they sing that they will go uphill, it leads them down. If they sing that they do not wish to return to the village, it leads them there. A man is said to have put a bamboo pole over his shoulder with a basket attached, when a ghost came and got into the basket, weighing it down to the ground. After that the pole led people whither it would.¹

(3) Some of the *Torres Straits* islanders performed a ceremony with poles when a turtle was caught.

The turtle was placed on a beach and two highly decorated and carved poles were erected, one on either side of its neck. These poles bore carved faces, somewhat resembling totem-poles. They were surrounded by a number of men, four of whom grasped long ropes that were attached to the tops of the poles. Beginning at the turtle's head, they walked counter-clockwise with a kind of dancing movement round the turtle. When they had advanced a short distance, they partly retraced their steps without turning round, then advanced again until they had gone completely round. All the time they were making overhauling movements with their hands on the ropes, and a drum was beaten and a song was chanted. One of the poles was regarded as male and the other as female.²

15. Australia.—In Australia poles are associated with the totemic ceremonies of certain tribes. (1) Thus, in the *Arunta* tribe, when a boy is circumcised or subincised, although the number of performers is very small, a sacred pole is frequently employed. This usually represents the totemic animal or plant. At such times the boy beholds the mystic ceremonies of the tribe for the first time.³

(2) Among the *Kingilli* a part of the fire-ceremony as witnessed by Spencer and Gillen was as follows:

The women danced round a pole about 15 ft. high, which bore on its top a sort of tuft;⁴ and after the dance, while the men were performing other parts of the ceremony, the women lay on the ground by the pole for the whole night.⁵ In the morning the men approached the pole in single file and crouched down, while the women, each carrying a little bag of stones in her hand, danced again round the pole, jingling the stones.⁶

The performers could give no explanation of the ceremony; it had been handed down to them from antiquity.

(3) Among the *Mara* and *Anula* tribes there is another curious ceremony in which a post figures.

When a man dies and his flesh has been eaten, his bones are collected and brought to his father and mother. They are first spread out to dry, after which they are wrapped up in paper-bark and the parcel is fixed into the fork of a stout stick which stands upright in the ground. The stick 'is placed in the centre of a little cleared space outlined by a raised circle of sand, in which an opening is left on one side.' Within the circle a small fire, which must be lighted by rubbing two sticks together, is made and kept burning. No one may approach it but the father and mother of the dead, and no stick may be taken from it. The spirit is supposed to come and hover over the bones and the fire, and at times may be seen by the father and mother standing near the fire.⁷ After the lapse of a considerable time, often a year or more, other important ceremonies having been performed in the meantime,⁸ the bones are removed, put into a hollow log, the ends of which are stopped up, and buried.⁹

16. Africa.—Posts and poles are used in various semi-sacred ceremonies by the savage tribes of Africa, but the religion of most of them is so inchoate that it is often difficult to tell what degree of religious significance is attached to the posts. A few examples must suffice.

(1) The *Yorubas* used to employ posts when offering human sacrifice to Ogun, their god of war.

A place was selected where rocks and boulders enclosed a kind of natural temple. As soon as it was known that such a sacrifice was to be made and that a slave had been selected as a victim, the women of the tribe were seized with great excitement. They rushed to the victim, addressed prayers to him, sent messages by him to departed friends, and gave him their choicest articles of food. Then, encircling him, they engaged in a wild dance of amazing rapidity, which continued until the

victim had been decapitated. While this dance was in progress, the officiating priest placed two forked sticks or posts about 7 ft. high in the ground, one on each side of the entrance to the rock-enclosed space, and across these he laid a pole from which a fringe of palm-leaves was suspended. While the dancing continued, the victim, in the space described, was laid on his face and beheaded. The head was placed in a fantastically decorated earthen pot in the rear, while the body was left lying where the decapitation occurred.¹ The sticks and pole possessed some ritual significance, though just what it was is not clear.

(2) On the *Upper Congo* a chieftain is, after his death, given a kind of worship for a time. As a part of the reverence shown to him, four of his wives are buried alive under his body, their legs and arms having first been broken so that they will not crawl out. In order that he may be properly attended in the spirit world, ten of his slaves are decapitated that their spirits may go with his. The ritual of this decapitation is as follows:

'A tall flexible pole is stuck in the ground, at some distance behind the seat' in which the slaves are to be placed one by one. 'From the top of the pole a cage-like arrangement is suspended by a cord. The pole is bent down, and the cage is fitted to the unfortunate man's head. He is blindfolded, but he knows what is happening,' having on former similar occasions seen it done to others. 'The executioner commences to dance, and make feints; at last, with a fearful yell, he decapitates his victim, with one sweep of the huge knife. The pole thus released springs the head into the air. The crowd yells with delight and excitement.'²

17. American Indians.—'The sacred pole was found widely among the American Indians. It was planted in the centre of their villages, or, if the tribe was nomadic, it was carried about in an ark or wrapping and set up in a tent by itself in their encampment. It typified the communal life of the tribe and represented the "mystery tree," which was intimately associated with their legendary origin.'³

The most striking of all these are the totem-poles of the Indian tribes of the north-west coast of America. The largest of these, as well as the most curious, are those of the Tlingit of Alaska and the Haida of Queen Charlotte Islands.

'Some of them stand in front of houses, or very near them; others are set near the beach, beyond the village. When old they are weather-beaten and gray. They are sometimes compared to a forest of tree trunks left after a fire has swept through a wooded district.'⁴

'There are three kinds of these carved posts—totem-posts, commemorative posts, and death-posts. The death-posts are the simplest of the three. Among the Tlingit and the Haida the dead were usually burned. If the man had been important, a display was made of his body. . . . After the body had been burned, the ashes were gathered and put into a box, which was placed in a cavity hollowed out of the lower part of the death-post. . . . At the top of the death-post was a cross-board on which was carved or painted the totem of the dead man.'⁵

'The second kind of carved post is the commemorative post, put up to commemorate some important event.'⁶ Thus an old chief once erected a post to commemorate the failure and consequent withdrawal from his village of missionaries of the Græco-Russian Church. On the pole were carved, from the top downward, an eagle, a man pointing with his right hand to the sky, an angel, a priest with hands crossed on his breast, and a trader.⁷

The totem-posts are the most interesting. They are taller and more elaborately carved than the others. 'They stand in front of the houses; among the Tlingit to one side, among the Haida at the very middle and close to the house. In fact among the Haida the doorway of the house was a hole out through the lower end of the totem-post.'⁸

Among these tribes every one bears the name of some animal or bird, such as 'the wolf, bear, eagle, whale, shark, porpoise, puffin, orca, orca-bear, raven, frog, goose, beaver, owl, sea-lion, salmon, dog-fish, crow.' The totem-poles bear the pictures of the totems of the persons living in each house. The husband and wife are of different totems, so both of their totems appear, that of the man at the top, that of the woman at the bottom. Between them other designs are frequently carved

to 'tell the tale of the man's wealth and importance, or they might represent some family story.'¹ Descent is reckoned through the mother in these tribes; consequently the carving at the bottom is most important, as it tells the totem of the mother and children. These poles are a kind of door-plate and tell at the same time something of a family's history and importance.

Besides the carved totem-poles there are also frequently carved columns or posts inside their houses.² They serve to support the two great rafters on which the jack-rafters and the roof rest. The carvings resemble those on the totem-poles and have, no doubt, a similar significance.

LITERATURE.—The literature has been fully cited in the notes. Most of it is of a fragmentary character. The more connected discussions may be recapitulated here with a few additions: M. H. Obnfalsch-Richter, *Aggyros, the Bible and Homer*, i., London, 1893, pp. 141-292; W. R. Smith, *The Religion of the Semites*,² do. 1894, pp. 187-191; W. C. Allen, 'Asherah,' in *HDB*; K. GEORGE A. BARTON.

POLITICAL ECONOMY.—See ECONOMICS.

POLITICS.—I. Scope of the article.—The word 'politics' is used to refer both to administration or legislation and to the study of this department of human activity. Although the usual sense of the word refers rather to public activities than to theory, the subject here spoken of must be what is more strictly called the theory of politics, or political theory. The practical importance of this theory is very great, both because it obstructs and because it assists the attainment of justice and liberty. Theory has often made the accidental conditions of a passing age seem to be the nature of things, and has therefore perpetuated abuses; and it has often shown a better way when politicians were blind to facts. The facts of political life will, therefore, be treated here as a basis for speculation, analysis, and suggestion (see, further, art. STATE). That part of life which is political is generally supposed to be concerned with the organization of social relations with a view to justice and liberty. Political theory is the analysis and criticism of the attempts to attain those ends; and such theory may be divided into political science (an analysis of facts) and political philosophy (a criticism and moral evaluation of political society). But, since political society is not the only form of society, the theory of politics is only one section of social theory; and it must be distinguished from other kindred subjects. Political society is distinct from the earlier or more primitive forms of social organization (*q.v.*). In political as opposed to primitive society there is a conscious adjustment of social relations by members of a society. Until

that occurs, there is, properly speaking, no political life, although, obviously, there is no moment nor any one place in which political life appears, and it must also be allowed that the more primitive social forces are active even in an elaborate political organization. Again, in early but not very primitive society there was no distinction between what we now call 'political' and what we now call 'religious' organization. There was, therefore, no separate theory of religious institutions; but there should be one now, if our social theory is to be complete. Political theory must exclude this. In still less primitive times, and even as late as the 19th cent., no clear distinction was made between economic and political purposes. Therefore a study called 'political economy' arose; and the study of organization for economic wealth was confused with the study of organization for justice and liberty. But, however close the connexion between them, we shall presume that economics (*q.v.*) is quite distinct from political theory, at least in its subject-matter, if not in its method. Finally, politics is connected, through the general theory of society, with ethics (*q.v.*), or the study of right action; but, although ethics should be regarded as fundamentally social and should not isolate the individual, it deals with more general issues.

2. The Greek conception.—The first political theory was Greek; and it was based upon the half-conscious political organizations—monarchy, oligarchy, and democracy—which are reviewed in the famous passage of Herodotus.¹ The criticisms there made mark the beginning of political theory. They are based upon Greek experience, aided by observation of Eastern practices; and the forms of government are distinguished by psychological observation of the actions of men in half-organized groups. The immediately following practice and theory were based upon the experience of the *πόλις*—a peculiar and unique organization or institution which has not only given a name to our subject, but very profoundly affected the view usually taken of it. A word is necessary as to the nature of the *πόλις*. It was the organization of a small local group of male slave-owners, based upon what we may call religious or ritual community. It was originally exclusive, segmented according to military purposes and organized politically, in our sense of the word (*i.e.* for the purpose of justice and liberty), in one of the three ways mentioned above. But it was a society in which the political was not yet clearly distinguished from the economic or religious needs of man. For this and other reasons, therefore, it is impossible to suppose that the *πόλις* was essentially a State (see STATE). But upon the experience of the *πόλις* was based all the Greek theory of society; and the Greek theory of the *πόλις* is therefore rather an early form of philosophical sociology than what we now call political theory. The pre-Socratic views of society probably veered between the idea that all social organization is a convention (and as such a break with 'nature') and the idea that the organization of civilized society is natural. The theory of convention was probably connected with the attack on slavery and the subjection of women. 'Nature' was the name given to what would be better than the established custom. But we have no complete statement of this view of society. The most valuable and effective political theory began with Socrates (*q.v.*), and is found in Plato's dialogues. Although it is not systematically presented, we can quite clearly see the main lines of the Socratic-Platonic analysis and suggestions of social betterment. This theory of society is part of a general theory of the nature and purposes of man; and,

¹ III. 80.

² F. S. Dellenbaugh, *The North Americans of Yesterday*, p. 612 ff.

since man is essentially social, ethics is part of the theory of social life which is called, in our transliteration of the Greek word, 'politics.' It is false to say that politics in this sense is only a part of ethics; it is absurd to suppose that Socrates and Plato (*q.v.*) were thinking only or chiefly of what we call 'politics.' Organized society presented itself to them as a whole—religious, cultural, and economic, as well as what we call political—and the discussion always refers to *all* the relations or contacts of man with man. For this reason the psychological analysis of the individual in the *Republic* is regarded as an equivalent to an analysis of society. The fundamental statement implied in Plato's work is that society is the result of three distinct elements of the character or nature of man; the reverse, he would admit, is also true that the three elements are the result of society.¹ For it is not possible to say of the individual or of society that one exists, in time, before the other. The *Republic* is in the main an analysis of fact, and only in a secondary sense a Utopia; the fact is the life of the *polis*. Therefore the Socratic-Platonic theory is only in part what we should now call political, and in that part is concerned more with the purpose of political action than with political devices or methods. The discovery and promulgation of what is worth doing rather than the administration of society so that its members should do it were the chief interests of Socrates. Law meant to him and to Plato what it meant to most Greeks—a statement of the reasonable rule to be followed rather than a command. And those who could discover this rule were, therefore, the only hope of society. Unimaginative commentators have turned this 'spiritual power' into a military autocracy, because of the Spartan tendencies in Plato; for Plato is indeed too impatient of the method of trial and error in politics. But the value of his work lies in suggestiveness as to ultimate ends rather than in ideas of method. He is the first political philosopher.

The situation had changed in the interval between Socrates and Aristotle; but Aristotle (*q.v.*) continues to repeat the established analysis and to depend for evidence upon an already fast disappearing life of the *polis*. His analysis, however, is carried farther than Plato's, and his suggestions, though less radical, are more detailed. In his *Politics* he reviews the general principles on which the *polis* was organized; and he begins to subordinate, as later ages did more completely, all other interests of man to the desire for orderly administration. In addition to principles shared with Plato, he gives us suggestions as to the dependence of social organization upon external or natural circumstances; he perceives the importance of economic facts; and he attempts to combine the good points of the different systems of government so far discovered by the Greeks. He is the first political scientist. Apart from his unsurpassed ability in analysis of political fact, he formulates well certain principles already discovered. The true State exists not for wealth or power, but for a full and noble life; administration is to provide opportunity for the highest social abilities of man; it is to give these opportunities to all who are capable of using them, women and slaves being proved by 'experience' incapable; and good government is such as prevents the exploitation of some members of a given society by others.

Great as Plato and Aristotle were, they omitted or under-estimated the value of certain facts of the social life which they analyzed. They treated the *polis* as in essence self-sufficing; but the evidence was against them. Nearly all the Greek city-States were dependent, for food, luxuries, or ideas,

on other communities; and Athens, confessedly the most advanced, if not, in the philosophers' judgment, the best organized, was civilized largely by foreign contacts. Secondly, they omitted to notice the growing departmentalizing of function which was making the primitive and all-inclusive *polis* into one of many institutions. Voluntary unions existed for economics, religion, or culture, which are simply disregarded by Plato and Aristotle.

So much with respect to facts; but as to conceptions of social betterment also the two great philosophers are deficient. Although each gives hints of the unity of Greece,¹ they neglect too much the attempt of Sophists like Gorgias, Lysias, and Isocrates to counteract the isolation of the *polis* and make an inter-State political structure. And they hark back to the primitive all-inclusive organization, since they desire a *polis* which is merely 'a parochial Sinai.' The history of their influence has unfortunately been as much a history of their mistakes and omissions as of their illuminating conceptions, and this both in the sphere of practical politics and in political theory. But they still give the most suggestive introduction to the general theory of society and the social nature of man. At about the same period political theory and development were beginning in China; but the early promise does not seem to have led to anything new or strange to the Western tradition, which, at any rate, continued for more than 2000 years unaffected by the East. We may therefore suppose that political, if not social, theory, as it now stands, is almost exclusively Western.

3. Roman contribution to the theory.—The domination of Rome marks the second stage in political development. A single State gradually acquired the administration of all the different local groups in W. Europe, W. Asia, and N. Africa. But even this State was a much more simple and all-inclusive organization than any modern State. It was, like the *polis*, in its basis religious, and in the form of its institutions military; and, although the same administration in the 2nd cent. of our era covered vast territory with many races, the structure of the State was still sufficiently like that of the original *urbs* for the conception of the Greek philosophers to be applied to it. With some modifications made by Cicero and Polybius, the idea of political life remained almost Aristotelian. Polybius is perhaps the more important, since he introduced to the political tradition the idea of a balance of social powers as a good method for administration.² But the real experience of the Romans is contained not in the philosophical commentators, but in the lawyers. For the social need of the time seems to have been orderly administration, and the desire for local or individual development was sufficiently satisfied if peace was secured.

The Roman lawyers added to the political tradition two important conceptions: an early form of the idea of sovereignty and the idea of a natural law. The one was a reflex of the imperial unity of the Roman world, the other an attempt to explain the basis of civil law. A single source of law and the dependence of all forms of association upon the will of the political power are conceptions of extreme importance in the Middle Ages, with sinister consequences in the Renaissance. And the idea of natural law lived on to affect the first efforts at international law and the early claims to 'the rights of man.' But no complete and comprehensive theory of politics had been developed among the Romans when the Roman world fell in ruin.

4. The Middle Ages.—The development of political life and theory was then interrupted.

¹ Cf. *Rep.* 443.

¹ Plato, *Rep.* 470; *Arist. Pol.* 1327b.

² *Hist.* vi. 18.

The Dark Ages contain nothing but gradual loss of the civilized administration and exact thinking of the past, together with fitful and primitive efforts to retain the ghost of the dead world or to inspire a new earth. When the darkness begins to lift, a single form appears—the Roman Church. The only stable and effective organization, with real power for ordering and directing life in every corner of W. Europe, it took over the prestige of the half-forgotten Roman rule and bestowed it upon one of the most fantastic creations of the political imagination—the Holy Roman Empire. What the Church was for the Middle Ages was largely due to Augustine's *de Civitate Dei*, which is an attempt to provide a theory to replace that of the Roman law and the Greek philosophy. Its importance for us here is that, continuing some of the old ideas of administration, it adds to them (1) a conception of another world for which temporal or earthly life is preparatory, and (2) a vague theory as to the equal value of all human beings.

Mediæval political experience may be summarized under two headings: (a) the distinction of Church and State, and (b) the hierarchy of rulers.

(a) Under the first heading come the two great facts—the distinction between the various human interests, and the unity of Europe. The interests for the first time appearing distinct were then called spiritual and temporal. Men were impressed with the existence of other values than those of wealth and power, and they lived in the firm conviction that another and a better existence was to be attained by all who deserved it. To deserve heaven involved, indeed, partly moral and partly magical action; but, in any case, the conception of what was called the spiritual was based upon actual experience. On the other hand, men felt the need for material goods and for orderly administration. This need it is not necessary to explain in the 20th century. Out of those two needs came the mediæval Church and the mediæval attempts at political administration; but the delimitation of function was never decided. In political theory the observation of the facts was complicated by an unhistorical reading of the Bible and Aristotle. Men thought that they saw in the mediæval system the Jewish priesthood and kings, mingled with the society of the old city-State. And the spiritual and temporal needs, differently supplied and differently explained, gave rise to thinkers whom we may roughly classify as ecclesiastical or civil. But, since the Church had control of most of the teaching, the ecclesiastical view of society prevailed in the mediæval books. Thomas Aquinas may stand for many others in his subordination of the civil to the ecclesiastical authority. And even Dante grants in theory a superiority of the Church which he feared in practice. The whole issue was discussed as though it were only a question of two authorities to which all men were equally subject.

As for the unity of Europe, this great mediæval idea was not destroyed by the conflict of Church and State. In fact, Europe was one in its general culture and in its social classifications, although politically it was one only in sentiment. No effective organization of the political order was produced by this sentiment. But in theory all thinkers agreed that the basis of political organization was the interdependence of all the groups of the humanity which counted. The existence of the Eastern empire, of heathen kingdoms and of distant civilizations, hardly seemed to trouble the theorists. Civilized humanity for them was one family, the inhabitants of W. Europe.

(b) Mediæval political life was formed by the system called feudal and by kingship. The local administrations of feudalism remain effective in the quaint idea that ownership of land implies the

right to govern the inhabitants of that land, and in certain peculiar caste-sentiments; but as a political system feudalism gave place to kingship, and it has hardly been the occasion of any valuable political idea. In fact it was essentially pre-political and socially primitive. Kingship, on the other hand, has been important to political life and to theory. The mediæval king was a sacred person, responsible to God, and an exponent, with advisers, of 'natural' or of customary law. He was not a despot, a representative, an official, or the source of law. He became, especially in England and France, the focus of the effort towards settled and therefore centralized government and the symbol of the new national sentiment. In theory the king has some special divinely-given qualities; he is the necessary result of the desire for one kind of law in any group, and he seems to be given some peculiar physical power of transmitting abilities to his children.

5. The Renaissance.—The decay of the mediæval system, towards the end of the 14th cent., left the unity of Europe a vague memory, the conflict of Church and State a tiresome and half-forgotten quarrel, feudalism practically defunct, and kingship supreme. But the influence of a new economic situation, due in part to discoveries and inventions, together with the disappearance of old ideals and the appearance of political realism, soon transformed mediæval kingship into Renaissance sovereignty. Theory changed as quickly as practice. First, William of Ockham and his follower, Marsiglio of Padua, attempted to give to the State the prestige of the Church by proving it to be fundamentally necessary and not secondary in importance. Then the minds of great numbers of men were gradually turned away from the desire for heaven. This had the double effect of degrading all political conceptions into the merely economic and at the same time of lifting ordinary life by making it seem more worthy of consideration. The supreme political fact of the Renaissance was the existence of personal government in different mutually jealous groups. The situation is generally described in books on history—a subject that has become since the Renaissance predominantly political. Indeed, conscious political development began again at about this date. And this resulted in a succession of brilliant analyses of political life and suggestions of change. Machiavelli is the first and greatest observer of facts; he is valuable because neither the Bible nor Aristotle obscured his view of life as it was; and since his time no political thinking has been based upon books. Even his suggestions for the future are not more than observations of the plans usually followed. The State is for him an instrument of the prince, chiefly for the attainment of 'glory'; and it is essentially an organization for exploitation, either within its frontiers, of the many by the few, or, outside of its frontiers, of one group by another—an analysis which is not altogether inapplicable to modern States.

A slight change of experience is marked by the consolidation of personal government on a more economic and less military basis, over nations rather than districts. France and England provide the evidence, and Jean Bodin analyzes the new phase of political life. The monarch is less prominent in theory and the organization more, although even in Bodin the theory of government in general is always tending to become an analysis of personal rule only. The *Six Livres de la République* (Paris, 1576) expresses for the first time clearly the complete doctrine of sovereignty, at least with respect to the internal organization of the State. This was a great step forward. From that time it has been taken for granted that there is within each

politically organized group an authority, a source of law and administration, beyond or above which there is no other. Legal supremacy of one authority within one territory was, therefore, seen to be necessary for political life. Bodin, however, never lost sight of the fact that legal supremacy does not imply moral superiority, and that legal submission does not imply moral allegiance. He recognizes other institutions and even grants that they existed before the State; but he seems to say that, the State having come into existence, all other social allegiances derive their force from the State and bind only in subordination to the State. This is probably due to the influence of the Greek theory of the *πολις* and of Roman law. It marks the Renaissance identification of political with the whole of social theory. Hobbes's *Leviathan* (London, 1651) still remains the best expression of the full meaning of this attitude. The State is the highest, most complete, and at the same time most fundamental or original form of society. It is doubtful if Hobbes (*q.v.*) saw anything but perversity in other social obligations than those of the State. For him the real social world was altogether included in the two problems of the individual and the State. The original war of each against all was to be avoided only by the mutual agreement (compact or contract) to erect and to obey one authority above the whole group. Groups which had not so compacted were still essentially at war each with the other. This natural war of each against all, according to Hobbes, survives between organized groups or States, and it is described as the use of force and fraud. Within the frontiers of the State there is no appeal against 'the mortal god' who, in effect, is a monarch, although in theory the sovereign may be a multitude; and there is no appeal because force is against any such appeal. As for a Church, either it is the State itself in one of its functions or it is a subordinate form of society like a goose-club. Political realism could go no farther; and with some uncertainty perhaps, but with evident intention, force is made to be the fundamental political fact. Against this Locke's conception of civil government was in part a protest. Man is not for him quite so physical, and 'the state of nature' is clearly distinguished from war. Primitive man is rightly considered to have social tendencies; and Locke (*q.v.*) adds to the idea of a compact the valuable conception that civil administration is not based upon an unlimited surrender of individuality, but on limitation of independence with a view to particular purposes. He implies that these purposes are not the only purposes of life, and he definitely makes allegiance to a government depend upon its success in attaining the purpose for which it exists.

The two leading conceptions of the period in all writers were those of a state of nature and of a social compact or contract. They have been many times proved untenable, and, although they survived into the Revolutionary period and perhaps influenced the idea of 'the rights of man,' they had been already exploded. For it is obvious that primitive man was neither so unsocial as Hobbes imagined him nor so intelligent as Rousseau thought. And even as a logical basis for society, as opposed to a historical origin, a social compact implies far too calculating and conscious an activity. But perhaps now we need rather to understand the element of truth in these two ideas of the late Renaissance. It is true that political society is based, logically and historically, on a tangle of primitive impulses and that its best purpose is the preservation and development of the constructive tendencies which are 'natural'; on the other hand, it is true that a relation not un-

like a compact is logically implied in the half-reasoned acceptance by citizens of the political conditions under which they live.

The international law of this period deserves special consideration, for it reflects a new phase of political experience and adds something to political theory, but with strangely little effect upon the idea of sovereignty. International law was primarily an attempt to supply another conception for the mediæval idea of the unity of civilization. It was based upon the obvious facts that no State was isolated, and that the relations between States were not altogether those of force and fraud. There were indications that at intervals even sovereigns regarded other sovereigns as trustworthy or amicable; and, when the peculiar habit called war broke out, there seemed to be some limits set to the amount of force or to the intricacy of the fraud usually maintained. How was this to be explained? The attempts which were made to explain it culminated in Grotius (*q.v.*), who established or revived for many generations the conception of a natural law, with Christian connexions, superior to the will of States or princes. Besides being only the expression of the moral feeling of that particular period, this natural law, in so far as it was defined, was a mild restrictive suggestion which the international lawyers tried to believe was a command. But its presupposition was that the agents of States could use anything except a few peculiar practices, and need not feel even that restriction when the existence of their own form of government was in danger. Personal rule had created a mythical State-person, having all the qualities of personality except moral responsibility. At the close of the Renaissance period another great political realist appeared. Charles de Secondat Montesquieu set himself, in *L'Esprit des lois* (Geneva, 1748), to study political facts by the method of comparing the usages of different peoples. The evidence at his disposal was very deficient, but he arrived at some valuable conclusions—e.g., that environment affects institutions. His attempt to distinguish the inner spirit of different forms of government as well as their external forms is also valuable.¹ His aloofness is partly that of the scholar, partly due to the spirit of the 18th cent., when passionate feeling had not yet disturbed or developed the course of political thought.

6. Influence of Rousseau.—Meanwhile the dumb majority were living and dying, hardly troubled by 'glory' and gradually rising to a hope for something more than food and clothing, of which, indeed, the prevailing social organization made the distribution more and more uneven. The movements of the following centuries were political largely because economic needs could not be supplied without political disruption. And it was beginning to be felt that government for the good of the governed should not be a kindly concession by the established powers, but a right—i.e., it must be conceived as the very nature of government and the only basis of moral allegiance. A new and truer conception of humanity was shaking the barriers which divided social castes.

The new age was heralded by the work of Jean Jacques Rousseau (*q.v.*). Still moving in the confused region of contracts, rights, and sovereignty, Rousseau redeemed the old words and foretold a new spirit by his undeluded love of men. He thought in terms of real life, even when he used the musty language of his predecessors. In the analysis of fact Rousseau emphasized chiefly the dependence of the individual upon society for his thought and feeling as well as for his material wants, but he so phrased his conceptions that the

choice of the individual seemed to be the ultimate source of government. As for suggestions of social betterment, he required a complete supremacy of all adult men of the group, who were to rule directly through their agents. They were, however, to have power, not because of their combined force, but because their real will could not be mistaken. This was a moralizing of politics; but in effect Rousseau only transferred to popular government the absolutism and the divine right (*q.v.*) which had hitherto been allowed to personal government. Again, for him as well as for most of his contemporaries, the State meant the whole of organized society. And, again, in the effort to preserve local political vitality he repudiated the device of representative government. These are obvious mistakes. But the great importance of Rousseau is not merely due to the effect of his work on his own generation; it comes from the fact that he re-established the old Greek and fundamentally human idea of political society as an opportunity for the full realization of what is best in man. His argument is often bad and his language always ineffective, because of the obsolete conceptions with which he had to work. But one can feel the effort to express a new meaning. Men were to be truly free in political society; they were to find in it more than they had surrendered in the mythical contract; and they were to be 'citizens,' because 'subjects' only of the general will. The Revolution was intoxicated with the word 'citizen'; and it marks a new age, if we consider that for writers like Hobbes the products of the social contract are only subjects. With the title of citizen the common man felt that he could rise from his knees; and, even if later he mistakenly worshipped himself, he was at least given a dignity without which the political progress of recent years would have been impossible.

Burke, who imagined himself as far as possible opposed to Rousseau, is full of the same kind of humanism. He feels the naturalness of institutions and the value of tradition, but his intellectual analysis of facts is inadequate. The circumstances of the time often misled him into the maintenance of what was obsolete, and he saw objections against any new idea much more clearly than the evils of the established system.

The two great political changes of the period, of which the importance is hardly recognized even to-day, were the political experiments in N. America and in France. 'The rights of man,' vaguely conceived by English revolutionaries, were taken as the theoretical basis for the republic of the United States and, under the influence of thinkers, adopted by the revolutionaries of France. The phrase, however, sounds so empty to-day that it is difficult for us to understand the force that it once had. It meant that there was to be recognized by every political society a fundamental humanity in every man which should not be, as it still is, forgotten in the pursuit of wealth, or because governments desire to act without being criticized, or because we know that men differ in ability.

In the meantime men were turning away from the comparison of different organizations to the criticism of all organization in view of fundamental needs. The new question was not which form of administration was best for the attainment of old purposes, but what purpose any administration should pursue.

7. Utilitarianism and politics.—Political thought renewed its life in the utilitarians. The experience which gave rise to their calculus of pleasures was the dismal beginning of industrialism. At first a revolt against the restrictive influence of the

remnants of the mediæval system, utilitarianism (*q.v.*) became ultimately an appeal for the full and free development of all human beings. Jeremy Bentham was the source of the new energy. 'The greatest happiness of the greatest number' became the new gospel. The effect of Bentham's theory upon political practice was so obvious and is still so recent that even practical politicians admit in this case the importance of theory. For Bentham initiated the modern practice of continuous legislation. The State was not merely to maintain, but to develop and increase the opportunities for civilized life. From this period we derive the conception of a scientific use of legislation for definite social effects and the desire to have as few restrictions on individual action as is consistent with order. J. S. Mill (*q.v.*) was the most philosophical thinker of the new school, especially as regards the fact that spontaneous individual action is the only source of a valuable social life. So far as the analysis of fact is concerned, the most important influence upon political thought came from the new study of economic facts. At one time the State seemed to be concerned only or chiefly with wealth. Mill represents this element in the new phase of political thought. Much discussion turned upon commercial policy, and for the first time a proper attention was directed to the relation of administration and economic production. English political thought has since fallen into the hands of the lawyers, whose natural interest is in methods rather than in moral ends to be pursued. The problem of legal sovereignty has bulked largely in their imagination, and they have done admirable work in making the machinery of government more effective. Their deficiencies were due largely to an extreme provincialism. French thought, meanwhile, was making progress in the basic conceptions of political society. It was perceived that society could not be understood as a machine, and that the conception of individuals as nerveless similar units was destroying social vitality in the attempt to prevent the growth of privilege. The republic was criticized as severely as any monarchy had been. In Germany the philosophical study of man led to conceptions of society vaguely correct but hopelessly without reference to contemporary facts. The most valuable idea developed was that of the historical evolution of various forms of organization.

The attitude towards established government, adopted chiefly in France and England, was one of suspicion. It seemed to imply that the individual was best when alone or was by nature isolated. *Laissez-faire* (*q.v.*) led to brute conflict, and the State was becoming a machine for the use of manufacturers. The influence of the historical school, both on the Continent and in England, should be counted as correcting the mistakes of this false individualism. In practice it had been corrected, for the political influence of the later utilitarians was by no means directed to isolating the individual. But the theory of the State as a living and natural unit was needed to complete the tendency towards socializing all political activities. The historical school rightly looked back to a form of political humanism in their opposition to what appeared to be a too mechanical conception of society and the State. But their ambitions misled them. They lost sight of the individual in the endeavour to transcend him; they confounded the State with society as a whole and, in the desire for organic conceptions, they raised from the grave of Leviathan a monstrous ghost—the mystical State which is above all morality.

8. A new political theory.—The crude and as yet unexamined conceptions of nationalism at present popular are in part due to the mistakes of the

historical school. Already, however, especially among French writers, there is a return to the individualism (*q.v.*) of earlier times, with such corrections as must be allowed from the suggestions of Auguste Comte and his followers (see art. POSITIVISM). Society is clearly not a mere collection of individuals, nor is the State a mere contract of citizens; but, on the other hand, the social unit or the State is not to be explained except as a special form of relation between individuals. Neither the atomic individual nor the mystical crowd-mind is a fact; and with such negatives the history of political theory ends, except for the study of special or departmental interests.

Again, however, political life outgrows the formulae of established theory. Within the frontiers of every civilized State independent quasi-voluntary associations have arisen — the trade-unions (*q.v.*). Across the frontier voluntary associations for the use of capital in undeveloped countries have become powerful. State action has immensely increased, and no clear limit appears as to what the State can do; but other organizations have begun to repudiate the idea that they owe their existence to the State. Further, by contrast to the preceding period, States are compelled by force of circumstances to act together; and, most important of all, for the first time in human history every human being is brought into continuous political contact with every other, since all the States of the world are at last connected. The mass of new facts has led to extreme specialization in action and thought; and so far no comprehensive view has become common nor is any suggestion of improvement generally accepted. Recent political thought is to be found embedded in the discussion of general social and economic questions. Socialism and syndicalism (*qq.v.*), although implying political conclusions, are far-reaching social movements rather than programmes of State action. For the old theories of the State begin to appear superficial to an age impatient of fundamental evils and unlikely for much longer to be satisfied with the modification of a few officialisms. Already there is evidence that a new political theory is arising out of the new social theory; and the new experiences of recent years will perhaps require an entirely new analysis of fact, not to speak of new suggestions of reform. It is becoming obvious that political thought should concern itself not only with devices of government, but with the establishment of more ideal purposes than those now commonly accepted.

Although the situation has indeed changed in so many ways that much of the old political theory is obsolete and all of it is inadequate, we owe much to the statesmen and thinkers of the past. The results acquired in practice are probably such as that the consent of the governed is essential for good government, that different situations need different systems, that political life changes and therefore the system of administration should change. These are principles which may be observed to be implied in the action of the more advanced political groups. In the sphere of theory the old truths still valid are such as that society is a real and natural whole, that man is made by society and yet the individual is the only source of development. But, naturally it is impossible to distinguish clearly theory from practice when we are making a summary of our indebtedness for the achievements of past ages. We can only build the future upon the good already established by men now dead. The greatest good, however, that we may derive from them, in the effort to elevate political action and illuminate political theory, is the power to repudiate

what we have inherited when it hampers our perception of evil or dulls our desire to destroy it.

POLYGAMY.—See MARRIAGE, FAMILY.

POLYNESIA.—1. Introductory.—Polynesia is the name given to a number of Pacific islands whose inhabitants are closely related to one another, speak dialects of substantially the same language, are similar in physique, and are, in fact, a distinct, though not a pure, race. The chief groups of islands included in the area are Samoa, Tonga, Tahiti and the Society Islands, the Hervey or Cook Islands, the Marquesas and the Paumotu, with the Hawaiian or Sandwich Islands to the north and New Zealand to the south. The Fiji Islands form part of Melanesia; but their people are largely Polynesian in character; and there are, scattered among the islands of Melanesia and Micronesia, small outlying settlements of people either wholly or partly Polynesian.

The Polynesians have long been subject to the influence of white men. Mission stations were established long ago in most of their groups, and the people have been in constant contact with travellers, traders, government officials, and others. The old religious beliefs have been swept away, and superseded by Christianity; early social and political systems and customs have been displaced; past cultures have been forgotten. It is therefore necessary, in writing about these things, to adopt the past tense, even though some of the matters spoken of still survive. It must not be assumed that every statement which follows applies to all the islands, the intention of this article being merely to indicate, as far as possible in the space available, some of the more widely spread or characteristic features of Polynesian customs and beliefs.

2. Origin and migrations.—It is believed that, prior to the migrations about to be mentioned, the islands of Polynesia, or many of them, must have been occupied by a people more primitive in culture than these later migrants. This belief is based upon a recognition of physical differences among the people; upon an investigation of the systems of relationship, nomenclature in connexion with those systems, and certain relationship duties and privileges found in Polynesia; upon a study of certain Polynesian beliefs, cultures, and customs, including the custom of *kava*-drinking; and upon a comparison of all these matters with what has been found in Melanesia. Much fresh light has been thrown upon this difficult subject by W. H. R. Rivers in his recent great work, *The History of Melanesian Society*. The later migrants moved into the Pacific from the islands of Indonesia; they had probably passed to those islands from an earlier home on the mainland of further India; and there are grounds for suggesting a still earlier home to the north-west. Their movements from India to Indonesia, and afterwards, by routes skirting some of the islands of Melanesia, to the Pacific, are believed to have been caused by pressure from behind; and it is thought that in the course of their migrations through Indonesia they themselves came in contact with, and to a certain extent pushed before them, Papuans or Melanesians then

occupying the islands. Their legends indicate that their first halting-places in the Pacific were probably the Fiji Islands, from which they reached the Samoan and Tongan groups, and from all these they spread westward among the other groups which now constitute the islands of Polynesia. Certain definite migrations are recorded in these legends; but there must have been unrecorded movements, and, indeed, it is possible that during the whole period there was a more or less undefined and intermittent process of passing from India southward and eastward. The period of what is regarded as the first recorded migration from India to Indonesia has been placed in the last century prior to the Christian era; but it has been suggested that the movement began some few hundred years earlier. Their first recorded appearance in Fiji has been allocated to the 5th cent. A.D., but probably there were Polynesian colonies in Fiji before then. It will be seen, therefore, that, if these figures are anything like correct, the whole period of migration may have been extremely prolonged; and, whatever may have occurred before the departures from India, there must have been, during this period, numberless times of separation and isolation of bodies of migrants, and the people must have come into contact with other races. Then, again, after the Polynesians were scattered about in the Pacific, further separation and opportunities for differentiation arose. It is therefore hardly to be wondered at that, when many centuries afterwards they came under the notice of white observers, it was found that, notwithstanding the general similarity among the people, there were marked differences in their cultures and beliefs. The period, extending over centuries, of occupation of the western islands—Fiji, Samoa, and Tonga—has been spoken of as the Homeric age of the Polynesians, when flourished so many of their heroes, whose deeds are embodied in the traditions and songs that form the classics of the race.

3. **Political systems.**—The political division of the people was largely geographical, each village, subdistrict, district, and large division of an island, and each island or group of islands, being to a large extent a separate entity, managing its own affairs. The political power, and such rude systems of justice as the people possessed, were in some of the islands mainly in the hands of the chiefs, small chiefs controlling villages and small districts and great chiefs ruling over the larger areas, whilst in most of the islands or groups there were powerful head chiefs, sometimes with special distinctive titles, who are generally spoken of by writers as 'kings.' In some of the islands there were classes of landed proprietors inferior in rank to the families of the chiefs, from whom they were distinct, but who nevertheless possessed considerable influence and power. This was the case in Tahiti, where no important proposal could be carried out without the concurrence of the landed proprietors, and perhaps still more so in the islands of the Samoan group, where each village, subdistrict, district, division, and island had its *fono*, or meeting of land-owners, by whom the affairs of the area under their jurisdiction were discussed and regulated, and whose powers rivalled, and in some places seem to have over-ridden, those of the chiefs.

4. **Past clan systems.**—There was little or no clearly defined system of division into clans, with their accompanying practices of clan exogamy and clan totemism; but there is abundant evidence that such a system must have prevailed in earlier days and that some of its features still survived. This evidence is diverse in character. An enormous number of their gods were incarnate or

immanent in animals and plants or in parts of them, in inanimate objects, such as stones, and in phenomena of nature; and the attitude of the people towards these things, and the imagined attitude of the latter towards the people, seem to point irresistibly to a totemic origin—that is to say, these visible representations of their gods were deified totems, or, as has been suggested, had been the totems of deified heroes and ancestors of long ago. For instance, a Polynesian would be unwilling to kill, and still more unwilling to eat, the animal which was the incarnation of his own god or that of his people, and the accidental killing of one of these animals, or the finding of it dead, would cause great distress, and perhaps involve a religious ceremony; he would, however, have no scruples in regard to the god of his neighbour or a neighbouring people. He not only trusted the incarnation of his god to do him no injury, provided, of course, he had not been guilty of a grave offence, but he actually looked to it for guidance, help, and protection. There is, moreover, evidence which points to beliefs as to animal incarnations having been the ancestors of their worshippers, or the offspring of human ancestresses. Then, as regards the more social aspects of a clan system, the attitude of the people towards one another includes features highly significant of clanship; these features are various, but by way of example reference may be made to the idea prevalent in some of the islands, that, if A killed B, it was a social and even religious duty of all B's people to join in retaliating, and their vengeance was directed, not only against A, but also against all his people, a whole village sometimes being involved in the matter. There were also clear and unmistakable relics of clan exogamy; and in some of the groups—notably in Tonga—family rank descended by a matrilineal system, and there were traces of the same thing in other groups.

5. **Myths of creation.**—The dominant idea of some of what are believed to have been the oldest Polynesian myths of creation was the evolution of light from darkness, with which was sometimes associated the beginning of sound and of stability.

The Maori myth told of the embrace of the original parents, sky and earth. So close was this embrace that their children, who were between them, were being smothered, until one of these, Tane, succeeded in forcing their father, the sky, upwards and so letting in light and air. The same myth was known in Niue (Savage Island); and the belief that the sky had originally been forced and propped up from below prevailed widely in Polynesia. The beautiful Marquesan legend told of the victory of Atea (representing light, or perhaps even the sun) over darkness, and of sound over silence; and the marriage of Atea with the dawn. The Hawaiian myth narrated the achievements of Kane—the Hawaiian spelling of Tane—representing light, and two other beings, representing sound and stability, who broke up darkness and chaos, admitted light, and created the heavens and earth and, lastly, man. In Mangala (Hervey group) the legend of creation begins with references to certain spirit-beings, not of human form; and then goes on to tell of a woman, called the 'very beginning,' or the 'beginning and the bottom,' who dwelt in the depths below the earth, and of the children whom she produced by tearing off portions of her own flesh, of whom the eldest, Vatea, representing the moon, and so in effect the light, was the divine ancestor of mankind.

Several of the Polynesian myths, in the form of a recital of a series of consecutive births or evolutions, suggest the development of firm rock or foundation from sand, slime, or dust. Tane and Kane were the same god; Atea and Vatea were also the same as Tane, or at least represented the same conception; and to Tane must, perhaps, be accorded the original primacy in the Polynesian pantheon; though he had not retained it in all the groups, and in some of them, in particular, had been wholly or partially forgotten and supplanted by another god, Tangaroa, who was there regarded as the creator of all things. Another idea which was widely scattered in Polynesia was that the islands or groups had been dragged up by one or

other of their ancient gods, by means of a fish-hook, from the bottom of the sea.

6. Ideas as to earth, heaven, hades, etc.—A belief prevailing in Polynesia was that the earth—a term generally confined to one island or group of islands and the surrounding sea—was a flat surface, overarched by the sky, and ending abruptly at the horizon, where sea and sky met. In some of the groups we find the idea that the heavens, above the visible sky, were formed in a series of concentric layers or strata, the higher being darker than the lower, and the highest being absolutely dark. These upper or more distant heavens, spoken of as the region of Po, or night, were believed to envelop all things, both the visible sky and the earth, so that it was Po in the remote heavens above, and Po in the regions below the earth. This idea has an important bearing upon Polynesian beliefs as to the homes of their gods and the destination of the souls of the dead. The old migration traditions and myths point to the west as the place from which they came. The home of their gods, some of them known in most or all of the groups (possibly gods or living heroes of Indonesian or pre-Indonesian days), was a beautiful paradise away to the west, and in the region of darkness, which was believed in some islands to be in the sky above, and in others to be in the depths below. The apparent confusion between the distant west, beyond the horizon, and the sky above was natural, for anything coming from the former was visibly approaching from the sky; and the further confusion between the sky above and the region below arose from their conception of Po. Similarly, the most general belief as to the destiny of the souls of the dead was either that they went to live with the gods in their western paradise or that they passed into Po.

7. The soul during life.—The belief that man possessed a spiritual personality quite distinct from his physical body—a ghostly self, which we may call a soul—and that this soul survived the body at death is found throughout Polynesia; the statement as to survival must be qualified, however, by saying that in some islands it was believed that the souls of the low-class people died with their bodies. There was a distinction in their minds between this soul, on the one hand, and the mental and moral faculties and emotions, on the other. The belief that, when dreaming, the soul of the sleeper left his body and actually saw what appeared to him in his vision was apparently widely spread; and dreams were a recognized method of inspiration by the souls of the departed and the gods. In some of the islands the possession of a soul, or at all events of a mysterious invisible self, was attributed not to man alone, but also to animals, and even to trees, plants, and inanimate objects; and we find beliefs that with these also this invisible self survived the death of its owner.

8. Good and bad conduct.—It may be said generally that a man's conduct, as between himself and his fellow-men, had no influence upon his life on earth or upon the future of his soul. The only offences noticed by the gods were acts of disrespect to themselves—omissions of acts of devotion, shortcomings in performance of the usual religious observances, breaches of the tabu, and, perhaps especially, neglect in offering in sufficient quantities the required sacrifices, the last offence being one to which the priests, for obvious reasons, attached special importance. For offences of this sort the gods inflicted the punishment of illness; and, if the offence was serious and the gods were not appeased, the illness would be followed by death.

9. The soul after death.—The conduct of a man

during life, even as between him and the gods, had no influence upon the destination of his soul after death. In some of the islands all souls went to the same place; in others there was an alternative between what may be called heaven and some region under the earth—generally Po. But in nearly all the groups it was solely a question of rank, only the chiefs and upper classes going to heaven, and the common people, if their souls survived at all, going below; though in one group the alternative depended upon an entirely different matter.

In Samoa and Tonga the souls of chiefs went to their heaven, Bulotu, which was one of the homes of their gods—indeed, the souls of Tongan chiefs became gods; the souls of common people of Samoa went to a sort of hades, called Sa-le-fee, which was not exactly Po, but was for all practical purposes the same; the souls of common people of Tonga died (according to the more prevalent beliefs) with their bodies. Bulotu was away to the west; the Samoans believed it to be a region under the sea, and the Tongans thought that it was an island. It was a beautiful place, abundantly supplied with plants, bearing the richest fruits and most beautiful flowers, and with quantities of pigs; and, when the flowers were plucked and the pigs killed, others immediately took their place. Sa-le-fee was under the earth; it was the home of the family of the cuttlefish god, and, though not apparently a place of actual torture, was an unpleasant place to live in.

The Society Islands heaven was Rohutu-noa-noa, a home of the gods. It was primarily the destination of the souls of members of the great Society Islands semi-sacred Areoi society; but, as any one could go there whose surviving relatives could afford a somewhat expensive ceremony after his death, it was also in effect the destination of chiefs and important persons. All other souls went to Po. Rohutu-noa-noa, which was really Bulotu with another name, was by these people believed to be near (apparently above, in the sky) a mountain on the north-west side of the most westerly island of the group; the description of it is similar to that of Bulotu. All souls which did not attain to life in Rohutu-noa-noa had to go to Po, the journey to which appears to have been a westward one; it was a home of the gods, and was not regarded as a revolting or terrible place.

In Mangaia (Hervey Islands) the alternative destinations of the souls were paradise in the heavens above and a subterranean Po—both of them homes of the gods. Here the soul's destiny did not depend upon rank; the souls of those slain in battle went to paradise, but all others went to Po. The heavens were above, built of azure stone; and the souls that reached them were clothed with beautiful and sweet-scented flowers, laughed, danced, and enjoyed themselves in every way, looking down with disgust at the poor wretches in Po, who had to endure the indignity of being covered with the dung which fell from their more fortunate friends above. There were three points of departure for Po; but they all faced westward. The beliefs of the people of Rarotonga (Hervey Islands) were fundamentally similar to those of Mangaia.

In the Marquesas the souls of the upper classes went to heaven, this being, they thought, an island up in the sky, apparently beyond the seas, abounding in everything delightful; those of the lower classes went to Po, beneath the earth. Each of these was a home of the gods.

The Maoris of New Zealand recognized the idea of Po in its original form, as extending in concentric layers both above the visible sky and beneath the earth. Po above was the home of the gods;

and Po below was the destination of all human souls, which after death descended to the impenetrable darkness of its lowest depths, where they gradually pined away and ultimately became annihilated.

In Hawaii there was a common belief that the souls of the dead went to Po and were there eaten or annihilated by the gods; but there were variations of this belief.

It will be noticed that generally the alternative destinations were paradise and what we may call Hades; that each of these was a home of the gods; and that, whilst the former was delightful, the latter, though not necessarily a place of torment, was not a desirable residence—among other things it was always dark and gloomy. It will also be observed that heaven was usually supposed to be situated somewhere in the west; and so generally was Hades; for the most usual route to either one or the other was westerly, commencing with a rock facing the sea at the westerly end of the island group, from which the soul leapt into the sea. In New Zealand the leaping place was at the northerly extremity of the islands; but the migrations to this group of the Maoris were from central Polynesia, and a glance at a map will explain what might otherwise be regarded as an inconsistency. It may be that the custom which, as will be seen, prevailed in some of the islands of placing the remains of the dead in a canoe or a canoe-shaped receptacle is significant of a belief as to the journey of the soul when released from the body. It is thought that all these beliefs concerning the west must be associated with the early traditions of the people about the quarter from which their remote ancestors had migrated; for this would be the natural habitation of their oldest racial gods, and, to a certain extent, of their pantheon generally, and the natural destination of the souls of the dead.

In some of the islands it was believed that the soul during its journey might have a chance of turning back and re-entering its body. This was so in the Hervey Islands and in Samoa. In the latter group the belief was that, if the soul struck against a coco-nut-tree near the western land extremity at which it leapt into the sea, it could come back; and a man apparently dying, but afterwards recovering, was believed to have died and come to life again through this fortunate accident to his soul.

A belief which prevailed in many of the islands was that the souls, on reaching their ultimate destination, were eaten by the gods, or one of them. Except perhaps in one or two groups, this fate awaited only the souls that went to Po, and not those bound for paradise. It is sometimes spoken of by writers as a punishment for the people's sins against the gods. So far as the Society Islands were concerned, this statement receives some support; for we are told that in that group those who had sinned were eaten and the innocent were spared; in other groups it was the fate of all, good or bad. There is ground for suggesting that this soul-eating was not merely a matter of divine gastronomical enjoyment, but that there was connected with it an underlying idea of the passing of the souls through the gods, for the purpose of purifying them and making them fit to live among the gods.

The souls would sometimes linger about their old haunts before starting on their final journey, and in some of the groups they would actually return from their abode in paradise or Po and revisit their friends. They seem to have appeared usually in human form, but to have been immaterial and mist-like. Their visits were much dreaded by the people, though it does not appear

that they were usually believed to act malevolently during their wanderings.

10. The gods.—The Polynesian gods were extremely numerous, and differed widely in celebrity and power. They were greedy of respect and religious attentions and merciless with those who failed in these matters; but it cannot be said that they were regarded merely as a body of malignant beings, only to be propitiated. The people appealed to them for active guidance and assistance in all the affairs of life, both great and small, and relied confidently upon receiving it; and a large proportion of the omens which governed the people's decisions, even in most important matters such as peace or war, were the actions and movements, most carefully watched, of the divine incarnations. First in rank came what may be called the racial gods—great deities, one or more of whose names were known in nearly all the groups; these included Tane, Tangaroa, Rongo, Tiki (or Tii), Tu, Ru, the demigod Maui, and others; they were the oldest gods, possibly the divinities or heroes of the Polynesian ancestors in the Indonesian days or earlier. At the periods of visits of white men to the islands there was much confusion as to these gods. In one group only one or two were known, whilst in another group it would be another or others of them; in one group one held the supremacy, whilst in another group another was supreme; the beliefs as to the relationships of these gods, one to another, and even their origins, attributes, and spheres of influence, differed in the several groups. As a rule, they were not the objects of prayer and sacrifice, except on specially important occasions, the reason being that they were believed to be too remote to concern themselves with unimportant human affairs. Each island group, and many a single island, had gods wholly or mainly peculiar to itself; there were tutelary gods of specific sections of the people, of districts, and of villages, and family gods; and individual Polynesians had special gods, selected by themselves, or by their parents for them at birth, under whose protection and guidance they placed themselves. There were gods of the air, of the mountains, of valleys, of streams, of the sea, of animals, of plants, of fishes, of the forces and phenomena of nature. There were gods of various trades or occupations, from the most important productive labours to mere matters of personal entertainment. Of all these deities, some (including the great gods above mentioned) were spoken of as 'original gods,' or 'gods of night,' being regarded as having evolved themselves in the far distant past, never having been human; others were supposed to have been descended from, or created by, these original gods; others again were admittedly deified human beings. It may be said generally that these gods were believed to be influenced by sentiments, inclinations, and passions, and, as regards many of them, to engage in occupations and enjoyments very similar to those of the human race, though they were more enlightened and possessed supernatural powers. Very many of them were believed to be incarnate or immanent in, or to enter or take the forms of, birds, beasts, fishes, insects, plants, stones, and other inanimate objects and natural phenomena, all of which necessarily became sacred, each one to its own worshippers. There were, besides these deities, a number of spirits, some purely supernatural, others human in origin, some vindictive to humanity in general, others only to the enemies of their own clients, but all greatly feared by the people. It was usually through their help that sorcery was practised.

11. Hero- and ancestor-worship.—As many of the gods were admittedly departed human beings, and in some islands chiefs became gods immediately

after death, it may be said that the religion of the Polynesians included the worship of the dead. Whether it can be said that they were hero-worshippers or ancestor-worshippers depends mainly upon the definitions to be put upon these terms. As regards hero-worship, if, as is probable, a number of the Polynesian deities had been human beings—great chiefs, successful warriors, distinguished navigators, etc.—then to this extent their religion perhaps may be regarded as having had its origin, in part at all events, in hero-worship. As regards ancestor-worship, a Tongan chief would go to the grave of his deceased father or grandfather, and pray to him; but this does not necessarily mean ancestor-worship; the ancestor was regarded by the chief as a god, to whom he might pray, not merely because of ancestry, but because, having been a chief, the ancestor after death had become a god; and other people not descended from the deified chief also might pray to him. Some of the myths of creation ended in the birth of a god who was the ancestor of the human race, *i.e.* of the particular people who believed in the myth and worshipped the god; and this idea perhaps may be regarded as pointing to a past cult of ancestors. There is, however, no evidence to justify the suggestion of a general custom for members of families to worship their ancestors, either actual or collateral.

12. Sun-worship.—The evidence of sun-worship in the past is of a varied and scattered character; but its cumulative weight seems to be irresistible. Only a few indications of the nature of some of this evidence can be given here. Some of the gods are in certain groups associated with the sun—so much so that writers speak of them as sun-gods. There is a Tahitian legend, almost classic in form, concerning a god Hiro, which, though he was not there regarded as a sun-god, is very suggestive.

Hiro was voyaging with his companions in search of the *maro ura*, the special red girdle which was perhaps the most sacred object in Tahiti and is believed to have been specially connected with sun-worship. On one occasion, when he was sleeping in a grotto, evidently under the sea, his enemies, the gods of darkness, taking advantage of his absence, raised a violent storm, in the hope of destroying his boat and companions; Hiro, however, awaking just at daybreak, reappeared on the surface of the water, and with a look dispersed his enemies with the darkness.

Other evidence is connected with the great Areoi societies of the Society Islands and the Marquesas, and with certain seasonal festivals in which they engaged. These societies, which have been compared, and indeed associated, with the secret societies of Melanesia, appear, both from the legends as to their origin and from the performances in which they engaged, to have been connected with the worship of the sun. Among their performances in the Marquesas and perhaps in some of the islands in the Society group were certain seasonal festivals of a significant character. The summer, ending in April or May, was a season of rejoicing; but on its termination feasts were held to celebrate the departure of the gods to the abode of darkness; and, after these, prayers were offered to the gods to return. Then the *areoi* went into mourning, suspending all amusements, and retired to their homes to lament the absence of the gods; this continued until the spring, when, about October, they had another feast to celebrate the return of the gods (and especially, it would seem, the sun-god) and their period of rejoicing recommenced. These festivals, as might be expected, if the suggestion as to their significance is correct, were closely connected with the ideas of fertility and reproduction, and abundant crops and harvest. It may be noticed that this marked differentiation between summer and winter must in itself be regarded as an indication that these people came from some latitude very different

from that of the central Pacific islands. A custom of orientation of the bodies of the dead prevailed in some of the islands, but, in view of the beliefs of the people as to their place of origin, the homes of the gods, and the destination of the soul, this custom must not necessarily be regarded as evidence of sun-worship.

13. The priesthood.—There is ground for believing that at one time religious and civil authority were united in Polynesia. In Tonga there were two head chiefs or kings, of whom one, the *tuitonga*, held a purely sacred office, having little or no secular power, while the other, the *tuikanokubolu* or *hau*, was the actual civil and military ruler of the people; and the same division of the supreme power is found in Mangaia and Rotuma. The Tongan traditions go back to a time when religious and civil supremacy were united in the *tuitonga*, and tell of his parting with the latter; but probably the change was gradual. In some of the islands the head chief or king was the high-priest of the island; in all of them the chiefs, or at all events the higher chiefs, were regarded as divine or nearly so; and in some of them the chiefs were in many ways closely associated with the priesthood. In some of the groups there were recognized separate ranks or grades of priests, but this was not general. Considerable differences are found in the social status of the priests and their co-operation as an organized and distinct class. In some islands they formed a powerful united caste; in others they were merely members of the lay classes (and not necessarily of the highest of these), engaged in the ordinary vocations of life, and, except when actually inspired, having no special social status or power. Each of them, as a general rule, was associated with a specific god. As diviners and interpreters of the will of the gods, able in cases of illness to ascertain the cause of the divine displeasure and to specify the offerings required for its removal—offerings in which they usually had a substantial interest—they had considerable power; and the practice of sorcery gave them a special method of terrorizing the people. In some groups the sorcerers were regarded as a separate caste, distinct from and inferior to the priests, and there were certain ranks of priests who do not appear to have practised sorcery; but in some groups even high-class priests did this; and it cannot be said that there was any general defined distinction between priests and sorcerers. The father, or other head of the family, was in some of the groups the person to approach the tutelar family god.

14. Temples and places for disposal of the dead.—The Polynesians had temples and places for the disposal of the bodies of the dead. In many of the islands the temples were the mortuaries; in some the two were distinct. Where, as in Tonga, a chief became a god after death, the place where he was buried became in a sense a temple; for it was there that supplications would be addressed to him; but in Tonga they also had temples for their other gods. The temples included great national temples, temples of districts, of villages, and of families, the places of sepulture generally belonging to families. The great national temples, the domestic temples of the great chiefs, and in some of the islands the family burying-places of the chiefs were often massive structures; one form of these was a huge raised quadrangular arena, enclosed and supported on one or more of its sides by boundaries made of immense blocks of stone, the interior being flat, or rising upwards from the sides to the centre, and often wholly or partly paved. In some cases the stone boundary rose in steps; in some a portion of the enclosed arena was occupied by a massive stone structure, in the form

of a truncated pyramid, with sides rising in steps. The prevalence of this form of step-like boundary and pyramid may be a matter of some significance. In some islands the temples were merely houses, in form like domestic dwellings, and usually enclosed by an encircling fence. Similarly, in some of the islands, where it was the custom to keep the bodies of the dead above ground, house-like structures were erected for their retention.

In or about the larger temples there were usually some other erections connected with the religious rites conducted in them. These erections were different in the several groups; but they commonly included images, great and small, altars, upon which the sacrifices were laid, and houses for keeping some of the smaller images and other sacred objects, and for the occupation of priests and custodians of the temples. The images erected outside varied in character. Some were of stone and others of wood; some were rudely carved with more or less grotesque representations of the human form, others were not carved at all. And so with the smaller images kept inside the houses; some were merely shapeless logs of wood, or only poles or sticks, covered perhaps with sinnet and ornamented with red feathers—that sacred form of decoration throughout Polynesia; others were mere bundles of cloth, decorated with red feathers.

As regards all these objects, it must be stated that the old missionary idea that the people actually worshipped them was mistaken. They were images or symbols of the gods, to whom alone the worship was offered, and as such they were of course sacred; but this sanctity was not inherent in themselves, but due merely to their association with the gods. Sometimes, as in Tahiti, the god was supposed to enter temporarily one of these images, and through its medium to speak to the priest. On such an occasion the image would necessarily become specially sacred, just as the commonest Tongan layman would be sacred during a period of inspiration by the gods; but this does not mean that the image was worshipped as an 'idol.'

15. Religious observances.—Fear of the gods and spirits, the wish to turn away their wrath, and the desire to secure their guidance and help were for ever present in the minds of the Polynesians. Hence we have records of their methods of invocation and praise, possession, inspiration and divination, intercession, self-humiliation, offerings and sacrifices, and of their belief in omens, use of charms, and practices of sorcery. Religious ceremonies of one sort or another were associated, not only with the leading events of the lives of the people, from birth to death, but also with their daily life, their industries and occupations, and even amusements. Many of the prayers repeated by the priests were expressed in metaphorical and obscure language, the meaning of which was sometimes hardly understood by the speakers themselves; some of them included references to the traditions of the people, the genealogies of their chiefs, the feats of their heroes and histories of wars, and any other events of which the priests professed to have knowledge.

The faculty of obtaining inspiration from the gods and of expressing their wishes and intentions does not seem to have been nearly so much a monopoly of the priests as was that of invocation and intercession. In some of the islands any one might become temporarily inspired. Possession by the gods was generally indicated by great bodily agitation, in which the limbs became convulsed and the features distorted, the inspired person sometimes rolling on the ground in his frenzy, foaming at the mouth, and giving vent to violent cries. Thus they ascertained and announced

the will of the gods in matters great and small, public and private. In cases of illness the priests and sorcerers were the doctors, for they claimed to be able to find out the cause of illness—always either an offence by the patient or by some person connected with him, against the gods, or else sorcery—and plead with the gods for mercy, or try to counteract the machinations of the hostile sorcerer. There were actual remedies for known illnesses; but the curative powers of these remedies seem to have been attributed by the people to supernatural agency, the medicines being the vehicles or media by which the gods acted. The doings of these priests and sorcerers, and the articles, including medicines, used by them differed in the several islands, and indeed, as regards different individuals; but the predominant matters seem to have been the fees to be paid to themselves and the offerings to be made to the gods, this generally meaning, in part at least, to the priest. Sometimes one of these men would, without actually applying sorcery to make a man ill, frighten him into the belief that he was so and thus reap a harvest from him and his friends. Another customary feature was the acts of humiliation of the patient or his friends, intended to soften the hearts of the gods.

16. Omens.—Omens were believed in largely in Polynesia, some of them relating to the ordinary affairs of life, but the majority being connected with war. The people noted the position of the moon, the appearance of the stars, the forms and movements of the clouds, the advent of shooting stars and comets, the position of rainbows, the direction from which thunder was heard, the character and locality of lightning discharges, the sunset sky and other matters, and especially the movements and behaviour of birds and other living creatures in which their gods were supposed to be incarnate. The matters which these signs portended included, besides success or failure in war, the approach of death to a member of a household, the recovery or otherwise from an illness, the death of some chief, whose identity the omen did not disclose, or an invasion from a neighbouring island, etc. All these omens were believed to be signs sent by the gods; when the guidance was given by an animal incarnation, it was the god himself who was pointing out what should be done. The appearance before a Polynesian of the creature in which the god whom he worshipped was incarnate—perhaps a bird, a fish, or a crab—was sometimes regarded as a prognostication of his death; the god had come to receive his spirit.

17. Tabu.—The principle of the tabu, which was in effect a prohibition based upon the idea of sanctity, permeated deeply the minds of the Polynesians; it has been defined as a prohibition resting on a magico-religious sanction. There were certain forms of tabu which, though doubtless having a similar basis, were, in their application, of a social rather than an obviously religious character; and these cannot be dealt with here. Most of the other tabus fell under one or other of the following categories: they might be directed against (a) touching of a sacred person or object; (b) entering a sacred place or one in which a sacred ceremony was being performed; (c) doing certain things on certain solemn occasions; and (d) interfering with things upon which a specific tabu had been placed. The penalty usually expected for breach of any of these tabus was punishment by the gods, inflicted in the form of illness or even death. A few illustrations of these tabus will indicate their general character.

(a) The belief as to the sanctity of kings and great chiefs was almost universal in Polynesia, and none might come in contact with them, direct or indirect. In some of the islands no one

might touch one of these divine people or anything with which he had been in contact, or sit near him, in some places his food had to be thrown to him. In Tahiti the king was so sacred that any dwelling-house which he had entered, or furniture which he had used, or articles from or with which he had eaten or drunk could not be touched by any one else, and had to be burnt; even the ground upon which he trod became sacred, and so he had to be carried about on the shoulders of a bearer, who therefore himself became sacred. Any person who broke this tabu and came into contact, direct or indirect, became tabu himself. It was the same with those who had, in performance of the funeral offices, handled the bodies of the dead; they became tabu. The most widely recognized result of such a situation was that the person thus infected with sanctity must not handle his own food, as, if he did so, the sanctity would be transmitted to the food, and he would become ill and die. The removal of the tabu was effected in different ways in different islands. In Tonga, *e.g.*, a humble act of piety had to be performed before another great chief, whilst in Samoa the remedy was sprinkling with coco-nut-water. The tabu of the dead man was sometimes terminated on the completion of one of the regular funeral ceremonies.

(b) Entry into temples, or portions of them, and other sacred places, and even into private houses, when religious ceremonies were being carried on there, was in many islands forbidden to all except the priests, and perhaps the chiefs; and a violation of any tabu of this character would be regarded as a sacrilege, from which the direst consequences would ensue. The most widely spread form of tabu sign, intended to warn off trespassers, was a flag or piece of white cloth.

(c) There were certain acts of every-day life which were forbidden during the performance of certain solemn ceremonies and for a period after the death of a great chief. These differed somewhat in the several groups; but they included such things as eating food, or eating it in the day-time, lighting fires, engaging in certain occupations, launching a canoe, or passing in a canoe the place of ceremony or the place where the dead man lay.

(d) The placing of tabu upon specific things was a somewhat different matter. A king or chief, or perhaps a priest acting on his instructions, would place a general tabu upon a grove of coco-nut-trees or a patch of some other produce or upon the whole of some form of diet; and no man would dare to break it, even in secret. This restraint was not merely based on fear of discovery and earthly punishment; the tabu food was under the protection of the gods; a violation of the tabu would be an offence against them, and they would punish the offender. This point is illustrated by the fact that any man could place a tabu upon his own property; if it were, say, a coco-nut-tree, he would tie round it perhaps a frond of coco-nut or a wisp of grass or leaves; and any would-be pilferer knew well what this meant, and dared not risk the curse which would follow a violation of the tabu.

18. **Sorcery.**—Sorcery was practised by lower classes of priests, commonly spoken of by writers as sorcerers, and also, in some islands, by the higher priests. The supernatural beings through whose help it was accomplished were usually evil spirits, inferior in rank to the gods; but the gods themselves were not always superior to such work, at all events in some of the islands. One method of sorcery was what may be called contagious magic. A man, wishing to avenge himself on an enemy, procured some of his hair, saliva, urine, or excrement, or some remnants of his food, or a piece of his loin-cloth, or something else which had been in contact with his body, and handed this, with the requisite fee, to the sorcerer. The latter might take these things to his house or to the temple with which he was connected, and engage in incantations over them; or he might place them in a little bag, in which he carried images or other symbols of the supernatural beings whose aid he would invoke; and the bag might also contain such things as lizard-skin, parts of special plants, peculiarly formed stones, etc.; and he would probably bury the bag and its contents. Another method of contagious magic consisted in rubbing with a human skull food that a man was going to eat. Another form of sorcery was that of cursing. No doubt the prayers of the sorcerer engaged in contagious magic would be of the nature of curses; but in some of the islands it was believed that disaster could be brought upon the head of an enemy by merely cursing him. Presumably the imprecation was supposed to move the god or spirit, just as did the proceedings in connexion with contagious magic. In Tonga they had some special curses, amounting to commands that the

person cursed should maltreat a superior relation, such as 'Bake your grandfather till his skin turns into cracknel, and gnaw his skull for your share,' or 'Dig up your father by moonlight, and make soup of his bones,' and others of a highly indelicate character. These Tongan curses are referred to specifically because of what they would appear to involve. It was a tenet of Tongan religion that human merit, for failure in which a man might be punished by the gods, included among other things the paying of respect to aged persons and filial love; and it was considered a crime to eat food that a superior relative had touched; so, in pronouncing either of these curses, a man was commanding the committal of a double offence, for which the gods would punish the offender; for, if it was wrong to eat an aged relative's food, it must have been very wrong to eat the aged relative himself. How these curses operated is not stated; but it must not be assumed that it was believed that the victim would actually be impelled to commit the crime; for many of the Polynesian ceremonies were purely symbolic, and symbolism may well have been behind these curses, in the sense that the suggestion of the act took the place of its actual committal. Sometimes the victim was not aware of what was being attempted against him; but sometimes he was told of it, and then he would often pine away and die from sheer fright.

The underlying idea of Polynesian sorcery seems to have been that the supernatural being to whom the sorcerer appealed actually entered into the victim, sometimes perhaps through his food, and sometimes by direct entry into his body. The sensations of a person so possessed were far from pleasant; we are told, *e.g.*, of the evil spirit twisting and knotting the man's internal organs; and again of his causing the feeling of being transfixed internally by a barbed hook. These descriptions suggest certain internal complaints, which may well have been ignorantly attributed to sorcery.

There is a description by a missionary of a young Tahitian who had been subjected to sorcery. He was lying on the ground, writhing in anguish, foaming at the mouth, his eyes ready to start from his head, and his countenance exhibiting every form of terrific distortion and pain, while his limbs were agitated with violent and involuntary convulsions.

In some of the groups, however, the spell seems to have worked differently; in the Marquesas, for instance, it is said to have operated only slowly, the victim first becoming sick and then growing daily weaker, until, after about three weeks, he seemed to die from loss of strength.

In some of the islands there were alternative methods of saving a man who was under the spell of sorcery. One was to find out who was the sorcerer that had inflicted it, and by means of presents to him, exceeding in value those given to him by his original client, to induce him to call off the malignant and devouring spirit. The other was to call in the services of another sorcerer, associated with another supernatural spirit, more powerful than that which had produced the trouble, or perhaps, if only equal in power, stimulated to greater energy by more costly gifts. When a victim died, the instigator, or suspected instigator, of the calamity would often become himself the victim of persecution by the dead man's family.

19. **Funeral ceremonies.**—Something has already been said about the attitude and conduct of the priests, acting as doctors, diviners, and supplicants to the gods in time of illness. This matter of illness and subsequent death is also interesting as regards the attitude of the people, the relatives and friends of the sick man, especially when the invalid was a great chief or king, and thus the subject of anxiety and concern of a deep and

wide-spread character. Large numbers of people—relatives, friends, and chiefs and other important personages—came to the village of the dying man, bringing with them enormous quantities of cloth and of pigs and other food, to be offered to the offended gods. There was a general wailing, and much self-wounding and blood-letting; in the Tongan Islands women or children were in the case of a great chief strangled and offered to the gods; in the Marquesas on the illness of a priest enemy victims were sacrificed; sometimes only symbolic sacrifices were made, the people going to the temple with ropes round their necks, but not being actually slain. There is a narrative concerning the dying of a Tongan secular king, who was carried by his friends to the cook-house of the sacred king, and there placed over the cooking-hole, as a symbolic offering to the gods of the patient himself; we are told also of the same thing being done with the sacred king. The discovery that all efforts had been unavailing and that the chief was indeed dead was usually the occasion for a general howl of despair.

The methods of dealing with the bodies of the great dead, and the ceremonies with which the funerals were conducted, differed so widely in the several groups that it is impossible even to attempt to explain them here; there were, however, certain interesting features in some of the ceremonies, to which attention may be drawn, and a short statement may be made as to the modes of dealing with the corpse.

Immediately and for some time after the death all the people engaged in loud lamentations, which were, in most of the groups, renewed at certain stages of the funeral ceremonies. The lamentations were accompanied by most amazing self-wounding and laceration. The people in many of the groups would beat themselves almost senseless with clubs and other weapons, and stones, cut themselves shockingly on the heads, temples, cheeks, and breasts with instruments armed with sharks' teeth, lacerate themselves with shells, knives, and spears, sometimes driving spears into their limbs and bodies, or even through the cheeks into their mouths, thus making hideous wounds, from which the blood flowed profusely; they would tear off their hair in handfuls, and burn their bodies with lighted sticks or pieces of cloth. Various motives have been suggested by observers for these wild and excessive manifestations of grief. One suggestion is that it was intended to please the ghost, another that it was to please the gods, and yet another that it was merely a testimony of respect for the dead man's memory and of fidelity to his family. Any, or all, of these explanations may be correct; but none of them seems entirely adequate. It may be that a more correct explanation is to be deduced from the custom, which prevailed in Tahiti and perhaps others of the Society Islands, of catching the flowing blood in cloths and throwing these under the bier which held the corpse; and that the underlying idea was, or originally had been, an offering of blood to the ghost of the dead man, to strengthen it on its journey to the other world.

Another interesting practice, found in some of the islands, was that of giving the dead man some of his earthly possessions—either burying them with him or placing them on or near the bier—to which were sometimes added further offerings by his friends. Suggestions have been made by writers that the reason for the burial of the dead man's property with his body was that they were tabu; and this perhaps may have been the case as regards garments, mats, cloths, etc., which had been in contact with his dead body; but it can hardly be an explanation

of everything. The idea of providing the ghost with things for use in its new world is well known, and must surely be the explanation of many of the Polynesian practices. In Samoa valuable mats and other things were sometimes buried with the body; the grave of a warrior was surrounded with spears, fixed upright in the ground, while his club was sometimes placed on the ground and allowed to decay, no one daring to touch it; a few little trinkets and playthings might often be seen on the grave of a dead child. In Tonga most of the valuable property of the sacred chief, together with presents brought to the funeral, were buried with him. In Rarotonga they placed the dead chief's adze in his right hand, and his staff and drinking-cup by his side; and with a woman of rank they buried her cloth mallet and other domestic utensils. The practice of putting to death the dead man's wives and burying them with him prevailed, though apparently only to a limited extent, in the Tongan Islands. The custom of placing food on or near a grave or burial platform, and renewing it from time to time, was wide-spread.

Boxing and sham fights were usual features in most Polynesian festivities; but in some of the islands the ceremonies attending the burial of a chief included fights of a special character. In Mangaia (Hervey Islands) they had combats between parties, of which one was called 'the friends' and the other represented malignant spirits, and the former was always successful. In the Society Islands, when the body of a chief had been put on its resting-place—a bier, placed in the temple—it was surrounded by his family and people, all well armed. Shortly afterwards an armed party of friends from an adjoining district approached; they were called 'the mourners,' and they asked to be admitted to lament their chief. Permission was always refused; and thereupon arose a battle, which, though quite friendly and purely formal, often caused loss of life; and apparently the mourners were always the victors. In Samoa also they sometimes had combats which, though we have no description of them, there is reason for thinking had a special significance connecting them with those of Mangaia and the Society Islands. The special interest of these mock conflicts rests on the fact that a comparison of them with the ceremonial funeral combats usual in a district of Australia and in certain places in Melanesia seems to suggest that their underlying idea was an attack upon the hostile spirit that had caused the man's death.

Another curious ceremony practised in some of the islands may be called the 'burying of the dead man's sins.' In Tahiti a hole was dug in the ground, beneath the bier upon which the dead body lay; and the priest prayed to the god that the sins of the dead man, and especially that for which he had been called away, might be buried in the hole, so that the surviving relatives might be free from anxiety as to their future; the hole was then filled in, and the priest addressed the corpse, exhorting it (i.e. the ghost) to be content with its new conditions, and not to distress its surviving relatives by returning to them. Somewhat similar ceremonies were performed in some of the other islands.

20. Disposal of the corpse.—The methods of dealing with the corpse can be stated only in barest outline. Throughout Polynesia common people were usually buried underground with but little ceremony; but the modes of disposing of dead chiefs differed in the several groups.

In the Society Islands the body was taken to the seashore, and there is a statement that it was usually carried in a canoe as far as the opening of the reef, and back again. Within a short period

—generally three or four days after death—it was taken to the temple of the chief's family, and there placed upon a platform or bier, sheltered from sun and rain by a roof, in shape rather like an inverted canoe. There it was subjected to a process of preservation—a sort of simple embalming—and, when sufficiently dried up, it was wrapped in cloth, placed in a sitting posture on the bier, and allowed to remain exposed for an indefinite time. Ultimately it was buried underground beneath the platform. In time of war the bodies or their remains were often carried away to almost inaccessible spots in the mountains, in order to secure them from the sacrifice of the enemy.

In Tonga the body of a dead chief was carried, generally within a few days after death, to the burial-place of his family. The interment was underground in a vault, made of six huge masses of stone, one forming the bottom, four making the sides and ends, and one closing it in at the top, the whole being sunk underground, and covered with earth. These vaults were generally about 8 ft. long, 6 ft. broad, and 8 ft. deep; but that of a very important family might be larger, one such vault being described as capable of holding thirty bodies.

In Samoa, there appear to have been alternative methods of disposing of the body. The more usual one was burial underground, some ten, fifteen, or twenty days after death. Ultimately the body was placed in a canoe, or a canoe-shaped receptacle, and buried underground, with its head to the east and its feet to the west, in the family vault—a stone structure within the family temple, evidently somewhat similar to that of Tonga. Above the vault was erected a mound of stones, neatly built up in an oblong slanting form, about 4 ft. high at the head, and 3 ft. at the foot. Sometimes, however, the body was subjected to a rude process of preservation or embalming, and then either placed in a canoe and sent adrift out to sea or placed on a stage erected in the forest, and there left to decay, after which the bones were collected and buried. One or two of the leading families had a custom of embalming the bodies of their dead, placing them on platforms raised on double canoes, in houses built for the purpose, and leaving them there. Some Samoans used to exhume the dead bodies of their relatives, sever the head—that most sacred member in Polynesia—and reinter it in a family burying-place in the mountains, the intention being to save the head from enemies in case of war.

In Mangaia (Hervey Islands) the bodies of the dead were usually deposited in caves. Some of these were of the nature of chasms, into which the body had to be let down with vine ropes from above, and a description of one discloses that it was full of water, into which the body was dropped; others were apparently caves that could be entered from below. Some bodies were buried underground in the temples. They were fixed in a doubled-up position, with the chin and knees meeting, and the limbs secured with sinnet cord, and were then placed in the grave, face downward, with the head turning towards the east. A thin covering of earth was laid over the body, and heavy stones were piled on the top.

In the Marquesas the body was usually retained in the house in which the man had died, or in another house—sometimes for weeks or months; and there is a statement that it was flayed, the skin being preserved among the family treasures. Eventually it was put in a canoe-shaped coffin, which was placed upon a covered platform or bier (evidently very like that of the Society Islands) in the temple. Later, when the flesh had all decayed away, the bones were cleaned, and some of them

were kept as relics, the rest being buried in the temple. Sometimes the body, it would seem, was kept in a private dwelling-house until the time came for cleaning and breaking up the skeleton. The death of a high-priest involved human sacrifice and a cannibal feast; but apparently all the victims were not eaten. If the high-priest had been killed in battle, and his body had not been recovered from the enemy, his soul, we are told, could not travel to its destination until they had captured and killed a sufficient number of enemy men to paddle it thither; and fighting would actually take place for the purpose of securing a full crew.

In New Zealand the mode of dealing with the remains of the dead differed in the several parts of the islands. In some places the body was buried in a sitting posture underground in the house of the dead man; one or more of his wives strangled themselves, and several slaves were killed, so that the ghost might not be without attendants. After an interval of about four weeks the body was taken up for the purpose of a further funeral ceremony, and then reinterred. After two years the bones were again dug up, scraped, painted red (the sacred colour of Polynesia), wrapped up in mats, and deposited in a canoe, which was elevated on a pole, or in a small house, or they were placed on a stage at the top of a sacred tree, or put into a hollow trunk, or conveyed to a cave or a fissure in the rocks, or burnt. Another custom was to put the body into a kind of frame, formed by two pieces of an old canoe, and standing about 6 ft. high, the body being placed in a sitting posture on a grating in the hollow place between the parts of the canoe. After a time the skeleton was removed and scraped. Near the seaside bodies were often buried in the sand drifts.

In Hawaii some of the bones of the kings and principal chiefs were preserved, and either deposited in the temple or distributed among the relatives; and the rest of the remains were either burnt or buried. The bodies of priests and chiefs of inferior rank were laid out straight and buried in that position; and a pile of stones, and often a surrounding circle of high poles, marked the position of the grave. Priests were buried in the temples at which they had officiated. For other people natural graves were preferred, such as caves in the sides of steep rocks, or large subterranean caverns. Their artificial graves were only shallow, and were often dug in their gardens, or sometimes in their houses or in sequestered spots near them, the bodies being generally placed in them in a sitting posture.

LITERATURE.—The literature relating to the Polynesians is extensive and of a varied character; but the following are a few of the more important works: A. Fornander, *An Account of the Polynesian Race*, 3 vols., London, 1878-85; S. Percy Smith, *Uaouika*, do. 1910; W. H. R. Rivers, *The Hist. of Melanesian Society*, 2 vols., Cambridge, 1914; Horatio Hale, *Ethnography and Philology* (U.S. Exploring Expedition, 1838-42, vol. vi.), Philadelphia, 1846; Captain Cook, *Voyages*, London, several edd.; G. Turner, *Samoa a Hundred Years Ago*, do. 1884; J. E. Stair, *Old Samoa*, do. 1897; G. Brown, *Melanesians and Polynesians*, do. 1910; A. Kramer, *Die Samoa-Inseln*, 2 vols. and supplement, Stuttgart, 1901-02; W. Mariner, *An Account of the Natives of the Tonga Islands* (compiled by J. Martin), 2 vols., Edinburgh, 1827; B. Thomson, *The Diversions of a Prime Minister*, do. 1894; *Savage Island*, London, 1902; W. Ellis, *Polynesian Researches*, 4 vols., do. 1832-36; J. A. Moerenhout, *Voyages aux îles du Grand Océan*, 2 vols., Paris, 1837; Mrs. Salmon, *The Memoirs of Arii Taima*, do. 1901; W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876; *Sketches of Savage Life in Polynesia*, do. 1881, *Life in the Southern Isles*, do. 1876; G. Mathias, *Lettres sur les îles marquises*, Paris, 1843; C. A. ROBERT W. WILLIAMSON.

POLYTHEISM.—Polytheism is the stage or phase of the religious development of mankind in which the belief in and worship of many gods prevails. It is distinguished from the previous stage (polydæmonism) by the nature, and from the subsequent stage (pantheism, monotheism) by the number, of the objects of worship.

1. The antecedents of polytheism.—It is not necessary to retrace the development from its beginnings in animism (*q.v.*) or possibly an even earlier animatism (R. R. Marett, *The Threshold of Religion*, p. 15). Only two general remarks need be made.

(a) In the first place, the primitive monotheism which has been asserted has not been proved, as the assertion rests on insufficient and inconclusive evidence; and to this view applies the same objection as to the view that polytheism belongs to the pre-animistic stage.

'I am not at present prepared to admit,' says Marett (p. xvii), 'the postulate of a world-wide degeneration from the belief in such beings ('high gods'), as accounting for pre-animistic phenomena in general. On the contrary, I assume for working purposes that Mr. Lang's "high gods" must have had a psychological pre-history of some kind which, if known, would connect them with vaguer and ever vaguer shapes—phantoms teeming in the penumbra of the primitive mind, and dancing about the darkling rim of the tribal fire-circle.'

From the psychological standpoint the movement of the mind from the indefinite to the definite, the incoherent to the coherent, multiplicity to unity, is incomparably more probable than the reverse process. It is incumbent on us to try to make the development of the religious consciousness intelligible; and this we do, not by assuming any belief as a 'bolt from the blue,' a gift from heaven dropped down on earth, but by connecting it with the probable movement in the human mind under the given conditions of life.

(b) In the second place, totemism (*q.v.*) cannot be assumed as primitive or as a necessary phase of the development of the religious consciousness.

'The totemistic theory of the origin of worship has been widely propagated through the brilliant and learned monograph of W. R. Smith (*Journ. Philol.* ix. 75 ff.), and its fascinating exposition by Jevons (*Introduction to the History of Religion*, 1880); but the main body of English anthropologists refuse to regard it as primitive, while in France the hypothesis has been subjected to close and learned criticism (Marillier, 'La place du Totémisme dans l'évolution religieuse,' in *Rev. de l'Hist. des Religions*, 1897-98). Totemism seems most intelligible when viewed as formed under the play of savage thought or misconception, and as intruding upon and overrunning earlier forms of worship which found a god in nature or the spirits of men' (*HDB* iv. 331b).

Totemism assumes that the stage of generalization in thought has been reached, as the totem is not an individual, but an animal or plant class, and also presupposes the stage of tribal unity in life, neither of which can be regarded as primitive. There is not the same evidence that all religions have passed through a totemistic stage as there is regarding an animistic; and the psychological probability is not so great. We can hardly say that it appears necessary for religious thought to have passed through this phase. We cannot therefore connect polytheism so exclusively with totemism as Jevons does (pp. 234-248). Where the phase of totemism did exist, it is not at all improbable that, as he argues, the objects of the tribal cults, when a political union took place, were either fused together (syncretism), if for one or other of the reasons he suggests the spirits were not definitely enough distinguished either in belief or in worship to remain apart, or placed side by side in a national pantheon (polytheism). Totemism, however, was not monotheistic (belief in the existence of one God alone), nor even had it reached

the stage of monolatry (the worship of one God combined with the belief in the existence of others). As Jevons concedes (p. 239), 'the sky-god, whose favour is essential to the herbage which supports the herdsman's cattle, as well as to the farmer's crops, may be worshipped concurrently with the totem plant or animal, and retain his independence, as the Dyaus, Zeus, Jupiter, of the Aryans, did.'

Accordingly, we may question whether his statement, 'polytheism is the price which must be paid for political development' (p. 241), is so absolutely or universally applicable. Even where totemism does prevail, is it so certain that it must advance to monotheism? Polytheism need not then be regarded as a relapse from totemism; it may be regarded generally as an advance on polydæmonism (the belief in an indefinite multitude of spirits, and the worship of some of them). It must, of course, be understood that the distinction is logical, for our thought, rather than chronological, in time. Polydæmonism and polytheism overlap and intermingle. Gods and spirits may be worshipped together; but we may call a religion polytheistic when the worship of the gods is more prominent.

2. The transition from polydæmonism to polytheism.—How shall we distinguish the spirit from the god as the object of worship?

(a) The conception of the spirit is less definite than the conception of the god; he has less individuality; he has generally no name. As the god is conceived more definitely, he is less confined to, and more detached from, the individual object than the spirit which inhabits and controls it, and yet is not separated from it. As the god gets more of 'a name,' he has less of 'a local habitation' than the spirit. As man realizes more fully his weakness in comparison with the forces of nature, which he conceives as living, he endows the objects of his worship with powers, which we may at least describe as 'superhuman,' if 'supernatural' suggests too advanced a mode of thought; the god has more power than the spirit.

(b) Again, as man gets more familiar with the world, he begins to observe resemblances and connexions; he begins to classify plants and animals; he begins to recognize the effect of the great objects of nature—sun, moon, earth, etc.—on his environment; he begins to think of the objects in nature (may we say?) departmentally rather than individually. Each tree, stone, or stream may have its own spirit; there is a god of vegetation, of a land, of seas and rivers.

'The material progress made by man,' says Jevons (p. 234), 'as he advanced from the material basis of subsistence on roots, fruits, and the chase, first to pastoral and then to agricultural life, required that he should make an ever-increasing use for his own ends of natural forces. These forces were to him living beings with superhuman powers, of whom he stood in dread, but whose co-operation he required. Without some confidence that it was possible, if he set about it in the right way, to secure their favour and assistance, his efforts would have been paralysed. That confidence was given him by religion; he was brought into friendly relations with powers from which, in his previously narrow circle of interests, he had had little to hope or to gain.'

This practical interest was the main, if not the sole, motive of the intellectual development sketched above. Speaking generally, the relation to the gods is more definite, intimate, and confident than that to the spirits. As man comes, as it were, to be at home in his world, getting to know it, and so to use it more for his own good, the powers that he depends on, and whose assistance he seeks, appear to him more friendly, and he cultivates their friendship more carefully.

(c) Man only gradually distinguishes himself from living creatures, and animals especially; and thus his conception of the spirits or gods is not at once anthropomorphic. He does not at once make his god in his own likeness. There is a stage, which we may call the zoomorphic, when he thinks of the spirits as living beings. There follow as

stage, even where totemism does not prevail, where, feeling his kinship with some animals at least, he thinks of the spirits or gods as altogether animal, or partly animal and partly human. We may call this the therianthropic stage. At last, when he lifts himself above all his fellow-creatures, he thinks of the gods as men (or women) of like passions and forms as himself (the anthropopathic or anthropomorphic stage). In Egyptian religion we have a conspicuous instance of this development (see art. GOD [Egyptian]).

At first the god is an animal. 'Khnum of Elephantine was a ram, Hathor a cow, Nekhebt a vulture, Bast a cat, Horus a falcon, Anubis a jackal, Sebek a crocodile, Thoth an ibis, and so on' (G. F. Moore, *Hist. of Religions*, i. 147). Next the god is represented with an animal-head; lastly the god assumes a human form, but the animal which once represented him remains sacred to him.

3. The mythology of polytheism.—So much it seems possible to state of a general character about polytheism. The development of polytheism in each religion was determined by so many varied and varying factors that no simple uniformity but a bewildering variety appeared. Physical conditions, racial characteristics, political circumstances, historical occurrences—all affected the forms assumed by the belief and worship of the many gods. The personification of natural processes, the endowment of these gods with human qualities, passions, relations, and activities, the free play of the imagination with this varied material, the reflex influence of language on thought, metaphor begetting myth, the absence of any control of this development by scientific knowledge, moral sense, and religious reverence—all these factors combined explain the luxuriant, extravagant, and sometimes grotesque and even offensive mythology which connects itself with polytheism in the religions of mankind.

(a) *The moral defects of mythology.*—The description of natural processes as the personal actions of gods and goddesses, especially the comparison of these processes to sexual relations, results in the ascription to deity of what to a more developed moral sense appears immorality, although there was no such intention originally. Religion is more conservative in belief and worship than is morality, and much is told about the gods which a decent man would not do. Paul's condemnation of polytheism had been anticipated by Xenophanes in the ridicule which he casts upon anthropomorphism and anthropopathism.

'The Ethiopians imagine their gods flat-nosed and black; the Thracians, blue-eyed and red-haired; and if cattle and horses or lions had hands and could draw, horses would draw the gods as horses and cattle as cattle—each kind would make its gods in its own likeness' (Moore, i. 458).

To quote Xenophanes' own words:

'Homer and Hesiod ascribe to the gods everything that among men is a shame and a disgrace—theft, adultery, and deceit' (quoted by Moore, *loc. cit.*).

Only one other instance of such criticism of popular mythology need be given—Amphitryon's address to Zeus in the *Herakles* of Euripides:

'O Zeus, in vain I shared my wife with thee, in vain I called thee father of my son; thou hast not proved the friend thou dost pretend to be. Mortal that I am, I am much better than thou, a great god! For I did not betray Herakles's children, but thou understandest how stealthily to find thy way to men's beds, taking possession of others' couches without their consent, but how to save thine own friends thou dost not know. Thou art a stupid god, if not an honest one!' (quoted by Moore, p. 488).

It is no wonder that Plato desired that these stories should not be told to children because corrupting to their morals.

(b) *National differences in mythology.*—Not all nations were equally interested in their gods to develop a mythology about them. Of the Chinese deities Moore says:

'These powers have no plastic, dramatic individuality, like the gods of Greece; no mythology recites their exploits. They have definite functions, and by these alone they themselves are

defined. In this, as in other respects, the religion of China strikingly resembles that of the Romans; for a practical people it is enough to know what the gods do, and what their worshippers have to do to secure their favour, without trying to imagine what they are like' (p. 22).

But China and Japan offer the same contrast as Rome and Greece; for Shintō has an abundant and even grotesque genealogy of its many gods. Like Greece in the wealth of its mythology, Japan differs from it in the representation of the gods. While Greece represented the gods in the likeness of man, in a Japanese temple the deity is represented by some holy object (*shintai*) in which the spiritual presence (*mitama*) dwells; thus a mirror is the symbol of the presence of the sun-goddess. While Greece in its matchless art endowed its gods with beauty of form, Indian idols are 'to our taste grotesquely hideous—a human body with an elephant's head; tricephalous monsters; heads with a third eye in the middle of the forehead; human trunks with supernumerary arms and legs, and the like' (Moore, p. 345). Of this difference Moore offers an interesting explanation:

'It should be remembered, however, that all this ugliness is symbolical; the supernatural powers of the deity are intended to be expressed by these unnatural forms. The Hindu gods are less beautiful than the purely anthropomorphic gods of Greek art, because of the effort to make them more manifestly divine' (p. 345 f.).

In China heaven (T'ien) is the supreme emperor (Shang-ti), and determines both the moral and the natural order; in Japan the sun-goddess takes the highest place, but she has no relation to any moral order, although Japan did possess a customary morality even before the advent of Confucianism.

(c) *The influence of political conditions on mythology.*—Political conditions very directly and potentially affected religious ideas. Over each city-State in Egypt a god watched, cared, and ruled; when political combinations took place, the gods were brought into relation to one another. The chief god had a wife and a son. Amon of Thebes has as wife Mut (=Nekhbt of Eleithyia) and as son Montu (of Hermonthis). These triads have a special peculiarity:

'The son is the successor of his father, and it is his destiny in turn to marry his mother and so to reproduce himself, that is his own successor; and so though constantly dying he is ever renewed. The mother, not being a sun-god, does not die. If we remember that the gods have to do with the sun these things need not shock us, nor need we wonder at the statement which is very frequently met with, that a god is self-begotten, or that he produces his own members' (A. Menzies, *Hist. of Religion*, p. 135).

Rā, the solar deity of Heliopolis, rose to be the supreme god of the Middle Kingdom; but, as the political importance of the provincial cities increased, their local cults could not be suppressed, and each deity was in turn identified with Rā, and appropriated his attributes.

'From the Heliopolitan priests came also a theogony which put the god of their city, Atum, at the beginning of all things, and derived from him, through two intermediate generations, the gods of the Osirian circle as it appeared in the Delta' (Moore, p. 169).

When Babylon became the capital of the new dynasty in Babylonia, its god Marduk supplanted Enlil of Nippur, claimed Ea of Eridu with his wisdom as his father, and made Nabu, the god of Borsippa, his son and prophet. In one hymn the other gods are treated as only variant names of Marduk in his varying functions.

(d) *The influence of religion on mythology.*—The changes in thought about the gods did not, however, always depend on political conditions; religious belief and worship must also be taken into account. Before Marduk assumed the supremacy, the gods at the head of the pantheon were Ea of Eridu, Enlil of Nippur, and Anu, held in high honour, if not the patron deity, in Uruk; and they owed their place to the influence on the religious development exercised by their temples and priest-

hoods. An attempt at systematic theology appears in the partition of the universe among these three gods; Anu rules in heaven, Enlil in earth and air, and Ea in the waters. The Vedic gods are divided into three classes also—gods of the sky, gods of the air, and gods of the earth. Another interesting feature of the Vedic polytheism is that there are indications of the supersession of one order of gods by another, the *asuras* by the *devas*. Varuna, Mitra, and Rta fall into the background, and their places are taken by Indra, the Maruts, etc. While in the Rigveda the *asuras* are gods, in the Atharvaveda they have become demons. In the Iranian sister-religion the reverse process took place. If Ahura Mazda is the same god as Varuna, he becomes supreme in Zoroastrianism, and is in conflict with the *daevas*, the gods of the popular religion.

India offers an interesting illustration of the reflex influence of the worship on the theology. Sacrifice is conveyed to the gods by means of fire. Fire itself (Agni) becomes deified, and yet he is being constantly reborn when two sticks are rubbed together to produce the spark. The drink of the gods is *soma*. They love it so much that the gift of it can influence them. Soma becomes a god with power over the other gods. *Brahman*, the absolute deity of religious speculation, is probably to be traced back to the hymn or prayer which accompanied sacrifice (see Max Muller, *Origin and Growth of Religion*, pp. 358, 359, note). The Hindu Trimurti is a priestly device to combine their cult with the popular worship of Visnu and Siva. These two gods, together with Brahmā (masc.), the personal god, are manifestations of *Brahman* (neut.), the absolute reality.

(e) *The reflex influence of language on mythology.*—One instance of this must suffice. As a rule, heaven is thought of as father and earth as mother; so in the Vedic mythology, in which Dyaus and Pṛthivī are the universal parents, and in the Maori. In Egypt by an accident of grammatical gender the earth (Geb) is masculine, and the heaven or sky (Nut) is feminine; and the relation in the myth has to be altered accordingly. The influences affecting the ideas about the gods and their functions and relations being so manifold, it is evident that we cannot treat polytheism as one phenomenon of which any description of a general character can be given.

POPOL VUH.—The *Popol Vuh* is a mythic and heroic saga of the Quiche Indians of Guatemala, on whose mythology and ancient history it is our chief source of information. It is of great comparative value when studied in conjunction with the mythology of the pre-Columbian inhabitants of Mexico and Yucatan. The text, as extant, was written by a Christianized native of Guatemala some time in the 17th cent., and was copied in the Quiche language, in which it was originally written, by a monk of the Order of Predicadores, Francisco Ximenez, who added a Spanish translation and scholia.

A great deal of doubt has been cast upon the genuineness of the *Popol Vuh*, and it has been contended that it is merely the imaginative production of a Quiche native whose ideas were coloured by Christian influences; but these reflexions on this venerable compilation originated with persons who were for the most part unacquainted with the history and mythology of Central America, who possessed no insight into aboriginal habits of thought, and who, in short, were improperly equipped for the criticism of such a work.

C. Scherzer, an Austrian savant, became aware that such a work as the *Popol Vuh* had existed through the medium of a letter from the Abbé Brasseur de Bourbourg to the Duc de Valmy, in which the Abbé deplored the supposed loss of the collection. Bent on the recovery of a relic of such profound interest, Scherzer journeyed to Guatemala in 1854 or 1855, found that the *Popol Vuh* had been made use of early in the 19th cent. by a certain Don Felix Cabrera, and was successful in tracing the missing MS in the library of the university of San Carlos, in the city of Guatemala. It appears that Ximenez had deposited it in the library of his convent at Chichicastenango, whence it passed to the library of San Carlos in 1830. Scherzer copied the Spanish translation of the MS, as did Brasseur, and these were published at Vienna and Paris in 1856 and 1861 respectively. Most unfortunately the Spanish and French translations leave much to be desired as regards accuracy, and the misleading notes which accompany them must be read very critically. A Spanish translation, published as a number of the *Biblioteca Centro-Americana*, is scarcely more accurate, but is burdened by notes which show a total ignorance of his subject on the part of the editor, and which are substantially those of Brasseur.

The name *Popol Vuh* means, in its literal translation, according to some authorities, 'The Book of the Mat,' or, in more sophisticated phrase, 'The Record of the Community,' but it is likely that a correct rendering of the title is 'The Collection of Written Leaves,' *popol* signifying the prepared bark upon which aboriginal writing is often set down, and *vuh*, 'paper' or 'book,' from the verb *uoch*, 'to write.' Thus a still more simple translation would give 'The Book of Bark.' It is a work of the same family as the Chinese *History of the Five Books*, the Japanese *Nihongi*, the Danish *History of Saxo*, the *Heimskringla* of Snorre, and some of the Hindu sacred books—a compilation in which pure mythology gradually shades off into veritable history. The language in which it was composed, the Quiche, is a dialect of the great Maya-Quiche tongue, spoken at the time of the discovery in Western Guatemala, where it is still used by the natives, and it is the only remaining monument of this tongue. Evidence is not wanting to prove the considerable antiquity of the compilation, and a decided metrical tendency in its composition would lead us to the conclusion that it was originally composed in metre, and that consequently, like the poems of Homer and Ossian, before it was reduced to writing it depended for its popularity upon the aboriginal memory alone. On the other hand, it must be admitted that the work as we possess it probably does not stand in its pristine simplicity; that it has become sophisticated in a certain degree by Christian thought and influence can hardly be doubted; but it cannot be too strongly insisted upon that such sophistication is merely a surface one, and that it has not succeeded in penetrating to the lower strata of aboriginal thought. The evidence of language, too, is certain proof that it was penned by none other than a member of the Quiche race. The almost insur-

mountable difficulties of the Quiche language render it impossible that a European of the 17th cent. could have in any way tampered with the compilation, and the evidence of its contents is conclusive, as the Quiche mythology concurs in many respects with those of Mexico and Yucatan, which were as sealed books to the scholars of the time in which the MS was written. Furthermore, the Quiche mythology, as set forth in the pages of the *Popol Vuh*, accords in its general characteristics with the great laws of mythologic science.

The *Popol Vuh* is divided into four books, the first cosmological, the second dealing with the adventures of certain hero-gods in the nether world, the third detailing the origin and early migrations of the Quiche race, and the last a pseudo-chronicle of the Quiche kings.

In the beginning we see the god Hurakan ('the one-legged') hovering in the dense and primeval gloom over a waste of waters. As a mighty wind he passed over the surface of the sea and ejaculated the one word 'Earth.' In answer to his evocation the solid land rose slowly from the deep—vast, wet, and unstable. The gods took counsel together, presided over by Hurakan. Gucumatz, the serpent covered with green feathers, and Xpiyacoc and Xmucane, male and female creative divinities, were present.

Gucumatz is merely a Quiche variant of the Mexican Quetzalcoatl, known to the Maya as Kukulkan. It must be borne in mind that to the Nahuatl of Mexico Quetzalcoatl was an alien deity, and regarded as a culture-hero who brought them the seeds of civilization and then departed, whereas in the *Popol Vuh* we find him a native deity, assisting in the act of creation. It is strange to find him acting as the inferior of Hurakan, and, in fact, in this pantheon on the whole we cannot discover much affinity with Maya forms, so far as we are at present acquainted with the characteristics of these. The affinities, oddly enough, seem to be with Mexican deities. *E.g.*, Hurakan may be safely equated with Tezcatlipoca, and Xpiyacoc and Xmucane have all the characteristics of Ometecutli and Omeciuatl. Certainly Gucumatz has many points of contact with P. Schellhas's god P which he identifies with Kukulkan. As a Quiche deity, Gucumatz would undoubtedly seem to figure as a rain-god pure and simple—rather a different rôle from that which he plays in the mythology of the Mexicans. His serpent form is symbolic of water; and, as the god of the elements whose shape is serpentine is almost universal throughout N. America, but by no means so in the southern sub-continent, there is a possibility that he originated in the north. Of course, it is possible that as Quetzalcoatl he may have been adopted by the Mexicans from the Southern Maya, and that his name and fame may have filtered northwards, where they are found even to-day, as in the Kumsnootl, or Kanikilak, of certain British Columbian tribes.

As the result of the deliberations of the gods, animals were created, but as yet man was not. The want of a higher type of being was felt, and, to supply the deficiency, the gods carved mannikins out of wood, and endowed them with life. But these were frivolous and irreverent, and in their nature too puppet-like to be quite human; so the gods, irritated by their conduct, resolved upon their destruction. Hurakan therefore sent a great flood upon the mannikin folk, which was accompanied by a resinous rain falling from the heavens. In their drowning the mannikins were tormented by fierce birds which plucked out their eyes and tore their flesh; and, as the rain increased, the animals and plants, and even the domestic utensils that they had made, their millstones, plates, and cups, rose up against them and jeered at them. The wretched mannikins rushed hither and thither in their despair, but could find no place of shelter, until at last all were drowned, save a mere handful whose descendants are said to be 'the little monkeys that live in the woods.'

The composite character of the *Popol Vuh* may be recognized from the circumstance that we discover at least three agencies assisting in the work of creation. From this it appears that three separate cosmologies may have been welded together

into one account, as in the case of other and more familiar instances, the most remarkable of which will readily occur to all students of comparative religion.

After earth had somewhat recovered from this deluge, there arose a being, orgulous and full of pride, named Vukub-cakix, which signifies 'seven times the colour of fire,' or 'very brilliant,' an earth-god like the Scandinavian Jotunn or Greek Titans, who took the shape of the arara bird or great macaw. His eyes were of silver, his teeth of emerald, and his body was composed of various precious metals. His overweening conceit so irritated the gods that they resolved upon his destruction. To that end they dispatched the twin hero-gods Hun-ahpu and Xbalanque to earth, to chastise the arrogance of Vukub-cakix. These, arriving in his domain, wounded the god severely in the mouth with a dart from a magic blow-pipe. Afterwards, with Xpiyacoc and Xmucane, they proceeded to his dwelling, disguised as physicians, and extracted the unfortunate Titan's emerald teeth, for which they substituted grains of maize. After the operation Vukub-cakix expired.

This would seem to be a myth explaining the first fertilization of the earth with seed, and the substitution of the maize-plant for the green, virgin soil. But the progeny of Vukub-cakix had yet to be disposed of. Zipacna, the earth-heaper, and Cabracan, the earth-quake, were also destroyed by craft, so that the race of Titans was now extinct.

The second book yields much interesting material for the mythologist. It relates the under-world adventures of Hunhun-ahpu and Vukub-hun-ahpu, the sons of Xpiyacoc and Xmucane.

Hunhun-ahpu and his brothers were great exponents of the native game of ball, a kind of hockey. On one occasion the course of their play took them into the vicinity of the realm of Xibalba, the under world, the monarchs of which challenged them to a game with the malicious intent, common to all supernatural folk, of defeating and disgracing them. The challenge was accepted, and, after crossing over a river of blood, the brothers came to the residence of the lord of the Quiche hades, where they underwent a series of insults and tortures. First they were requested to place themselves in a seat of honour, but hastily arose when they found that it was a red-hot stone. Then they were thrust into the House of Gloom, where they were tortured, killed, and buried. The head of Hunhun-ahpu was, however, suspended from a tree, which speedily became covered with gourds. Xquiq ('blood'), the daughter of a notable of Xibalba, was standing underneath its shade, when the head of Hunhun-ahpu expectorated into her palm, so that she conceived. The head told her to go to his home on earth, where she would be received by Xmucane, to whom she must tell the story of the brothers' tragic fate. She did so, but Xmucane would not at first credit her story. Xquiq, however, to prove her supernatural origin, gathered a basket of maize where no maize grew—quite a natural thing for a deity of the under world to do, as they are invariably associated with the growing of grain. Xquiq became the mother of Hun-ahpu and Xbalanque, the twin-heroes alluded to in the first book. They were so noisy that Xmucane, their grandmother, thrust them out of doors. Extremely precocious, they were made to clear ground for the plantation of maize, but, as they possessed magic tools which could work of themselves, they went on hunting expeditions and neglected their duties, and during the night the wild animals met and undid the work that the magic tools had accomplished. The brothers watched for the purpose of capturing the miscreants, but the animals escaped, all save one, the rat, which in return for its life recounted to them the glorious deeds of their father and uncle, and how they had been entrapped in Xibalba. Shortly after this the twins themselves received a challenge to play ball from the lords of the under world, which they accepted. On their arrival in Xibalba, the community of which seems to have been conducted on the lines of a native secret society with a form of initiation, they passed scatheless through several of the ordeals, and defeated the lords of the Plutonian realm at ball. They were placed in the House of Lances, but escaped by bribing the lancers. They were then thrust into the House of Cold, where they cheated their tormentors by warming themselves with burning pine-cones. In the House of Tigers and the House of Gloom they passed a night each without misfortune, but in the House of Bats Hun-ahpu's head was cut off by Camazotz, ruler of the bats. The head was suspended in the hall-court, but the tortoise passed by the severed neck of Hun-ahpu, to which it became attached, turning into a new head.

The Camazotz here referred to is a figure of some importance. With the Central American peoples generally the bat was the symbol of gloom and darkness, therefore Camazotz is the god of subterranean caves in which that animal is usually found. It is plain, in fact, that here we have to deal with a form of the deity of mountain caverns and cave-worship. Pictures of the bat-god are found in the Borgian, Vatican, and Fejervary Codices—all Mexican MSS—as Seler first pointed out, and

this is strange, as in Mexico itself the cult of a bat-god does not appear to have been known. But it is probable that the MSS which give representations of this god originated near the southern borders of the Mexican empire, nearer the sphere of Maya influence. In the Borgian Codex the bat-god is represented as holding a severed human head in the left hand, and as in the act of tearing a man's head from the body with his right hand. He is also frequently met with on the Copan reliefs, and in the Maya Dresden Codex, and his head appears in the Maya conventional sign for the cardinal point of the north. In a vase excavated by E. P. Dieseldorff he is well portrayed with outstretched wings on which are depicted half-moons, symbolic of his nocturnal character. We find his name also reproduced in that of the two royal families of the Cakchiquels, who were called Ah-po-zotzil and Ah-po-xa, and, according to another passage in the *Popol Vuh*, we find that the Cakchiquels designated him Zotzilaha Chamalan, who, we are told, took the bat for his image. But Zotzilaha does not mean 'bat,' but 'bat's house,' therefore it is reasonable to suppose that this god possessed more than one form, i.e., that, besides the bat which he symbolized, he had the form of a cave-god.

The brothers, having outwitted their fiendish hosts, now entered upon a veritable orgy of magic, even submitting to be killed and coming to life again, after their bones had been beaten to powder and thrown into the river. The monarchs of Xibalba requested to be killed also, but, as the brothers omitted to revive them, their reign was at an end. They then showed themselves in their true colours, degraded the princes of Xibalba, and, after paying fitting funeral honours to their father and uncle, set them in the heavens as the sun and moon.

In this myth it is easy to see the harrying of hell so common to the mythologies of all nations. The Quiche Xibalba is, of course, a place of the dead, with many departments, like the Egyptian Amenti, where both just and unjust alike are lodged. The savage mind trembles at the idea of a place of eternal doom of which it knows nothing; therefore it invents myths of the descent into its hades of its most heroic and god-like figures, who are described as achieving the conquest of the terrors of death and hell, and making the way easy for those who come after them.

In the third book we find the gods once more in council, their object this time being the creation of man.

Four perfect men were fashioned by Hurakan out of red and white maize. But these beings were too perfect, and in knowledge closely approached to the gods themselves. The creators, alarmed at this condition of things, felt that it was not good that man should approach them in wisdom, so they contracted his sight so that he might only be able to see a portion of the earth. The gods then provided the first four men with wives. These eight people were the ancestors of the Quiche only, the progenitors of other tribes being created subsequently. As yet there was no sun in the heavens, and, despite the prayers of the early Quiche, no luminary appeared. A desire to migrate came upon the first men, and they set out for Tulan-Zuiva. Attempts have been made to identify this locality with the city of Tollan, the capital of the Toltecs of ancient Mexico. In that place the Quiche received gods, each man being given a special and probably tribal deity. One of these, Tohil, whose name signifies 'the rumbler,' and who is a thunder- and rain-god, probably a variant of Quetzalcoatl or Gucumatz, supplied the emigrants with fire by striking his feet (which were composed of flint) together, and producing lightning. At Tulan the speech of men became confounded, so that the four progenitors of the Quiche could no longer comprehend one another. Leaving Tulan under the leadership of Tohil, they wandered on, meeting innumerable hardships, making their way through desolate mountain-passes, and passing through the sea, which was miraculously divided for their journey from shore to shore. At length they came to the mountain Ilacavitz, called after one of their gods, where they halted, as they had been told that at this spot they should see the sun. At last he appeared above the horizon, weak and as reflected in a glass, and, as his beams lighted upon them, the tribal gods were turned into stone, as were the gods worshipped by the animals.

It is probable that this myth recounts a migration from the cold north to the warm south. The sun grows stronger as the journey proceeds, which would seem to show that, to begin with, the

ancestors of the Quiche people must have dwelt in a comparatively cold climate. T. A. Joyce (*Mexican Archaeology*, p. 362 f.) sees in this myth the adoption of a solar calendar or rather the fixing of a date to form a starting-point for a time-count modelled on solar time. The whole myth is strikingly akin to that of the wanderings of the Israelites, but the conditions of migration undergone by the Quiche, though similar to those recounted in the book of Exodus, possess as many points of difference, and are by no means a mere variation of the Scriptural version, as stated by short-sighted collators of both. The best proof that the myth is of purely native origin is that such myths of undoubted aboriginal manufacture abound in America. Thus we find in an Aztec migration-myth in the Boturini Collection that the Aztecs issuing from Aztlan carried their god Huitzilopochtli before them when they came by water to Colhuacan. We also find a similar myth in the *Wallam Olum*, or Painted Records of the Lenapé Indians, which state that the Lenapé left the dwelling of Talli for the Snake Land, to reach which they passed over the water of the frozen sea. The *Popol Vuh*, indeed, may be a dim and distant echo of a migration from N. E. Asia to American soil. The circumstance that the tribal gods of the Quiche were turned to stone on the appearance of the sun recalls a myth of the Zufi Indians of New Mexico, in which the great gods turned certain animals into stone, which afterwards became fetishes.

The fourth book of the *Popol Vuh* is almost purely pseudo-historical, and as such possesses no interest for the student of comparative religion. Enough has been said to prove that the *Popol Vuh* is the New World's richest mythological mine, abounding with treasure awaiting those who will take the pains to unearth it. In especial there can be no question that it throws much light upon the mythologies of the Mexicans and Maya, but our knowledge of these is so slight that at present it is found not a little difficult to apply the light shed by the *Popol Vuh* so as to dispel the gloom which surrounds them.

LITERATURE.—Brasseur de Bourbourg, *Popol Vuh*, Paris, 1861. F. Ximenez, *Los Historias del Origen de los Indios de Guatemala*, Vienna, 1866. L. Spence, *The Popol Vuh* (in 'Popular Studies in Mythology, Romance, and Folk-lore' series), London, 1908. *The Myths of Mexico and Peru*, do. 1913; T. A. Joyce, *Mexican Archaeology*, do. 1914. The brief essay of Max Müller upon the *Popol Vuh* is worthless. A tr. is in course of preparation in Austria, and a tr. from the original Quiche is understood to be in progress by a distinguished German student of Mexican archaeology.

POSITIVISM.—1. Derivation and definition. —Derived from the French *positif*, 'sure,' 'certain,' 'positivism' was the term chosen by Auguste Comte to designate a system of thought and life dealing with realities and based on the sure results reached by scientific methods, which aimed not only at certainty, but also at precision in the varying degree that each particular branch of science allows. When, however, the word was applied to a system of life as well as of thought, it obtained the additional connotation of 'useful'; and, as our knowledge of the world depends on the powers of mankind, we also get the meaning 'relative.' With the study of biology and sociology, science becomes organic, and, with the recognition of the union of mankind in the social organism, sympathetic. Positivism, therefore, in spite of its name, is not purely intellectual. It is not only

real, certain, and precise, but also useful, relative, organic, and sympathetic.

2. History before Comte.—The general application of scientific methods, the accumulation of a mass of ordered knowledge, the building up in turn of the various abstract sciences—all this has been a long and gradual process. While in the theocracies of Babylon and Egypt concrete facts were observed, recorded, and utilized, calendars made, canals dug, land measured, temples and pyramids built, it was only in Greece that abstract laws of co-existence and succession were formulated. But the abstract science of Greece made considerable progress only in mathematics and astronomy; it was essentially statical, failing to solve even so simple a problem as that presented by the acceleration of a falling body; it did not reach the subjects—health, politics, morals—most interesting to mankind, for in these subjects Greek knowledge remained almost entirely concrete and empirical. Other interests and needs, the development of Roman law, the rise of a new religion, the inroads of the barbarians, distracted the attention of the ancient world, and Greek science not only ceased to make progress, but would have been lost, had it not been preserved and even slightly increased by the Arabs. At the Renaissance the scientific advance was resumed. Copernicus, Kepler, and Galileo introduced the new astronomy; the earth ceased to be the centre of the universe; problems of motion were successfully solved. Bacon and Descartes discussed the purpose, methods, and scope of science, and the former foresaw its extension to social and moral phenomena. In the two centuries after Bacon the sciences of physics, chemistry, and biology made great progress, and a long series of thinkers began tentatively to investigate the laws of social structure and development, the working of the human mind, and the relation of subject and object. Building on the results of these labours and gathering up the scattered threads of these 18th cent. investigations, Comte founded a scientific philosophy and a purely human religion.

3. Comte.—Auguste Comte was born at Montpellier on 19th Jan. 1798, the son of a revenue officer of small means. His parents were royalists and devout Catholics, but he had abandoned theology before he was fifteen, and was throughout his life a firm republican. At the Lycée at Montpellier he showed such precocity that, while still a pupil, he took the place of the absent mathematical professor. Thence he passed to the famous Polytechnic School, first of his list in the entrance examination when sixteen, though he was not allowed to join till the next year. In 1816—the year after Waterloo—he took a leading part in a demonstration against an unpopular official, and was expelled with the other students of his year, the whole school being suspected of republican sentiments. He was, however, already known to some eminent men, and on their recommendation he obtained pupils. Later he was appointed to two small mathematical posts in the Polytechnic as teacher and examiner. Having already published some important essays, he began, in 1826, a course of lectures on the positive philosophy, which was interrupted by a mental breakdown; but after his recovery it was resumed and completed. The course was attended by some of the most eminent men of science of the day, and formed a first sketch of the *Positive Philosophy* (6 vols., 1830–42). This was followed in 1848 by the *General View of Positivism*, the introduction to his second great work, the *Positive Polity* (4 vols., the last being published in 1854). Between the two works his outlook on life had developed. An early marriage had turned out unhappy; his wife grudged his devotion to his

chosen task, and wished to direct his powers into more lucrative channels; eventually she left him. Some years afterwards he formed a devoted friendship for Madame de Vaux, whose husband was a fugitive from justice. Clotilde de Vaux was not perhaps a woman of exceptional mental capacity, but she was quite able to appreciate Comte's genius. She was not, however, in the least in love with him, and their friendship led to no closer union. It began in April 1844, and ended by her death just a year later. This short episode had a lasting effect on his career. From the outset, as he had shown in his early essays, he had sought the good of mankind as the proper goal of all human effort. But he had sought it by an intellectual regeneration, a philosophy of science, a synthesis of human knowledge. Clotilde de Vaux could add nothing to his intellectual equipment, but their friendship opened his eyes to sides of human life previously unseen, to other needs of the human heart and other values in human conduct. Henceforth, while recognizing the primary necessity of scientific synthesis, he saw that there must be a synthesis embracing all sides of human nature, action, and affection as well as intellect—in other words, a religion at once scientific and human. Thus he became the founder of the Religion of Humanity. This was the dominant note of the *Positive Polity* and the *Catechism of Positive Religion*. In his last work, the *Subjective Synthesis*, he returned to mathematics, considered from a social and religious point of view. A companion treatise on morals he did not live to write. He died on 5th Sept. 1857, in Paris, and was buried in Père Lachaise Cemetery. A monument was erected to his memory outside the Sorbonne in 1898. Many years before his death he was deprived of his posts at the Polytechnic; for the scientific specialists disliked his insistence on synthesis, and vehemently rejected his claim that science should fulfil a social mission. Some of his earlier supporters, notably M. P. E. Littré and John Stuart Mill, declined to follow him in his religious developments. But he gathered round him a small body of disciples who remained after his death to defend his memory and propagate his ideas.

When twenty years old, Comte became acquainted with Henri Saint-Simon (1760–1825), who was already famous. Saint-Simon had conceived the idea of a reformed social order in which all the resources of the State should be used for the benefit of the whole people, and was in fact one of the originators of modern socialism, though the word was then unknown, while, unlike most socialists, he had no confidence in democratic institutions. He believed that the new order must rest on a basis of science; but he had led a roving and adventurous life little compatible with scientific studies. This lack Comte seemed eminently fitted to supply. He wrote his two earliest essays under Saint-Simon's influence, and the third at his request; but, when this was written, it was the master who first perceived the discrepancy between his ideas and those of his disciple. Saint-Simon had expressed his purpose in the title which he had suggested: 'Plan of the Scientific Operations necessary for reorganizing Society.' He wanted an immediate application of science to this purpose. Comte saw that much more was needed, and that a much longer task lay before him: a new science of sociology must be founded irrespective of any immediate application; and science itself stood in need of reorganization. He soon came to see that a scientific philosophy must precede a polity founded on science. Thus, after six years, master and disciple separated; and Comte, who in every other case was so ready to acknowledge his indebtedness to his predecessors,

always insisted that Condorcet was his immediate intellectual ancestor, and that he owed nothing to Saint-Simon. It is true that he gained little intellectually from the connexion; for Saint-Simon's ideas were constantly changing and often inconsistent—he was a visionary rather than a systematic thinker. Nevertheless, Comte was affected both for good and for evil: for good, since Saint-Simon was well fitted to impress on him the need of reconstruction, and had some confused glimpses of its true conditions; for evil, because he retained to the end of his life Saint-Simon's tendency to expect quick results and to outrun scientific forecast in his zeal for social reconstruction. The first is, indeed, the common failing of reformers; the second led Comte to make his forecasts of the future more detailed than the complex character of social phenomena allows.

It was in this third essay (1822) that Comte put forward his law of intellectual development, which he named the 'Law of the Three States,' and his classification of the sciences. The former had already been stated by Turgot in an early thesis, but without adequate proof or recognition of its scope; and it was open to fatal misunderstanding unless combined with a classification of the sciences in the order of their historic development. Here is a statement of the law by Comte:

'From the nature of the human intellect each branch of knowledge, in its development, is necessarily obliged to pass through three different theoretical states: the theological or fictitious state, the metaphysical or abstract state; the scientific or positive state' (*Early Essays in Social Philosophy*, Eng. tr. 2, p. 131).

In the first stage men, interpreting the unknown by the known, attribute the phenomena of the world without to the action of beings moved by human passions; in the third they content themselves with discovering the order in which events occur, noting the relations of co-existence or succession, which give the conditions of human action. Between these there is a transitional stage in which personified or merely verbal entities take the place of divine wills. Thus a pestilence, which is in primitive times or among backward peoples a punishment sent by the gods, passes into an entity, which comes and goes without assigned cause, till with increasing knowledge the conditions of its appearance and the course of its development are discovered, its microbe isolated, it may be, and so its prevention or cure becomes possible. The natural rights of man, supposed the same in all ages and under all conditions, supply an example in politics of the metaphysical transition from the divine right of kings to the ordering of society in accordance with the needs of a developing civilization. Of such entities Nature is the most general. At the beginning of the transition it is hardly distinguishable from a divinity or at least a living being, as in such expressions as 'Nature abhors a vacuum.' In the end it becomes a convenient summary for the totality of phenomena and their laws.

But, in order to understand correctly the Law of the Three States, a classification of the abstract sciences was necessary. Comte proposed to range them in a linear series, beginning with the most general and simple and proceeding to the most special and complex—mathematics, astronomy (celestial physics), physics, chemistry, biology, and sociology, to which he afterwards added ethics, the first four being condensed into cosmology on occasion. This order was that actually followed by the sciences in their historic development—the order in which they in turn reached the positive stage. Herbert Spencer attacked this classification on the ground that no linear arrangement was possible, the sciences being interdependent. But classification is a logical artifice, which usually

accentuates the divisions found in nature, and is intended for the assistance of human reason. For exposition a linear order is necessary, and of such orders Comte's conforms most nearly to the order of historical development; and in its main lines it has been adopted by Spencer himself in his exposition of the synthetic philosophy, with one amendment which does not affect the order of the series. This amendment consists in the intercalation of psychology between biology and sociology. In fact, the most serious criticism directed against Comte's classification is that he has treated psychology as a department—the concluding section—of biology and not as a separate science; but, if the criticism be allowed, it would mean only the insertion of a new term, not a recasting of the whole. Whether psychology is to be considered as a separate science depends, according to Comte's principles, on whether it requires a new method; for the main distinction between the various sciences lies in the methods necessary for their investigation.

It will thus be seen, if we consider the Law of the Three States in combination with the classification of the sciences, that at any given period all three stages will be represented, the simpler sciences being already positive, while the more complex are partly or wholly metaphysical or theological. In the earliest societies of which we have knowledge some simple positive notions will have been derived from practical life, while even in the present age the most complex sciences have not become completely positive.

Comte is generally recognized as the founder of sociology. It is true that the necessary conditions of human society were discussed by Aristotle, and that therefore, in its purely static aspects, the subject was studied in ancient Greece. Early in the 18th cent. Vico attempted to establish a new science of society, but the necessary foundation in the simpler sciences was wanting; the same century saw the successful treatment of many isolated questions relating to social structure and development; and towards its close Herder, Kant, and Condorcet sought the laws of the progress of civilization in the study of history. But Comte was the first to map out the field of sociology, to show its true relation to the earlier sciences, especially biology, to distinguish social statics from social dynamics, and to put forward and apply the special method proper to the latter. In this, which Comte called 'historic filiation' and J. S. Mill 'inverse deduction,' a generalization is made inductively from the facts of history. Then the same result is deduced by showing how the sequence of events could be attributed to the known facts of human nature, or to what we already know of the development of societies and the conditions of social action. By this method Comte reached his law of intellectual development and corresponding laws of the evolution of activity and affection. Thus in the Western transition, while human activity was at first organized for conquest and then for defence, eventually industry becomes recognized as the chief occupation of mankind. In correspondence with this the status of the workers changes from slavery to serfdom and then to freedom. In the last stage there is a further advance from the metaphysical concept of individual rights and the absolute control of wealth by its possessor to the acceptance of social duty or convenience as regulating industrial relations. In the language of Pierre Laditte, Comte's successor as leader of the Positivist body, we should regard 'wealth as social in its origin and destination' (*The Positive Science of Morals*, Eng. tr., p. 191). So, too, there is a widening of the moral sphere, a law of moral progress. At one

time moral duties are bounded by the family, class, or tribe. Later they are extended to all of the same city or nation. Finally, they include the whole human race.

The field of social statics, as we have seen, had been cultivated from ancient times. Comte, however, made some important additions to the work of his predecessors. He brought out more fully than they had done the co-ordination that exists between institutions in corresponding stages of social evolution, while avoiding the error of supposing this co-ordination to be as exact as in biology, where R. Owen was able from a single bone to reconstruct the form of an extinct bird. More important is Comte's classification of the elements of society—first into spiritual and temporal, these tending to further subdivision, the former into emotionals and intellectuals, the latter into chiefs and people. The progress of sociology has not been so rapid as Comte hoped, but it is now generally recognized as a science under that name, which he gave it. The chief sociologists since his time have pursued the study from rather different standpoints. Herbert Spencer has dealt largely with the influence on the social organism of the laws of the lower sciences, especially the biological laws of heredity. P. G. Frédéric Le Play has shown how the environment chiefly affects social structure and development indirectly through its control of industry, the work of the hunter, the fisher, the shepherd, and the tiller of the soil each giving rise to a different type of civilization. But in sociology physical and biological laws only give the conditions of social existence. The environment is most powerful in the early stages of civilization and becomes less and less so as the social heritage grows. Following the example of other sciences, sociology must discover laws by the direct study of social phenomena, the structure of human societies, and the development of human civilization. In this field Comte has been the chief pioneer.

The importance of his discoveries is seen in the light which they throw on history. He traces the development of civilization from fetishism or animism, through astrolatry, the worship of the heavenly bodies, to polytheism, found in a theocratic form in the great river valleys, isolated by strong natural barriers, as in Egypt, or in a military form in Greece or Rome. In Greece the geographical configuration of the country did not favour a career of conquest, and amid the freedom and rivalry of the small city-States Greek art and Greek science arose. Rome, on the contrary, conquered and united the Mediterranean world. Polytheism passed into monotheism and conquest into defence. For some centuries the energies and intellect of the West were occupied in civilizing the barbarian and creating the Catholic Church. But, as that was accomplished, a new intellectual curiosity arose, stimulated by contact with the Muhammadan world and later by the revival of ancient learning. From the 14th cent. onwards Europe entered on that revolutionary transition which culminated in the 18th. But, alongside of the movement of destruction, the breakdown of the old institutions and beliefs, there was a movement of construction, the building up of modern science. In this growth of science Comte saw the promise of the close of the revolutionary era, for scientific results were true for all, transcending national bounds and giving a certitude in which all could share. From a study of the past he reached the following conclusions as to the characteristics of the new era: (1) as the field of scientific investigation was continually enlarging, as that was becoming more and more the test of certitude and the bond of intellectual unity, the

philosophy of the future must be founded on science, and the religion of the future must be compatible with science; (2) however much the peace of the world might be troubled by nations in a more backward stage of civilization—and even in Europe some are behind others—industry was becoming more and more the chief occupation of man's energies; peace was becoming normal, war abnormal; (3) in politics the metaphysical conception of natural rights, the same in all places and times, was giving way to the acceptance of duties, changing with the development of civilization; (4) conduct was being more and more judged by human and social standards. Aristotle had described man as a civic animal. 'We are members one of another' (Eph 4th), St. Paul proclaimed. In the 17th cent. this recognition of solidarity was extended—at least in the intellectual sphere—to continuity, when Pascal said:

'The whole succession of men during the course of so many centuries should be considered as one man, ever living and continually learning' (*Préface sur le Traité du Vide, Œuvres*, Paris, 1908, ii. 139).

In Comte's view the human race formed one great organism, Humanity, living a continuous life in accordance with its own laws of development, its elements becoming more and more closely connected. The individual as such is an abstraction; for every one is a member of a family, then of a city or nation, and finally of Humanity, which is made up of all the nations of the earth. On these collective elements the thought and life of each individual depend, and that thought and life necessarily differ in different stages of human development. Each is the child of his own nation and time.

Religion, in Comte's definition, consists in the full harmony of life, and embraces equally the heart and the intellect, 'for both of these must concur to produce any true unity of life' (*Positive Polity*, Eng. tr., ii. 8). Its function is to regulate the individual life and to combine collective lives. In the earlier stages of man's development this was attained by the unconscious creation, first of fetishes, then of gods, the unknown outside being interpreted in terms of men's own feelings. But intellectually, in one department after another, natural laws take the place of divine wills, and in morals the desire to please or appease the gods becomes less potent as a motive for good actions than the love of our fellow-men. Humanity thus becomes the new centre of unity; the Religion of Humanity, a religion capable of uniting all, and 'Live for others' its guiding principle. The term 'altruism,' now in general use, was introduced by Comte.

Three sources of misunderstanding must be guarded against in considering this religion. (1) It is not mere cosmopolitanism. Humanity is made up of families and nations. For the great mass of men and women—indeed, for all in many relations of their lives—it must be served through service to family and country, to kinsmen, friends, and fellow-countrymen. Humanity is strengthened, not by reducing all nations to one level, but by each nation in its free development bringing to the common service of mankind the special aptitudes and resources which it has developed. Devotion to Humanity is based upon family affection and love of country. Humanity does not set aside nationality; it only controls it, making a nation's glory consist in service and not in domination. (2) Positivism does not regard the earlier religions as bad and false. They are such approximations to the truth as were possible in the ages in which they arose. Their acceptance and, indeed, their continued existence, where they still exist, show that they answer to certain human needs;

and, so far as they fulfil a necessary function, to be destroyed, they must be replaced. They were centres of unity to their adherents, even when their rivalry made for disunion. Thus Positivists honour the great teachers of all religions and gladly accept what is permanent in their work—e.g., the separation of spiritual from temporal power under the mediæval Church. But they also honour apostles of enlightenment like Diderot and Condorcet, who, though they failed justly to appreciate the past, made ready the way for the future. (3) Altruism is inconsistent with self-immolation or with purposeless self-denial. Pleasure is not an evil, except where it involves neglect of duty in ourselves or pain to others. To live for others implies the maintenance of our full powers of service, including physical health and cheerfulness of temper. Asceticism, save as training for service, is alien to the Religion of Humanity.

Comte has been blamed for neglect of epistemology and formal logic. The latter he considered best studied in the several sciences, methods being thus seen in their application. As to the former, the validity of scientific methods and the underlying assumptions of science were in his view sufficiently established by the success of modern science and the continual extension of its sphere. The uniformity of nature, the reign of natural law, the relativity of knowledge, the distinction between subjective and objective derived from Kant, were accepted as postulates of scientific investigation. He did, however, formulate under the designation *The First Philosophy* a series of general principles or laws on which the abstract sciences rest. Hypotheses, far from being condemned, were held to be legitimate provided they were verifiable. Without the use of hypothesis scientific discovery is impossible. Knowledge was not to be pursued for its own sake, but for a social purpose.

'Know in order to foresee, and foresee in order to provide' (*Politique positive*, I., table facing p. 726).

As to those ultimate problems which occupied so large a space in man's early speculations, Comte considered them insoluble. The absolute is out of reach of man's relative powers. We can postulate benevolence of his immediate environment and the laws that control his destiny only in so far as they have allowed Humanity to arise and develop. To that extent the earth and the whole body of natural laws—'le grand milieu,' in Comte's expression—were rightly venerated by mankind, but only as a consequence of their relation to Humanity. The old cosmogonies made man the objective centre of the universe. Comte aimed only at a subjective synthesis. In positivism all knowledge is viewed in its relation to man, and human knowledge is considered adequate for all human needs. At the same time Comte was not purely intellectualist. He recognized the effect of practical life and feeling on thought. He took all sides of human nature into account. He insisted on the need of social aims even in scientific inquiry.

'The Intellect should always be the servant of the Heart, never its slave' (*A General View of Positivism*, Eng. tr. 2, original title page).

To the positive philosophy corresponds a positive education, replacing instruction in letters by a training in science and a knowledge of realities. Comte divided the education of the young into three phases. Till seven years of age the child would remain entirely in his mother's charge, gradually exercising his powers, but in an informal way, and not even being taught to read. From seven to fourteen, while he would learn to read and write, his education would be mainly artistic. He would sing and draw, and become acquainted with the literature of his own country, and possibly

towards the end of the period he might begin to study foreign languages. Comte hoped that eventually mothers who had already received a positivist education would be capable of teaching their children during the second, as well as the first, period, but for the present he recognized that this would be impossible. Finally, in the third stage, from fourteen to twenty-one, the youth, while engaged in preparing for the active work of his life—in general as apprentice—would follow courses on all the seven abstract sciences, from mathematics to ethics, on two evenings in the week during the first two years, on one evening during the last five. Girls would go through precisely the same course, except that, to prevent overstrain, they would have only one evening a week throughout. For such classes to be largely attended, they would obviously have to fulfil certain conditions. (1) The hours of labour would have to be short. Comte hoped that the hours even of adults would ultimately be reduced to thirty-five a week. (2) The study of each science must be limited. There was to be no question of training the boys and girls to be teachers of mathematics or chemists or surgeons. For such professional instruction there would be special institutions. The general courses would be open to all and would have to recognize two limitations. They must be sufficient only (a) to give the student a grasp of scientific method, of the scientific way of looking at the world, and (b) to enable him to proceed to the later sciences. Each science would be pursued—till the last was reached—in order to understand its method and have a firm basis for later studies. (3) The course of seven years must form a connected whole, and be infused with a social purpose. The teachers, therefore, were to be men of philosophic outlook—Comte referred to them as a philosophical priesthood—who, while their chief business would be teaching, would also form a spiritual power, international as science is, and independent of political parties, who, as they would renounce all temporal ambition, could give disinterested counsel in relation to public affairs.

Many other institutions were suggested by Comte. Of these it is possible here to describe only the Positivist Library and the Positivist Calendars.

The Positivist Library for the Nineteenth Century was a selection of books made by Comte, 'with the view of guiding the more thoughtful minds among the people in their choice of books for constant use.' It is divided into four sections: poetry and fiction, science, history, and philosophy and religion. Of these the first and last have naturally the most permanent interest, the one containing the great masterpieces of imaginative literature from Homer and Æschylus to Goethe and Walter Scott, the other, not only the sacred books of Hebrew, Christian, and Muslim, the Bible and the Qur'ān, with St. Augustine, St. Bernard, Thomas à Kempis, and Bossuet, but the great philosophers, from Aristotle, through Bacon and Descartes, to Diderot, Condorcet, and Comte. The collection was purely provisional and intended only for the West. It includes only those religious writings that have directly affected Western civilization; it excludes the great epics of India. This is in the main true also of the Historical Calendar, though the first month contains the names of Buddha, Confucius, and Zoroaster as well as those of Moses, Isaiah, and Muhammad. The year is divided into thirteen months, each representing a phase in human development: theocratic civilization, ancient poetry, philosophy, science, military civilization, catholicism, feudalism, modern epic poetry, industry, drama, philosophy, statesmanship, and science. The month is divided into

twenty-eight days. At the head of each month is a great name, Homer, Dante, Shakespeare for the three months of poetry, Aristotle and Descartes for the two of philosophy, Julius Cæsar, St. Paul, Charlemagne, etc. Other types preside over each week, while every day recalls some eminent man, with substitutes in some cases for leap-years. The whole forms a wonderful picture of European progress from the dawn of history to the French Revolution. It is professedly a record of construction rather than destruction; except in the first month it deals almost entirely with the West; it is temporary, save as a historical sketch, and even historical values change. On the other hand, the Abstract Calendar is general and permanent. In this the first month is dedicated to Humanity, the next five to family and industrial relationships, then three to the preparatory historic phases, fetishism, polytheism, and monotheism, and the last four to the normal functions—the moral providence of women, the intellectual providence of the teachers and thinkers, the material providence of the industrial leaders, and the general providence of the proletariat. Both Calendars end with an additional day not included in any month—a day dedicated to no particular individual but to ‘all the dead,’ since every man, in the course of his life, however useless or degraded, has done some useful or even honourable actions. In leap-year one day more has to be added, and this is devoted to a general commemoration of those illustrious women who, under exceptional circumstances, have, like Joan of Arc, passed beyond the sphere of woman’s ordinary duties. Under the influence of a higher standard of education, Comte thought the number of such women would increase in the future, but that the great mass of women would still devote themselves to the indispensable duties of the home, and remain the moral providence of Humanity. The first day of the first month of the year was assigned as the festival of Humanity, not as the day of all the dead, a commemoration of the individuals who compose the human race, but as the day of that great human organism considered as a whole and built up by the convergent efforts of all generations. Comte also instituted a series of nine social sacraments ‘consecrating all the successive phases of private life by connecting each with public life’ (*The Catechism of Positive Religion*, Eng. tr.², p. 90).

4. Spread of positivism. — Comte founded the Positivist Society of Paris in 1848. His philosophy was spread from an independent standpoint in England by John Stuart Mill, George Henry Lewes, and Harriet Martineau. Later a Positivist Society was founded in London by Richard Congreve, E. S. Beesly, J. H. Bridges, Frederic Harrison, and Henry Crompton. They concerned themselves not only with the philosophy but also with the religious side of his teaching and with the practical application of positivism to public affairs. Believing with Comte that ‘the proletariat class is not, properly speaking, a class at all, but constitutes the body of society’ (*A General View of Positivism*, Eng. tr.², p. 147), and that trade unionism is a powerful instrument for the emancipation of the workers, the English positivists were foremost in the agitation for the strengthening and legal recognition of the Unions. Believing that politics should be subordinate to moral considerations, they have actively opposed all schemes of aggressive imperialism, whether on the part of their own or on that of other countries, and they protested in 1871 against the dismemberment of France. Recognizing that Humanity consists, not of an undifferentiated aggregate, but in a consensus of free nations, they have supported the claims of subject nationalities, as Ireland and Poland, to

control their own internal affairs and develop in their own way. The term ‘Comtist’ was repudiated by Comte, and has not been accepted by positivists, as it misinterprets the relationship between that great teacher and those who have carried on the positivist movement and propagated the Religion of Humanity since his death. Positivism being founded on science and on scientific philosophy, its doctrine and practice must be adapted to the new truth that results from scientific development. It is a synthesis, but not a closed and rigid synthesis. It is a relative, an organic, and an expanding synthesis, in which all new developments of science must find their place. The positive philosophy neither began nor ended with Comte, though it was under the inspiration of his genius that positivism ceased to be purely intellectual, and embraced not only the intellect, but also the feelings and activity of man.

At present there exist an International Positivist Society with its seat in Paris, of which Emile Corra is president, and local Positivist Societies (some of which are attached to the International Society and some independent) in many places—notably in London and Liverpool, and in several parts of Latin America, with scattered groups or individuals in almost every country. Among distinguished adherents in the past or present may be mentioned, in addition to the English positivists named above, in France Pierre Laffitte, who succeeded Comte, and had among his disciples many of the founders of the Third French Republic, George Eliot, the English novelist, John Kells Ingram in Ireland, Benjamin Constant Botelho de Magalens, founder of the Brazilian Republic, Theophilo Braga, chief of the provisional government and second President of the Portuguese Republic, Ahmed Riza, speaker of the first Turkish Parliament after the Revolution, and Dwarka Nath Mitter, first Indian Judge of the High Court at Calcutta. *La Revue positiviste internationale*, published six times a year at Paris, is the organ of the central body. *The Positivist Review* is published monthly in London.

5. Principles. — The English Positivist Committee (The Church of Humanity, 19 Chapel Street, Lamb’s Conduit Street, London, W.C.) have recently issued the following statement under the title, ‘Some Principles of the Religion of Humanity.’

‘As the bounds of human love and duty extend from family to country, from country to all races and peoples, as science develops till it embraces the laws of the world and of life, of Man and Society, Humanity becomes recognised as an organic whole, which has existed through the ages and has continually grown in knowledge and unity. The old religions are seen to be worthy of honour so far as they foreshadowed this unity, as they inspired love and service, the pursuit of social aims, and the advance in righteousness and knowledge. The Religion of Humanity attains these ends more completely and more directly; for it has grown out of the whole past of Man; it is inspired by human love; it is based solely on human science; it has human service as its highest aim. It gives us a criterion of duty and a test of progress. In the presence of our duty to Humanity, all lesser duties find their true place and meaning. We can reconcile family affection and private friendship with public endeavour, devotion to country with love of all mankind. The Religion of Humanity does not destroy the older religions, it fulfils their highest aims. It does not repudiate the love of country; it honours each nation, however small or primitive, as a necessary element of a greater whole—an element more glorious as in its free development it brings its special gifts to the general service and the common task. It does not disregard physical and material well-being; but it subordinates them to the social and moral point of view, considering human happiness of greater importance than the accumulation of wealth, and the welfare of the great mass of the people than that of any section. This religion is based on the positive philosophy which includes in its scope the social organisation, the historic filiation of the ages, and the conduct of Man in Society, and it involves full liberty of speech and teaching for all. Humanity and science, love and knowledge, are alike necessary to right action. Inspired by the one, and enlightened by the other, we go forward in the great work of human service’ (Leaflet, p. 1.)

The Committee invites the adhesion of 'all those who wish to see life inspired by a human religion, guided by a philosophy founded on science and directed to the service of Man' (*ib.* p. 2).

LITERATURE.—i. *PRECURSORS OF COMTE IN THE 17TH AND 18TH CENTURIES*.—F. Bacon, *Novum Organum* (under title, *Instauratio Magna*), London, 1620; R. Descartes, *Discours de la Méthode*, Leyden, 1637, Eng. tr., London, 1649; T. Hobbes, *Leviathan*, London, 1651; G. Vico, *Scienza Nuova*, Naples, 1725, Fr. tr., Paris, 1835; D. Hume, *Treatise of Human Nature*, London, 1739, *Four Dissertations*, the first being *The Natural Hist. of Religion*, do. 1757; C. de S. Montesquieu, *De l'Esprit des lois*, Geneva, 1748, Eng. tr., London, 1752; J. G. von Herder, *Ideen zur Philosophie der Gesch. der Menschheit*, Riga and Leipzig, 1784-91, Eng. tr., London, 1900; I. Kant, *Werke*, Leipzig, 1838-39, esp. *Politische Meinungen*, Königsberg, 1794, Eng. tr., London, 1798; M. J. A. N. Condorcet, *Essai sur un tableau historique de l'esprit humain*, Paris, 1795, Eng. tr., London, 1795. For relations of positivism to 18th cent. thought cf. POSSESSION (Introductory and Primitive).—

The belief that supernatural powers, spiritual or divine, may become embodied in man, either permanently or temporarily, is found at all stages of human development and has had a profound effect on the history of religious belief. Possession, a temporary embodiment of an influence or spirit alien to the subject, is a conception in full logical agreement with primitive animistic theories; it was officially recognized in the early Christian Church; and it underlay the cruder forms of modern revivalism. Abnormal physical and psychical manifestations are regarded as evidence of the presence of a deity or spirit, good or evil, and every word and action of the subject are held to be outside his or her control and to proceed solely from the indwelling power. The primitive mind has been quick to seize the advantage of the supposed presence of a supernatural being in order to influence or ascertain the future course of events, and this in one form or another has persisted throughout the religious and spiritual history of mankind. And, since those who are, or have been, under the influence of possession are regarded as oracles, prophets, magicians, and diviners, it has followed that, where the physical and mental peculiarities which are regarded as signs of the spiritual influence are not present from natural causes, they have been simulated or artificially induced. Possession in primitive custom may, therefore, be distinguished as being either involuntary or voluntary. This distinction, though not clearly present to the primitive mind, is nevertheless real.

1. *Origin of belief*.—The spiritual theory of the universe, which is the basis of primitive modes of thought and ascribes powers and attributes which would now be regarded as supernatural to every

man or woman, might be held adequate to account for the nature of the belief. It is clear, however, that, while this attitude of the primitive mind has suggested its general form, its interest centres in what is abnormal in the phenomena. The constant association of possession with pathological states of mind and body indicates that as a theory it is an attempt to explain the existence of epileptics, neurotics, perverts, and those who are subject to other forms of mental diseases. It is particularly significant that it is precisely in those areas in which what is known as 'arctic hysteria' is prevalent, and especially in Siberia, that the mediumistic side of the shaman's functions are most prominent and most constantly in request.

2. *Description of phenomena*.—The interesting physical and psychical phenomena of possession as described both in antiquity and in recent times are essentially identical wherever encountered. The subject, having attained by means of some stimulus or other a state of intense emotional excitement, is seized with convulsive shiverings and shakings of the body, makes violent gestures with the arms, and his looks become wild and excited.

An account of a case of possession in the Sandwich Islands says that the priest who was the subject worked himself up to the highest pitch of frenzy, the limbs seemed convulsed, the body swelled, the countenance became terrific and the features distorted, the eyes wild and strained. While in this state, he rolled on the earth, foaming at the mouth as if labouring under the influence of the divinity. The will of the gods was then revealed in shrill cries, in violent and often indistinct sounds. When the response of the oracle had been given, the violent paroxysm gradually subsided and comparative composure ensued (W. Ellis, *Polynesian Researches*, London, 1832-38, i. 372-375). This account may well be compared with that given by Vergil:

subito non vultus, non color unus,
Non comptæ mansere comæ; sed pectus anhelus,
Et rabie fera corda tument; majorque videri,
Nec mortale sonans; afflata est numine quando
Jam propiora dei' (*Æn.* vi. 47-51).

The exclamations, the cry 'Apollo,' and the disjointed utterances with which Cassandra in the *Agamemnon* begins to prophesy under the influence of the god (*Æsch. Agam. 1072 f*) in like manner find a parallel in the description of possession among primitive races. In the Vedda ceremony the shaman cries 'Ah, Ah,' as the *yaka* enters into possession of him and when it leaves; in Fiji, when the priest was seized, the god announced his name with the subject's voice (*GB³, pt. i., The Magic Art*, London, 1911, i. 378, quoting L. Fison).

The gradual cessation of the paroxysm is not universal. Among the Veddas the termination of possession takes place suddenly after a crucial act in the pantomime of which the ceremonial consists and the shaman falls back exhausted into the arms of his supporters. In a careful study of the phenomena in the Vedda shaman Seligmann says that, although the performer can co-ordinate his movements, he has only a general idea of what he is doing and is more or less in an automatic condition in which he goes through all the emotional movements of the dance correctly and in the proper order. He acts without complete volitional consciousness. The shamans themselves said that both at the beginning and at the end of the performance they were seized with vertigo and nausea. One said that he heard booming noises in his ears when the spirits left him. Apparently the determining factors are a profound belief in the reality of possession and a subconscious attitude of expectancy. It appears to be clear that the possession of the bystanders is non-volitional. A Sinhalese 'devil-dancer' appeared to suffer considerable pain, or at any rate inconvenience, although he did not wish to be, and had taken pains to avoid becoming possessed. At the end of the dance the performer seems to be genuinely tired. The Veddas show no particular indications of a neurotic or hysterical tendency (*C. G. and B. Z. Seligmann, The Veddas*, Cambridge, 1911, pp. 130, 134 f., 209 ff.).

3. Possession and disease.—Although the primitive theory of possession does not discriminate between the cause of cases which are pathological and those in which an abnormal state is the result of the more or less voluntary action of the subject, both alike being attributed to the presence of spirits, in practice a distinction is made between an accidental or occasional seizure and the ceremonial observance of rites to summon spirits to materialize for a special purpose.

Forms of possession which, in the light of this distinction, might be classed in the former category, would include such as are explained as arising from neglect of what is fitting in respect of, or by way of offerings to, a spirit.

Among the Lushai of India, on the occasion of the tribal feasts, the spirits of the dead are believed to be present and it is usual to place offerings of food for them in the caves of the houses. If it should happen that a girl who has recently lost her mother should fall in a faint, it is taken as a case of possession; 'the dead has taken her place.' This is a sign that the spirit is not satisfied with the costume and ornaments with which she was decked on the occasion of the funeral. In order that the girl may be relieved and the spirit appeased, her clothes, ornaments, etc., are placed on that part of the floor where the body lay and one of her old petticoats and cloths is burnt in the forge (*J. Shakespeare, The Lushet Kuki Clans*, London, 1912, p. 65).

Possession may follow some act of impiety.

It is recorded that a Javanese coolie in the Malay Peninsula who cut down a tree known to be tenanted by a *hantu* (spirit) was seized by something resembling an epileptic fit, which was regarded by the Malays as possession. No Malay would cut down a tree known as the abode of a spirit unless directed to do so in the course of an exorcism conducted by the medicine-man (*C. O. Blagden, quoted by W. W. Skeat, Malay Magic*, London, 1900, p. 64 f.).

Near relatives appear to be peculiarly susceptible to attacks by spirits of the deceased, as in the Lushai case of mother and daughter cited above. In other cases, as, e.g., among the Akikuyu, who believe diseases to be caused by *n'goma* (spirits of the dead), there is peculiar danger for the relatives.

The *n'goma* haunt especially the place of the man's death and, if he has been an evil liver, his spirit does as much harm as possible, in particular by taking possession of people whenever he has an opportunity. In such cases the medicine-man is called in to interpret the spirit's desire. If it is not satisfied, it will torment its victim at night and probably cause madness (*W. S. and K. Routledge, With a Prehistoric People*, London, 1910, p. 240 f.).

Possession and causing madness are here specifically mentioned as activities of an evil spirit, but among the primitive theories of disease causation by spirits who enter into or torment the patient holds a prominent place. The therapeutic measures of the medicine-man, in so far as they are

not purely materialistic, like the extraction of a bone or pebble, are largely directed towards driving out or propitiating the demons or spirits responsible for the disease (see art. SHAMANISM). It also finds expression in the customs of driving out disease-spirits at special festivals, of sending them away in boats, or of diverting them to a scapegoat.

It is, however, to the more violent and abnormal forms of disease in particular that the theory of possession is applied.

The Bathonga hold that possession in the form in which it is recognized among them is caused by the spirits of the dead, not, be it noted, spirits of their own dead, but Zulu or Bannao spirits. It occurs chiefly among those who travel outside Thonga boundaries. The attacks are not confined to the time of their absence from their own country; they may bring back the infection with them, and, indeed, though now less frequently than formerly, at times the disease has assumed the proportions of an epidemic. The preliminary symptoms are a nervous crisis, persistent pain in chest, hicough, extraordinary yawning, and emaciation. If, after consultation of the divinator bone, the medicine-man decides that the patient is possessed, the spirit is exorcized. In the course of the elaborate series of ceremonies which follows the patient in a frenzy, declares the name of the spirit which possesses him, speaking in Zulu or Njao even if he has no previous acquaintance with the language. The spirits are appeased by the offering of a goat. When the throat of the goat is cut, the patient sucks blood from the cut until his stomach is full and is then torn away from the carcass by the bystanders. He is given drugs which act as an emetic and the spirit is declared to have left him. At the end of the ceremony which closes the rites, and after a probationary period of a year, the possessed are regarded as fully initiated medicine-men and are distinguished by white beads woven into their hair (*H. A. Junod, Life of a S African Tribe*, London, 1913, ii. 436 ff.). Among the Zulu, where possession occurs in a very similar form and with almost identical symptoms, it is ascribed to the ancestral spirits (*amatongo*); from some it departs of its own accord, others have the ghost laid, while in other cases the disease is allowed to take its own course and they become diviners (*H. Callaway, Religious System of the Amazulu*, London, 1870, pp. 135, 259, etc.).

The magico-medical theories of the Malays which are based upon the idea of 'machiets' are peculiarly instructive as illustrations of this side of the possession theory. As an example may be cited the form of treatment which aims at inducing the disease to pass along a parti-coloured thread from the patient to small dough figures of birds, beasts, and fishes (*Skeat, p. 432 f.*).

In Borneo the pagan tribes regard madmen as possessed by some *toh* (spirit), while the Melanau extend this theory to other forms of sickness. Exorcism for possession is practised by all the pagan tribes, least frequently among the Kayans, most elaborately among the Klemantan. The different forms of dementia are ascribed to different devils. They are said to be ghosts with red eyes; the *umuk* devil comes from the swamp and is different from the suicide devil, both being distinct from the devils which cause simple lunacy (*C. Hose and W. McDougall, Pagan Tribes of Borneo*, London, 1912, i. 23, 31, 46).

It will not be necessary to enter more fully into this side of the subject here, on which further information may be found elsewhere (see artt. DISEASE AND MEDICINE, SHAMANISM). Enough has been said to indicate that, while possession is one of the more important theories of disease, it is applied especially to those cases in which peculiarly violent or abnormal symptoms are plainly to be observed.

4. Possession and initiation.—The pathological character of those affections which are regarded by primitive peoples as evidence of possession is such that the symptoms of the disease or weakness would recur at more or less frequent intervals. It is therefore not surprising to find that those who are subject to such nervous crises come to be regarded as a class apart—a class of peculiar sanctity. This offers in part an explanation of the origin and power of the medicine-man on one side of his functions—as healer, wonder-worker, and prophet. Those who have been in such close relation with the spirits are expected to have special power over them and special knowledge of their will (see J. G. Frazer, *The Belief in Immortality*, i., London, 1913, p. 15).

The Bathonga who had been exorcized for possession after a period of probation himself became a medicine-man and exorcist (*Junod, ii. 436 f.*). The Melanau woman who has been under the influence of the *toh*, when she has undergone the full

ceremony of exorcism, becomes a medicine-woman with full powers to summon the spirits to assist her in healing others (Rose-McDougall, n. 180).

In both these cases the abnormal condition did not bring about the automatic inclusion of the subject in the class of medicine-men and -women. The further ceremonies beyond the minimum necessary for mere exorcism, as well as the probationary year in the Thonga case, suggest that, while the actual case of possession had indicated the fitness of the subject, some further process was necessary before he or she was regarded as fully qualified. In this connexion it may be mentioned that in the secret societies, and especially in those of W. Africa, of which initiation is such an important feature, the spiritualistic element which is prominent in certain forms of possession appears to be strongly cultivated (see Hutton Webster, *Primitive Secret Societies*, New York, 1908, p. 174 ff., and P. A. Talbot, *In the Shadow of the Bush*, do. 1912, p. 40). On the other hand, the mere fact of possession is sometimes adequate to secure recognition of magical powers.

Among the Patagians those who were seized with the falling sickness or St. Vitus' dance were at once selected to be sorcerers as chosen by the demons themselves (T. Falkner, *Description of Patagonia*, Hereford, 1774, p. 116). In some cases the power was confined to certain families; among some Siberian tribes the office of shaman tended to become hereditary, but the supernatural gift was a necessary qualification, and the shamans also adopted children who appeared suitable to succeed them, i.e. those who showed signs of an epileptic or neurotic tendency. Notwithstanding the prevalence of arctic hysteria, it is probable that the qualities necessary for a successful shaman were not too common, as not only must he differ from the ordinary patient in having great control over himself between the fits, which occurred only at the ceremonies, but he had also to have a strong personality, tact, and knowledge to control those with whom he came into contact (M. A. Czaplicka, *Aboriginal Siberia*, Oxford, 1914, p. 169 ff.; *PC*, London, 1903, li. 133, quoting Georgi).

Yet, notwithstanding their selection on the grounds of special fitness, whether due to inheritance or as manifested in the susceptibility to possession, the shamans, after a call which usually follows an acute nervous crisis, have to undergo a period of preparation varying from tribe to tribe, but which in the case of the Yakuts is a lengthy and elaborate ceremony of initiation.

On the other hand, even where a predisposition or the actual symptoms of previous disease were not a condition of becoming a priest, diviner, or soothsayer, the novitiate often imposed conditions which could not fail to lead to an abnormal or unhealthy frame of mind.

The probationary periods required from the aspirant to the profession of the medicine-man among the N. American tribes not infrequently included long fasts and periods of solitude spent in the mountains, during which the novice saw visions, dreamed dreams, and entered into relation with spirits, while the immediate followers of the medicine-men in periodic seclusion in the woods often inflict upon themselves mutilations and injuries which suggest the influence of hysteria (C. Hill-Tout, *British North America*, i., *The Far West*, London, 1907, p. 174 ff.; *NYR*, San Francisco, 1882-83, i. 170 f., 202, 284, 777, etc.). Among the Chukchi, Koryak, and Gilyak, during the long periods of seclusion in the forests, not only did the shamans learn and practise their professional arts—singing, dancing, ventriloquism, and playing the drum—but they endured hardships of cold, hunger, and solitude which could not but intensify their natural predisposition towards hysteria (Czaplicka, p. 173 f.).

These facts appear to lend support to the view that possession voluntarily induced was not entirely imposture, as those in whom lay the power of acting as media would be recruited from neurotic and mentally weak members of the community who, having a natural predisposition to instability, would be peculiarly susceptible to the influence of excitement and auto-suggestion.

In view of the sanctity of the chief and king and the close connexion of these offices with that of priest and medicine-man, it is not surprising to find that it is believed that the presence of the deity or the spirits may be made manifest in the person of the ruler or leader of a community.

In the Sandwich Islands the god spoke through the king (Ellis, *loc. cit.*). In Fiji the god could be approached only through the medium of the priest, who announced the will of the deity while under the influence of divine possession, but the offices of priest and chief were combined. If, however, the chief was of high rank, it was considered derogatory to his dignity that he should become possessed (B. Thomson, *Fijians*, London, 1908, p. 159).

5. The spirit helper.—As a result of the seclusion which forms part of the novitiate both in Siberia and in N. America, the shaman acquires a familiar spirit or helper which usually appears to him in the form of some animal. When he becomes possessed subsequently, it is by the intermediation of this helper that he comes into relation with the spirit world.

In the Siberian séance, the shaman being a skilled ventriloquist, the voices of the spirits come from all sides of the room as well as from the ceiling. The spirits speak with their own voices, unless they happen to be wolf, fox, or raven, which can speak in the language of man. Sometimes the shaman himself does not understand the language; it may be a mixture of Koryak, Yakut, and Yukaghir, and it may have to be translated for the benefit of Russified shamans. One Tungus shaman having Koryak spirits, they spoke through him in that tongue. The Asiatic Eskimos have a spirit language analogous to that of the Eskimos of Alaska and Eastern N. America. On the other hand, a Chukchi shamaness, while in a state of possession, in which she produced small pebbles from a larger pebble with no apparent change in the latter, by wringing it with her hands, was unable to answer questions except by signs, because, it was said, she had temporarily lost the knowledge of her own language (Czaplicka, pp. 231, 233).

6. Voluntary possession.—The theory of possession is not applied solely to those intermittent manifestations of abnormality to which it owes its origin. It could hardly be expected that those who are subject to attacks should not take advantage of the power given them by the feelings of awe and terror aroused by their supposed relation to the spirit world. But, as a crisis of their disease cannot be relied upon to coincide with the moment when their advice may be sought or their assistance invoked by the ordinary member of the community, possession is superinduced voluntarily by an artificial stimulus. The fact that in the majority of cases possession is not a morbid state due to purely natural causes, but is artificially induced, as well as the comparative certainty and facility with which the state of exaltation is attained, has caused question to be raised as to the genuine character of the manifestations and the honesty of the performers. When the peculiar temperament of the performers is taken into account, however, there can be little doubt that, notwithstanding imposture in details, the seizure is genuine and the performer himself often believes to a great extent in the reality of his powers. Many writers concur in ascribing a peculiar cast of countenance to the medicine-man as distinct from other members of his tribe. There is often said to be an appearance of evasive cunning and malice, especially in the expression of the eyes. More probably it is due to a highly-strung or neurotic temperament (see especially writers quoted in Czaplicka, *loc. cit.*).

Various means are employed to superinduce the state of possession. These are usually of such a character as might be expected to set up a state of automatism in the chief actor, and, where possession is not confined to the central figure, to stir up a sympathetic state of excitement in the bystanders. Usually some form of action with a strong rhythmic appeal is a prominent feature in the preliminary ceremonies.

The Veda form of possession is preceded by a dance in which the shaman, while uttering invocations to the spirits, circles round the offerings; the dance increases in speed until the seizure takes place. In one dance in which there were two principal performers the second joined in when the first, who had already become possessed, waved a cloth in front of him. This cloth was the vehicle by which the spirit was supposed to have entered the first dancer, and presumably by the action of waving the cloth in front of the second it was also transmitted to him (C. G. and B. Z. Seligmann, p. 230). In Borneo the Kayan medicine-women, in the course of the exorcism of the

evil spirit for the cure of disease, whirl round until they fall in a faint (Hose-McDougall, *l.* 133).

Among all the Siberian tribes the most important part of the shaman's outfit is the magic drum, on which he beats at first softly and then louder and louder as his excitement increases. The shamans of the Chukchi and the Asiatic Eskimo sing while beating the drum, and responses are given by an answering chorus consisting in the former case of novices, in the latter of the members of the shaman's family (Czaplicka, p. 280 f.). The Samoyed shaman holds in one hand two arrows, from the points of which hang two bells, and in the other a mystic staff, with which he beats the bells rhythmically as he sings (*ib.* p. 239). In the course of the Bathonga ceremony for exorcizing the spirit of possession—a ceremony which consisted chiefly of an orgy of noise made by drums, rattles, etc., round the subject, sometimes for as long a period as a fortnight—the patient composes a song, usually in Zulu, by the repetition of which subsequently he can be roused or arouse himself to a state of excitation. This is his special song and is used by him on all occasions when, having become a fully-fledged medicine-man, he exercises his powers. One peculiarity connected with this song is that it is invariably composed in Zulu or Njao, even though the subject is unacquainted with these languages. In Fiji the priest appears to set up a state of auto-hypnosis. He takes in his hand, and gazes fixedly at, a whale's tooth until he begins to tremble with a violent muscular action and to sob (Thomson, p. 100). The Yakut shaman also in the preliminary performance gazes fixedly on some point in the darkened room, usually the fire. The peculiar effect of suggestion is indicated in this case by the artificial hicough which the shaman keeps up during the early part of the performance in the complete silence of a darkened room before he begins to beat his drum (W. Sieroszewski, quoted in Czaplicka, p. 235).

The action of other means employed is more obvious. Intoxicants of various kinds are used.

In Mangaia before giving oracles the priests drank an intoxicating liquor (W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876, p. 75). In Bali incense was inhaled by the seer or he was surrounded by a band of singing men and women (F. A. Liefrinck, quoted in *GB*, pt. i., *The Magic Art*, i. 379).

Smoke from the foliage of a sacred tree or plant was sometimes used.

Among the tribes of the Hindu Kush the priestess veiled her head with a cloth and inhaled smoke from the fire of the sacred cedar until seized with convulsions (J. Biddulph, *Tribes of the Hindoo Koosh*, Calcutta, 1880, p. 97). The priestess of Apollo ate and was fumigated with laurel, while the Bacchanals ate ivy (Plut. *Quest. Rom.* 112). In Uganda tobacco was smoked (J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda,' *J.R.A.I.* xxxii [1902] 42). Chukchi and Tungus shamans smoked pipes containing narcotic tobacco; the Yakuts also smoked, swallowing the smoke (Czaplicka, pp. 230, 234). In Madura the medium inhaled incense as she sat on a tripod (*GB*, pt. i., *The Magic Art*, i. 384).

A repulsive but not uncommon method of excitation was to suck or drink the blood of a sacrificial victim.

Among the Kuruvikkārāns of S. India the goddess Kali descends on the priest after he has sucked blood from a goat of which the throat has been cut (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, iv. 187). In S. Celebes the priest runs to put his head inside the carcass of a pig which has been cut open. The impulsive character of this act may be compared with the convulsive sucking of the victim's blood in the Bathonga case quoted above (*GB*, pt. i., *The Magic Art*, i. 382). Analogous examples are to be found in the records of antiquity. In Rheira, the religious capital of the W. Slavs, the priest tasted the blood of the victim in order to prophesy better (F. J. Mone, *Gesch. des Heidenthums*, Leipzig, 1822, p. 168). The heathen of Harrān, although holding blood unclean and the food of demons, drank it in order to enter into communion with them. In ancient Greece drinking bulls' blood was both a test of the chastity of the priestess and, in Argos, at Ægira in Achaia, a preliminary to the descent of the priestess into the cave from which she prophesied (*GB*, pt. i., *The Magic Art*, i. 381 f.). In S. India self-mutilation was part of the rite. The devil-dancer cuts and lacerates his flesh with a huge whip till the blood flows, presses a torch to his breast, drinks blood from his own wounds and then from the throat of the sacrificial victim (R. Caldwell, 'On Demonolatry in S. India,' *J.A.S.B.* i. [1882] 101 ff.).

7. Objects to be attained by possession.—(a) *Oracles, divination, and prophecy.*—It follows from the primitive interpretation of this abnormal state of exaltation as one of possession by a spirit or by a deity that anything said by the subject while in this state should be regarded as the utterance of the spirit itself. A condition of the success of an attempt to exorcize the possessing spirit is that it should be compelled to declare through the mouth of the victim either its name, thus giving the operator power over it in accordance with a generally recognized rule of magical practice, or its

desires (usually a request for offerings), knowledge of which makes it possible for it to be expelled by propitiation. It requires only a slight extension of the argument that these sayings are an expression of the will of the gods to transform them into a channel for the revelation of the future. There is abundant evidence in the recorded instances of possession to show that this is not merely an *a priori* view, but is in accordance with the facts, and, even when the state of possession may have been induced primarily with another object in view, advantage has been taken to obtain knowledge of the future through the possessed person.

In the Sandwich Islands it was believed that, when the priest had reached the height of his frenzy, he revealed the will of the gods. But it was also held that the god did not leave him immediately after his recovery, but continued to possess him for two or three days longer. During this time, when he wore a cloth of a peculiar kind in order to mark his abnormal condition, all his acts were regarded as those of the god, and the greatest attention was paid to his expressions and his whole deportment (Ellis, i. 372-375).

When it is believed that these manifestations of the deity or of spirits are not such involuntary seizures as may occur at any time or to any person, but are subject to what to the savage mind must appear to be certain rules or natural laws, in that they can be superinduced by magical formulae or magical acts, or in virtue of magical powers inherent in certain individuals, the custom arises of performing these actions or resorting to these individuals whenever it is desired to obtain knowledge of the future. Those who are subject to possession by entering voluntarily into the state of exaltation at the request of their consultants attain the position of oracles. Analogies more or less close to the priestess of Apollo at Delphi and the Sibyl at Cumæ are found in almost every part of the world.

The germ of the prophetic character of possession is to be seen in the Veda dance in honour of the *nae yaku*, when the direction in which game will be found is indicated by the direction in which the pot of rice falls after it has been set spinning by the shaman as his last act before he ends his performance. In another dance the shaman splits a coco-nut with an *auke* (ceremonial arrow); if a clean break is made, the animal to be shot will be a female, but, if the edge is jagged, it will be a male (C. G. and B. Z. Seligmann, pp. 221, 223). In Bali it was held that, when the *pérmās* had been taken to the temple and had been raised to a proper pitch of excitement by the incense and the singing of groups of men and women who surrounded him, his soul left his body, which was then at the disposal of the deity. He was regarded as a god and as such gave answers to all questions (F. A. Liefrinck, quoted in *GB*, pt. i., *The Magic Art*, i. 379).

The belief that the subject spoke no longer with his own voice but with that of the god is supported by peculiarities of diction and intonation. The utterance may be intermittent or the quality of the voice may be changed.

The Patagonian shaman, when he has worked himself into a frenzy by drumming and rattling, speaks in a low mournful voice (Falkner, *loc. cit.*). In the Sandwich Islands the god gives utterance through the priest to shrill cries and sounds violent and indistinct (Ellis, pp. 352, 375). In Guinea the fetish woman snorts and gasps and her responses are given in a shrill whistling voice (Romer, *Guinea*, p. 57, quoted in *PC*, p. 134 f.). As already mentioned, the Siberian shaman, by his skill in ventriloquism, was able to convince his audience of the presence of his spirit or spirits by the cries, appropriate to their supposed animal form, which they uttered. In the case of those animals which spoke with the human voice their utterance was distinguished by a peculiar timbre (Czaplicka, p. 231).

(b) *Propitiation.*—These abnormal manifestations may also be evoked in order to propitiate spiritual powers or to enter into communion with those powers; or they may even become an act of worship.

This aspect of the belief is very apparent in the pantomime dances of the Veddas, which form the most important element in their ritual and of which the essential object is that the shaman, the central figure, should become possessed by the spirits invoked. The end to be attained is the material success of the tribe, especially success in the matter of food supply, by propitiating the spirits of the recently dead and those spirits who are specially concerned with hunting, the gathering of honey, and the like. These dances are of the greatest interest; their details throw much light on similar dances elsewhere and on the belief in possession generally. The details of the ceremony, and

especially the eating of the offerings after its termination by all present, point to an attempt thoroughly to unite the spirit in a community of membership with the group and thus to secure the exercise of his power to its advantage, the shaman being both the convener and the vehicle of materialization. The dances take place around offerings to the *yaku* (spirits of the dead). The shaman, while dancing and uttering an invocation summoning the spirits, is seized by the *yaku* invoked. It is interesting to note that the spirit cannot enter directly into the shaman, but only by some vehicle, an *aide*, sword, cloth, or other object held in his hand, or the leaves of a bower of branches usually erected near by. The bower is beaten and stripped when the dance is over in order that the spirits may not linger in the neighbourhood longer than is thought desirable. When the spirit enters the shaman, his first act is to approve the offering; this is signified by the shaman bending over the bowl in which it is contained and then springing away. It is expected that the spirit will grant them what they desire out of gratitude. The pantomime dance then begins; the movement usually leads up to some critical action, after which the shaman collapses. This critical act in a dance devoted to Kande Wauniya, a hunting hero, of which the object is to secure success in hunting, is the shooting of the *sambar* deer by the medicine-man. Another dance, in which Banbura Yaka is invoked for success in getting yams and pigs, staple foods, involves three separate possessions of the chief performer, one of each of the personages mentioned as helping Banbura to kill the boar in the hunting story represented by the action of the dance. In each of the dances the spirit invoked to take possession of the dancers and accept the offerings is appropriate to the end desired, Kande Wauniya for success in hunting, Banbura Yaka for pigs and yams, Paka Yaka in childbirth, Dola Yaka for success in collecting rock honey, Rahu Yaka in collecting the honey and in illness. One of the chief dances is that in honour of the *nae yaku*, the recently dead. Some of the dances, in addition to being intended to secure success in the future, are thanksgivings for past favours (C. G. and B. Z. Seligmann, p. 203 ff.).

Possession also forms an element in Malay dances, which, although now a form of amusement, retain some traces of a religious origin. The dance is preceded by an invocation and offering to the spirit of dancing, during which it is usual for the performer to lie down, but in the 'monkey-dance,' which is performed by a girl of about ten years of age, she lies in a swinging cradle, is rocked until she is dizzy, and is fed with salt and areca-nut. At the end of the invocation the spirit is supposed to have taken possession of the dancer. Sometimes the dancer in the monkey-dance is said to perform extraordinary feats of climbing while under the spirit's influence. The child is called by name when it is time for her to recover or, if that fails, she is bathed with coco-nut milk. At the end of the dances an invocation escorts the spirit home. In the 'spit-dance' the dancer holds two iron spits in his hand which at a certain point in the dance he drives into his arms, where they hang (Skeat, pp. 463-467).²

(c) *The treatment of disease.*—As has been stated above, the primitive theory of disease, in one of its forms, attributes it to the influence of spirits. This being the case, it is thought that its cure may be effected by entering into relation with the spirits and ascertaining their will. Frequently desire to obtain a knowledge of the future is merely secondary. The function of the Siberian shamanistic rites of possession was primarily to remove disease; only when this was accomplished did the shaman at times turn to prophecy. Among the Yakuts the gift of prophecy, however, was retained for some time after the cessation of the rites (Czaplicka, p. 237).

An instructive instance in which the relation of possession to both propitiation and cure of disease is illustrated is to be found in the *bori* cult of the Hausas of Nigeria and Tams. The *bori* are spirits, some of Mubamadan origin, some purely pagan, who are regarded as the cause of the various diseases. Each spirit is known by name, is responsible for a particular disease, and is summoned to the accompaniment of drumming and the burning of incense by his or her special song. The

dancers, both male and female, are 'mounted' by the spirits in the great ceremonial dances when offerings are made. In addition to these propitiation ceremonies which avert the attacks of disease, the medium may be called into consultation in case of an actual illness to make the offerings to appease the offended spirit, or for purposes of divination (A. J. N. Tremearne, *The Ban of the Bori*, London, n.d. [1914], pp. 243 ff., 280 ff.).

In S. India and Ceylon in the course of the devil-dances the performers by becoming possessed enter into relation with the demons who are responsible for cases of illness. It may be noted, however, that in some cases the aim of the performer is to avoid possession by the spirit responsible for the disease, especially if the spirit be very powerful. In the Gonagalla ceremony, at the stage when the Riri Yaka was invoked, a cock was substituted for the dancer as the subject for possession owing to the great malignity of this spirit (B. Z. Seligmann, *JRAI* xxxviii, 374).

In such dances as these the object of the dancer is to cure or to avert disease by appeasing or propitiating the spirits responsible, and in these cases possession is only one of the means, though it may be the most important, by which the goodwill of the spirits is secured and made manifest.

In Cambodia in the time of an epidemic the villagers will seek a man whom they consider suitable, take him to the temple, and then, when he is possessed by the god, ask him to ward off the plague from their village (J. Moura, *Le Royaume de Cambodge*, Paris, 1883, i. 177).

But, while in this case and in other cases—e.g., the *bori* quoted above—spiritual causation is recognized, the exact relation of the spirit to the patient is not clearly expressed. When, however, disease is regarded as due to an indwelling spirit, the obvious aim of the exorcist is to drive out the possessing influence. Such is the case in the Thonga form of possession, when the object of the exorcist is to master the spirit by learning its name and thus acquiring power to drive it away. It is possible to trace the development of the idea of the relation of possession and disease through various stages. The exorcist as among the Bathonga, Zulus, Kayans, and many other peoples, some already mentioned, is usually one who has himself or herself suffered from possession, and therefore may be supposed to stand in a peculiar relation to the spirits. Even when disease is attributed to a material cause, a pebble or bone introduced by magical means into the body, the assistance of the deity may be invoked through his agent.

In Poso in Central Celebes, when the priestess is consulted in a case of disease, she becomes possessed and it is the god who speaks through her mouth, and through her hands draws the evil from the patient (*GB*, pt. i., *The Magic Art*, i. 379 f., quoting A. C. Krings).

The intervention may be less direct and the god or spirit may do nothing more than indicate the measures propitiatory or therapeutic that will relieve the patient, as among the Akikdyu (Routledge, p. 241). On the other hand, a logical development is to summon a stronger spirit to possess the exorcist and drive out the malignant spirit.

This is the object of the elaborate rite of the Melanaus of Borneo. If a woman who is possessed goes through the complete rite of exorcism known as *bayau*, she herself becomes an exorcist and can cast out devils from others. This rite is divided into three parts, extending with intervals over eleven nights; the first part is to satisfy the people, the second part to appease the spirits, and the third secures the patient's acceptance as an exorcist. The *bayok salung* ceremony is undertaken when fowls and eggs have been offered without effect to good spirits. It takes place in a room which is elaborately decorated and on the floor of which coloured rice in the shape of crocodiles, peacocks, maize, tobacco, etc., have been scattered as an offering. The object of the ceremony is to summon the evil spirits to take possession of the medicine-women, three or four of whom are present. In the course of the ceremony the patient is brought to the centre of the room and is whirled round in a sealed cone of shavings until she has been worked up into a frenzy. The medicine-women themselves whirl round until they fall in a faint. The native explanation of the ceremony is that it serves as a summons to the spirits, who keep on coming until one sufficiently strong to deal with the case arrives. This one then takes possession of the chief medicine-woman, and in her person eats the rice and other offerings which have been prepared. The spirit in her then calls out the evil spirit from the patient. Sometimes a rattan swing is provided for the patient and chief medicine-woman,

¹ It is stated that carved bamboos and arrows to be used for a similar purpose were found in the hut of a Sakai medicine-man (W. V. Skeat and C. O. Ragden, *Pagan Races of the Malay Peninsula*, London, 1906, ii. 252). In a Sinhalese devil-dance at Gonagalla, however, while a sword brought the dancer *en rapport* with the spirits, an arrow was used to prevent possession by a dangerous spirit (B. Z. Seligmann, 'A Devil Ceremony of the Peasant Sinhalese,' *JRAI* xxxviii, [1908] 372).

² Insensibility to pain or invulnerability is a mark of divine possession. In Bali, when the divinity had seized the possessed person, his body became immaterial and therefore invulnerable, and in the dance with swords or pikes which followed no weapon could hurt him. The S. Indian devil-dancer cut and lacerated his flesh until the blood flowed. The Siberian shaman apparently stabbed himself in the body with a knife in the course of the rite as practised among the Kamchadal Eskimos, Chukchi, Jukaghir, and some other of the Siberian tribes, but close observers consider this an effect of sleight of hand, at most a scratch being responsible for the blood shown (Czaplicka, p. 235).

while near at hand is a stand for the evil spirit (Hose-McDougall, pp. 28, 31, 46, 130 ff.).

The Sakai and Jakun, when they have built their little shelters, place the patient inside and then call upon the spirits to descend on themselves. The Blandas summon the spirits of elephants and monkeys (Skeat-Blagden, i. 252, 295), while the Malay *parang*, in dealing with a serious case of illness after possession by the tiger-spirit, when he imitates the actions and voice of that animal in movement, in eating, and in licking the body of the patient, engages in a hand-to-hand conflict with the malignant spirit and stabs it after it has taken refuge in jars of water or other receptacles placed for the purpose (Skeat, pp. 436-444).

8. Possession of animals and inanimate objects.

—Finally it may be noted that possession is not confined to human beings.

The Todas believe that gods sometimes possess their buffaloes (W. H. R. Rivers, *The Todas*, London, 1906, p. 451). This may be compared with the belief that disease may be transferred to cattle. When the cattle of the Bahuma suffer from an epidemic, it is the custom to secure by means of a ceremony the transfer of the disease to one member of the herd which is then driven out for sacrifice as scapegoat (J. Roscoe, 'The Bahuma: a Cow Tribe of Ankole in the Uganda Protectorate,' *JRAI* xxxvii. [1907] 111). The Yakut shaman sometimes frightens away disease, driving it off by spitting and blowing, but sometimes it is transferred to cattle, which are then sacrificed. The dance which forms part of the ceremony is said to be symbolical of their journey to the sky, and in olden days, it is said, there were shamans who themselves ascended to the heavens (Sieroszewski, in Czapliska, p. 237 f.).

Among the Malays, in a species of spiritualistic performance, after invocation and offerings, spirits are made to take possession of inanimate objects such as palm-blossoms or a fish-trap, and make them go through the motions of a dance. A parallel may be found in the spiritualistic performances of the shaman of the Reindeer Obukhi. Their spirits are said to be very mischievous. Invisible hands turn everything in the tents upside down and throw different objects about. Should the spectators try to touch the spirit, they resent it and may kill the shaman by stabbing him or breaking his head (Czapliska, p. 232).

LITERATURE.—This is sufficiently quoted throughout.

E. N. FALLAIZE.

POSSESSION (Greek and Roman).—The conception of divine possession—the incarnation of a god in human form—prevailed extensively in the earlier stages of religious history. It may be that, as evidenced by the practices of Australian savages, this consciousness in states of excitement of an internal but overmastering force is felt without relation to a personal god (J. E. Harrison, *Themis*, Cambridge, 1912, p. 65); but such considerations are inapplicable to the Greeks of the historical age. When the body of the priest or celebrant passed for a time into the possession of the god, all his acts and words were not merely prompted by but proceeded from the god himself. The devotee identified himself with the god and affected to exercise the divine functions. Illustrations may be drawn from the professions of savage medicine-men, such as the *wakan* men of the Dakotas or the Maori *tohungas* (A. Lang, *Myth, Ritual, and Religion*, i. 112 f.). The best of the Greek instances is the giving of the name Bacchus to those who participated as worshippers in the orgiastic cult of Dionysus (schol. Aristoph. *Eg.* 408); and the impersonations of the Curetes, who took part in the Cretan mysteries of Zagreus (Eur. frag. 472), were similar to those enacted by the enthusiastic followers of the god at Eleusis or Delphi. The ultimate explanation of these phenomena—whether the collective emotion of the group meeting together for the performance of mimetic rites, when projected and externalized, led to the conception of a personalized god (J. E. Harrison, p. 46), or whether, again, the religion of Dionysus was entirely developed from the worship of a god of vegetation (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, i. 1 ff.)—cannot be discussed here. It is sufficient to observe that in all cults where the god enters into the worshipper the worshipper regularly assumes the name of the god. The famous line, to which Plato alludes (*Phædo*, 69 D)—'Many are the thyrsus-bearers, but few are the inspired (Bacchi)'—may be ascribed to the

theological movement of the 6th cent. B.C., which laid increased stress on the mystical value of the communion of the celebrant with the god (C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, p. 813; T. Gomperz, *Greek Thinkers*, Eng. tr., London, 1901, i. 132). Less familiar instances are Sabi and Sabæ, names given to the inspired worshippers of Sabazius (H. Usener, *Götternamen*, Bonn, 1896, p. 44), Bassaræ and Bassarides applied to the Mænads (Athenæus, 198 E; Nonnus, *Dionys.* 14. 395), Cybeli, the designation of the emapt votaries of the Great Mother (Phot. s.v. *Κύβητος*), Hermæ, the boy attendants at the oracle of Trophonius (Paus. ix. 39. 7), and Melissæ, the bee-priestesses of Demeter and other deities (A. B. Cook, in *JHS* xv. [1895] 14 f.; Frazer, *Paus.* viii. xiii. 1). With the last we cannot fail to compare the Thriæ, the prophetic bee-goddesses mentioned below, and the dove-priestesses (Peleiades) at Dodona (R. C. Jebb, *Soph. Trach.*, Cambridge, 1892, p. 202 ff.). The identity of the Peleiades is obscure, but it has recently been suggested with some plausibility that the name was given to a class of magicians who, by intimate association with the birds, had learnt to understand their language, and, as the birds' interpreters, wore a kind of bird-dress when giving response to their questioners (W. R. Halliday, *Greek Divination*, p. 265 ff.). The external association displayed in this mimicry may be compared with the wearing of horns by the Thracian Mænads (*Μυαλλόδες*) in order to identify themselves with the bull-god Dionysus (schol. Lycophr. 1237). These impersonations are not always or even usually to be classed as merely deliberate impostures. The visionary who is conscious of the divine possession yields to the emotional impulses stirred in his responsive nature by the whirling dance, the wild music of the flutes, and the intoxication of the midnight hour. And it would not be difficult to adduce modern parallels for the hallucinations of the Bacchantes, when they saw the earth flowing with milk, wine, and honey, and inhaled the fragrance of Syrian unguents (Plat. *Ion*, 534 A; Eur. *Bacch.* 141 ff.), or for their insensibility to the attack of fire and sword (Eur. *Bacch.* 747; Ov. *Trist.* iv. i. 41 f.).

The condition of the inspired devotee is described as a divine seizure (*κράτος, θεόληπτος*); and the original sense of the word 'enthusiasm' (cf. *ἐνθεός, ἐνθεάτω*) is derived from the indwelling faculty which evokes the display of superhuman power. Corresponding to the entrance into the devotee of an overmastering force was the release of the soul from its corporeal subjection (*ἔκστασις*, our 'ecstasy'; cf. Plat. *Ion*, 534 B). This temporary expropriation is defined as a brief madness (Galen, xix. 462), which is not to be understood as an irresponsible unsteadiness, but rather as the complete occupation of the mental faculties by a sacred energy (Procl. in Plato, *Rep.* 59. 19). A description of the outward effects of inspiration is given by Vergil in connexion with the visit of Æneas to the Cumæan Sibyl:

'Even as she spoke neither her features nor her complexion remained the same, nor was her hair confined within its braid; her bosom heaved, and her wild heart was swollen with frenzy; her stature was larger to the sight, her voice no longer human—so soon was she inspired by the breath of the god as it came ever nearer. . . . At length, no longer submitting herself to Phoebus, the prophetess rages furiously in her cavern, if so be she may succeed in flinging off the mighty god from her bosom. All the more he plies her frenzied mouth, subduing her wild heart, and fashions her to his will by constraint' (*Æn.* vi. 46 ff., 77 f.).

Even more explicitly Lucan (v. 161 ff.) describes the vapour from the chasm inspiring the Pythia, and the god forcing his way through the whole of her frame, and compelling her nature to yield to his exclusive guidance. Then he passes to an account of her distraction, as she shakes the

sacred garlands from her head, and overturns the holy vessels of the temple in feverish efforts to escape from the wrath of the god.

The notion that the entrance of the divine afflatus swells the physical frame of the seer recurs in *Ov. Fast.* vi. 537 ff., where Ino consults Carmentis, the prophetic mother of Evander; and the reluctance of the seer to yield to the overpowering strength of the god is illustrated by Cassandra's cry:

'Again the fearful pangs of true prophetic vision stir my soul, and whirl me with their dizzy prelude' (*Aesch. Ag.* 1214f.).

Those who would avail themselves of the prophet's insight must encounter his natural tendency to resist, by binding him fast when they have caught him (*A. Lang, Making of Religion*, p. 142)—a proceeding which receives illustration from the story of Proteus (*Hom. Od.* iv. 415 ff.; *Veig. Georg.* iv. 395 ff.). It has been observed that a divine possession produces the appearance of madness; and, while especially characteristic of the diviner (cf. *Eur. Bacch.* 298), the signs of madness are wont to accompany every ecstatic impulse, as when Hector with foaming mouth and flashing eyes rushes upon the Greek ships, and savage Ares entering into him fills every sinew with increased might (*Hom. Il.* xv. 605, xvii. 210 f.). For inspiration may be put in operation by the agency of various deities, more particularly of those whose individuality was less firmly marked or whose worship was infected with Oriental or at least foreign influences. To the latter class, besides the instances already mentioned, may be assigned the inspiration of Hecate and Cybele (*Eur. Hipp.* 142 ff.). The former, who belong to an earlier and indigenous stratum of thought, include Pan (*Poll.* i. 19), the Nymphs (*νυμφόληπτος*), and the Muses (*μουσόληπτος*). The Muses (*g.v.*) are merely a subdivision of the Nymphs (*PHG* i. 36); and the Nymphs themselves, of whom the Sphragitides of Cithæron may be cited as typical (*Paus.* ix. iii. 9; *Plut. Aristid.* 11), were gradually forced to yield the sanctities of their shrines to the superior majesty of the Olympians. Plutarch (*Amat.* 16, p. 758 E) includes various kinds of inspiration (*ἐκλιννοία*) which overturns the reason under the generic term 'enthusiasm.' Besides the inspiration of the diviner by Apollo, he names the Bacchic frenzy of Dionysus, with which he couples the orgiastic ecstasies of Cybele and Pan, the poets' frenzy inspired by the Muses, the warlike frenzy of Ares, and what he calls the fiercest and most fiery of all, the frenzy of love. It must be remembered that Plutarch was writing as a philosopher and man of letters; for in popular estimation the inspiration of the seer was essentially distinct from the rest. Although Apollo had no monopoly of divination, the presiding functionaries of the leading oracles, such as the Pythia at Delphi and the Sibyl of Erythræ, passed increasingly into his service. Among the exceptions may be mentioned Erato, prophetess of Pan at Lycosura in Arcadia (*Paus.* viii. xxxvii. 1'), and the ministers who prophesied at the temple of Artemis Sarpedonia in Cilicia (*Strabo*, p. 676).

The entrance into the ecstatic condition was not effected without the co-operation of the seer himself, and various methods were adopted to bring him into communion with the god. The drinking of wine, supposed to contain the vital essence of the god, was practised by the priests at the shrine of Dionysus among the Thracian Ligyræi (*Macrob.* i. xviii. 1). The oracle of the Clarian Apollo at Colophon was served by a priest drawn from a particular class, who, although utterly ignorant of letters, was able, after drinking the water of a secret spring, to give utterance to oracles composed in formal verse (*Tac. Ann.* ii. 54). A similar potency was ascribed to the waters of the Delphian

Cassotis (*Paus.* x. xxiv. 7) and of the sacred well at Hysia in Bœotia (*ib.* ix. ii. 1). The mystical power of the water might be manifested otherwise, as at the oracle of Apollo Thyrsæus near Cyaneæ in Lycia, where the spring showed to any one looking into it whatever he wished to see (*ib.* vii. xxi. 13). The priestess of Apollo Dradiotes at Argos became inspired by drinking the blood of a lamb which had been sacrificed (*ib.* ii. xxiv. 1), and Pliny records that, as a preliminary to the exercise of her prophetic power, the priestess of Earth at Egira in Achaia was accustomed to drink the blood of a bull (*HN* xxviii. 147). The crudity of the conception that the eating of the flesh of a prophetic animal imparts the prophetic faculty by way of corporeal assimilation is illustrated by the remarkable statement of Porphyry (*de Abst.* ii. 48) that those who wish to become possessed of a prophetic spirit swallow the most effective parts of similarly endowed animals, such as the hearts of crows, moles, and hawks. The temple of Apollo at Delphi occupied the site of an old Earth-oracle, which was placed over a deep chasm with a narrow outlet. Here the Pythia, seated on a tripod above the outlet, received the mephitic vapours which rose from the hollow, and was thereby inspired to the utterance of the answers appropriate to the needs of the inquirers (*Strabo*, p. 419; *Cic. de Divin.* i. 79; *Pliny, HN* ii. 206). Herodotus relates (vii. 111) that at a Thracian oracle of Dionysus belonging to the Satræ, and situated among the loftiest peaks, a priestess of the religious order of the Bessi pronounced the oracles in the same manner as the Pythia, i.e. in a condition of ecstatic rapture—but how induced he does not explain. However the result was attained, at Delphi the supremacy of Apollo was acknowledged by his priestess, when, before entering upon her duties, she chewed laurel-leaves (*Lucian, Bis Accus.* 1) or was fumigated with their smoke (*Plut. Pyth. Or.* 6, p. 397 A). Similarly, the Bacchic frenzy was believed to be imparted by the ivy which the Bacchanals ate (*Plut. Quæst. Rom.* 112, p. 291 A). The Thriæ of Mt. Parnassus were conceived either as actually having the form of bees or as winged females with a bee's body from the waist; in either case they were fabled as willing to utter true prophecy when they had fed on fresh honey and were inspired by its intoxicating madness (*Hom. hymn Herm.* 561 f.; with Allen and Sikes's [London, 1904] Appendix, p. 313). Sometimes inspiration was conferred as the result of a sexual union: Numa exercised prophetic power in his capacity as the husband of Egeria (*Plut. Num.* 8); and Apollo was said to have espoused not only Cassandra, but also the Sibyl Herophile (*Paus.* x. xii. 2) and the priestess at Patara in Lycia (*Herod.* i. 182).

Whether Theoclymenus in the *Odyssey* (xx. 350) is described as under the influence of inspiration has been disputed; but Calchas and Helenus speak the words that Apollo puts into their mouth (*Il.* i. 385, vii. 53), and the story of Cassandra is a clear proof that the phenomenon was familiar to the writers of the Cyclic epics. From an early date the constitution of Lycurgus was believed to have been inspired from heaven, whether Lycurgus himself was the direct medium for conveying the divine message (*Plato, Legg.* 691 E), or was formally commissioned by the Pythian oracle (*Herod.* i. 65). The sayings of inspired prophets began to be collected perhaps first during the progress of the religious movement of the 6th cent., to which reference has already been made. The prophet Amphilytus encouraged Pisistratus with an oracle immediately before his victory at Pallene (*Herod.* i. 62), and Onomacritus, the founder of the Orphic community at Athens, who lived at the court of

the tyrant, was charged with the preparation of a collection of the oracles attributed to Musæus, and was subsequently banished for interpolating it with his own compositions (*ib.* vii. 6). Besides the oracles of Musæus the most notorious were those assigned to Bakis—originally the generic term for a seer, whence a fictitious personality was developed. Collections of oracles were not merely preserved among the state records, but circulated freely among the public without any official endorsement. In fact, the calling of an oracle-monger tended to grow into a profession, which traded on the credulity and superstition of the masses; and the extent of the evil may be measured by the violence with which Diopieithes and others of the same class are denounced by Aristophanes (*Eg.* 1085, etc.). Another impostor of the same period was Eurycles the ventriloquist, who claimed to be inspired by an indwelling demon (see DEMONS AND SPIRITS [Greek]). In later ages the belief in demons, fostered even among cultivated circles by the adherence to it of the Stoic philosophy, kept alive also the notion that the divine power could inform and stimulate the human seer. When pressed to account for the failure of the Pythian oracle to maintain its former reputation, Chrysippus (ii. 1215 [Arn.]) was content to explain that the peculiar virtue of the locality, which imparted her inspiration to the priestess by means of the exhalations rising from the ground, had decayed through lapse of time. The Stoic theories of the universal immanence of the divine *πνεῦμα*, and of the harmonious co-ordination of every part of the world (ii. 546 [Arn.]), seemed to give a scientific sanction to the popular belief in the inspiration of the professional diviners (ii. 1211 [Arn.]).

A position of special eminence was accorded to the Sibyl, whose earliest mention is to be found in Heracitus:

'The Sibyl with raving voice speaks words that have no part in laughter or in rich apparel or in unguents. Yet she prevails; for it is the god who drives her' (frag. 92, in H. Diels, *Fragmente der Vorsokratiker*, i. 8 94).

The name is believed to be of Semitic origin, and to bear the meaning 'seized by the god' (Gruppe, *Gr. Myth.* p. 927). It will be observed that in Heracitus, as in Aristophanes (*Pax*, 1095) and Plato (*Phædr.* 244 B), there is no mention of more than one Sibyl; and there is very little doubt that her original home—i.e. from the Greek point of view—was at Erythræ on the west coast of Asia Minor (Paus. x. xii. 7). In the later authorities several Sibyls are mentioned, so that the name, once introduced, seems to have spread over the Greek world (cf. Livy, i. 7). One of the most famous was the Sibyl of Cumæ introduced by Vergil into the narrative of *Æn.* vi., and it was she who, according to the legend, brought the Sibylline books to King Tarquin.

The idea of possession may be traced also in the ritual of the dream-oracle. The dream itself was a divine message sent to the sleeper in concrete form (Hom. *Od.* iv. 796 ff.), and clear evidence is wanting that it was commonly regarded as the working of a demonic being within the body of the sleeper himself. On the contrary, it is the normal belief of savages that the soul of the sleeper passes out of his body during sleep (*GB*⁸, pt. ii., *Taboo and the Perils of the Soul*, London, 1911, p. 36 ff.); and there are some indications that a similar view was adopted by the Greeks (Cic. *de Divin.* i. 30, etc.). Nevertheless, the custom whereby inquirers were wont to spread beneath them the skin of the sacrificial victim before seeking sleep in the temple—a custom which is well attested for the shrine of Amphiaraus in Attica, and for other places (Frazer, on Paus. i. xxxiv. 5)—shows that the revelation of the dream required for its transmis-

sion the establishment of a special relation between the worshipper and the god. It has also been suggested that the sleeping on the bare earth attested for ordinary persons (Lucian, *Necyom.* 7), as well as for the Selli of Dodona (Hom. *Il.* xvi. 235), was intended to assist the entrance into the body of the sleeper of the chthonic influences coming from below. Sometimes the inquirer is not brought directly into contact with the sacred influence, but receives his message from the lips of a priestly intermediary, whose functions are similar to those of the medium in modern spiritualism. At the temple of Dionysus at Amphiclea in Phocis the god was said to announce cures for sickness in dreams, not directly, but using the priest as his inspired mouth-piece (Paus. x. xxxiii. 11). Further, inscriptional evidence seems to prove the existence of a class of inspired persons (*κράτοι*), who superintended the incubation-rites at various dream-oracles in Egypt and Syria (Gruppe, p. 928).

The Greek poets always spoke of themselves and of other singers as inspired (*θεῶς δαδός* [cf. Hom. *Od.* iv. 17; Pind. frag. 150; Bacchyl. viii. 3]). This was not so much a metaphor as a survival, since the origin of the conception is to be referred to a primitive era in which the functions of poet and seer were not yet differentiated. The early medicine-man, like Apollo himself, was at once prophet, poet, doctor, diviner, and wizard; but the gradual emergence of the various arts and sciences continually stripped him of his attributes (Halliday, pp. 57, 75). Hence, even in the earliest of our literary records, poetry and divination appear as distinct arts; and in the 5th cent. the sense of their original connexion had so entirely disappeared that it was almost a paradox for Democritus to declare that no good poetry was possible without a mental ardour and inspiration akin to madness (frags. 17, 18 [Diels]). Similarly, the Platonic Socrates asserted that poets compose their songs not by virtue of any wisdom or skill, but owing to a kind of natural inspiration, like that of seers and prophets (*Apol.* 22 C, *Ion*, 533 E). Inspiration had come to be a general notion covering many different kinds of activity which seemed to spring from some transcendent or pre-eminent ability. It was in accordance with this habit of thought that Pindar, emphasizing his preference for inborn over acquired characteristics, spoke of all wisdom as inspired (*Ol.* ix. 28, xi. 10). Since it was the characteristic of seers, as being merely the mouth-pieces of the god, to utter what they did not understand, Plato concluded that statesmen, who, though often successful in their speeches and policies, were equally ignorant of the real meaning of their words, must be guided by divine inspiration (*Meno*, 99 C, D). Again, the wisdom of the philosopher may be described as enthusiasm in the fullest sense; for, though derided by the masses as dotage, it is derived from constant association with the divine (*Phædr.* 249 D).

Roman religion has been so much overlaid with Greek innovations, particularly in so far as our evidence is derived from literary sources, that it is generally difficult to discover old Italian beliefs which have not been contaminated with foreign associations. The early date of this Greek influence may be gauged by the legend which refers the acquisition of the Sibylline books to the end of the regal period, and by the authentic statement that they were first consulted in the year 496 B.C. (Dion. Hal. vi. 17). It is certain, however, that prophetic inspiration must have been as familiar to the old Roman religion as it has been found to be everywhere else; and it is unnecessary in this place to do more than refer to some scanty traces of native divination which occasionally meet us in Latin literature. Besides the Sibylline books, we

read of collections of oracles attributed to Marcius and Publicius (Cic. *de Divin.* i. 115, ii. 113). Of the latter nothing further is known, but the *carmina Marciانا*, if Livy's extract (xxv. 12) may be trusted, contained allusions to Greek myths, and must have been of comparatively late origin. To take another illustration, there is no doubt that Faunus was a native Italian wood-spirit, although he was constantly assimilated to Pan by Graecizing writers. Moreover, Fauni (in the plural) are well-evidenced as the semi-divine occupants of oracular shrines. Ennius, in a well-known line, refers to the verses in which Fauns or prophets chanted of old (213 [ed. J. Vahlen, Leipzig, 1854]). Vergil described the visit of Latinus to the dream-oracle of Faunus at Albunea, where a sacred spring in the midst of a dark grove emitted sulphurous fumes (*Aen.* vii. 81 ff.). This character of Faunus is confirmed by the tradition that his wife was named Fatua, and that she foretold the future in the frenzy of divine inspiration (Justin, xliii. 1. 8). He himself also bore the title Fatuus, which, though connected by modern philologists (K. Brugmann, *Comparative Grammar*, Eng. tr., London, 1888, i. 151; W. M. Lindsay, *Latin Language*, Oxford, 1894, p. 324) with *fa-rē*, 'to speak,' was understood by the ancients as descriptive of the inspired madness of the seer (Plin. *HN* xxvii. 107). In his mantic capacity Faunus was associated with Picus, the woodpecker-king or prophetic bird-spirit (Plut. *Num.* 15; see also Harrison, *Themis*, p. 106 ff.).

Gruppe, *Griechische Mythologie und Religionsgeschichte*, Munich, 1906, p. 924 ff.; E. Rohde, *Psyche*, Tübingen, 1910, ii. 19 ff.; W. R. Halliday, *Greek Divination*, London, 1913, pp. 64-99. A. C. PEARSON.

POSSESSION (Indian).—The question of the possession of spirits in the case of the medium, who in a state of hysteria mutters incoherent words which are interpreted as oracles, and of persons in an abnormal condition, as at puberty, pregnancy, and the like, has been discussed in art. **DEMONS AND SPIRITS (Indian)**, vol. iv. p. 604 ff. In the present article some points hitherto unnoticed are considered.

1. Possession at domestic rites.—Cases of possession often occur at domestic rites.

(a) *Death.*—The practice of the Paniyans of Madras is typical:

A man enters with his legs girt with bells, the music of which is supposed to scare the malevolent spirits which are present at the time of a death. He advances with short steps, rolling his eyes and staggering to and fro, sawing the air with two short sticks which he holds in his hands, and thus works himself into a frenzied state of inspiration, while the mourners wail and ask why the dead has been taken from them. Presently a convulsive shiver attacks the medium, who staggers more violently, and at last falls on the ground. He tries to support himself by holding one of the poles of the funeral shed, while he gasps out disjointed sentences which are taken to be the voice of the god.

The object here is to ascertain the fate of the spirit of the dead man, and to discover the cause of his death, which may be due to some misconduct on the part of his relatives—witchcraft, sorcery, or the like. In another form of the rite in the same tribe the intention seems to be to secure communion with the deity who is supposed to be responsible for the death.

Here three masked dancers—one representing the tribal goddess, the other two her ministers—waving sticks and shivering, go before each elder of the tribe and apparently receive his blessing, the elder placing his hands on their faces as a form of salutation, and then rubbing them on his own face. The man representing the goddess then seats himself on a stool and gives an address to the assemblage, admonishing them as to their future conduct (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, vi. 67, 69).

The desire to effect communion with the spirit of a person lately dead is illustrated by the practice of the Tiyans of Madras.

A girl becomes possessed by the spirit, and talks and acts, it is said, just like the person who has lately died, calling the children, relatives, and friends by name, and giving commands for the future conduct of the surviving members of the family. 'After this, the spirit is severed from earthly trammels, and attains heavenly bliss' (*ib.* vii. 91).

(b) *Marriage.*—The Gollas of Madras at their marriages worship Gangā, the goddess of the river Ganges.

They draw coloured figures on the floor of the house and during the preparation of these some people, more particularly boys and those of feeble mind, are excluded from the yard, as some ill luck would befall them if they caught sight of the figures before the rite of removing the evil eye from them had been performed. Food and incense are waved before the figure of Gangā, and a cock is sacrificed, its neck being wrung. The three men who perform the rite prostrate themselves before the goddess and salute her. One of them gradually begins to perspire, and the spectators exclaim that he is about to become possessed by the spirit of an ancestor. Taking up a sword, he tries to cut himself with it, but he is careful to use only the blunt edge. The sword is wrested from him and placed on the figure of the goddess. He then walks round the figure, shaking and twisting his body. Then the bridegroom enters, and he also becomes possessed. Incense and lights are carried round the figure, and the man representing the ancestor announces that the marriage will be fortunate; in other words, the family ancestor sanctions the union of the couple (*ib.* ii. 295).

2. Possession among Muhammadans.—The cult of spirits is a later addition to the orthodox form of Islām, but it is inevitable in India where so many of the converts are drawn from animistic tribes and castes. Among people of this class the spirit-scaring power of the tombs of certain saints and martyrs is prominent.

The shrine of Mirān Sayyid 'Alī, at Unjā in N. Gujarāt, is famous for its power of relieving persons attacked by spirits. When such a patient arrives, the warden (*mudāwar*) provides him with accommodation in one of the open rooms or outhouses of the shrine. In the evening he takes his place beside the railing of the saint's grave and is given a cup of water from the shrine well or cistern. If he is really spirit-possessed, the spirit manifests itself by causing him to shake his body, or, in the case of a woman, to fling her hair about and roll her eyes. If after one or two draughts of water these effects are not produced, the ailment is supposed to be constitutional, and the remedy prescribed is the external or internal use of the leaves of the tree which grows near the saint's grave. This is said to be of a variety elsewhere unknown, but to have grown from a piece of wood which the saint used to clean his teeth—an idea which savours of Buddhism (*PR* ii. 89 f.). In more serious cases the patient seems to be dragged by some unseen force, writhing and raving as if he were undergoing chastisement. 'At last when he gives a faithful promise of future good conduct, and when the fit is exhausted, he removes himself from the place, often with a shoe between his teeth as a sign of abject admission of defeat, and runs from the shrine enclosure, and drops as if dead. He is now in his proper senses, the wild and fagged look in his face during the days of his possession has disappeared, the dazed expression with the snake-like fixedness of the eyeballs is gone. He regains his usual spirits, and after the performance of his vow is sent back to his home' (*BG* ix. pt. ii [1899] 128 f.).

3. Shaikh Saddū.—Among the spirits which attack women in India the chief is Shaikh Saddū. He was a learned man, but a hypocrite, who found a copper lamp engraved with mystical characters. When he lighted it, as in the case of Aladdin (*R. F. Burton, Book of the Thousand Nights and a Night*, London, 1894, x. 33 ff.), a *jinn* appeared to serve him. But, when he employed the *jinn* to gain for him the daughter of a king and to appropriate a mosque which he coveted, the spirits tore him to pieces.

'It is very common to hear the vulgar people say if any of their friends is affected with melancholy, hypochondria, etc., "Ay, it is the spirit of Shaikh Saddū has possessed him." In such cases the spirit is to be dislodged from the afflicted person by sweetmeats, to be distributed among the poor; to which is added, if possible, the sacrifice of a black goat' (Mrs. Meer Hasan Ali, *Observations on the Mussulmans of India*, London, 1832, ii. 323 f.).

Some women, regarded as impious by the orthodox, dress themselves in men's clothes, and have a séance in which Shaikh Saddū 'comes on the head' of one of them.

She becomes possessed, waves her head about, and women who desire any special boon, such as the birth of a child, implore her aid. The medium gives her a packet of betel-leaves, and some which she has herself chewed, or sweets

'which she with her profound faith, actually eats. However, God is Lord of all, and it depends on His will and pleasure whether the woman shall be with child or not. But if perchance she should bring forth a child, the belief of these unfortunate creatures in these things is wonderfully confirmed, and they turn real infidels. Should she not have a child, she concludes Miyān [the saint] is angry with her, and repeats the ceremony with redoubled credulity' (Jaffur Shurief, *Qanoon-e-Islam; or the Customs of the Mussulmans of India*², Madras, 1863, p. 184 f.).

LITERATURE.—The literature has been quoted in the article; see also *ERE* iv. 608

W. CROOKE.

POSSESSION (Japanese).—*Kangakari*, which is a contraction of *kami*, 'god,' and *kukari*, a word implying the idea of 'possession,' means literally 'god-attachment,' and expresses the idea of the passive attitude of a man under a superior influence which takes possession of him. The Japanese also use two words of Chinese origin to denote inspiration, *shintaku* and *takusen*, both of which imply the idea of divine revelation—of a communication made by divinity by means of an inspired man as intermediary. In pure Japanese the latter idea is also rendered by the expression *kami no shirase*, 'information of the god.'

1. In ancient literature. — This supernatural phenomenon is described in the most ancient Shintō documents. One of the most important mythological tales is that of a famous goddess, Ame no Uzume (the Dread Female of Heaven), who is a sort of prophetess. It is she who, by a sacred dance before the rock cavern in which the sun-goddess has hidden, finally leads her to reappear and lighten the world again. In this connexion an expression is employed in the *Kojiki* (*kamugakari-shite*, 'accomplishing divine possession') which is not very clear, and may be taken in the sense of feigned possession (this is the sense adopted by B. H. Chamberlain, *Kojiki*², Tokyo, 1906, p. 69, n. 32); but the corresponding passage in the *Nihongi* rather seems to indicate that it is real possession (see *Nihongi*, Shūkai ed., i. 40; and cf. tr. by W. G. Aston, London, 1896, i. 44). Moreover, Uzume is regarded as the mythical ancestor of the *sarume* (monkey-women), who performed religious dances (*kagura*) at court; and the divinely-inspired utterance which, according to the *Nihongi*, she pronounced in front of the celestial cavern (and which, according to another version, consisted only of the words *Hi, fu, mi, yo, tsu, mi, nana, ya, kokono, tō*—simply the numerals from one to ten) is the prototype of the revelations of the *miko* ('august child'), young priestesses attached to the principal Shintō temples, who dance the *kagura* to this day and sometimes acted as mediums, particularly at Ise.

Another and more characteristic case of possession is furnished by the prelude to the story of the expedition of the empress Jingō, the first legendary conqueror of Korea. The scene, which is one of ancient grandeur, is thus described in the *Kojiki*:

'The Empress, Her Augustness Princess Okinaga-tarashi [the ancient name of the empress], was at that time divinely possessed. So when the Heavenly Sovereign [Emperor Chuai], dwelling at the palace of Kasiki in Tsukushi [Kyūshū], was about to smite the Land of Kumaso, the Heavenly Sovereign played on his august lute [the *azuma-koto*, an instrument 5 or 6 ft. long, with six strings], and the Prime Minister, the Noble Take-uchi, being in the pure court [*sa-niha*], requested the divine orders. Hereupon the Empress, divinely possessed, charged him with this instruction and counsel: "There is a land to the Westward, and in that land is abundance of various treasures dazzling to the eye, from gold and silver downwards. I will now bestow this land upon thee." Then the Heavenly Sovereign replied, saying: "If one ascend to a high place and look Westward, no country is to be seen. There is only the great sea"; and saying, "They are lying Deities," he pushed away his august lute, did not play on it, and sat silent. Then the Deities were very angry, and said: "Altogether as for this empire, it is not a land over which thou oughtest to rule. Do thou go to the one road!" [i.e. Hades]. Hereupon the Prime Minister, the noble Take-uchi, said: "[I am filled with] awe, my Heavenly Sovereign! Continue playing thy great august lute." Then he slowly drew his august lute to him, and languidly

played on it. So almost immediately the sound of the august lute became inaudible. On their forthwith lifting a light and looking, [the Heavenly Sovereign] was dead' (*Kojiki*, 284 f.; cf. *Nihongi*, i. 221 f.).

After the tragic death of the emperor, which was the punishment for his impiety, the empress and her prime minister, alarmed and dismayed, perform the ceremonies of the Great Purification of the country; then Take-uchi tries to obtain a new inspiration from the gods.

'The Noble Take-uchi again stood in the pure court and requested the Deities' commands. Thereupon the manner of their instruction and counsel was exactly the same as on the former day: "Altogether this land is a land to be ruled over by the august child in thine Augustness's august womb." [The deities now speak to, as well as through, the empress.] Then the Noble Take-uchi said: "[I am filled with] awe, my Great Deities! The august child in this Deity's womb, what [sort of] child may it be?" [The Deities] replied, saying: "It is a male child." Then [the Noble Take-uchi] requested more particularly, [saying]: "I wish to know the august names of the Great Deities whose words have now instructed us." Forthwith [the Deities] replied, saying: "It is the august doing of the Great-August-Heaven-Shining-Deity; likewise it is the three Great Deities Bottom-Possessing-Male, Middle-Possessing-Male and Surface-Possessing-Male [three of the deities born at the time of the purification of Izanagi, on his return from Hades], etc. . . ." (*Kojiki*, 286 f.).

Whereupon these divinities reveal the offerings and mysterious rites by means of which the crossing of the sea and the conquest of Korea will be successfully accomplished.

It is to be noted that, in this text, the empress is accorded 'divinity' (*kami*). This title may have been given to her, as sometimes happened, simply on account of her supreme rank (cf. *Kojiki*, 333, 364 f., etc.); but it is more probable that, as has been supposed by the native commentator Motoori, the prime minister made an exceptional use of the title here, because at the moment she was 'divinely possessed.' However this may be, both this narrative and that of the death of the emperor have a corresponding passage in the *Nihongi* (i. 225 f.) which shows that the interrogation of the gods in a sacred place, with a lute accompaniment, in order to know their names and desires, was a form of divination regularly employed in the most ancient Shintō; and we see also that this practice admitted of the presence of two persons, the one, in a state of possession, serving as a medium, and the other entrusted with the asking of the necessary questions, and also, no doubt, with the explanation of the obscure answers, as the priests of Delphi interpreted the unintelligible words of the pythoness.

2. Development and modification by Buddhism. — After these fundamental narratives of the sacred books, mention might be made of many other cases of inspiration in the course of Japanese history. Without relating them here in detail, we may draw from them two observations of a general kind. (1) Any persons whatever may be possessed as subjects of divination. They may be men (*e.g.*, *Nihongi*, i. 225, 391 f., ii. 317 f.), particularly inferior priests (ii. 76 f., 318), or women (i. 152, 221), especially priestesses (i. 176), or even children (i. 163). (2) We find that the objects of inspiration are usually the oracles of a god who demands a cult either for himself (*e.g.*, *Nihongi*, i. 154 f., 163, 221, ii. 76 f.) or for some other god (i. 391 f.), or who complains that his already existing cult is neglected (i. 152, ii. 77, 318), asks for the erection of a new temple (i. 176, ii. 77), or specifies the particular offerings and observances agreeable to him (i. 153, 222, 226, 391 f., ii. 77, 318). All this represents something rather vulgar. It is, in a word, a secondary divinatory practice, which the court and the upper Shintō clergy, faithful to the official method of the 'Greater Divination' (see DIVINATION [Japanese], vol. iv. p. 802), regard with a certain mistrust. *E.g.*, in the year 812 a decree announced penalties against peasants who, without reason, predicted good or bad fortune.

It is true that this document ordered the local authorities to report to the central government all authentic predictions. But later, when, in 1348, a bonze of Ise, after a thousand days of prayers, found floating on the sea a glittering sword, which a young boy, divinely inspired, declared to be one of the three imperial insignia—the sacred sword lost in 1184 at the great naval battle of Dan-no-ura—the court refused to recognize it as such. This shows that, if possession plays an important part in the most ancient Shintō, it tends afterwards to become rather a popular proceeding, more and more neglected by the official religion.

On the other hand, however, Buddhism lays hold of it, and often avails itself of it in its politics and its 'pious expedients' (*hōben*), i.e. cleverly appropriating Shintō by representing its gods as incarnations of its own saints. Thus, in the 8th cent., the priest Gyōgi, having prayed seven days and seven nights under a tree near the great temple of Ise, receives an oracle the result of which is that the sun-goddess must be identified with Vairochana, a Buddhist personification of spiritual illumination and purity. At the same time this foreign influence brings to Japanese possession moral characteristics which pure Shintō did not know. Henceforth the gods teach kindness, charity towards the poor, righteousness, purity of heart—all Buddhist and Confucian virtues. Even Hachiman, the terrible god of war, enjoins on his followers pity for mendicants and lepers, for ants and crickets. A glance through the odd collection of oracles of the *Wa Rongo* ('Japanese Analects,' 1669), of which Aston gives an analysis (*Shinto*, London, 1905, pp. 367–372), will make one realize this transformation. It is a mixture of foreign ideas, attributed to the gods of various Shintōist temples, which contradict not only each other but all that we know of these Japanese gods. At the same time, however, there are in many cases conceptions of a much higher moral level than that of the old indigenous religions.

3. Present-day practice.—At the present day possession is represented chiefly by popular practices of which the principal element is hypnotism. It is certain that this phenomenon was the basis of primitive possession, although the ancient documents do not describe it minutely. Nervous phenomena in general played a large part in Shintō, and gave birth especially to some curious beliefs and legends founded on dissociation of personality (see M. Revon, *Anthologie de la littérature japonaise*, Paris, 1910, pp. 58, 134, etc.). Hysteria was also well known to the early Japanese, who treated it by massage (see W. N. Whitney, 'Notes on the History of Medical Progress in Japan,' in *TASJ* xii. pt. iv. [Tōkyō, 1885] 351). This state of things being understood, it is not astonishing to find that in our day the hypnotic crisis constitutes the essential point of the spiritual séances so well described by Percival Lowell ('Esoteric Shinto,' in *TASJ* xxi. [1893] 106–135, 152–197, 241–270, xii. pt. i. [1894] 1–26, and *Occult Japan*, Boston, 1895).

In a purified place a small group of believers assemble, of whom the principal personages are the *naka-za* ('middle-seat'), i.e. the medium, and the *mae-za* ('front-seat'), who directs the ceremony and interrogates the medium himself. It is easy to recognize in these two modern rôles those which we have already found, in primitive times, in the persons of the divinely-possessed Empress Jingō and her minister Take-nchi. After various preliminary ceremonies (in which Buddhist influence is sufficiently marked, by the employment, as accompaniment to the songs, of the *shakuhō*, a staff to the end of which metal rings are attached, as well as of incense, and by other foreign custom), the *naka-za* sits down, closes his eyes and receives from the *mae-za* the *gohei*, i.e. a wand adorned with strips of white paper, which is the sacred emblem of Shintō. Then there is singing, and the descent of the god (*kami-oroshi*) is awaited. At first the *naka-za* remains motionless, but suddenly the *gohei* quivers in his hands, and gradually trembles more and more until the man enters into a state of convulsion. In some cases his eyes remain half-closed; in others they open,

and, when the crisis subsides into a permanent trembling, remain fixed, with the look peculiar to hypnosis. The man has then become a god, and the *mae-za*, bowing respectfully, first asks his name, and then puts some questions to him, to which the god, on his part, replies. When this dialogue is finished, the *naka-za*, after a last prayer, rouses him by striking him on the back. After that one of the audience offers him a cup of water, and, when he manages to drink it, others rub his arms and his body until he recovers from his catalepsy.

It may be added that, even in some forms of inspiration in which hypnotism does not play the principal part, as in divination by the *oki*, the soothsayer allows himself to be put into a certain nervous state, marked by a violent contraction of the face, foaming of the lips, and trembling of the whole body. The present writer has seen a man in this state of traditional delirium in the exercise of his prophetic office, who was ordinarily quite gentle—the famous soothsayer Takashima (cf. DIVINATION [Japanese], vol. iv. p. 804^b).

4. Possession by human spirits.—There is another kind of possession, in which it is not gods that are invoked, but human spirits, either of living men, or, more frequently, of the dead, and especially of deceased relatives. These evocations are practised, also by means of hypnosis, by sorceresses called *ichi-ko*, or *agata-miko*, or sometimes *azusa-miko*, because in their conjurations they make use of the *azusa-yumi*, a bow of *azusa*-wood. Some are parish mediums, others itinerant mediums of a more humble position. This necromancy is, however, a modern custom.

5. Animal-possession.—The last form of possession to be noticed is possession by the fox, the badger, and other animals. The Japanese employ for animal-possession the same expression as for divine possession: 'to be possessed by the fox' is *kitsune ga kukuri*. But the fox and the badger do not appear in the primitive documents unless just as any other animals, and Aston is wrong (*Nihongi*, i. 59, n. 10) in including their enchantments among the calamities (*wasahahi*) which required ritual purification. He has confused two aspects of the Japanese fox, which must be all the more carefully distinguished because they are in direct opposition to each other. If the fox holds a place in Shintō, it is only on account of its gradual identification with the god Inari, 'the Man of the Rice,' who is himself connected with Uka no Mi-tama, 'the August Spirit of Food,' a hypostasis of the goddess of food, Ukemochi. It is only in Buddhism that he is regarded as an agent of possession; and he appears there not as a beneficent god, but, on the contrary, as an evil demon.¹ The traditional badger (*tanuki*), which in fact is not a real badger, but a small black fox, the *canis procynoides*, also appears only in popular superstitions, just as does the *mujina*, a kind of badger mentioned in some tales of the *Nihongi* (i. 184, ii. 155).

A famous story in Japan is that of the badger in a monastery which assumed the shape of a tea-kettle and, by its fantastic gambols, caused consternation among all the priests. When they sold it to a coppersmith, the animal took its own shape again, and made the fortune of its new master, who exhibited it as an animal both curious and sacred (A. B. Mitford, *Tales of Old Japan*, London, 1888, p. 175 f.).

That these popular beliefs persist even to-day is shown by a well-known anecdote.

In 1889 a phantom train suddenly appeared to the engineer-driver of a real train on the line from Tōkyō to Yokohama. After a desperate pursuit the phantom train was overtaken, and a fox was found crushed to pieces under the wheels of the real locomotive.

¹ For the legendary point of view see W. de Visser, 'The Fox and Badger in the Japanese Folklore,' in *TASJ* xxxvi. pt. iii. [1908]; Lafcadio Hearn, *Glimpses of Unfamiliar Japan*, Boston, 1896, i. 310 f.; W. Anderson, *Catal. of Jap. and Chin. Paintings in the British Museum*, London, 1896, pp. 391, 424; J. M. James, in *TASJ* vii. pt. iv. [1890] 276 f., etc.; cf. also J. I. Nevius, *Demon Possession and Allied Themes*, Chicago, 1894, pp. 48, 51, 71, 104, 202; for the medical point of view the observations of E. Baetz, of the University of Tōkyō, a résumé of which will be found in B. H. Chamberlain, *Things Japanese*, Tōkyō, 1898, s.v. 'Demoniacal Possession.'

It must also be mentioned that, besides persons possessed by the fox, there are others who possess the fox (*kitsune-mochi*) and can, like the fox himself, employ charms against their enemies. In the old province of Izumo whole families exist who are supposed to have invisible foxes protecting them; but these families are regarded with a general feeling of repulsion, and it is only other families also possessing the fox who will agree to become united to them by marriage. Lastly, it may be recalled in this connexion that the soul of the dead fox is sometimes employed in a kind of secondary divination practised by the *kitsune-tsukahi* (see DIVINATION [Japanese], vol. iv. p. 803^b).

LITERATURE.—The literature is cited throughout the article.

MICHEL REVON.

POSSESSION (Semitic and Christian).—Among the Semitic peoples, as among the other peoples of the world, there survived from the animistic stage of culture the belief that a spirit can take possession of a person either for good or for evil. This will be made more clear by passing in review the facts in detail.

1. *Babylonia and Assyria*.—Among the ancient Babylonians the idea of possession in its completest form survived only in the case of evil spirits, though some attenuated traces of the conception that the spirit of a god might take possession of a man are also found. In every period of Babylonian history it was believed that sickness was caused by a demon which entered into persons and took possession of them. This conception is reflected in the oldest Babylonian religious text known, an incantation inscribed on a foundation cylinder of the time of the dynasty of Akkad, about 2800–2600 B.C., now in the University Museum in Philadelphia. The cylinder is fragmentary, the beginning being broken away. But in one of the early columns the demon is addressed thus:

'The light of the city,—in the light of the city are they.
The darkness of the city,—in the darkness of the city are they.
The people of the city,—among the people of the city are they.'

In a later column we read:

'Enlil declares to him:
"Gone is the sickness from the face of the land."
As a protector he removed it,—
Enlil's are they,—
As a protector he removed it.'

It is clear from this text that sickness was a demon, but a demon that Enlil could expel. The beneficent god was more powerful than the demon.

The Babylonians distinguished one demon from another just as a modern physician distinguishes one germ from another. Ashakku was the demon of a wasting disease, perhaps a form of tuberculosis. Akhkhazu, the 'seizer,' was the demon of liver troubles. Labartu, who was pictured as a monster with swine sucking at her breasts, attacked women in childbirth and their infant children.¹ Toothache was supposed to be caused by a demon that was identified with a worm. This is made clear by the following text:

'After Anu [had created the heavens]
The heavens created the earth,
The earth created the rivers,
The rivers created the canals,
The canals created the marsh,
The marsh created the worm.
Then came the worm weeping before Shamash;
Before Ea came her tears:
"What wilt thou give me for my food?
What wilt thou give me as mine to destroy?"
"I will give thee the ripe figs (?) and soft pomegranates (?)."
"Me! What are these ripe figs (?) to me? And soft pomegranates (?)?"
Lift me up, between the teeth and the jaw-bone set me,

That I may destroy the blood of the teeth,
And run their strength,
Grasp the prong and seize the root."²

As disease was possession by a demon, so cure consisted of expelling the demon from the body. This is most clearly shown in an incantation text in which the demon is addressed thus:³

'Out! Out! Far away! Far away!
Shame! Shame! Perish! Perish!
Turn thy body! Out! Far away!
From my body go out!
From my body far away!
From my body, for shame!
From my body, perish!
From my body turn!
From my body thy body!
Into my body do not return!
To my body do not approach!
In my body do not dwell!
On my body do not press!
By Shamash, the mighty, be exorcized!
By Ea, lord of all, be exorcized!
By Marduk, chief exorcizer of the gods, be exorcized!
By the five-god, who burns you, be exorcized!
From my body be ye separated!'

It was a common belief that demons of sickness might enter the body through the agency of other people. Such bewitchment or the casting of a spell over the body of another was an easy way of avenging real or supposed injuries. So frequent were attempts to bewitch personal enemies, and so potent were the spells or charms believed to be, that the second section of the Code of Hammurabi is directed against the practice. It is taken up immediately after cases in which men are accused of a capital crime, and one who was accused of practising such arts was compelled by the law to purge himself by the ordeal of plunging into the sacred river. If he could swim out, he was innocent.

This belief in bewitchment is recognized in a number of the incantations, as in the following:³

'An evil curse, like a demon, rests upon the man,
A voice, a wretchedness has fallen upon him,
A voice not good has fallen upon him,
An evil curse, a ban of pestilence!
That man an evil curse has slaughtered like a lamb;
His god has retired from his body,
His prayer-answering goddess stands aside,
The voice, the wretchedness covers him like a garment, it overwhelms him.
Marduk saw him,
Into the house of Ea, his father, he entered and spoke:
"My father, an evil curse, like a demon, has fallen on a man."

A second time he said to him:
"What that man should do I do not know. By what may he be cured?"
Ea answered his son Marduk:
"My son, what dost thou not know? What can I add to thee?
Marduk, what dost thou not know? What can I add to thee?
What I know, thou knowest.
Go to him, my son Marduk,
To the house of holy cleansing take him,
His ban loose, his ban break!
The restless evil of his body,
Whether it be curse of his father,
Or curse of his mother,
Or curse of his elder brother,
Or curse of a pest-demon,
Or curse of a man unknown,
Like an onion may it be peeled off,
Like a date may it be cut off,
Like a palm-raceme may it be broken off!
O curse, by Heaven be thou exorcized!
By the Earth be thou exorcized!"

This text makes it clear that, when the demon took possession of a person, the god or goddess (in other words, good spirits) was believed to withdraw. A similar conception prevailed among the Hebrews.

³ H. Zimmern, *Beiträge zur Kenntnis der babylonischen Religion*, Tafel v. 1 ff.

¹ Cf. M. Jastrow, *The Medicine of the Babylonians and Assyrians*, p. 7.

In order to exorcize the demon not only words but symbolic acts were employed. The incantation from which the last quotation comes is continued by a series of sections, each devoted to a symbolic casting into the fire of different kinds of material—an onion, a date, a palm-raceme, a little fleece, a goat-skin, wool, and seed. The portion of it which accompanied the use of the onion reads:

'As this onion is peeled and cast into the fire,
The devouring flame seizes it,
In a garden it will never be planted,
Amid pools and irrigating-ditches will not be placed,
Its roots will not strike into the ground,
Its stalk will not shoot up, will never see the sun,
Unto the feast of a god or a king will not approach,
So be the curse, the ban, the torture, the bewitchment,
The sickness, sighing, sin, misdeed, wrong, and transgression,—
The sickness which in my body, my flesh, my members dwells.
As this onion is peeled and
On this day the devouring flame seizes it,
May the curse be removed! May I see light!'

Similar utterances accompanied the burning of the other materials. To such an extent did the belief in the possession of evil demons prevail that, at least in later times, the whole life of Babylonia was pervaded by the fear of them. This is proved by the extent and variety of the incantation literature. This need not be more fully quoted here, as its fundamental conceptions are embodied in the extracts given above. The rest of it presents in different ways and with a variety of outward symbols endless variations of this theme.

Because of the difficulties of life in the Babylonian climate, struggle, sickness, and pain were more common than exultant joy. Perhaps it was for this reason that, while belief in the possession of demons was developed to a pseudo-science, there is almost no trace of a belief in the possession of a man by a good spirit or god. Nevertheless men who accomplished unusual deeds recognized that their power was not their own—that it came to them from the gods. As a rule, however, they did not claim possession of the gods, but held that each god had imparted to them some special attribute of his as a gift.

Thus Lugalzaggisi, the first to carry the Babylonian arms to the Mediterranean coast (c. 2300 B.C.), claims that intelligence was given him by Enki, the god of wisdom, that he was nourished with the milk of life by Ninkharsag, that he was called by Shamash, and chosen to be the king of the world by Enlil.¹ Earlier than he Eannatum, the conquering king of Lagash, made similar claims. Eannatum also relates a more intimate religious experience. When the men of Umma had raided the fertile plain of Guedin and carried off the crop which was of such value to the men of Lagash, Eannatum fell on his face before the god Ningirsu and prayed for guidance in the important crisis. Thereupon Ningirsu appeared to him, apparently in a dream (we cannot be sure, since the text is broken) and gave him the desired guidance and power. Filled with enthusiasm because of this communion with his god, Eannatum went forth and completely subdued his enemies.²

Five or six centuries after Eannatum Gudea, another ruler of Lagash, had a similar experience. The overflow of the rivers had failed, and a famine had resulted. Naturally the ruler was most anxious. Two gods appeared to him in a dream and told him to rebuild the temple of Eninnu,³ which he proceeded to do. Evidently Gudea believed that in this experience divine intelligence was imparted to him, for he boasts that he introduced by his superior understanding a new type of temple architecture.

This method of gaining divine power continued down to the end of the Assyrian period, though in a somewhat attenuated form.

In the time of Ashurbanipal, *e.g.*, when the king was once invading Elam, both he and his troops were in trouble on account of the river Ididi being in flood. Ashurbanipal prayed, and the goddess Ishtar answered, but now it was not the king to whom the goddess appeared in a dream, but a seer.⁴ The vision came by proxy.

² *Ib.* p. 13, and L. W. King, *Hist. of Sumer and Akkad*, London, 1910, p. 123 ff.

³ See Thureau-Dangin, pp. 89-93.

⁴ Cf. G. A. Barton, *Archaeology and the Bible*, Philadelphia, 1916, p. 417.

Perhaps it was because of the heightening of this conception—that gods occasionally appeared to their devoted followers and empowered them to unusual deeds—into a belief that these exceptional men were possessed by the gods or by divine powers that led to the deification of a few Babylonian rulers. It has long been one of the puzzles of Babylonian history why Naram-Sin, Gudea, Dungi, Bur-Sin, and Gimil-Sin claimed to be gods. Granted that the last two may have inherited the title from Dungi, why should it have been accorded spontaneously to three of Babylonia's great rulers, and not to a number of others equally great? None of the theories previously put forward (such as Egyptian influence or the possession of the shrine of Nippur) is adequate. A more probable hypothesis would seem to be that for some reason Naram-Sin, Gudea, and Dungi were believed to be possessed of the divine powers.

2. Phœnicia.—While most of the Phœnician literature has perished, interesting evidence of Phœnician belief in possession is found in an Egyptian document known as the 'Report of Wenamon,'¹ an Egyptian who was sent to Byblos (Geba) in Phœnicia in the reign of Ramses XII. (1118-1090 B.C.). It was a troubled period of history, and Wenamon had many adventures, being robbed at Dor on his way to Phœnicia, and driven by adverse winds to Cyprus on his way home. Fortunately he lived to narrate his experiences, not the least of which occurred at Byblos itself.

The king of Byblos, Zakar-Baal, was at first unfriendly. This part of the narrative runs:

'I spent nineteen days in his [harbour], and he continually sent to me daily saying: "Betake thyself from my harbour."

Now, when he sacrificed to his gods, the god seized one of his noble youths, making him frenzied, so that he said:

"Bring [the god] hither! Bring the messenger of Amon who hath him, Send him and let him go."

'The god' in this passage refers to an image of the Theban god Amon called Amon-of-the-way—a kind of travelling Amon which Wenamon had with him. Wenamon continues:

'Now, while the frenzied (youth) continued in frenzy during this night, I found a ship for Egypt, and I loaded all my belongings into it.'

He then relates how, as he was about to flee, Zakar-Baal, at the command of the god through the frenzied youth, sent and recalled him.

The whole incident shows that the Phœnicians believed in possession by a god, and that what was uttered by one so possessed was a divine command that should be given the strictest heed. It is a conception of prophecy familiar to students of the OT.

3. Israel.—The OT affords much evidence that the belief in possession in Israel in the early days of her history was identical with that in Phœnicia. A classical instance of this is Balaam.

The king of Moab sent for him to curse Israel. Balaam strongly desired to comply; to comply meant rich rewards. But, according to the E account, Jahweh met Balaam in the way, and 'put a word in Balaam's mouth' (Nu 23⁴). Jahweh so took possession of Balaam that in spite of his desires he blessed Israel. The J document says of his experience, 'The spirit of God came upon him' [Balaam] (24²).

That Balaam had the ecstatic experience of the Byblite youth is clearly shown by the poems attributed to him. One of these describes him as the man

'Who seeth the vision of the Almighty,
Falling down and having his eyes open' (24^{10b})—

clearly a description of the frenzied or ecstatic state. The powerlessness of Balaam when thus possessed by the divine spirit is expressed in the lines:

'How shall I curse, whom God hath not cursed?
And how shall I defy, whom Jahweh hath not defied?' (23⁹).

A still more patent example of the view that pro-

¹ For the whole document see Breasted, *Ancient Records of Egypt*, iv. §§ 583-591, or, for the most important parts of it, Barton, pp. 352-355.

phesy is the result of ecstatic possession is afforded by the case of King Saul.

According to the narrative in 1 S 19^{18ff}, when David fled for protection to Samuel, Saul sent messengers to bring David back. 'And when they saw the company of the prophets prophesying, and Samuel standing at head over them, the spirit of God came upon the messengers of Saul, and they also prophesied.' The experiment was repeated three times, with the same result. The messengers were so overcome with the ecstasy that some one else had to return to tell Saul what had happened. Finally Saul himself started to go and fetch David, and 'the spirit of God came upon him also, and he went on, and prophesied, until he came to Naioth in Ramah. And he also stripped off his clothes, and he also prophesied before Samuel, and lay down naked all that day and all that night. Wherefore they say, Is Saul also among the prophets?'

It is clear from this story that the prophetic frenzy in the case of Saul rendered him unconscious or, at any rate, unable to stand. It also so possessed him that he became regardless of the ordinary proprieties of dress. Not only is it impossible to obtain stronger evidence of possession, but it is made clear that Samuel's prophecy was also of this order. Indeed *nibba*, 'he prophesied,' is a passive form, indicating that his words bubbled out under the influence of the power that possessed him.

That this was still the conception of prophecy in the time of Elisha is shown by the narrative in 2 K 3, which gives an account of the campaign of Jehoram, Jehoshaphat, and the king of Edom against Moab.

Elisha accompanied the expedition, and, when the prophet was asked for an oracle concerning where they could find a water-supply, he called for a minstrel to play before him. As the minstrel played, 'the hand of Jahweh came upon him,' i.e., the prophetic ecstasy was induced, and he gave the desired oracle.

From this type of prophecy the literary prophets of later time clearly differentiated themselves. Amos declared: 'I am no *nabi*!' (7¹⁴). We find in this period no trace of possession by demons, for in Hebrew thought the spirits were not yet differentiated into good and bad. They were still non-ethical. They were regarded by men as good or evil according as Jahweh sent them on missions that were for the benefit or for the injury of mankind. This is shown by the narrative in 1 K 22, in which the prophet Micaiah explains the fact that the other prophets of the court of Ahab differed from him, because Jahweh had sent forth a spirit to be a lying spirit in the mouths of these prophets.

The case of King Saul was of the same type. We find his melancholia or insanity explained thus: 'Now the spirit of Jahweh had departed from Saul, and an evil spirit from Jahweh troubled him' (1 S 16¹⁴). The evil spirit came from Jahweh, just as the spirit of Jahweh did, but it was evil because its effects were different. Just as in Babylonia the god and goddess were thought to depart before the demon could come into the man, so the spirit of Jahweh departed before the evil spirit entered into Saul. His possession by this spirit was believed to be the cause of his darkened reason.

The idea of possession appears also to have included the belief that a person could be possessed of the spirit of a departed person. Thus a necromancer is described as *baal 'ob*, 'the possessor of an 'ob.' The meaning of 'ob is obscure, but apparently it refers to the spirit of the dead. Thus in 1 S 28, where Saul consulted a woman who possessed an 'ob, the spirit of Samuel seemed to possess her, for she spoke as though she were Samuel. Necromancers were also called *yiddé oni*, and they were described in Is 8¹⁹ as those 'who chirp . . . and mutter'—possibly because they spoke in the voices of the dead.

In the time after the Exile the literature affords little trace of the conception of possession by the spirit of God. God had become in the theology of the time exalted and remote. Prophets con-

tinued to speak, but, as in the case of Zechariah, they received their messages through angels. Eventually even prophecy died out and apocalyptic took its place, and the apocalypses record visions which the God, once nigh, but now most remote, had formerly vouchsafed to men. In such an age the idea of divine possession became impossible.

In this period the belief in demons was fully developed (see DEMONS AND SPIRITS [Heb.]). Apparently the older view that men might be possessed of a supernatural being continued, but it was inferred in all such cases that the patient was possessed of a demon and not by the spirit of God. While there is no direct evidence on this point in the literature, the prevalence of the belief in demoniacal possession by the people of Palestine that is reflected in the NT is sufficient proof. It is predicted in Zec 13^{3ff} that in future, when any shall prophesy, 'his father and his mother that begat him . . . shall thrust him through when he prophesieth.' This prediction belongs to the latest of the Hebrew prophecies. Was it not uttered because possession was now coming to be regarded as always possession of the devil? See, further, PROPHECY (Hebrew).

4. Arabia.—The beliefs of the early Arabs concerning spirits and possession were similar to those of early Israel. The Arabs believed in a great mass of spirits called *jinn*, or *jan* (the more common name is *jinn*).¹ These were not pure spirits, for they were often represented as hairy and often as having the form of an ostrich or a snake. It was believed that, when a *jinni* was killed, a solid carcass was left behind. Nevertheless the *jinn* had the power to appear and disappear, to assume temporarily any form that pleased them. They are usually spoken of collectively, and were not individualized. Similarly they were originally non-ethical. Whether they were good or bad depended upon the attitude that for the time being they assumed towards men. They were generally supposed to inhabit desolate places and to be unsocial in nature. Their powers were superhuman and they were capable of taking possession of men.

Poets were supposed to owe their power to such possession.

E.g., it is related of Ḥassān ibn Thābit, a devoted follower of Muhammad who was very useful to the Prophet in replying in a sort of poetry to abusive attacks upon his master, that, while still a young man, before the rise of Islam, he met one day in a street of Medina a female *jinni*, who leaped upon him and compelled him to utter three verses of poetry. This was his initiation into the versifier's art. Thereafter he was a poet, but each poem came to him as the result of inspiration from the *jinn*.²

The separateness of the poets from other men greatly impressed the Arabs.

'From time to time, too, in the intense nervous susceptibility of the Arab race in the keen desert air, there fell upon him [the poet] cataleptic rigors, swoons, and dreams, from which he returned with strange words in his mouth.'³

So the poets, when under inspiration, were believed to be under the power of *jinn*. This gave them great distinction. They were, before Islām, often the leaders and representatives of these tribes. Honour was accorded them, not from appreciation of intellectual endowment or of artistic genius, but because of their uncanny connexion with the supernatural. There is a striking parallel between the way in which the poet Ḥassān 'was thrown down by the female spirit and had verses pressed out of him,' and the way in which 'the first utterances of prophecy were pressed from Muhammad by the angel Gabriel.'⁴ In

³ *Ib.* p. 24.

⁴ *Ib.* p. 19.

Arabian thought only the Prophet experienced angelic possession.

Beside the poet (*shā'ir*), and below him, was the *kāhin*, or soothsayer, and below him the *arrāf*, a kind of diviner. These, too, were under the influence of the *jinn*, but in a less exalted way. The *kāhins* were soothsayers connected with a sanctuary, while the *arrāfs*, like Samuel, told where lost articles might be found. Nevertheless the *kāhins* usually cast their oracles in verse. Their inspiration came, however, in the sanctuary, while that of the poet came as freely as the air of heaven. The ecstatic inspiration of the *kāhin* is interestingly set forth in the following account from the *Kitāb al-Aghani*, viii. 66, of the approach of the Banu Asad to Imrul-Qais.¹

'Then the Banu Asad advanced until, when they were a day's journey from Thāma, their *kāhin*, who was 'Awf ibn Rabi'a, prophesied [a prophetic fit came upon him] and said unto them, "O my servants!" They said, "With Thee! O our Lord!" He said, "Who is the king, the ruddy one, the all-conqueror, the unconquered, among camels as if they were a herd of gazelles, with no clamor by his head? He! his blood is scattered wide! He, tomorrow, is the first of the stripped and spoiled!" They said, "Who is it, O our Lord?" He said, "If my heaving soul were not disquieted, I would tell you that he is Hujr openly." Then they mounted all, every beast broken and unbroken, and the day had not risen upon them when they came upon the army of Hujr, and charged upon his tent.'

This passage describes the oncoming of the prophetic fit, which closely resembled those of which we know in Phœnicia and in Israel; it proceeds to tell us graphically what the *kāhin* uttered and how it was fulfilled. It reveals clearly to us the Arabian notions of possession. The speaker bears witness to the fact that his soul was disquieted by a power not its own.

Muhammad, when first his ecstatic revelations came to him, believed that he was possessed by a *jinni*, and only gradually came to the conviction that it was a divine revelation. He seems to have been subject to ecstatic disturbances, and began his career as a prophet in this way. Later he was compelled to simulate such states in order to keep up the illusion of his followers. It was accordingly natural that, when he began to preach, the Meccans should class him with the *kāhins* and attribute his inspiration to a *jinni*.²

There is an interesting story of a Jewish boy at Medina, in the time of Muhammad's residence there, who was subject to epileptic or cataleptic fits. His name was Ibn Sayyād. When in his fits, he would lie wrapped up in a rough mantle, muttering to himself, as Muhammad himself had done at the first.³ The Jews regarded him as a prophet, and Muhammad appears to have been puzzled whether to regard the boy as a prophet or as the Jewish Antichrist.⁴ In the one case his possession would be that of angels; in the other of *jinn*.

The adoption by Islām of the Jewish-Christian conception of angels tended to make demons of the *jinn*, but the movement was never completely successful. Though they are sometimes called satans (*shaitans*), they still maintain on the whole their impersonal character, and draw the satans into it. On the whole Islām took over the *jinn* in their original form, and in this form believes in them to this day. Their legal status and their relations to mankind, such as marriage and property, were discussed by Muslim jurists, and, so far as possible, fixed. They were divided into two classes, good and bad, and Muslim saints, such as al-Ghazālī, are said to have had relations with them. The *jinn* were believed to be of a lower order than men, and the saints are frequently said to have preached to them and to have taught them.⁵

5. Egypt.—The conceptions concerning possession in Egypt were more nearly parallel to those in Babylonia than to those in Israel and Arabia. In Egypt and Babylonia the spirits were differentiated into good and bad at a much earlier period,

and in Egypt, as in Babylonia, the conception that a person might be possessed by supernatural powers was confined largely to belief in demoniacal possession. All disease was accounted for in this way, and, although a kind of medical science developed in Egypt to a higher degree of excellence than in many countries, not only did this conception of demoniacal possession lie behind it, but the administration of purely medical remedies was, to the latest time, accompanied by the recitation of formulæ that were supposed to have power over the disease-giving spirit.

One of the clearest expressions of this view is found in a tale¹ invented at the end of the XXth dynasty of some fictitious events that are said to have transpired in the reign of Ramses II.

That king is said to have married, among others, a princess of Bakhtan. Afterwards the king of Bakhtan sent to Ramses, saying that Bentresh, another daughter of his, was very ill, and begged that an Egyptian physician might be sent to heal her. The most skilful physician went, but found her possessed of a spirit, and could do nothing. Evidently he laboured in vain for a long time, for nine years later the father sent again for aid. This time a charmed statue of the god Khons, called Khons-who-executes-plans-and-drives-out-rebels, was sent. This Khons proceeded to Bakhtan, touched the princess, and the spirit went out of her. Like some of those in the Gospels, he did not depart in silence. He said: 'Welcome, thou great god who drivest out rebels; the city of Bakhtan is thine, its people are thy slaves, I am thy slave. I will go to the place whence I came, to satisfy thy heart concerning the matter of thy journey. Let thy majesty be pleased to command that a festival be celebrated in my honour by the prince of Bakhtan.' The god then nodded to his priest saying: 'It behoves that the prince of Bakhtan make a rich offering to this spirit.'

As Naville has pointed out, this story was intended as an advertisement of the god Khons to the Egyptians. It reflects Egyptian ideas, setting forth in a detailed way their conceptions of possession. A god who advertised such cures hoped to have an opportunity to treat many similar patients in Egypt.

That similar ideas of possession underlay the Egyptian conception of disease is shown by the incantations that were to be spoken at the administration of certain prescriptions.

With a fermentation of honey and other ingredients, *e.g.*, one was to say: 'It has discharged and departed, that which has no fruit. It has gone away, that which has no arms. Turn back (*O mšpn-t*) for I am Horus. Yield (*O mšpn-t*) (for) I am the son of Osiris. The magic of my mother is the protection of my members. Thy evil shall not arise in my body nor any *mšpn-t* in thy members. It has been discharged seven times.' The words were to be spoken over *šnk-w* herbs. They were to be cooked, mashed, and applied thereto. In like manner, when a kind of beer² called *dér-t*-beer was administered, the *sem*-priest was to be present with his implements—statue, bird-catcher's net, oil, some kind of a flower, etc.—and say: 'Drink the beer. I have brought it to drive out the *tét-e-god*, the male death, the female death, which is in my body,' etc.

The demons of disease were supposed to be always lurking about, watching for an opportunity to attack. This belief made life a constant terror. No mother could lay a child to rest without invoking unseen powers to spare the little one from malice and disease that lurked in every dark corner or slipped through the open door as the gloom of night gathered, to prostrate the little ones with sickness. One can almost hear the voice of the mother as she said: ⁴

'Run out, thou who comest in the darkness, who enterest in stealth, his nose behind him, his face turned backward, who loses that for which he came

Run out, thou who comest in darkness, who enterest in stealth, her nose behind her, her face turned backward, who loses that for which she came.'

The demons might come under the guise of friends in order to gain access to the child. Hence the mother continues:

'Comest thou to kiss the child? I will not let thee kiss him. Comest thou to soothe (him)? I will not let thee soothe him.'

³ *Id.* p. 7.

⁴ See Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 291.

¹ Tr. Macdonald, p. 81 f.

² *Id.* pp. 33, 37.

⁴ See Macdonald, p. 84 ff.

³ Qur'an, lxxiv.

⁵ *Id.* p. 144 ff.

Comest thou to harm him? I will not let thee harm him.
Comest thou to take him away? I will not let thee take him away.'

The danger from demons not only accompanied one throughout this life, but also followed one into the hereafter. Hence the charms that had been potent to protect one here were applied to the life beyond. In the time of the empire the folk-charm invaded the *Book of the Dead*, where it forms the 'Chapter of not Permitting a Man's Heart to be Taken Away from Him in the Nether World.'¹

While belief in possession by demons developed to an elaborate system in Egypt, belief in possession by gods left little trace. In one of the Pyramid Texts of the Old Kingdom King Unis is represented as practising on the gods a kind of cannibalism, in order to possess himself of their powers. The passage reads:²

'King Unis is one who eats men and lives on gods,
Lord of messengers, who [dispatches] his messages;
It is "Grasper-of-Forelocks" living in Khehew
Who binds them for king Unis.
It is the serpent "Splendid-Head"
Who watches them for him and repels them for him.
It is "He-who-is-upon-the-Willows"
Who lassoes them for him.
It is "Punisher-of-all-Evil-doers"
Who stabs them for king Unis.
He takes out for him their entrails,
He is a messenger whom he (king Unis) sends to [punish].
Shesmu cuts them up for king Unis
And cooks for him a portion of them
In his evening kettles (or "as his evening kettles = meal").
King Unis is he who eats their charms,
And devours their glorious ones (souls).

He has taken the hearts of the gods;
He has eaten the Red,
He has swallowed the Green.
King Unis is nourished on satisfied organs,
He is satisfied, living on their hearts and their charms.

Their charms are in his belly.
The dignities of king Unis are not taken away from him;
He hath swallowed the knowledge of every god.

Lo, their (the gods') soul is in the belly of king Unis,

Lo, their soul is with king Unis.'

This text, which incidentally reveals the cannibalism that lay behind Egyptian civilization, was written to account for the intelligence, power, and divine qualities of King Unis. It reverses the usual idea of possession, however. The gods did not possess him, but he possessed them. How all Egyptian kings came to be regarded as gods we can now only conjecture, but evidently one pathway by which it came was this cannibalistic conception of possession.

In the Egyptian priesthood there was an order of prophets, but their particular functions are obscure. They appear to have differed little from the other priests in character. So far as appears, their functions did not depend, like those of the prophets of early Israel, upon ecstatic experiences.

6. Possession in the Gospels.—There is considerable evidence in the Gospels that, in spite of the silence of the later pre-Christian literature on the subject, belief in the possession of demons survived among the peasantry of Palestine, and was often supposed to be the cause of disease. Thus it is regarded as the cause of dumbness (Mt 9³², Lk 11¹⁴), of deafness, dumbness, and epilepsy (Mk 9²⁰), of dumbness and blindness (Mt 12²²), of curvature of the spine (Lk 13¹¹), and epilepsy (Mk 1²⁶). Ascription of these diseases to unclean spirits is not uniformly made; they are sometimes spoken of merely as disease (Mt 15²⁰, Mk 7²³, Lk 18³⁵). In some passages possession and these diseases are enumerated as separate things (Mt 10⁸, Mk 1²⁶, Lk 6^{7, 7, 7, 13}). It would seem that, among some,

knowledge of the nature of physical disease had progressed far enough to be distinguished from possession, though this was not universal. Once, at least, the old Hebrew and Arabic idea of the multitude and impersonality of the demons comes to the front in the Gospels. The Gerasene demoniac, when asked his name, replied: 'My name is Legion; for we are many' (Mk 5⁹). This narrative and those in Mk 1 and 9 indicate that insanity and epilepsy were the ills most commonly attributed to demoniac possession. This belief still prevails in Palestine.

The present writer once came upon a group of men near Beitin (Bethel) who were surrounding another, waving sticks at him and shouting. At an opportune moment one behind him dropped his club and caught the hands of the man in the centre, pinning them behind him. When the writer asked the cause, he was informed that the man was *maymun*, 'possessed of a *jinn*.'

It is indicated in the Gospels that in the time of Christ there were professional exorcists who cast out demons (Mt 12²⁷). Jesus, too, cast them out. Some of His most marvellous cures were of this nature. Attempts have been made by some theologians to prove that Jesus did not Himself believe in possession, but accommodated Himself to the views of His patients and their friends. There is no evidence for this view and much against it. He made the validity of the belief the basis of argument with others, assumed that certain Pharisees could exorcize the demons, and that He, too, could do so (Mt 12²⁷, Lk 11¹⁶). He also assumed that, after expulsion, the existence of the demons was real, and that they could still do harm (Mk 5¹²). His humanity was real, and He fully shared the beliefs of His contemporaries upon this point.

7. The Apostolic Age.—In the Gospels possession appears to be confined to demons; in the rest of the NT we hear mainly of being possessed of the Spirit, though references to demoniacal possession are not wanting. This change was wrought by the experience of the day of Pentecost (Ac 2) when the disciples were so possessed of the Spirit that they spoke ecstatically and the beholders thought them drunken. A later historian understood that this speaking, which was called *glossolalia*, 'speaking-tongues,' was the ability to speak foreign languages (v.³), but the narrative nevertheless contains evidence that this was a misunderstanding (v.¹³). The disciples were thrown into an ecstasy; they were exalted in mood; they were taken out of themselves. We learn from St. Paul (1 Co 12 and 14) that this type of public utterance was in his time exalted above all other types. His discussion of the subject also makes the nature of the phenomenon quite clear. One who 'spoke in a tongue' spoke with his spirit, but his understanding was unfruitful (1 Co 14¹⁴); the hearers did not understand (14²); those out of sympathy, when they witnessed such utterances, naturally called the speakers mad (14²³). Paul, with his sound common sense, rated intelligent speaking more highly than this speaking in a tongue, but so popular was this type of possession that even he could not but treat it with great consideration. 'Be not drunken with wine, wherein is riot but be filled with the Spirit' (Eph 5¹⁸) could have been written only in an age when complete fullness of the Spirit was supposed to produce effects similar to the drinking of wine. The greatest enemies of the Christians were still thought to be demons and their chief, the 'prince of the power of the air' (2²). The militant disciple wrestled 'against . . . the spiritual hosts of wickedness in the heavenly places' (6¹²). It is implied that these controlled, if they did not possess, men. One instance of such possession is presented in the Philippian slave-girl who possessed 'a spirit of Python' (Ac 16¹⁶).

¹ See Breasted, *Development of Religion and Thought in Ancient Egypt*, p. 291 ff.

² *Ib.* p. 127 ff.

Not only did the Philippians believe her possessed, but St. Paul did also, for he addressed the spirit in exorcizing it (16¹⁸).

8. The Montanists.—In the 2nd cent. the ecstatic type of prophecy was revived by Montanus in Phrygia, who became the champion of the prophetic ministry. Eusebius, quoting an unnamed informant, says:

‘He was carried away in spirit, and wrought up into a certain kind of frenzy and irregular ecstasy, raving, and speaking and uttering strange things, and proclaiming what was contrary to the institutions that had prevailed in the Church.’¹

This is the report of an unsympathetic critic, but among the few sayings of Montanus that have come down to us is one that confirms the view that he was subject to the phenomenon of possession. It runs:

‘Man is like a lyre, and I [the Holy Spirit] play him like a plectrum. Man sleeps, I [the Holy Spirit] am awake.’²

The Church had lost the fire of enthusiasm that made such possession possible, and cast out Montanus and his followers as heretics; nevertheless they lingered in Phrygia until in the 6th cent. they were forcibly exterminated. To what extent the ecstatic experiences were repeated by the followers of Montanus after the 2nd cent. we do not know.³

9. The Church and possession.—The condemnation of Montanus registered the belief of the Church that possession of the Holy Spirit in this extraordinary way was no longer possible—a view that was maintained by all the Church until the Reformation and is still maintained by all except some smaller sections of Protestantism. Belief in the possession of demons was still maintained and, as time passed, was intensified. The presence of this belief in the early centuries clearly moulded certain features of the ritual of the Church. Thus, according to the Roman usage, a catechumen, preparatory to baptism, first presented himself to the priest, who breathed upon him (i.e. performed the act of insufflation) and recited a prayer of exorcism with his hand extended over the candidate's head. A part of the petition was: ‘Break all the snares of Satan by which he has been bound.’⁴ The insufflation typified the reception of the Holy Spirit whereby the evil spirit was driven out. In the Gallican ritual the exorcism came first, then unction, and the insufflation last.⁵ One curious sentence of this ritual reads: ‘I approach thee, thou most unclean, damned spirit.’ The liturgy of the East contains similar ceremonies of exorcism and insufflation.⁶ The insufflation was a symbolic repetition of the act of Jesus when He breathed on His disciples and said: ‘Receive ye the Holy Spirit’ (Jn 20²²). Apparently it was believed that the candidate, who as a sinner had been possessed of Satan before, now became possessed of the Holy Spirit. Such possession was but an attenuated form, so far as outward manifestations were concerned, of that of earlier time. The belief that insufflation imparted such possession extended to oil and water, for, in the consecration of these, the priest breathed on them.⁷

While the belief in possession of the Spirit took this symbolic form, belief in demoniacal possession continued in its original vigour. In W. Europe it was gradually intensified by the survival of pagan beliefs, stories, and practices. Many of these the Church took over and consecrated, but all those not so consecrated were regarded as of the devil. He was supposed to possess those who practised arts that had been banned by the Church. Witches who practised them were in league with him or possessed of him. When in the 13th cent.

sects began to spring up, it was natural for ecclesiastics to regard them as in league with the evil one. Thus in 1223 Gregory IX. promulgated a letter exhorting a crusade against the Stedingers, a sect in Friesland and Lower Saxony, in which he accused them of worshipping and having secret communion with the prince of darkness. In 1303 John XXII. complained, in two letters, that both he and many members of his flock were in danger of their lives by reason of the arts of sorcerers. Finally Innocent VIII. in 1484 promulgated his famous bull ‘Ad forturan rei memoriam,’ in which he accused many persons of both sexes of mixing with devils and injuring by their conjurations unborn children, young animals, all sorts of crops, inflicting all kinds of pains and sickness on people and animals, preventing men from procreation and women from conception, and making them recant their Christian faith. He appointed Heinrich Kramer (Institor) and Jakob Sprenger to be prime inquisitors to rid the land of such. Sprenger had composed his *Malleus Maleficarum* (‘Witch-Hammer,’ 1489, Cologne, 1520) which, with the papal bull, precipitated a long drawn battle against witches, who were believed to be in league with Satan or possessed of him.¹ The movement spread to England, where in the reigns of Henry VIII. and Elizabeth laws were enacted against witches. It called forth Reginald Scot's noted work, *The Discoverie of Witchcraft* (London, 1584). The war against witches and the devil spread to the New World; in Salem, Massachusetts, a number of people were executed at the end of the 17th cent. on suspicion of exercising demoniacal powers. Of course the clergy supported the crusade on both sides of the Atlantic. How many lost their lives in consequence of this dread belief cannot now be ascertained.

Although the increase of scientific knowledge has stopped the execution of people on such charges, the belief in demoniacal possession dies hard. Several cases were reported among the peasantry of Germany in the early part of the 19th cent., vouched for by accredited doctors and clergymen.²

10. Possession and revivals.—With the spread of experimental religion as distinguished from ecclesiastical religion since the Reformation there has been a recrudescence of the ancient belief that ecstatic experiences are the work of the Holy Spirit—a kind of possession. Such ecstasies occurred at times under the preaching of the early Friends in the 17th cent. in England, and were interpreted as manifestations of the power of God.³ They manifested themselves again in the 18th cent. in England under the preaching of Wesley,⁴ and in Massachusetts under the ministry of Jonathan Edwards.⁵ They accompanied the Scottish-Irish revival in Kentucky in 1800-03⁶ and the revival in Ulster in 1859.⁷ They may still sometimes be seen in the meetings of the American Negroes.⁸ Enthusiastic revivalists have down to recent times regarded them as striking evidences of divine visitation, though the wisest of them, such as Jonathan Edwards, lost faith in them, and Wesley's judgment finally tended in the same direction. Under Finney and Moody common sense asserted itself and evangelism rose to a more healthy plane, though such phenomena still sometimes appear. Science has taught us that they are due to disordered nerves, and the primitive belief in possession that has survived so long is fading away.

POTTAWATOMIES. — See ALGONQUINS (Prairie Tribes), vol. i. p. 325.

POVERTY.—1. Definition.—In the Poor Law Commissioners' Report of 1834 poverty is defined as the state of one who, in order to obtain mere subsistence, is forced to have recourse to labour. This the Commissioners distinguish from indigence, by which they understand the state of a person unable to labour, or unable to obtain, in return for his labour, the means of subsistence. Probably B. Seebohm Rowntree's definition (*Poverty: A Study of Town Life*) is more satisfactory: families whose total earnings are insufficient to obtain the minimum necessities for the maintenance of mere physical efficiency may be described as living in 'primary' poverty. This he distinguishes from 'secondary' poverty, under which come those families whose earnings would be sufficient for the maintenance of mere physical efficiency, were it not that some portion of it is absorbed by other expenditure, either useful or wasteful. If this definition of poverty is accepted, indigence or destitution is included under 'primary' poverty.

2. History.—This is of a very restricted nature, and is practically limited to the history of destitution, or extreme poverty. Even at the present day the information available concerning poverty is very slight, as scientific investigations have been made in only very few towns, and the results vary so much that it is impossible to generalize.

The only attempt to compare conditions in this country at two different periods is that of Robert Giffen. We give his conclusions, whilst bringing the figures rather more up to date.

For 1843, the first year for which we have income-tax returns, Giffen estimated the income of the country to be £515,000,000, of which £280,000,000 belonged to persons with over £150 per annum and £235,000,000 to persons with under £150 per annum. The £280,000,000 was shared by 200,000 to 250,000 persons, or, including their families, by 1,000,000 to 1,250,000 persons. The £235,000,000 was shared by about 25,500,000 persons. The

income-tax paying class had about £250 per head, while the rest of the population had something under £10 per head.

For 1908 Leo G. Chiozza Money estimated the income of the country to be £1,844,000,000, of which £909,000,000 belonged to persons with over £160 per annum and £935,000,000 to persons with under £160 per annum. The £909,000,000 was shared by 1,100,000 persons, or, including their families, by 5,500,000 persons. The £935,000,000 was shared by 39,000,000 persons. The income-tax paying class had about £165 per head as compared with £250 in 1843, whilst the rest of the population had about £24 per head, as compared with under £10 in 1843.

Other figures which bear out the contention that the income-tax paying class has increased much more rapidly than the non-income-tax paying class are those relating to the value of estates passing at death.

In 1838, 25,368 probates were granted, the average amount per estate being £2160. In 1908, 87,524 probates were granted, the average amount per estate being £4000. The increase in the number of estates (165 per cent) was much greater than the increase in the population (70 per cent), so that the wealth of the country was becoming more diffused, or, in other words, a growing proportion of the population was leaving estates.

The figures relating to the consumption of comforts and conventional necessities consumed by the masses confirm the improved conditions of the bulk of the population. The following table gives the quantities of the principal imported and excisable articles retained for home consumption per head of the population of the United Kingdom in the years 1840 and 1911.

	1840.	1911.
Currants and raisins .	1·45 lbs.	4·89 lbs.
Rice	0·90 "	15 08 "
Sugar	15 20 "	92·07 "
Tea	1·22 "	6·48 "
Tobacco	0·86 "	2·05 "

The great increase in the consumption of currants, raisins, rice, sugar, tea, and tobacco can be accounted for only by the much greater use that is made of them by the bulk of the population; and such greater use would not be possible but for the increased incomes at the disposal of the masses. Figures showing the growing incomes of the non-income-tax paying classes have already been quoted and these may be supported by the Board of Trade index numbers of wages.

If the general level of wages in 1850 be taken as 100, then the figure for 1907 was 181·7, showing an increase of 81·7 per cent in 57 years (*Od* 4671, p. 44).

From the early part of the 19th cent. until 1896 prices fell very considerably, and, though they have risen since, they were much lower shortly before the war than they were during most years of the 19th century. A few figures from Sauerbeck's average prices of all commodities may be quoted:

Average of 1867-77 = 100	1878 = 111
1820 = 112	1890 = 83
1830 = 91	1899 = 72
1840 = 103	1896 = 61
1850 = 77	1900 = 75
1860 = 99	1910 = 73
1870 = 96	1911 = 80

With the rise in incomes and the fall in prices, there can be little doubt that the masses were much better off in the early 20th cent. than they were 50 or 100 years previously. The growth of Savings Banks deposits (£29,000,000 in 1850 to £257,000,000 in 1911), of the accumulated funds of Friendly Societies (£14,000,000 in 1877 to £50,500,000 in 1905), and of the loan and share capital of Co-operative Societies (£3,500,000 in 1883 to £45,250,000 in 1909) are other indications of greater general prosperity.

3. Extent.—(a) The earliest investigation is that of Charles Booth, who conducted an inquiry into the extent of poverty in London in 1886-88. By 'poor' he understood those who had a sufficiently regular, though bare, income, such as 18s.

to 21s. per week for a 'moderate family,' and by 'very poor,' those who from any cause fell much below this standard. Booth obtained his information from the London School Board visitors, who were in daily contact with the people and had considerable knowledge of the parents of the school children. He then assumed that the whole population was the same as the tested part, *i.e.* families with school children. When it is remembered that the part of the population which was not investigated included all the families with children above school age, and with no children, it will be realized that the condition of the bulk was better than the part tested, so that Booth's figures, in so far as they err, err on the dark side. In other words, conditions were probably not so bad as Booth's figures would suggest.

Booth divided the population into 8 classes:

- A. The lowest class of occasional labourers, loafers, and semi-criminals.
- B. Casual earnings—'very poor.'
- C. Intermittent earnings
- D. Small regular earnings } together the 'poor.'
- E. Regular standard earnings—above the poverty line.
- F. Higher class labour.
- G. Lower middle class.
- H. Upper middle class.

As the result of his investigations he divides the population among these classes as follows:

A. (lowest)	87,610	or 0.9 per cent
B. (very poor)	316,834	7.5 "
C. and D. (poor)	938,293	22.3 "
E. and F. (working class, comfortable)	2,166,503	51.6 "
G. and H. (middle class and above)	749,930	17.8 "
	4,209,170	100.0 "
Inmates of institutions	99,830	
	4,309,000	

According to Booth's inquiry, 30.7 per cent of the population of London were living in poverty in 1887. This may be taken to include what Rowntree calls 'secondary' as well as 'primary' poverty. That nearly one-third of the inhabitants of London were living in poverty appears very startling, yet the investigations in other towns seem to bear out the probable accuracy of this figure.

(b) Seebohm Rowntree conducted his investigations into the extent of poverty in York in 1899. As the population at that time was about 75,000, it was possible to make a house to house investigation in respect of every wage-earning family. Particulars were obtained concerning 11,560 families consisting of 46,754 persons. The population was divided into 7 classes:

- A. Total family income under 18s. for a moderate family.
- B. Total family income 18s. and under 21s. for a moderate family.
- C. Total family income 21s. and under 30s. for a moderate family.
- D. Total family income over 30s.
- E. Domestic servants.
- F. Servant-keeping class.
- G. Persons in institutions.

By moderate family was meant a family consisting of father, mother, and from two to four children. In classifying, allowance was made for families which were smaller or larger.

On this basis Rowntree divided the population as follows:

A.	1,057	or 2.6 per cent
B.	4,492	5.9 "
C.	15,710	20.7 "
D.	24,505	32.4 "
E.	4,296	5.7 "
F.	21,330	28.3 "
G.	2,032	2.7 "
	75,312	100.0

Rowntree, instead of adopting Booth's somewhat rough and ready method of saying that all families with less than a certain weekly income were living in poverty, sought to establish a scientific poverty line. He estimated the minimum necessary

expenditure for the maintenance of mere physical health and then ascertained whether each family had sufficient earnings to pay for the requisite food, housing accommodation, and household sundries.

With regard to food, he took as the basis of his calculations the diet adopted at the York Workhouse, but excluded butcher meat, as this diminished the cost without reducing the allowance of protein, fats, and carbohydrates below the minimum requisite for physical efficiency. The weekly cost of this diet in 1899 was as follows:

Men.	Women.	Child. 8-16.	Child. 3-8.	Child. under 3.
3s. 3d.	2s. 9d.	2s. 7d.	2s. 1d.	2s. 1d.
Average for adults, 3s. ; average for children, 2s. 3d.				

With regard to rent, the actual sums paid for rent were taken as the necessary minimum rent expenditure.

With regard to household sundries, Rowntree allowed 1s. 10d. ($=1\frac{1}{2}$ bags [140 lbs.] at 1s. 3d.) for coal, 6d. for adults and 5d. for children for clothing, and 2d. per head for all other sundries.

Thus a table was established showing the minimum necessary expenditure per week for families of various sizes; *e.g.*, a family of father, mother, and three children would require 21s. 8d. made up as below:

Food: 2 at 3s. and 3 at 2s. 3d.	12 9
Rent	4 0
Household sundries: coal	1 10
clothing: 2 at 6d. and 3 at 5d.	2 3
other sundries 5 at 2d.	0 10
	21 8

When the earnings of every family were examined by this table, it was ascertained that 1465 families, comprising 7230 persons, were living in 'primary' poverty. This was equal to 9.91 per cent of the whole population of the city and to 15.46 per cent of the working-class population. The number of persons living in 'secondary' poverty was ascertained by deducting the numbers of persons living in 'primary' poverty from the total number of persons living in poverty, the latter number being an estimate of the investigator, formed by his noting down evidences of poverty during his house to house investigation. By this method it was found that families comprising 20,302 persons, equal to 27.84 per cent of the population of the city, were living in poverty. Of these 7230 persons, or 9.91 per cent of the population, were living in 'primary' poverty and 13,072, or 17.93 per cent of the population, in 'secondary' poverty. According to this inquiry, the percentage of the population of York living in poverty (27.84) was only a little less than that in London (30.7). In the case of the towns mentioned below a similar comparison cannot be made, as the extent of 'primary' poverty alone has been investigated.

(c) An investigation at Northampton was made by A. R. Burnett-Hurst in July 1913. There, as also at Warrington, Stanley, and Reading, the system adopted was to investigate the conditions prevailing in some 5 per cent of the households and to generalize from these. Further, in each of these cases it was necessary to make allowance for the rise in the general level of prices between 1899 and 1913 before using Rowntree's poverty line figures. Thus the York food allowance of 3s. for adults and 2s. 3d. for children became 3s. 6d. and 2s. 7d. respectively. Fourpence was added for State insurance, and the expenditure on coal was adjusted to meet local conditions.

In Northampton, of the 693 working-class families investigated 57 were below the poverty line. These were equivalent to 8·2 per cent of the working-class households of the town and to 6·4 per cent of all households. These 57 families contained 9 per cent of the working-class population which fell within the scope of the inquiry. In York 15·46 per cent of the working-class population was living below the poverty line in 1899.

(d) Burnett-Hurst's inquiry at Warrington was conducted in the early autumn of 1913. Of the 640 working-class families investigated 78 were below the poverty line. These were equivalent to 12·2 per cent of the working-class households and to 11·5 per cent of all households. These 78 families contained 14·7 per cent of the working-class population which fell within the scope of the inquiry.

(e) The mining village of Stanley, in the Durham coalfield, was investigated by Burnett-Hurst in July 1913. Of the 203 working-class families whose circumstances were inquired into 12, containing 6 per cent of the working-class population investigated, were below the poverty line.

(f) A. L. Bowley conducted an investigation in Reading in the autumn of 1912. 123 families of the 622 investigated were below the poverty line. This is equivalent to 20·6 per cent of the working-class households and to 15·3 per cent of all households. The 123 households below the poverty line contained 29 per cent of the population which fell within the scope of the inquiry.

(g) An investigation of quite a different character into the extent of poverty in the United Kingdom has been made on two occasions by Leo G. Chiozza Money. His first inquiry related to 1903 and his second to 1908. As the income-tax returns constituted the basis of his inquiry, he divides the population into three groups, with £160 and £700 as the dividing lines:

	1903.		1908.	
	Number.	Income £ mil.	Number.	Income £ mil.
RICHES.				
Persons with incomes of £700 per annum and upwards and their families . . .	1,250,000	570	1,400,000	634
COMFORT.				
Persons with incomes between £160 and £700 per annum and their families . . .	4,000,000	260	4,100,000	275
POVERTY.				
Persons with incomes of less than £160 per annum and their families	37,250,000	880	39,100,000	935
	43,000,000	1,710	44,500,000	1,844

(h) The statistics relating to pauperism enable us to gauge destitution or extreme poverty, which must not be confused with poverty as defined by Rowntree. The average daily number of paupers in receipt of relief in the United Kingdom at the beginning of 1914 was 933,163, or 20·3 per 1000 of the population.

(i) On 26th Dec. 1913 there were 982,292 old age pensions payable in the United Kingdom. Of these, 685,288 were payable in England and Wales, 97,702 in Scotland, and 199,302 in Ireland. Of the total number of persons in England and Wales

who are over 70 years of age three-fifths are old age pensioners, i.e. persons whose incomes are less than £31 10s. per annum.

4. Causes.—All these investigators of poverty have analyzed its immediate causes, and their conclusions are given below.

(a) Booth analyzed 4076 cases of the poor and very poor in London, known to selected School Board visitors, and summarized the results as follows:

Loafers	60 or 1·5 per cent
Questions of employment—	
Casual work, low pay, irregular earnings	2546 62·4 „
Questions of habit—	
Drunkenness and thriftlessness	533 13·6 „
Questions of circumstances—	
Large families and illness	917 22·5 „
	4076 100·0

(b) Rowntree analyzed the causes of 'primary' poverty under somewhat different headings.

Immediate cause of 'primary' poverty	No. of households affected	No. of persons affected	Percentage of total population living in 'primary' poverty.
Death of chief wage-earner	403	1,130	15·63
Illness or old age of chief wage-earner	146	370	5·11
Chief wage-earner out of work	23	167	2·31
Irregularity of work	51	205	2·83
Largeness of family, i.e. more than 4 children	187	1,602	22·16
In regular work but low wages	640	3,756	51·96
	1,465	7,230	100·00

(c) The information collected by Bowley and Burnett-Hurst in Northampton, Warrington, and Reading may be summarized in one table; the figures for Stanley are omitted, being too small to express in percentages.

Immediate cause of poverty.	Percentage of households below the Rowntree standard.		
	Northampton.	Warrington.	Reading.
Chief wage-earner dead	21	6	14
do. ill or old	14	1	11
do. out of work	3	2
do. irregularly employed	8	4
do. regularly employed:			
Wage insufficient for 3 children	21	22	33
3 children or less	9	33	15
Wage sufficient for 3 but family more than 3	35	27	21
	100	100	100

In the case of each of the five towns where the immediate causes of poverty have been analyzed the predominant cause is the same, viz. low wages, frequently in conjunction with large families. In York (1899) 10 per cent of the adult males earned under 20s. a week and 26 per cent earned between 20s. and 24s. In Northampton (1913) 13 per cent of the adult males earned under 20s. a week and 14 per cent earned between 20s. and 24s. In Warrington (1913) 3·5 per cent of the adult males earned under 20s. a week and 28·5 per cent earned between 20s. and 24s. In Reading (1912) 15 per

cent of the adult male population earned under 20s. a week and 35.5 per cent earned between 20s. and 24s. When from one quarter to one half of the adult male populations of these towns was earning less than 24s. a week, it is not astonishing that poverty should be very prevalent.

The growth of population has undoubtedly a serious influence on the general extent of poverty in old countries. Sooner or later increasing supplies of food and minerals can be obtained only at increasing cost. As the population of an old country grows and the supply of labour as a consequence increases, the productive capacity of the country grows, but not in the same proportion as the population. For a time this tendency may be overcome by new inventions, the accumulation of more capital, and the greater efficiency of the workers; under these circumstances an advance in the general welfare of the community may be achieved, in spite of the increase of population. This has probably been the case in this country during the past hundred years or so, but we cannot look to similar conditions continuing indefinitely in the future.

5. Present system of dealing with poverty.—At the present time in this country there are various methods, public and private, but not too well co-ordinated, for dealing with poverty. Most are palliative in character and only too few are remedial. This, however, is hardly astonishing, seeing how difficult the problem is.

(a) *Public methods.*—(1) The poor relief granted by Boards of Guardians or Poor Law Boards must be mentioned first. Nearly £18,000,000 per annum are being spent by these bodies in the United Kingdom, but they assist no one unless he or she is absolutely destitute, so that their help is accorded only to a small proportion of the poor. Out-relief, which with certain exceptions is not granted to able-bodied persons, is generally very inadequate. Indoor relief, on the other hand, is very costly, and not infrequently has the effect of making persons relieved into more or less permanent paupers, by bringing them into contact with some of the least desirable guests of the Guardians. Undoubtedly, the most satisfactory work done by the Guardians is that done in their children's homes and in their hospitals.

(2) Under the Old Age Pension Act, 1908, every person of British nationality and twelve years' residence within the United Kingdom whose income is below £31 10s. per annum becomes entitled, subject to certain small exceptions, on attaining the age of 70 to a pension of 5s. a week from the Exchequer. At the present time about a million persons benefit by this Act at a cost to the community of some £13,000,000. As the result of the passing of this Act, the number of paupers in England and Wales over 70 years of age has greatly diminished. It was 229,474 on 31st March 1906, whereas it had fallen to 57,948 on 1st Jan. 1914.

(3) The Unemployed Workmen Act, 1905, provides for the establishment of District Committees which, if satisfied that an applicant is a person honestly desirous of obtaining work, but unable to do so from exceptional causes over which he has no control, and that his case is capable of more suitable treatment under the Act than under the Poor Law, can endeavour to obtain work for him or themselves undertake to assist him. This assistance may take the form of (a) aiding emigration, (b) aiding migration to another area, or (c) providing or contributing towards the provision of temporary work. The District Committees have dealt with only a very limited number of the unemployed: in 1912-13 the applicants for relief in England and Wales numbered 43,381, and of

these 30,662 were found qualified for assistance. The majority of the applicants were general or casual labourers.

(4) A far greater number of unemployed are dealt with by Labour Exchanges, established under the Labour Exchanges Act, 1909. On 16th Jan. 1914 423 Exchanges were open. During 1913 the total number of individuals who applied to the Exchanges for employment was 1,871,671, the total number of registrations being 2,965,893. During the year 652,306 individuals were given work, the number of vacancies filled being 921,853.

(5) Another attempt to minimize the consequences of unemployment, and indirectly of poverty, has been the introduction of compulsory insurance against unemployment in certain trades, under pt. II. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1914. The principal industries concerned are building, shipbuilding, works of construction, engineering, iron-founding, and the construction of vehicles. On 17th Jan. 1914 the number of workpeople insured was 2,282,324. The total amount of unemployment benefit paid to workpeople during 1913 was £497,725.

(6) The compulsory health insurance established by pt. I. of the National Insurance Act, 1911, since amended by the National Insurance Act, 1913, should ultimately have a considerable effect in increasing the welfare of the population, as ill-health undoubtedly lies at the bottom of a good deal of inefficiency, and the consequent low wages. A return made in February 1914 stated that there were 13,759,400 insured persons in the United Kingdom, of whom 360,000 were deposit contributors.

(7) The most direct effort to raise the low level of wages which is at the bottom of so much poverty was made when the Trade Boards Act, 1909, was passed. The Act applied at first only to the four trades specified in the schedule—tailoring, cardboard box-making, machine-made lace, and chain-making—but the list may be extended by Provisional Order, confirmed by Act of Parliament. In 1913 the Act was applied to four new trades—shirt-making, sugar confectionery and food-preserving, hollow-ware, and linen and cotton embroidery. For each trade or branch of a trade one or more Trade Boards are to be established. The duties of a Trade Board include the fixing of minimum time and piece rates.

Investigations into the working of the Act have been made in the chain-making and tailoring trades by R. H. Tawney, and in the box-making trade by Miss M. E. Bulkeley, under the auspices of the Ratan Tata Foundation of which Tawney is director. The following table relating to the wages earned by mastermen and journeymen chain-makers, before and after the establishment of minimum rates, gives some indication of the work of a Trade Board:

Weekly wages.	Mastermen.		Journemen.	
	1911.	1913.	1911.	1913.
Under 15s.	56.7 %	1.3 %	61.3 %	0.7 %
15s. and under 20s.	33.7 "	20.2 "	37.2 "	14.6 "
20s. and under 25s.	9.4 "	60.8 "	1.4 "	48.1 "
25s. and under 30s.	17.6 "	..	80.6 "
30s. and over	5.8 "

(8) Of the persons who fall below the poverty line there can be little doubt that the school children and infants constitute the majority and that they are the worst sufferers. As a result of their investigations Bowley and Burnett-Hurst

inform us that in Northampton just under one-sixth of the school children and just over one-sixth of the infants, in Warrington a quarter of the school children and almost a quarter of the infants, in Reading nearly half the school children and 45 per cent of the infants belonging to working-class families are living in households in 'primary' poverty.

The direct efforts of the State to remedy these conditions in England and Wales are connected with the feeding and the medical inspection of school children.

(a) The Education (Provision of Meals) Act, 1906, which permits rates to be spent on the provision of food, is optional, and its adoption by Local Education Authorities is by no means universal. In many cases the authorities have contented themselves with making arrangements with voluntary agencies. In 1911-12, out of 322 Local Education Authorities in England and Wales, 131 were making some provision for feeding school children. Of these, 95 were spending rates on the provision of food. In 1908-09, £67,524 from the rates, and £85,690 in all, were spent in the provision of meals by Local Education Authorities. In 1911-12 the corresponding figures were £151,763 and £157,127. The total number of meals provided in 1911 was 8,487,824 in London and 7,634,395 in the rest of England and Wales. Both these figures show a small decrease on the previous year. The total number of children fed is given in the returns for 1911 as 124,685. The number is apparently too low; and Miss Bulkley, in her investigation under the Ratan Tata Foundation, estimates that the total number of children who were fed at some time or other during the year was about 230,000 out of a total school population of 5,357,567. The Education (Provision of Meals) Act, 1914, has removed the chief financial restrictions imposed by the earlier Act, and provides for an Exchequer grant which may amount to half the local authority's expenditure. It is hoped that this grant will prove a stimulus to increased provision of school meals and a means by which the Board of Education can level up the conditions under which the provision is made.

(b) The School Medical Service was set up under the Education (Administrative Provisions) Act, 1907. The medical inspection of all children attending public elementary schools is obligatory, but their treatment is optional. In 1913-14 there were 841 school medical officers in England and Wales, and in addition there were 578 officers appointed for special work, especially dentistry. In 277 out of the 317 Elementary Education Areas in England and Wales school nurses had been appointed. Medical treatment was provided by 241 out of the 317 authorities. The treatment is generally limited to minor ailments, uncleanness, ring-worm, and other common skin-diseases of children, defective eyesight or hearing, some external affections of the eyes and ears, and various temporary conditions of the mouth (including teeth), nose, and throat.

(b) *Private methods.*—These vary greatly in character. There is much individual charity, people who are well-to-do helping those who are less fortunate. In many cases it is the poor who help the very poor, whether they be relatives or merely neighbours. Further, there are many charitable foundations and institutions whose funds are obtained from endowments or subscriptions, or from both these sources, such as Dr. Barnardo's Homes and the Church Army. Other types of organization are the Charity Organization Society and the Gilds of Help that exist in several towns; these organizations exist with the special object of investigating cases of poverty and helping

them or bringing them into touch with some means of help. At times of unusual distress, such as is caused by a famine or a coal-mine disaster, a special fund is often raised to meet the emergency. Many trade unions, although not charitable organizations, relieve distress by the payment of out-of-work benefits.

How many people in the grip of poverty are helped by private efforts, and how much money is spent in this way, it is impossible to say. Definite information with regard to public efforts to alleviate poverty is also very difficult to obtain. The ideal of public and private methods should undoubtedly be gradually to reduce the amount of poverty by abolishing the ultimate causes of poverty. That many of the efforts are not remedial, but merely palliative, must be admitted. Further, no expenditure of money, however lavish, no raising of wages, no bettering of urban and rural housing accommodation, no improving of sanitary conditions, in fact, no material improvements alone, can hope to achieve permanent results, unless they are accompanied by certain moral changes in the character of the people. Thrift, sobriety, tidiness, and cleanliness—these and other virtues must be developed, if people are to reap the full benefits of any material changes which are likely to be effected. Much, in fact, could be achieved by moral development alone, and it is of the greatest importance to realize this, as material improvements at a time of high prices and great national impoverishment due to the war are hardly likely to be forthcoming in any large measure in the immediate future.

DOUGLAS KNOOP.

POWER.—The definition of power, or potency, and the distinction of power into active and passive are most clearly given by Aristotle. In this respect later writers, as Hobbes and Locke, have done little more than repeat Aristotle.

In *Met.* (iv.) v. 12 Aristotle distinguishes three senses of the term:

"Potency" means (1) a source of movement or change, which is in another thing than the thing moved or in the same thing *qua* other, e.g. the art of building is a potency which is not in the thing built, while the art of healing, which is a potency, might be in the man healed, but not in him *qua* healed. "Potency" then means the source, in general, of change or movement in another thing or in the same thing *qua* other, and also the source of a thing's being moved by another thing or by itself *qua* other. For in virtue of that principle, in virtue of which the patient suffers anything, we call it "capable" of suffering; and thus we do sometimes if it suffers anything at all, sometimes not in respect of everything it suffers, but only if it suffers a change for the better.—(2) The capacity of performing this well or according to intention; for sometimes we say of those who merely can walk or speak but not well or not as they intend, that they *cannot* speak or walk. The case of passivity is similar.—(3) The states in virtue of which things are absolutely impassive or unchangeable, or of which things are for the worse, are called *potencies*; for not easily changed for the worse, are called *potencies*; for things are broken and crushed and bent and in general destroyed not by having a potency but by not having one and by lacking something, and things are impassive with respect to such processes if they are scarcely and slightly affected by them, because of a "potency" and because they "can" do something and are in some positive state' (*Metaphysics*, tr. W. D. Ross, in *Works of Aristotle*, tr. J. A. Smith and W. D. Ross, vol. viii. Oxford, 1908).

In *Met.* (viii.) ix. 1, having mentioned these different kinds of potency, Aristotle says:

'Obviously, then, in a sense the potency of acting and of being acted on is one (for a thing may be "capable" either because it can be acted on or because something else can be acted on by it), but in a sense the potencies are different. For the one is in the thing acted on, it is because it contains a certain motive principle, and because even the matter is a motive principle, that the thing acted on is acted on, one thing by one, another by another; for that which is oily is *inflammable*, and that which *yields* in a particular way can be *crushed*; and similarly in all other cases. But the other potency is in the agent, e.g. heat and the art of building are present, one in that which can produce heat and the other in the man who can build. And so in so far as a thing is an organic unity, it cannot be acted on by itself; for it is one and not two different things' (tr. Ross; cf. Reid's *Works*², ed. Hamilton, p. 510, note).

Aristotle also refers to the use of the term in geometry, and says that it is due to analogy.

The foregoing quotations contain not only the germ of all that has been subsequently written, but also anticipations of what is suggested by the most recent results of science.

The language of Hobbes is not essentially different from that of Aristotle. Hobbes reduces all change to motion. Hence power is confined by Hobbes to what Aristotle regards as only one sense of the word 'power.'

'All mutation,' says Hobbes, 'consists in motion only'; 'there can be no cause of motion, except in a body contiguous and moved'; 'motion is not resisted by rest, but by contrary motion' (*English Works*, ed. Molesworth, i. 123-125).

Hobbes continues:

'Whosoever any agent has all those accidents which are necessarily requisite for the production of some effect in the patient, then we say that agent has *power* to produce that effect, if it be applied to a patient. . . . The same accidents, which constitute the efficient cause, constitute also the *power* of the agent. Wherefore the *power* of the agent and the *efficient cause* are the same thing. But they are considered with this difference, that *cause* is so called in respect of the effect already produced, and *power* in respect of the same effect to be produced hereafter; so that *cause* respects the past, *power* the future time. Also the *power* of the agent is that which is commonly called *active power*.¹ Power of the patient, passive power, material cause are, he says, the same thing, 'but with this different consideration, that in cause the past time, and in power the future, is respected'. The power of the agent and patient together he styles 'entire or plenary power.' It is the same thing with entire cause—the aggregate of all the accidents, as well in the agent as in the patient, which are requisite for the production of the effect' (ib. i. 127 f.).

The language of Hobbes reminds us of J. S. Mill, who regards the cause as the sum total of conditions, positive and negative taken together, which being realized, the consequent invariably follows. To Mill, however, the distinction of agent and patient is illusory, whereas Hobbes follows closely the Aristotelian analysis given above. They are two aspects necessarily united.

'These powers . . . are but conditional, namely, the agent has power, if it be applied to a patient; and the patient has power, if it be applied to an agent; otherwise neither of them have power, nor can the accidents; which are in them severally, be properly called powers; nor any action be said to be possible for the power of the agent alone or of the patient alone' (ib. i. 128).

Neither in Hobbes nor in Mill do we find any satisfactory account of power as a subjective phenomenon. This question was first raised by Locke, who uses language, in some respects, similar to that of Hobbes, but not so objective. He says:

'Power also is another of those simple ideas which we receive from sensation and reflection: for, observing in ourselves that we can at pleasure move several parts of our bodies which were at rest; the effects, also, that natural bodies are able to produce in one another, occurring every moment to our senses, we both these ways get the idea of power' (*Essay*, ii. vii. 8).

'This idea how got.—The mind being every day informed by the senses of the alteration of those simple ideas it observes in things without, and taking notice how one comes to an end, and ceases to be, and another begins to exist which was not before; reflecting also on what passes within itself, and observing a constant change of its ideas, sometimes by the impression of outward objects on the senses, and sometimes by the determination of its own choice; and concluding from what it has so constantly observed to have been, that the like changes will for the future be made in the same things, by like agents, and by the like ways; considers in one thing the possibility of having

any of its simple ideas changed, and in another the possibility of making that change; and so comes by that idea which we call power. . . . The power we consider is in reference to the change of perceivable ideas; for we cannot observe any alteration to be made in, or operation upon, anything, but by the observable change of its sensible ideas; nor conceive any alteration to be made, but by conceiving a change of some of its ideas' (ib. ii. xxi. 1).

In these sentences we come face to face with the psychological and epistemological problems which, in modern times, circle round the meaning of the term. Apart from these questions, power is to Locke, as to Aristotle and Hobbes, active and passive.

'Power, thus considered, is two-fold; viz., as able to make, or able to receive, any change: the one may be called active, and the other passive power' (ib. ii. xxi. 2).

He suggests that matter may be wholly destitute of active power, as its author, God, is truly above all passive power, and that created spirits alone are capable of both active and passive power. He also suggests that the clearest idea of active power is got from spirit, from reflexion on the operations of our minds, from which only we have the ideas of thinking and of the beginning of motion. These ideas of Locke lead inevitably to the question as to the relation that the power of which we seem to be conscious to control our own thoughts and actions has to power considered as existing in the external world.

It is not unusual to evade the problems thus raised by Locke by distinguishing different senses of the word 'power'; by saying that, when we use 'power' in the psychological sense, as an apparent phenomenon of our inner consciousness, the sense is quite different from and unrelated to such uses of 'power' as are exemplified when the 'mechanical powers' are spoken of, or 'power' as the rate of doing work per unit of time, or, again, as implied in the phrase 'potential energy'; or in the theory of *potential* introduced into electrical science by G. Green in 1828. The question as to the total discrimination of these different senses from the psychological cannot be determined *a priori*, by mere introspection. We, therefore, propose to consider: (1) the psychological data from which the concept of power is derived; (2) the scientific uses of the term; (3) the metaphysical connexion (if any) which exists between the psychological concept and the scientific use; and (4) the epistemological value of the concept.

1. The psychological origin.—The passage quoted above from Locke was early taken exception to by Hume.

'I believe,' says Hume, 'the most general and most popular explication of this matter, is to say, that finding from experience, that there are several new productions in matter, such as the motions and variations of body, and concluding that there must somewhere be a power capable of producing them, we arrive at last by this reasoning at the idea of power and efficacy. But to be convinc'd that this explication is more popular than philosophical, we need but reflect on two very obvious principles. First, That reason alone can never give rise to any original idea, and secondly, that reason, as distinguish'd from experience, can never make us conclude, that a cause or productive quality is absolutely requisite to every beginning of existence' (*A Treatise of Human Nature*, ed. T. H. Green and T. H. Grose, new ed., London, 1900, i. 452).

In the *Inquiry concerning Human Understanding*, he says:

'From the first appearance of an object, we never can conjecture what effect will result from it. But were the power or energy of any cause discoverable by the mind, we could foresee the effect, even without experience; and might, at first, pronounce with certainty concerning it, by mere dint of thought and reasoning' (sect. vii. pt. 1).

Hume then inquires whether this idea is derived from reflexion on the operations of our minds, and is copied from any internal impression—e.g., an act of volition. His conclusion is:

'The motion of our body follows upon the command of our will. Of this we are every moment conscious. But the means, by which this is effected; the energy, by which the will performs so extraordinary an operation; of this we are so far from being

immediately conscious, that it must for ever escape our most diligent enquiry' (ib.). His general conclusion is: 'All events seem entirely loose and separate. One event follows another; but we never can observe any tie between them. They seem conjoined, but never connected. And as we can have no idea of anything which never appeared to our outward sense or inward sentiment, the necessary conclusion seems to be that we have no idea of connexion or power at all, and that these words are absolutely without any meaning, when employed either in philosophical reasonings or common life' (ib. sect. vii. pt. 2).

These views regarding power were accepted and repeated by Thomas Brown.

'We give the name of *cause* to the object which we believe to be the invariable antecedent of a particular change; we give the name of *effect*, reciprocally to that invariable consequent; and the relation itself, when considered abstractly, we denominate *power* in the object that is the invariable antecedent,—*susceptibility* in the object that exhibits, in its change, the invariable consequent. We say of fire, that it has the *power* of melting metals, and of metals that they are *susceptible* of fusion by fire,—but, in all this variety of words, we mean nothing more than our belief, that when a solid metal is subjected for a certain time to the application of a strong heat, it will begin afterwards to exist in that different state which is termed liquidity,—that, in all past time, in the same circumstances, it would have exhibited the same change,—and that it will continue to do so in the same circumstances in all future time' (*Inquiry into the Relation of Cause and Effect*, p. 15 f.).

The analysis of Hume and Brown reduces the idea of power, efficiency, necessary connexion, considered as a subjective phenomenon, to an illusion.

'In the sequence of events called Cause and Effect,' says James Mill, 'men were not contented with the Cause and the Effect; they imagined a third thing, called Force or Power, which was not the cause, but something emanating from the Cause, and the true and immediate cause of the Effect' (*Analysis of the Phenomena of the Human Mind*, new ed., London, 1869, ii. 323).

In opposition to Hume's opinion, Reid held that reason might give rise to a new original idea; in what way it is difficult to say.

'It is not easy to say in what way we first get the notion or idea of *power*. It is neither an object of sense nor of consciousness. We see events, one succeeding another; but we see not the power by which they are produced. We are conscious of the operations of our minds; but power is not an operation of mind. If we had no notions but such as are furnished by the external senses, and by consciousness, it seems to be impossible that we should ever have any conception of power' (*Works*, ed. Hamilton, p. 446). 'Our conception of power is relative to its exertions or effects' (p. 514). From the consciousness of our own activity, seems to be derived not only the clearest, but the only conception we can form of activity, or the exertion of active power' (p. 523).

The view expressed in these and other passages, and already suggested by Locke, that the conception of active power is derived solely from the consciousness of our own exertions, occurs frequently in subsequent philosophy. In its most significant form it seeks to derive the notion of power from the consciousness of our voluntary activities and, in particular, our motor energies. This view had been already combated by Hume (*Inquiry*, sect. vii.), and his arguments are repeated by Hamilton (*Lectures on Metaphysics*, Edinburgh and London, 1859, ii. 391 f., Reid's *Works*, p. 866 f.). To escape the force of Hume's arguments, H. L. Mansel (*Prolegomena Logica*, Oxford, 1860, p. 151, *Metaphysics*, Edinburgh, 1875, p. 269) and V. Cousin (*Fragments philosophiques*, Paris, 1826, preface) were led to seek an immediate intuition of power in mind as determining its own modifications—in Cousin's language, in a causation wholly spiritual. Quite recently an attempt has been made to prove experimentally such purely mental determination. Such mental determination seems equivalent to the *fiat* of William James (*Principles of Psychology*, London, 1905, ii. 561). But, just in so far as the element of effort is eliminated, the experience becomes correspondingly unfruitful as the source of the origin of our notion of power.

If, however, the sense of effort, and in particular of muscular effort, is retained as an integral part of our volitional consciousness, we encounter a grave difficulty. The experiment of D. Ferrier

(*Functions of the Brain*, London, 1886, p. 386) seems to show that the consciousness of effort is an afferent, not an efferent, sensation, and dependent in every case upon some muscular contraction. Ferrier's argument was powerfully pressed by Hugo Munsterberg, in *Die Willenshandlung* (Freiburg, 1888, pp. 73, 82, quoted by James, ii. 505); nor does it seem possible now to maintain the view formerly held by Hamilton, Bain, and Wundt, that we have a direct consciousness of effort, or energy expended, accompanying the innervation of the motor nerves. Muscular afferent sensations are as subjective as those of brightness, noise, and smell. Thus P. G. Tait (*Dynamics*, London, 1885, p. 354) regards the idea of force as corresponding to some process going on outside us, but quite different from the sensation which suggests it. If this view is sustained, a philosophy like that of Maine de Biran or Schopenhauer, which seeks to interpret the universe in analogy with will force, is excluded.

In his *Metaphysic* Lotze says:

'These effects or actions [of things], which proceed from them and are sense-stimuli to us, are no doubt only motions and themselves neither red nor sweet; but what is there to prevent our supposing that, by acting through our nerves, they make that same redness or sweetness arise, as our sensation, in our souls, which also attaches as a quality to the things themselves? Such a process would be no more wonderful than the performances of the telephone, which receives waves of sound, propagates them in a form of motion quite different, and in the end conducts them to the ear retransformed into waves of sound' (Eng. tr., Oxford, 1887, ii. 204 f.).

The objectivity of the qualities of sensation has been maintained by J. H. von Kirchmann (*Katechismus der Philosophie*, Leipzig, 1877, p. 103), H. Schwarz (*Das Wahrnehmungsproblem*, Leipzig, 1892, p. 76), and apparently by Bergson (*Matter and Memory*, Eng. tr., London, 1911, p. 49 ff.). Wundt long ago recognized that his argument against the specific energies of the nerves, according to which the quality of sensation does not belong originally to the nerves, but is due to the action upon them of the normal stimulus, involves as a consequence that the sensation is brought nearer to the stimulus and made dependent upon it. These tendencies in modern writers show that it may still be possible to interpret the feeling of effort or force objectively, even though it be mediated by a sensory, not a motor, nerve. The objectivity of our perception of force does not really depend upon whether the nerve is incoming or outgoing, but depends upon the nature of the impression which is thereby conveyed. Here a difference presents itself. In the case of other impressions the phenomenon disclosed to consciousness seems purely subjective. In the perception of force we are confronted with a transeunt phenomenon. At whatever point the transition into sensuous consciousness takes place, the nature of force is to exist and to be perceived only as coming from without, just as we feel at the point of the pen the resistance of the paper over which it moves. This is what Hamilton means by the 'quasi-primary phasis' of the secundo-primary qualities (Reid's *Works*, note D, § 2). His analysis of the apprehension is correct, even if he be wrong in assigning it to a locomotive faculty instead of to the muscular sense. It is also implied in Reid's 'relative' notion.

2. The scientific use of 'power.'—If a force is applied to overcome a resistance, no matter at what time-rate the force acts, the force so applied has been called the 'power,' and that independently of any mechanical advantage gained. Power in this sense is now called the effort.

When, by use of a simple machine, mechanical advantage is gained, the instrumentality through which this advantage is obtained has been called a 'power,' as in the phrase 'the mechanical powers,'

applied to the lever, the wheel and axle, the inclined plane, the wedge, the movable pulley, and the screw. Such a machine is not a force or power in itself, but only a contrivance for concentrating force on a particular resistance. Since the work done by a simple machine may be taken as equal to that done upon it, it is not itself a power in the sense of doing work.

Power is the rate of doing work, or the quantity of work the agent can perform in a given time.

If it can be shown that the power, or *actio agentis*, of a material agent stands to the object upon which it acts in a relation analogous to that which governs the relations of the material and spiritual generally, we shall have a confirmation of the foregoing theory of the perception of force.

3. Metaphysical connexion of the subjective and objective aspects of power.—The well-known law of Fechner, that the increase of sensation is as the logarithm of the stimulus, is commonly discussed as a purely phenomenal law—a formula to which the facts of our sensitive consciousness rather curiously happen to conform. As such it has been regarded rather contemptuously by James. In recent years attempts have been made to extend it not only to the organic, but also to the inorganic, world. To Fechner himself it was something infinitely more than such a mere phenomenal rule. It was no less than a fundamental law, governing the relations of the physical to the psychical, and, conversely, of the psychical to the physical. It was closely connected with Fechner's psycho-physical parallelism. Fechner's doctrine was quite different from ordinary psycho-physical parallelism. The latter endeavours to find for each mental state, and each fragment thereof, its underlying physical equivalent (e.g., Münsterberg, *Aufgaben und Methoden der Psychologie*, Leipzig, 1891). Fechner, on the other hand, saw clearly that to a single mental unity a distinguishable material multiplicity may correspond (*Zend-Avesta*², Hamburg, 1906, ii. 141). This is quite in accordance with his law. Here it is only necessary to call attention to the fact that, if in the physical world energy increases as the square of the velocity, in the psychic world the resistance to the stimulus increases by a similar law.

4. Epistemological conclusion.—If there is thus in the relations of the spiritual and physical something like that which holds between potential energy, depending upon configuration, and movement, something analogous to the strain implied in that which on other grounds has been called 'potential' (J. Clerk Maxwell, *Theory of Heat*, new ed., London, 1894, p. 91), it is a reasonable inference to say that it is just the very nature of this power which as 'quasi-primary phasis' we experience in our muscular activities, and that the secundo-primary qualities are experienced in an objective sense.

LITERATURE.—Aristotle, *Metaphysica*; Hobbes, *English Works*, ed. W. Molesworth, London, 1839-45, i.; Locke, *Essay concerning Human Understanding*, do. 1690, bk. ii. ch. xxi.; Hume, *An Inquiry concerning Human Understanding*, do. 1748; T. Reid, *Works*², ed. W. Hamilton, Edinburgh, 1849; Maine de Biran, *Nouvelles Considérations sur les rapports du physique et du moral de l'homme*, Paris, 1834; Thomas Brown, *Inquiry into the Relation of Cause and Effect*², Edinburgh, 1835.

GEORGE J. STOKES.

POWER OF THE KEYS.—This term is derived from the promise of our Lord to St. Peter: 'I will give unto thee the keys of the kingdom of heaven' (Mt 16¹⁹). In Jewish literature the key is symbolical of authority (cf. Is 22²², Rev 1⁸ 3⁷; G. Dalman, *Words of Jesus*, Eng. tr., Edinburgh, 1902, p. 213). Here the expression contains a manifest reference to Is 22²². In that passage the prophet announces that 'the key of the house of David' is to be taken from the unworthy Shebna

and given to Eliakim; in other words, the latter is to be appointed the king's minister, and to govern the kingdom in his name. 'The Kingdom of Heaven' is the term ordinarily employed by our Lord to signify the Church which He had come on earth to found—the organized, theocratic society of those who accepted His claims. Thus the promise, it would seem, can have but one meaning: Peter is to be Christ's vicegerent to rule the Church on His behalf. It is true that a few recent writers have sought to give another sense to the passage by connecting it with our Lord's words to the scribes: 'Ye have taken away the key of knowledge' (Lk 11⁵²). They suppose that scribes were instituted to office by the ceremonial delivery of a key, and conclude that the words addressed to Peter signify no more than that he is a scribe fully instructed unto the Kingdom of Heaven. The contention is devoid of all probability, for there is no evidence for any such ceremony of institution. The natural interpretation of the expression as employed in Lk 11 is simply that the scribes had prevented all access to the knowledge of the way of salvation (cf. A. Plummer, 'St. Luke'², in *ICC*, Edinburgh, 1899, p. 314).

The nature of the power conferred on St. Peter is indicated by what follows: 'Whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven.' It seems generally admitted that the power of binding and loosing (*g.v.*) signifies primarily the gift of legislative authority. In theological literature, however, from Patristic times to the present day, the term has commonly been employed to denote the judicial power exercised by the Church in regard to the forgiveness of sins. This use is not without justification. In every State supreme legislative authority carries with it supreme judicial authority; the one is the corollary of the other. Hence, when Christ constituted St. Peter and subsequently (Mt 18¹⁸) the whole apostolic college legislators of His kingdom, He thereby made them likewise its judges. But the judicial power which is proper to the Church must in the nature of things differ very greatly from that exercised by a civil government. The function of the State is simply to secure the temporal welfare of its citizens; hence it takes cognizance only of external acts and not of the internal motive ('De internis non judicat prætor'). The Church, on the other hand, exists for the salvation of souls. From this it may be concluded that in her judicial capacity she must deal with sin as such, and must be authorized to remit it or refuse remission as the case may demand. This power, as the traditional theology of the Church has always taught, was granted in express terms on a subsequent occasion (Jn 20²³).

In Patristic literature we find two interpretations of the promise of the keys. Neither of the two, however, gives us quite the full force of the Hebrew metaphor. Thus several of the fathers, while recognizing that St. Peter is the recipient of an exceptional favour marking him out as the chief of the Twelve, understand the privilege as having reference not to the Church militant but to the celestial Kingdom. Our Lord, they hold, foretold that it should be Peter's office to receive the souls of the just into beatitude and exclude the unworthy, and by this prerogative constituted him the prince of the apostles. St. Asterius of Amasea writes as follows:

'He receives by this promise the keys of the kingdom, and becomes lord of the gates thereof, so as to open them to whom he will, and to close them to those against whom they should justly be shut' (*Icon. viii. in SS. Pet. et Paul. (PG xl. 280)*).

St. Cyril of Jerusalem speaks of 'the Prince of the Apostles, the key-bearer of the kingdom of heaven'

(*Cat. xvii., de Spiritu Sancto*, ii. [PG xxxiii. 997]; cf. Basil, *de Iudicio Dei*, 7 [PG xxxi. 671]; Chrysostom, *Hom. in St. Ignat.* n. 4 [PG I. 591]; Eph. Syrus, *Serm. Syr.* lvi. [tom. ii. p. 559]).

In another and much the most frequent class of passages the promise is understood of the power of absolution alone. To men thoroughly familiar with the institution of penance the metaphor of the keys seemed intended to signify that to Peter was granted authority to forgive sins and thereby to open or bar the road which alone gives access to heaven. This application, as we have explained above, is admissible, though it is far from exhausting the full significance of Christ's words. But some at least of those who adopted it failed to see that the metaphor implied the gift of supreme authority in general, and restricted its meaning entirely to the sacrament of penance. Thus we find Augustine so completely identifying the keys with the power of absolution that he expressly denies that the gift was personal to Peter. It was bestowed, he says, no less on all the Twelve, and it is in virtue of this gift that the Church, wherever it is found, exercises the right to forgive sins (*Serm. cxlix.* 7 [PL xxxviii. 802]; for other examples see Ambros. *de Pœn.* i. 33 [PL xvi. 496]; August. *Serm. cccxcii.* 3 [PL xxxix. 1711]; Hilary, in *Matt.* xvi. 7 [PL ix. 1010]; Origen, in *Matt.* xii. 14 [PG xiii. 1014]; *Conc. Eccl. Eph.* Act iii. [Hardouin, i. 1477]. This explanation of the passage leads naturally to the question why, if the power conferred belonged to all the apostles, the keys were committed to Peter alone. To this it is replied that thereby is signalized Peter's pre-eminence among the apostles (Origen, in *Matt.* xiii. 31 [PG xiii. 1179]; Hilary, *loc. cit.*; August. *Serm. cxcv.* 2 [PL xxxviii. 1349]). Stress is further laid on the consideration that in giving the keys to the chief apostle alone Christ designed to make it clear that the Church is in her essence one (August. *loc. cit.*; Optatus, *de Schismate Donat.* vii. 3 [PL xi. 1087]).

The Scholastic theologians of the 12th and 13th centuries, when they treat of the sacrament of penance, devote a special section to 'de Clavibus,' in which they examine the nature of the power of absolution (Hugo Victorinus, *Summa Sententiarum*, vi. 14 [PL clxxvi. 152]; Rolandus, *Sententia*, p. 264 [ed. A. M. Gietl, Freiburg im Br., 1891]; Petrus Lombardus, *Lib. Sent.* iv. 18 [PL cxcii. 885]; Petrus Pictaviensis, *Sent.* iii. 16 [PL cxxi. 1073], etc.). There are, they say, two keys, viz. *discretio* and *potestas*—the *clavis scientiæ* and the *clavis potentiæ*. The original source of this curious distinction is apparently the *Glossa interlinearis* of Anselm of Laon, where it occurs in the comment on Mt 16 (PL clxii. 1306). The idea of a *clavis scientiæ* is most probably connected with Lk 11⁵². To the objection that many who are not priests possess *scientia* Thomas Aquinas replies that the *clavis scientiæ* is not knowledge as such, but the authority to inquire judicially previously to pronouncing judgment (*Summa Theol.* Suppl. qu. 17, art. 3, ad 2). It appears, however, from a passage in a decree of John XXII. which deals incidentally with this point that some theologians at least rejected this distinction of the *clavis scientiæ* and *clavis potentiæ* as an artificial refinement (*Corpus Juris Canonici: Extravagantes*, xiv. 5, 'Quia Quorundam').

Towards the end of the 13th cent. a new interpretation makes its appearance. At this period the struggle between the empire and the papacy was at its height, and on either side the pen was hardly less active than the sword. The imperial legists claimed for the emperor complete supremacy over the ecclesiastical order; and the canonists replied by maintaining that the pope as Christ's

vicar possessed direct authority over secular princes, that it lay with him to appoint them, and, if need be, to depose them. Christ's gift of the keys to Peter was employed to support this contention. It was urged that the gift was not of one key alone, but of two; and that this symbolized Peter's supremacy alike over spirituals and over temporals. The first, it would seem, to employ this argument was the famous canonist Henry of Segusio (Hostiensis) († 1274), who writes:

'Ideo etiam Dominus dominorum non sine causa dixit Petro: Et tibi dabo claves regni coelorum. Et nota, non dixit clavem sed claves, scilicet duas, unam quæ claudat et aperiat, liget et solvat quoad spiritualia; aliam qua utatur quoad temporalia' (*Summa Aurea*, lib. iv. tit. 'Qui filii sint legitimi,' n. 10).

The same claim was made in the following century by Augustinus Triumphus († 1328) and Alvarus Pelagius († 1352) (*de Planctu Ecclesiæ*, 13). It is perhaps not to be wondered at that, at a period when Marsiglio of Padua and John of Jandun were advocating their revolutionary theories, the controversialists of the opposite school should have fallen into exaggerations on their side. On the other hand, the theologians who denied that the pope possessed direct authority over secular princes called attention to the fact that it was the keys of the Kingdom of heaven, not those of an earthly kingdom, that Christ gave to His apostle (cf. Cornelius a Lapide, *in loc.*).

Since the 16th cent. Roman Catholic theologians appear to be practically unanimous in their understanding of the passage. By the gift of the keys, they hold, is signified ecclesiastical authority in its widest scope. This authority is multiple, and embraces (1) the power of order, exercised in regard to sacrifice and sacrament, (2) the power to teach authoritatively the revealed word of God, and (3) the power of jurisdiction, in virtue of which the Church rules and legislates for the faithful. This authority was conferred in its fullness on Peter and his successors. It was, however, to be shared by others in due measure, though always in dependence on the chief pastor. Thus the pope is the supreme ruler and teacher of the Church. Yet all bishops and priests possess the power of order; and they receive in due degree authority to teach, and in most cases some measure of jurisdiction. In absolving from sin the Church is exercising the powers of order and of jurisdiction. This is, however, but one aspect of the gift signified under the metaphor of the keys of the Kingdom of heaven.

Macedo, *De Clavibus Petri*, Rome, 1660, i. 2; J. Biötzer, art. 'Schlüsselgewalt,' in *Wetzer-Welte, Kirchenlexikon*, x. [Freiburg im Br., 1897] 1834; Cornelius a Lapide, *Comment. in Script. Sacr.*, Lyons, 1872, xv. 370.

G. H. JOYCE.

PRADHĀNA.—Pradhāna, properly 'fundamental substance,' is a Sanskrit term employed in the Sāṅkhya (*q.v.*) philosophy as a synonym for *prakṛti*, to denote the primeval substance. Since in all material developments this primeval substance retains a place though transformed, and the doctrine of the Sāṅkhya expressly asserts the identity of the material cause and the product, the words *pradhāna* and *prakṛti* in the Sāṅkhya texts not seldom denote also the matter which is the result of evolution, *i.e.* the material universe in general. R. GARBE.

PRAGMATISM.—Pragmatism has come into use since 1898, when the word first occurred in William James's pamphlet on *Philosophical Conceptions and Practical Results*, as the technical name for a tendency which can be traced throughout the history of philosophy, but has only of late grown self-conscious, systematic, and general. The term had been coined twenty years before by

C. S. Peirce (without regard to the existing, but obsolescent, word 'pragmatic') in order to express the scientific need of testing the meaning and value of our conceptions and terms by their use, *i.e.* by applying them to the things which they were supposed to stand for, instead of allowing their own apparent self-evidence or intuitive certainty to attest their truth without more ado. He insisted, therefore, that the truth (and indeed the meaning) of every conception depended on the difference which it made in a scientific situation and on the 'consequences' to which its assumption led, and systematically denied that it could be determined in any *a priori* way. Thus every 'truth' became a question of empirical observation and scientific experiment. This critical method was, however, widely understood to mean practical consequences in the way of action alone, and so pragmatism was regarded as a sort of 'practicalism,' and as a disparagement of 'theoretic' truth which was a direct insult to all who cultivated the latter. But, though many pragmatists emphasized the importance of bringing fine-spun theorizing to some sort of definite test, and showed that in point of fact practical consequences frequently formed such a test, this interpretation of pragmatism is untenable. It is not correct etymologically, for the word is derived from *πράγματα* ('things') not from *πράξις* ('action'). It is seriously misleading scientifically, unless it is fully understood that 'practical' is taken by pragmatism in a very wide sense, which includes what is ordinarily called the 'theoretic,' for which 'in practice' means 'in use for any purpose,' for which every thought is essentially an act, and the test of a thought may be another thought to which it leads in some psychological connexion. Pragmatism is really a denial of the absoluteness or ultimateness of the traditional antithesis between 'theory' and 'practice,' and relies for its justification on the fact that everything that we think and do has first to be willed, and has ultimately some biological value as a vital adaptation, successful or the reverse. The controversial significance of this critical and empirical attitude towards doctrines and beliefs lies, of course, in the wide prevalence of credulity and dogmatism, which cannot bear questioning. It is evident, moreover, that this pragmatist questioning may arise in various contexts and in various ways, each of which will constitute an approach to pragmatism which can be used independently of the rest. Hence what is really a very simple method is apt to assume the appearance of a perplexing complexity of doctrines. It will be best, therefore, first to survey the problems that most obviously demand pragmatic treatment in ordinary life and in the various sciences, in order to appreciate the solutions which pragmatism offers, remembering always that this treatment is ultimately logical, *i.e.* if 'logic' be taken in a sufficiently wide sense.

1. The problems leading to pragmatism.—(1) Common sense is quite aware that the world is full of deceptive appearances, that things are not all what they seem, that not everything is real or true that claims to be, that not all 'facts' are facts, that not every form of words has a meaning, that much which passes for profundity is unmeaning nonsense, that, though all things are real in some sense (seeing that they can be talked about), they are very frequently not so in the sense in which they profess to be; in short, that the intellectual world is pervaded and perverted by errors, lies, fictions, and illusions. It is recognized, therefore, on quite a simple level of reflexion that precautions must be taken, and the needs of (a) determining the meaning, and (b) testing the truth, of assertions make themselves felt. A method is

demanded for distinguishing the meaningful from the meaningless, the true from the false, the real from the unreal. It is also extensively known that our ability to form conceptions and to lay down definitions is not decisive of their real value and in no way ensures that they will apply to reality in a successful and fruitful way or that reality will conform to them.

(2) The everyday problems of practical knowing reappear in logic and the theory of knowledge as 'the problem of error' and the questions about the definition and 'criterion' of truth, the 'import' of propositions, the 'reference to reality' of judgments, the formal 'validity' of proof, and the absoluteness or relativity of knowledge. But their treatment has always been vague and inadequate, because it has not been perceived that they are all concerned with one and the same central difficulty of knowledge and with the problem of logical values.

(3) Similarly, logic has never succeeded in determining its relations to psychology in a comprehensive and consistent way. It has professed to be somehow 'independent' of psychology and to be entitled to regulate the course of actual thought; yet it could never quite deny that all logical processes occur in a psychological setting, and are derived from the cognitive operations of human minds. These, however, are found to differ widely from the ideas of pure thought which logic constructs and contemplates. It appears that all actual thought is full of 'non-intellectual' factors; it is active, volitional, emotional, purposive, selective, and its understanding presupposes a study of the effects of interest, attention, desire, bias, satisfaction. But, while the actual thought is thus dependent on, and expressive of, its thinker's total personality, its logical representative has hitherto been permitted to abstract from personality. Hence there arises an acute problem of how to correlate the theories of logic with the facts of human psychology, and to determine what effect the actual nature of thought should have on its 'ideal.' For, even though this effect may be considered wholly deleterious, it is ineradicable; all truths are, and must be, on one side matters of belief. Moreover, the discrepancy between the facts and the theories of knowing is hardly less marked within the field of psychology proper. Nearly all psychological theories still abstract from the biological and functional import of the psychic processes which they describe and classify; their descriptions are in terms of 'faculties' and 'elements,' which are creatures of abstract analysis and not objects of immediate experience. They consequently overlook that all mental functioning must be understood as a reaction of the total organism, that beliefs are essentially rules for action, and that valuations occur as the stimuli to thought as well as to action.

(4) This occurrence of valuations connects pragmatism with the one science that has hitherto professed concern with value-judgments, *viz.* ethics. Pragmatism notices (a) that all the different kinds of value, ethical, æsthetical, logical, and economic, have in common a relativity, to their several purposes in the first place, and ultimately to the final end of action, 'the good.' They are all means to intrinsically valuable ends ('goods'), and as such valuable or 'useful.' It notices (b) that any 'truth' asserted about any 'real' is a latent value—both because it is the achievement of a purpose and because it is selected from a number of competitors and preferred as the *best* of them. Similarly, whatever is recognized as 'real' is logically in a position of superiority to other *claimants* to reality. Thus the 'true' and the 'real' have to be viewed as forms of the 'good,' and as satisfactions of desire. It is evident, however, that goods,

ends, and values may come into conflict with one another, and that intricate problems arise when we ask how much beauty or moral goodness will make up for lack of scientific evidence for a belief, or how intolerable a 'truth' may be before it is rejected as incredible.

(5) Such problems have long agitated the philosophy of religion and familiarized it with the antithesis of 'knowledge' and 'faith.' Pragmatism notes, indeed, that most men, especially when excited, regard the unsupported satisfactoriness of a belief, and their mere 'will to believe' it, as sufficient proof of its truth; but it is not true that it approves of this; for it dispenses with verification no more here than elsewhere, and observes that religious beliefs also are in fact tested, though not perhaps as systematically as they might be, by their 'working.' Still it does not simply dismiss 'faith' as a source of error alone, with the traditional rationalism. For the faith-attitude or 'will to believe' appears to it to have important cognitive functions. It may be, psychologically, a necessary condition of the discovery, not only of religious, but also of scientific, truth. It is, moreover, latent in the very notion of 'knowledge.' For the 'principles' which every system of knowledge assumes are not to be understood either as mere generalizations from experience or as sheer necessities of thought; they seem to be intelligible only as 'postulates' which are adopted by an act of faith, before they are 'proved' by the subsequent working of the science. Nor, on the other hand, does it seem proper to regard a belief as established merely because it evokes a strong will to believe. The truth is that the religious questions as to the sort and amount of evidence required by a postulate of faith are peculiarly difficult.

2. The pragmatist handling of these problems. —(1) *The problem of meaning.*—Pragmatism contends that alleged meanings, to be tested, must be applied or used, and thereupon valued or revalued according as they work well or ill. Of all the formulæ for defining pragmatism none is better than 'meaning depends on application,' which condemns the absolute distinction between theory and practice and the entire separation between 'pure' and 'applied' science (e.g. in mathematics). Thus inapplicable notions (like unknowable and absolute truths and realities) are declared to be unmeaning. Moreover, if two notions do not differ in their application, the distinction between them is said to be unmeaning; they are really identical and differ only in words—differences that make no difference are not worth making.

(2) *The problem of truth.*—Applying the same principle to alleged truths ('truth-claims'), we see that, since all assertions formally claim to be true, and mostly are not, truth-claim or formal truth is not what common sense and science mean by 'truth,' and that all claims have to be tested by their applications or 'consequences.' If they work well, their claim to truth-value is confirmed; if ill, it is doubted or rejected as false or erroneous. Hence the pragmatist formulæ, 'All truths are useful' and 'Genuine truth must work,' are corollaries from this method of testing truth-claims. But it should be observed that these formulæ are not formal definitions and so must not be treated as convertible; pragmatism does not affirm that whatever is useful or works is true. To assert this would be to ignore the existence of lies, fictions, errors, methodological assumptions, and other varieties of truth-claim, which are not generally called truths, and are the very things which pragmatism prides itself on distinguishing from genuine truths. It should be noted, further, that the question what sort of 'working' is relevant to the truth of a claim is relative to the inquiry, and is

often disputable. In general it must be left to the experts in the various subjects concerned. But in all subjects truth always remains relative to the state of knowledge, because only the consequences known up to date can be used to test a truth-claim. Hence no amount of successful working ever leads to the complete verification of any truth, or renders it 'absolute'; further confirmation is always possible and conceivable. But this denial that any truths are absolute and immutable is quite in accord with the practice of the sciences; it leaves room for literally infinite improvement in the reigning 'truths,' and explains their continual changes. For a truth remains true only so long as it is the best to be had; it becomes false as soon as it can be bettered.

(3) *The problem of truth and error* is solved by regarding both as values, positive and negative, i.e. as success and failure relatively to a cognitive purpose. A *bona fide* truth-claim is always supposed by its maker to be as true as he can make it at the time; but it may nevertheless fail subsequently and be declared false, nor is its formal truth-claim any protection against this fate. Consequently there can be (4) *no criterion of truth* which is formal or absolute, nor (5) *any formally valid proof* which renders its conclusion certain as a fact, in advance of observation. Successful verification never amounts to 'valid proof,' because it involves the formal defect of 'affirming the consequent.' The same conclusion follows from the formal defects of syllogistic reasoning. It is impossible to get any guarantee of the absolute truth of the premisses used, because these cannot be truer than the sciences can make them, and because 'self-evident' intuitions have always to be tested. Moreover, as Alfred Sidgwick was the first to point out, the 'truth' of a premiss is ambiguous. A premiss may be true in general and yet false for the special purpose in hand. When, therefore, it is used, a false conclusion is deduced. After the event this failure may be described as a 'fallacy of accident,' or as an 'ambiguity in the middle term'; but the potential flaw was imperceptible before, and could not be guarded against. Hence we can never know whether a formally valid deduction will be true in fact, nor can we be absolutely assured in advance that an apparent 'case' of a rule, 'law,' or 'universal' will turn out to be one in actual fact.

As regards the psychological aspects of logic, pragmatism demands especially a recognition of *the relation of thinking (6) to personality and (7) to doubt.* Emphasis on the former has led to the systematic extension of pragmatism called humanism (q.v.), but it is evident that in logical theory also the traditional abstraction from the personal context and particular occasion of assertions must be called in question. In particular, the relation of meaning to purpose and context, the psychological impossibility of asserting truths which are thought to be useless, the selectiveness of human thought, the importance of interest in starting and of attention and relevance in conducting reasoning, and the massive, and still more the subtle, effects of bias and passion in distorting it, may be mentioned as implications of personality which have far-reaching (and unexplored) logical effects. The dependence of thought upon the stimulus of doubt has been specially elaborated by John Dewey, who has emphasized the need of a continual reconstruction of beliefs and the experimental nature of all judgment. (8) Dewey also emphasizes *the biological function of thinking* as an instrument of vital adaptation, and his name for pragmatism, 'instrumentalism,' conceives it as a radical application of Darwinism to psychology. But, though it is clear that pragmatism entails a

reform of psychology as well as of logic, and that it has had a certain effect in promoting psychological explanation in terms of 'function' rather than of structure, it cannot as yet claim to have led to the working out systematically of a non-intellectualistic and biological psychology.

Much the same may be said about the bearing of pragmatism on the ethical and religious values. It is certainly important, for pragmatism cannot but affect the factitious value which they have derived from their acceptance as absolute, immutable, and infallible. Actually, however, they do not seem to be able to substantiate these claims, which are contradicted by the facts of their history, and they probably stand to gain more than they could lose by being humanized and brought into closer relation with the needs of life. It is also evident that, whereas the belief that truth, reality, and good are each one, absolute, immutable, and infallible was in principle bound to lead to dissensions between men each of whom believed that because he was right the others must be wrong, the pragmatist doctrine that truth, right, and good, being relative to circumstances though not less precious on this account, may be different for different persons, and must, moreover, be developed by the continuous correction of errors and the substitution of better and more satisfactory views for worse, is highly conducive to toleration and social harmony. Even so, it does not seem probable that on questions which affect different temperaments so differently anything like universal agreement will ever be reached; but a convergence of opinion sufficient for social purposes is far more likely, if greater freedom to experiment in ways of living were granted and if men were allowed to see for themselves which methods are successful and satisfactory and which are practically sure to fail.

3. **Pragmatism and absolutism.**—It was natural that so distinctive and comprehensive an attitude as the pragmatic should be highly controversial, especially as it was diametrically antithetical to the intellectualistic 'idealism' which conceived the essential function of intelligence as a static contemplation of 'eternal' truths and possessed great academic vogue. The ensuing controversy has chiefly raged round the conceptions of truth and its absoluteness. The pragmatists have accused the traditional accounts of truth of being unduly intellectualistic and ultimately devoid of meaning. Thus the realistic 'correspondence' theory, which makes truth depend on an agreement with a reality which transcends the process of knowing, has no means of establishing or testing the correspondence which it alleges between the object as it is known and the object as it is *per se*. Its rival, the (idealistic) 'coherence' theory, not only has to *postulate* an absolutely coherent system of truth on the (inadequate) evidence of the relatively coherent systems of the sciences, and so (inadvertently) requires a voluntaristic logic to justify it, but leads to a conclusion which confutes this same premiss. For it finds that the absolutely coherent truth which it demands cannot be possessed by any human mind; it has, therefore, to allege an Absolute to be the receptacle of such absolute truth. But this is equivalent to scepticism as regards human knowledge, while it relapses into a 'correspondence' theory as regards the relation of human truth to absolute. Pragmatism, therefore, rejects both these absolutist metaphysics and the absoluteness of the truths known to man. They are all regarded as relative to man and to the condition of human knowledge for the time being, as the history of the sciences exemplifies. From this point of view also, humanism becomes an appropriate description of pragmatism.

LITERATURE.—The literature of pragmatism is still largely scattered in the philosophic periodicals, especially in *Mind* and the *Journal of Philosophy*. Its history as an avowed doctrine begins in America, with William James's lecture on *Philosophical Conceptions and Practical Results* at Berkeley, Cal., 1898. James acknowledged that he had taken the name from his friend C. S. Peirce, who had written on 'How to make our Ideas clear,' in *Popular Science Monthly*, xii. [1878] 287 ff., without using the word, but James himself had long been teaching pragmatism in everything but the name. His *Will to Believe*, New York and London, 1897, states (p. 124) the pragmatic test of truth, in a paper dating from 1881. His epoch-making *Principles of Psychology*, 2 vols., do. 1890, also is full of pragmatism, and was admittedly the chief source from which the other leaders derived it. After the movement had been baptized, James devoted himself to its popularization, in his *Pragmatism*, do. 1907, *The Meaning of Truth*, do. 1909, *A Pluralistic Universe*, do. 1909, the unfinished *Some Problems of Philosophy*, do. 1911, and the posthumous collection of *Essays in Radical Empiricism*, do. 1912. The applications of pragmatism to logic were made in America by John Dewey and his pupils, who studied especially the dependence of knowledge on doubt and on the need of reconstructing beliefs (*Studies in Logical Theory*, Chicago, 1908, *How we Think*, Boston, 1910, *The Influence of Darwin on Philosophy*, New York, 1910, *Essays in Experimental Logic*, Chicago, 1916, *Creative Intelligence*, New York, 1917). In England Alfred Sidgwick had worked out a pragmatic logic independently (*Distinction and the Criticism of Beliefs*, London, 1892, *The Use of Words in Reasoning*, do. 1901, *The Application of Logic*, do. 1910, *Elementary Logic*, Cambridge, 1914). F. C. S. Schiller's writings elaborate chiefly the epistemological, logical, and polemical sides of pragmatism, in 'Axioms as Postulates' (in *Personal Idealism*, ed. H. Sturt, London, 1902), *Humanism*, do. 1903, 1912, *Studies in Humanism*, do. 1907, 1912, the new ed. of *Riddles of the Sphinx*, do. 1910, and *Formal Logic*, do. 1912. As simple introductions, D. L. Murray, *Pragmatism*, London, 1912, and H. V. Knox, *William James*, do. 1914, may be recommended; the full history of the movement has been written in Dutch in T. B. Muller, *De Kennisleer van het Anglo-Amerikaansche Pragmatisme*, The Hague, 1913. The validity of the pragmatic argument from consequences and the connexion of truth with what 'works' was upheld (*à propos* of A. J. Balfour's *Foundations of Beliefs*) by A. Seth (Pringle-Pattison), *Man's Place in the Cosmos*, Edinburgh, 1897. Other pragmatist books of value are A. W. Moore, *Pragmatism and its Critics*, Chicago, 1910; I. E. Miller, *Psychology of Thinking*, New York, 1909; J. E. Boodin, *Truth and Reality*, do. 1911. For the religious applications of pragmatism cf. James, *Varieties of Religious Experience*, London and New York, 1902; G. Tyrrell, *Lez Grandi*, London, 1904, *Lez Credendi*, do. 1906; I. King, *The Development of Religion*, do. 1910.

Abroad pragmatism has great affinities with the French anti-intellectualism of Henri Bergson and his school (especially Le Roy and Wilbois) and the criticism of scientific procedure by H. Poincaré, E. Boutroux, G. Milhaud, P. Duham, etc. In Germany the same may be said of the theories of knowledge of F. W. Nietzsche (*The Will to Power*, Eng. tr., 2 vols., Edinburgh, 1907-10), H. Vaihinger (*Die Philosophie des Als Ob*, Berlin, 1911), E. Mach (*Zur Analyse der Empfindungen*, Jena, 1911), W. Ostwald, W. Jerusalem, and G. Simmel.

In the way of criticism of pragmatism nothing systematic has yet been accomplished, but the best materials may be found in E. A. W. Russell, *Philosophical Essays*, London, 1910; L. J. Walker, *Stonyhurst manual on Theories of Knowledge*, do. 1910; W. M. Keane, *Pragmatism and the Scholastic Synthesis*, Dublin, 1910; J. B. Pratt, *What is Pragmatism?*, New York, 1900; R. B. Perry, *Present Philosophical Tendencies*, do. 1912; W. Caldwell, *Pragmatism and Idealism*, London, 1913. A. Schinz, *Antipragmatism*, do. 1910, is of value as a display of the emotional reaction elicited by pragmatism, and F. H. Bradley, *Essays in Truth and Reality*, Oxford, 1914, as a record of the reluctant, but in the end decisive, concessions to which idealistic absolutism has been driven (cf. Schiller's art. in *Mind*, no. 95 [1915]).

F. C. S. SCHILLER.

PRAISE.—See HYMNS, WORSHIP.

PRAKRTI.—See PRADHĀNA, SANKHYA, NATURE (Hindu).

PRĀNNĀTHĪS.—This is the name of an Indian sect founded by Prānnāth, or Prāna-nātha, in the early part of the 18th century. He was a Kṣatriya by caste, and came from Kāthiāwār. After long wanderings over W. India he reached Bundelkhand, and settled near Pannā with a large following of disciples. During his stay there he indicated the Pannā diamond-mines to Chhatrasāla Bundēlā († 1732), the local Rājā, who became his disciple.

Prānnāth founded an eclectic religion combining the best elements of Islām and Hinduism. He was the author of at least sixteen works written in a strange jargon, a mixture of Hindī, Sindhi,

Gujarātī, Arabic, and Sanskrit, by no means easy to understand. Growse ('The Sect of the Prānāthis,' *JASBe* xlviii. pt. i.) has edited and translated one of these—the *Qiyāmat-nāma*, or 'Account of the Day of Judgment.' Verses 28 ff. of this give a good idea of the attitude taken by the teacher:

'(According to the Hindūs) the Kalki (incarnation of Viṣṇu) will make an end of the Kali Yuga. The Gospel says that Christ is the head of all, and that He will come and do justice. The Jews say that Moses is the greatest, and that all will be saved through him. All follow different customs, and each proclaims the greatness of his own master. Thus idly quarrelling they fix upon different names; but the end of all is the same, the Supreme God.'

One of the names of this Supreme God is Dhām, and hence the Prānāthis also call themselves 'Dhāmīs.'

Prānāth disallowed the use of intoxicating drugs, tobacco, wine, meat, and unlawful visits to women, and preached peace and charity. He prohibited idolatry, but at the present day one of his books, called the *Qulzum*, is worshipped at the temple at Pannā. All else that is seen at his shrines here and elsewhere is a small bed with a turban on it, called Prānāth's seat. In 1764 Murtaza Husain saw the bed with a stool on each side of it. On one was a copy of the Qur'ān, and on the other a copy of the Hindū *Purāṇas*, with learned men of both religions in attendance ready to give profitable answers to all inquirers. Most of the replies made to him involved the unity of God.

There are only a few hundred followers of this cult in modern times. Most of them live at Pannā, and others are found in small numbers in the United Provinces and in Nēpāl. Those of Bundelkhand bury their dead at Pannā. Elsewhere they burn them, and carry the relics thither.

LITERATURE.—H. H. Wilson, *Sketch of the Religious Sects of the Hindūs*, in *Works*, ed. R. Rost, London, 1891-77, i. 351; F. S. Growse, 'The Sect of the Prānāthis,' *JASBe* xlviii. [1879] pt. i. p. 171, reprinted in *Mathurā, a District Memoir*, Allahābād, 1880, p. 212; Jagēshar Prasad Tiwārī, *Juvenile Hist. of Charkhārī, by a Native Servant of the State*, Benares, 1886, p. 13 ff.; C. E. Luard, *Gazetteer of Bundelkhand*, Lucknow, 1907, p. 199. Lāl Kavi, *Chhatra Prakāśa*, Calcutta, 1829, and Benares, 1903, chs. 183 ff., contains a contemporary account of Prānāth's dealings with Chhatrasāla. Murtaza Husain, Allahyār, wrote the *Hadīqat-ul-aqālim* about 1782. In this is described the author's visit to Pannā about the year 1764, with a full description of the Prānāthis and their temple (p. 669 of the lithographed ed., Lucknow, n.d.).

G. A. GRIERSON.

PRAPATTI-MĀRGA.—*Prapatti-mārga* was a development of the Indian *Bhakti-mārga* (q.v.) which took its rise in S. India in the 13th cent. A.D. *Bhakti* connotes active love and devotion to the adorable, while *prapatti* is simply passive surrender. There are two schools of Vaiṣṇava thought in S. India. The Vaḍagalai, of the country north of, say, Conjeeveram, lays stress on *bhakti*, and the Teṅgalai, of the country south of that town, on *prapatti*. The attitude of a follower of the Vaḍagalai school is compared to that of a baby monkey, which is carried about and protected by its mother, but nevertheless has to cling to her, while that of a follower of the Teṅgalai school is compared to the passive surrender of a kitten carried about in its mother's mouth. They are hence nicknamed the 'monkey-school' (*markaṭa-nyāya*) and 'cat-school' (*māyāra-nyāya*) respectively. The corresponding attitudes of the deity in these two cases are, respectively, *sa-hētuka-kṛpā*, or 'grace sought,' and *nir-hētuka-kṛpā*, or 'grace unsought,' which may be compared with the 'co-operative grace' and 'irresistible grace' of Western theologians.

A man who has adopted the *prapatti-mārga* is called a *prapanna*, 'refugee,' or 'suppliant,' and he may be either *drpta*, 'patient,' or *ārta*, 'impatient.' A patient suppliant is one who lives an ordinary life, straight in thought, speech, and

deed. An impatient suppliant is one whom *prapatti* has caused to loathe the ordinary life and everything connecting him with this world, and who, impatient of salvation, beseeches and besieges God to bring him to Himself.

The argument of the teachers of the *prapatti-mārga* is that the active concentration upon and adoration of God demanded by the *bhakti-mārga* is a means of salvation that tries the utmost strength and capacity of mortals, and is beyond the powers of most. Hence God in His mercy has opened the way of *prapatti*, which demands merely unconditional self-surrender, and is accessible to all, irrespective of caste, colour, or creed.

Although essentially a creed of S. India, the *prapatti-mārga* in later times found its way to the Ganges Valley in the north, and gave consolation to many pious souls afflicted by the tragedies that overwhelmed Hindōstān in the 17th and 18th centuries (cf. art. CHARAN DĀSIS).

A further development of the ideas contained in this doctrine is called *āchāryābhīmāna*, 'resort to a teacher or mediator.' In this a mediator, tangibly present and accessible, conducts the soul to a God, who is to many beyond the reach of human thought. The mediator is represented as possessing two arms. With one he reaches downwards and rescues the proselyte soul from the world of sin, and with the other he reaches upwards and presents the soul, purified from earthly taint, before the throne of the Adorable.

LITERATURE.—A. Gōvindhāchārya and G. A. Grierson, 'The Artha-pañchaka' (text and tr.), *JRAS*, 1910, p. 565, 'Teṅgalai and Vaḍagalai,' *ib.* 1912, p. 714; A. Gōvindhāchārya, 'The Aṣṭādāśa Bhēdas' (account of the doctrinal differences between Teṅgalai and Vaḍagalai), *ib.* 1910, p. 1103.

G. A. GRIERSON.

PRĀRTHANĀ SAMĀJ.—The Prārthanā Samāj is the Brāhma Samāj (q.v.) of the Bombay Presidency, but it has noteworthy characteristics of its own.

Through the final defeat of the Marāṭhas in 1818 the Bombay Presidency, almost to its present extent, came under direct British rule, and Mountstuart Elphinstone was the first governor. Under settled government things began to improve; Western education was introduced; with John Wilson missions took a fresh start, employing new methods; and, in consequence, the Indian mind showed signs of awaking. About 1845 discussions on religious and social questions began to agitate both the Hindu and the Parsi communities in Bombay. The Hindus took action first. The earliest organization was a secret society, called the Gupta Sabhā, for the discussion of religious questions. This was followed in 1849 by a larger secret society, called the Paramahansa Sabhā, which was meant to advance liberal ideas, both social and religious, and above all to break down caste. But in 1860 the matter was made public, and the society broke up.

Yet liberal ideas were not thereby crushed, and the movement was quickened by a visit which Keshab Chandra Sen (see art. BRĀHMA SAMĀJ) paid to Bombay in 1864. Finally, in 1867, the Prārthanā Samāj (i.e. 'Prayer Society') was organized. There was no man of genius among those who founded the society, but three strong men, the brothers Pandurang and N. M. Paramanand, stood out as leaders. The chief interests of the Samāj were theistic worship and social reform; and a simple congregational organization was adopted. In 1870 two young men of character and capacity joined the movement, M. G. Ranade (later Justice Ranade) and R. G. Bhandarkar (now Sir R. G. Bhandarkar), the well-known scholar. Ranade was the most influential leader the Samāj has had, and to this day its teaching and activity bear the impress of his

spirit. The Samāj building was erected in Girgaum, Bombay, in 1874, and since then has been the chief centre of theism in the West. In 1882 another young man, now Sir N. G. Chandavarkar, became a member of the Samāj. Bhandarkar and Chandavarkar, the former in Poona, the latter in Bombay, have been by far the most prominent men in the movement since Ranade's death in 1901. There have been no groups of vigorous missionaries connected with the Samāj such as built up Brahminism in Bengal, but there have been individual workers who have done faithful service, notably S. P. Kelkar and V. R. Shinde; but something hinders; for no one remains long in the work. There are also a number of cultured laymen whose assistance must be valuable—K. Natarajan, V. A. Sukhtankar, N. G. Velinkar, and others.

There is also a strong Samāj in Ahmadābād in the Gujarātī country, the first leader of which was Bholanath Sarabhai. Poona, Kirkee, Kolhāpur, and Sātara, all in the Marāṭha-speaking portion of the Presidency, have each a Samāj. Of the twenty-nine theistic societies in the Madras Presidency eighteen bear the name Prārthanā Samāj.

The beliefs and teaching of the Samāj are very similar to those of the Sādhārana Brāhma Samāj of Calcutta. They are theists and opposed to idolatry with all its accompaniments. The inspiration of the Vedas and the doctrine of transmigration and *karma* have been surrendered. While the thought and life of the Samāj are largely fed from Hindu theology and literature—the hymns of Tukārām, Nāmdēv, and other leaders of the *bhakti* school of Marāṭha-land being much used—yet the teaching of Christianity, religious, moral, and social, has had quite as much influence as in the Brāhma Samāj. One striking difference, however, has to be noted: in the Sādhārana Brāhma Samāj and also in the New Dispensation section vows are taken by every full member whereby he promises to give up both caste and idolatry absolutely, while in the Prārthanā Samāj no such promises are made; and, though the leading members are as strict in these matters as any Brāhma could possibly be, there are others who belong to the Samāj and yet have banished neither idolatry nor caste from their homes. Thus the Bombay society stands nearer Hinduism and has closer relations with the Hindu community.

The religious services of the Samāj are very similar to those of the Brāhma Samāj, the language being Marāṭhī in Bombay, Poona, and the other southern centres, but Gujarātī in Ahmadābād. Passages are read from the Hindu Scriptures, and hymns are sung. There are prayers and a sermon.

The literature of the Samāj is partly in English, partly in the vernacular. Sermons and hymn-books are in the vernacular, and have a fair circulation. The literature in English is very scanty. Indeed, the weakness of the Samāj in theology is very notable, and was fully recognized by Ranade. Attempts are being made to produce books to enrich the teaching and the thought of the community, but the results are meagre.

Apart from the regular Sunday services, the religious activities of the Samāj are the Young Theists' Union, the Sunday School, the Postal Mission, and the *Subodh Patrika*, an Anglo-Marāṭhī journal. The Students' Brotherhood, a sort of theistic Y.M.C.A., whose active workers belong to several communities, owes much to the Samāj.

A good deal of educational and charitable work is carried on. In Bombay schools are maintained for children and for women, night-schools are conducted for working men, and there is a Home for the Homeless; there is also an Orphanage, with

a Foundling Asylum, and Distressed Widows' Refuge, at Pandharpur.

It is a very remarkable fact that, although the organization of the Prārthanā Samāj with reference to social questions is lax as compared with the Brāhma Samāj, yet its services to the cause of social reform, to philanthropy, and to social service have been very great. It was Ranade who organized the friends of social reform and started the National Social Conference, which meets annually. The first Conference was held in 1888, and ever since that day members of the Prārthanā Samāj have taken a very large part in its activities. Similarly, the rise of the Depressed Classes' Mission, a society organized in 1906 to help and uplift the out-castes, which draws its support from various communities, is due almost entirely to V. R. Shinde and other Samājists. A third instance is the Social Service League recently founded in Bombay under Sir N. G. Chandavarkar.

Like the sister organization in Bengal, the Prārthanā Samāj remains weak in numbers but strong in influence.

PRATYEKABUDDHA.—i. Introduction and definition.—In the course of ages the Law (*dharma*) has been successively taught by a long line of saviours or perfect Buddhas (*samyaksambuddha*). They are not only Buddhas, i.e. in possession of the knowledge (*bodhi*) that works out *arhat*-ship or liberation (*nirvāṇa*); they are perfect Buddhas—omniscient, omnipotent, and very compassionate. These qualities they owe to the long practice of the 'perfect virtues' (*pāramitās*) as *bodhisattvas* (see artt. BODHISATTVA, MAHAYANA).

The seed of the Law bears different fruit according to the dispositions of the disciples. A threefold distinction must be made. (1) Some disciples (mediate or immediate) of a perfect Buddha resolve to imitate him; they follow the practice of the *bodhisattvas*, and finally become perfect Buddhas, revealing the Truth and establishing the Church. For, after a few centuries, the visible work of a perfect Buddha perishes, the very name of Buddha and the path to *nirvāṇa* die away. It is the lot of the *bodhisattva* to build the path again and again. (2) Some disciples realize the fruit of the religious life, and become *arhats* or Buddhas and reach *nirvāṇa* while the Law is yet living; the (later) technical name for such disciples, taught by Buddha or the Church, is *śrāvaka*. This word is commonly translated 'auditor,' 'disciple,' but it also means 'preacher,' and this meaning (supported by *Suddharmapundarika*, iv. 53, with the commentary of Chandrakīrti thereon) points out one of the features of these saints: they are preachers. They are the fathers and the doctors of the Church together with the *bodhisattvas*. (3) But not every disciple, either monk or layman, becomes an *arhat* or a Buddha during the short period of the duration of the Church. The consequence is that, during the much longer periods of the disappearance of the Church, these already converted men continue to progress in holiness and wisdom; they develop their old 'roots of merit'; they will finally reach knowledge (*bodhi*), without being actually taught by a perfect Buddha, without being trained under the rule of the Church created by a perfect Buddha; they will, in their last birth, discover the Truth by themselves, as Śākyamuni did and as all perfect Buddhas do. But they will not be perfect Buddhas; they will not move the wheel of

the Law; they will not re-establish the decayed Church. These saints are named *pratyekabuddhas* (*paccekabuddha*, *rañ-saṅs-rgyas*), 'private Buddhas' (Kern), 'Buddhas individuals' (Burnouf); 'they desire their own peace' (*rañ zhi don gñer*, *svasāntyarthaka*); 'they rule themselves, not the others; it is themselves they bring to *nirvāṇa*' (*ekam ātmānam damentī parinirvāpayanti*).

'The name and the nature of a Buddha,' says Chandrakīrti,¹ 'belong to three classes of persons, the *śrāvakas*, the *pratyekabuddhas*, and the incomparable perfect Buddhas. The name of Buddha is therefore suitable for the *pratyekabuddhas*. These, owing to their merits and knowledge, are greater than the *śrāvakas*. But, as they lack the equipment of merit and knowledge [of the perfect Buddhas], the great compassion,² the universal knowledge, they are inferior to the perfect Buddhas. They are intermediary. And as knowledge [i.e. the knowledge that brings *nirvāṇa*] is born in them without a teacher, as they are Buddhas by themselves, isolated and acting for their own sake, they are *pratyekabuddhas*.'

2. *Bodhisattva* and *pratyekabuddha*.—All *pratyekabuddhas* are not *śrāvakas* who have failed to obtain knowledge (*bodhi*, *arhat*-ship) during the duration of the Church. A *bodhisattva* may abandon his career of a *bodhisattva* and become a *pratyekabuddha* in order to obtain *nirvāṇa* sooner. A legend told in the *Kanakavarṇāvadāna*³ illustrates the leading motive of the *pratyekabuddha*:

A *bodhisattva* chanced to be aware of a hideous crime (incest); he felt disgusted with the creatures whom he was trying to liberate by becoming a perfect Buddha: 'Beings are corrupt! Nay, they are very corrupt! Who would have the courage to work so long a time for the sake of so wicked beings?' Accordingly, this *bodhisattva* made up his mind to obtain *nirvāṇa* as soon as possible (i.e. the *pratisṭhita nirvāṇa*); he sat at the root of a tree, meditated on the origination and passing away of the *skandhas* (elements of the 'self'), and soon realized *bodhi*, the *pratyeka* *bodhi*.

The *Avadāna* adds that this *bodhisattva*, changed into a *pratyekabuddha*, did not totally lose his previous charity.⁴ He thought that he had not done anything for others, having only provided for himself (*svakārtham*). Being unable to preach, he begged in order that the donors might acquire merit by giving to such a 'holy vessel' as a *pratyekabuddha*. Some *pratyekabuddhas* are known to display miraculous powers—a poor substitute for the Word, but a proof of their altruism.

3. Why *pratyekabuddhas* do not preach.—The *pratyekabuddha* possesses the *bodhi*, or the knowledge necessary to *nirvāṇa*, but he is not a perfect Buddha: he lacks omniscience, omnipotence, supreme compassion; and the reason is clear enough. The *pratyekabuddha* is an *arhat* 'en retard,' who has had to work very hard, in an egoistical way (*svakārtham*), to compensate for the want of actual teaching; he has not followed the practice of the *bodhisattva* which assumes high compassion and creates omniscience and omnipotence. But why does he not preach as *śrāvakas*, as even ordinary monks and laymen do? For he has both compassion and learning. The reason of his silence, of his incapacity for preaching and even speaking, is to be found in the special nature of his training.

The *pratyekabuddhas* have led a lonely life for centuries, as 'solitary contemplative philosophers,' as 'hermits' (Kern); they have not met with laymen, monks, or other *pratyekabuddhas*; they have had neither teacher nor spiritual friends (*kalyāṇamitras*). They have been living 'like a rhinoceros' (*khaḍgaviṣṭāṇakalpa*).⁵ The natural

consequence of this solitary life, of this excessive distaste for 'human contact' (*samsarga*) in order to avoid 'attachment' (*sneha*), is that they are unable to preach the truth that they have discovered.

4. *Rsis* and *pratyekabuddhas*.—There is little doubt that this theory of the *pratyekabuddha*, the hermit saint, arises from actual fact. The *pratyekabuddha* embodies the old ideal of a solitary and silent life—an ideal that was flourishing before Śākyamuni came. Śākyamuni did not favour it; he, indeed, condemned the vow of silence, and did his best to encourage spiritual exercises in common—reading, teaching, and social activities of many kinds. But he was shrewd enough to leave some scope to the more ascetic tendencies of his countrymen. Accordingly, after they had undergone some training (novitiate), monks were allowed to live in the forests, like the *ṛsis* of old.

Hermits are supposed to have great magical power, and to be angry when troubled in their contemplations; the same is true of the *pratyekabuddhas*, and there are some legends to this effect.

5. The vehicle of the *pratyekabuddha*.—Owing to their austerities and long meditations, the *pratyekabuddhas* are superior to the ordinary *śrāvakas* in power and in science. But do they acquire *bodhi* by the same method as the *śrāvakas* or by some other method? Both *Mādhymikas* and *Vijñānavādins* state that the *śrāvakas* and the *pratyekabuddhas* are 'conveyed' to *bodhi* by the same vehicle.

'The path of the *pratyekabuddha* is of the same nature (*tulya-jātiya*) as the path of the *śrāvaka*. The difference is that in their last birth, owing to their former exercise, they realize without a master the thirty-seven qualities leading to *bodhi* and obtain *arhattva*, the abandonment of all vices' (*Bodhisattva-bhāṣī*, i, vi 6; *Musōn*, new ser., xii [1911] 168).

'All saints are born from the Buddhas. The Buddhas teach dependent origination. By hearing it, pondering over it, meditating on it, the *śrāvakas* and the other saints will obtain, according to their intentions, the perfection of their own state. But some of them [the *pratyekabuddhas*] . . . do not obtain *nirvāṇa* in this life; they therefore will obtain it, without further exertion, in another life' (*Mādhymakāvadāna*, p. 2; *Musōn*, new ser., viii, 252; Chandrakīrti quotes Aryadeva, *Satka*, viii, 22, and Nāgārjuna, *Mūlamādhymakā*, xviii, 12).

On the other hand, Tibetan and Chinese authorities maintain that, while the *śrāvakas* meditate on the Four Truths (*chaturāryasatya*), the *pratyekabuddhas* obtain their *bodhi* by meditating on 'dependent origination' (*pratītya-samutpāda*). The Chinese translations of *pratyekabuddha* mean 'alone-Buddha,' '*pratītyabuddha*.' The Tibetan equivalents are 'who meditates on *pratītya*' (*rtseṅ ḥḥrel bsgom*), 'who understands only the causes' (*rkhyen gcig rtoḡs*?).¹ We are told that the proper way of such meditation is to look at the birth and decay of the leaves.

The present writer believes that this distinction is purely scholastic. Dependent origination is only the commentary of the Second Truth.

6. *Mahāyānist* criticism.—According to the *Saddharmapundarika* (p. 44, and *passim*), there is not a *śrāvaka*-vehicle or a *pratyekabuddha*-vehicle. *Śrāvakas* and *pratyekabuddhas* do not reach *bodhi* or *nirvāṇa*. They have to become *bodhisattvas* to enter into the Great Vehicle, which is the only vehicle.²

The *Prajñāparamitā*, on the contrary, maintains that it is not necessary to become a *bodhisattva* in order to reach *bodhi*. There is a *śrāvaka*-vehicle, a *pratyeka*-vehicle (see *Saḍḍharma*, pp. 79, 260; *Dharma-Saṅgraha*, etc.). But one cannot

304; but it seems that the Valbhāṣikas agree, the *pratyekabuddhas* 'who are living together' (*vārgasāhārin*); Kern (*Manual of Indian Buddhism*, p. 62, n. 1) compares *vaggasārin* in the *Sūta-Nipāta*, 871, 800, 912.

¹ See Wassiljeff, p. 13; Eitel, *Handbook*, p. 123; Sarat Chandra Das, *Tibetan-English Dictionary*, p. 1166.

² See also the *sūtra* quoted, *Śikṣāsamucchaya*, p. 97.

¹ *Mādhymakāvadāna*, Bibl. Buddhica, ix, 8, 18; tr. in *Musōn*, new ser., viii, [1907] 254.

² The 'compassion' (*karuṇā*) is compassion 'consisting in absence of hatred' towards beings of *Kāmadhātu* (see COSMOGONY [Buddhist]) as far as they are enduring the first kind of suffering (*duḥkhaduḥkhatā*). The 'great compassion' (*mahākaruṇā*) includes all beings and all kinds of suffering.

³ *Dharmavādāna*, p. 94. Cowell and Neil, p. 293 ff.; tr. E. Burnouf, *Introduction*, p. 94.

⁴ Cf. *Avadānasatka*, Bibl. Buddh. iiii, (Petrograd, 1906-09), ii, 116: the *pratyekabuddhas* are said to be *hināsanānukampaka*.

⁵ Later, it seems, a second category of *pratyekabuddha* was admitted (by the Sautrāntikas, says Wassiljeff [*Buddhismus*, p.

become a *śrāvaka* and *pratyeka* by the mere understanding of the Four Truths or of dependent origination. Understanding of voidness (*śūnyatā*) is necessary.¹

7. Technical details.—Many technical details are to be found in the Abhidharma and Vijñānavādin books—e.g., the theory of the last incarnation of a future *pratyeka*.

The *chakravartin* (sovereign king) is conscious when descending into the maternal womb; then he becomes unconscious and is born unconscious. The future *pratyeka* remains conscious in the womb. The *bodhisattva* at his last birth is born conscious.

PRAYER (Introductory and Primitive). — I. Origin and development.—In its simplest and most primitive form prayer is the expression of a desire, cast in the form of a request, to influence some force or power conceived as supernatural. Apart from the modern usage of the term, which connotes spiritual communion, it is usually understood to imply reverent entreaty. It must be said, however, that in the primitive mind reverence is usually obscured by fear—all spirits, whether good or bad, are regarded as dangerous—while the idea of entreaty, though the ostensible influence in determining the form, is largely coloured by a desire to compel or command. Genetically, prayer is related to the spell or charm; and it is frequently a matter of difficulty to determine whether a particular formula should be assigned to one category or to the other. Although the form of the address may be of assistance—some writers have endeavoured to distinguish between spell and prayer by assigning to the latter those formulae which contain a vocative (see W. H. R. Rivers, *The Todas*, London, 1906, p. 272)—in the rudimentary forms the underlying psychological elements are hardly distinguishable. In performing a magical act the performer often supplements the mimetic action by indicating in a phrase or two what it is that he wishes to be done.

The Australian black-fellow who works magic against his enemy by pointing and stabbing with his spear says, 'Strike! Kill!' Here a simple command emphasizes the action. In another and more complex example the Maidu medicine-man inflicts disease on the neighbouring villages by burning certain roots and blowing smoke towards them saying, 'Over there! Over there! Not here! To the other place! Do not come back this way. We are good. Make these peoplesick. Kill them; they are bad people!' (R. B. Dixon, 'The Northern Maidu', *Bull. Am. Mus. Nat. Hist.* xvii. pt. 3 [1905] 323 f.). In form this is a direct command, but in spirit it differs hardly, if at all, from supplication.

A familiar process of magic is to work evil against an enemy by performing a ceremony over some part of the body, such as hair or a piece of nail, or some object which has been in intimate contact with the body, such as earth impressed with a footprint. The ceremony is accompanied as a rule by some formula.

¹ *Aṣṭasāhasrikā*, Bibl. Indica (Calcutta, 1888), p. 379; *Madhyamakavṛtti*, p. 353 (a different opinion, p. 351).

The Maori priest was believed to be able to 'pray' mother and child to death by using the placenta in this way (G. Bennett, *Wanderings in New South Wales, Batavia, etc.*, London, 1834, i. 128).

The relation between formula and ceremony is shown in a Malay charm in which the nature and meaning of the treatment of the soil from the centre of a footprint were indicated by saying:

'It is not earth that I switch,
But the heart of So-and-so.'

But, while this instance merely illustrates the desire to make clear the intention of the charm (though it must be noted that it is an essential part in securing success), another charm from the same part of the world illustrates by a curious conjunction the primitive attitude of mind towards the powers to whom these invocations are addressed: in one of the ceremonies for bringing sickness, injury, or death upon an enemy by the mutilation or transfixing of a waxen image the operator, in the course of his address to the spirit, says:

'Lo, I am burying the corpse of Somebody,

Do you assist in killing him or making him sick:
If you do not make him sick, if you do not kill him,
You shall be a rebel against God,
A rebel against Muhammad.'

which illustrates at once the request for help, the idea of compulsion involved in the charm, and a threat in case of non-compliance (W. W. Skent, *Malay Magic*, London, 1900, pp. 569, 571). In some addresses to the dead, especially when the fear of the dead, however well disposed, has been much exaggerated by any peculiar or unusual circumstance, magical ceremony, entreaty, and command combine in much the same way.

The Orāons appear to regard the spirit of a woman who has died in childbirth or while pregnant as specially malignant. Not only is she buried with special precautions (the ankles are broken and the body is laid face downward with the bones of a donkey), but various invocations are addressed to her, such as, 'If you come back, may you turn into a donkey!' The roots of a palm-tree may be burned, while the mourners say, 'May you come home only when the leaves of the palm-tree wither!' (P. Dehon, 'Religion and Customs of the Orāons', *Mem. As. Soc. Bengal*, i. 9 [1906], p. 139).

On the other hand, the Thonga formula at the *tjebe* ceremony of collective fishing by the community, which takes place when the lakes are

drying up, seems to be passing, if it has not already passed, into the category of prayer.

An offering is made by the descendant of an inhabitant of the country, who, however, does not perform the full sacramental *tsu*, which consists in placing part of the offering in the mouth and then spitting it out, but merely spits without having placed anything in his mouth, and says, 'Let fish abound! Let them not hide in the mud! Let there be enough of them to satisfy everyone!'

Notwithstanding the form of the address and the circumstances of the ceremony, which give it a magical turn, the stress laid upon the ancestral connexion seems to indicate a more definite direction of the supplication than would be expected in an endeavour to compel a successful issue by magic alone (H. A. Junod, *Life of a S. African Tribe*, Neuchâtel, 1912-13, ii. 70). Among the Veddas of Ceylon many of the invocations which form a part of the ceremonial dances by which the favour of the spirits is secured are Sinhalese charms which are meaningless to them and as such are merely the 'word of power.' But in form, whatever may be the spirit in which the invocations as a whole are used, whether merely as spells or as supplications with full appreciation of their purpose and meaning, they belong to the category of prayer. This appears clearly in the following instance of an invocation to the *nae yaku*, the spirits of the dead:

'O father who went to that world, come to this world. Come quickly to place (for us) the sambar deer, the spotted deer. Take this betel leaf. Come very quickly. Come quickly. My mother's people take the rice, take the rock honey, take the betel leaf. To place the sambar, to place the spotted deer, come very quickly' (C. G. and B. Z. Seligmann, *The Veddas*, Cambridge, 1911, p. 277).

Notwithstanding the change in mental attitude involved by the transition from spell to prayer, there is always a tendency for the latter to retain or to revert to the character of the former. The primitive mind clings firmly to the idea of control over power which is involved by the use of name or formula. Among the Todas, with whom ritual has almost overwhelmed religion, prayers are divided into two portions, of which the petition or prayer proper forms the second. The first part consists almost entirely of names known as *kwarzam*; it is made up of a number of clauses, each consisting of the name of an object of reverence followed by *idith*, 'for the sake of.' Much care is taken that this part of the prayer should not be overheard; it is muttered in the throat. It has been conjectured that the *kwarzam* was originally a form of supplication to the gods with which other words have come to be included. The objects of reverence named are of various kinds, including the names of gods, buffaloes, villages, dairies, and parts thereof. As in other cases—e.g., the Vellala prayers, for which there is a special vocabulary—these things are referred to not by their ordinary names, but by special names (Rivers, pp. 216, 229). This formalization of prayer which assimilates it to a spell can be paralleled from the Avesta, in which the conception of the magical power of prayer is such that the mere repetition of the words, if correct, is sufficient for efficacy, and it is commanded that they should be repeated as a sort of preservative at fixed hours of the day (W. Geiger, *Civilization of the Eastern Iranians in Ancient Times*, Eng. tr., London, 1885-86, i. 71)—a use of 'vain repetition as the heathen do' which finds expression in an extreme form in the employment of the Buddhist prayer-wheel (*q.v.*).

2. Occasions on which prayer is offered.—It follows from the close genetic relationship between spell, or charm, and prayer that the latter, when first it begins to modify its magical character of compulsion and to take on the character of an appeal for assistance, is employed intermittently only.

It is said of the Baganda that, when everything goes smoothly and the family is in good health, a man does not trouble to pray or make offerings, but does so only in times of danger or sickness. If a ghost was troubling a family, offerings were made and prayer was addressed to a stronger ghost to secure its assistance. Prayer was offered to Musisi, the god of earthquake, when he exhibited his power; Nagawonyi received offerings when the women desired children (J. Roscoe, *The Baganda*, London, 1911, pp. 286 f., 313 f.). The Fijian addressed a prayer to his totem when he was in danger; e.g., a man who capsized at sea called on the shark-god, and a shark appeared and towed him ashore (B. Thomson, *The Fijians*, London, 1908, p. 116).

Illness, when recognized as caused by a spirit, was another occasion which called for prayer, either to the spirit responsible, or to a spirit which possessed the power to heal.

Among the Kayans of Borneo the chant of the *dayong* (medicine-man or -woman), before starting on the soul-hunt, is essentially a prayer for assistance addressed to Laki Tenangan, the supreme being of the universe, or in the case of a woman to Doh Tenangan, his wife (C. Hose and W. McDougall, *The Fagan Tribes of Borneo*, London, 1912, ii. 29 f.). The Thonga medicine-man, before entering upon the treatment of a case of illness, prays to his ancestors, and in particular to that one of them from whom he holds that his knowledge was acquired, to give their blessing to his treatment (Junod, ii. 362). The oblation which follows the circumcision ceremony performed on the young men to secure the recovery of a Fijian chief is accompanied by prayer to the ancestral spirits (Thomson, p. 167).

Drought is a frequent occasion—especially in Africa—for prayer in connexion with rain-making ceremonies, as, e.g., among the N'yang and N'goni tribes, when the chief at the head of the whole community offers up prayers as a part of a propitiatory ceremony addressed to his predecessors and ancestors. Every village has its prayer-tree, usually a fig, standing in the open space, under which sacrifices are offered (A. Werner, *Natives of British Central Africa*, London, 1906, pp. 51, 53, 62 f.).

A remarkable development of the theory of divine punishment which bears upon the efficacy of prayer as a remedial measure in case of drought is recorded among the Torajas of Central Celebes.

Divine displeasure in cases of incest is marked by torrential falls of rain. In cases of prolonged drought they simulate incest among their animals. A cock and a sow are killed and laid side by side in an intimate embrace. The headman then prays, 'O gods above and gods below, if you have pity on us, and will that we eat this year, give rain. If you will not give rain, we'll have here buried a cock and a sow in an intimate embrace, i.e. show your displeasure by sending storms' (A. C. Kruijt, quoted in *GB*, pt. i., *The Magic Art*, ii. 118).

Another occasion when the assistance of super-human powers may be sought is in divination.

The Baganda leather-thrower, when consulted in a case of sickness, or the Thonga diviner, when consulting his bones, usually offered up a prayer to the god or to the ancestors (Roscoe, p. 339; Junod, ii. 363).

Although it cannot be said that among the more primitive races, with certain exceptions, there is any conception of prayer as anything more than a call in the hour of need and as occasion arises, there is an approximation to the idea of an organized ritual in the constant but irregularly recurring crises in which it is thought desirable to petition the spirits or deities for benefit or protection.

One of these is death or burial—a time when evil influences are most potent and are brought more intimately into touch with human life. Among the Igorots after a death an old man relates the story of the first man and woman after the flood. Cabunian taught them to bury the dead, and, after burying the dead, he said, 'You should make prayers and offerings so that you may not be affected by any kind of disease' (A. Robertson, 'The Igorots of Lepanto,' *Philippine Journ. Science*, sect. D. 9 [Manila, 1914], p. 514). Among the Bathonga a burial, a ceremony of which the traditional solemnity is indicated by the exceptional prominence assigned the uterine nephew, was one of the important occasions in the family ceremonial in which prayer was offered. Another was a marriage, when the father of the bride prayed the gods to give children to the union. When a man departed on a journey, the medicine-man prepared drugs, spat on him, and prayed for his protection (Junod, ii. 362). In the Philippines the native tribes spend a great part of their time in collecting animals with which to make feasts. The spirits are invited to these feasts in order to secure their favour. They precede almost every action of any importance, such as the first hair-cutting of a son, harvest, irrigation and other work connected with the crops and, inevitably, are part of the treatment of disease. In a feast preceding a journey to

make a purchase a man will invite the attendance of certain spirits, asking them to put it in the mind of whomsoever he may buy from to sell the animal cheap (R. F. Barton, 'The Harvest Feast of the Kiangnan Ifugao,' *Philippine Journ. Science*, sect. D. 6 [1911], p. 88). Among the Igorots the feasts, whether made for a particular object or with the general aim of securing spiritual assistance, are not only the occasions for a petition; the reply is also forthcoming, being furnished by an examination of the liver of the victim (Robertson, p. 472 f.). Among hunting tribes with strongly developed animistic ideas it was usual to address some form of prayer to their prey by way of propitiation, either before or after its death (see HUNTING AND FISHING). The hunter of N. America sometimes thanked the animal for allowing itself to be killed (C. Hill-Tout, *British N. America*, i. *The Far West*, London, 1907, p. 168). This practice was also extended to the vegetable kingdom, and prayer to vegetation-spirits formed a part of the numerous firstfruit ceremonies which were a prominent feature in the culture of the American Indian. Before young people ate the first raspberry-shoots of the new season they addressed the plant and asked for its favour. Further, in both the raspberry-shoot ceremony and the salmon ceremony of the tribes of the north-west, ceremonies which inaugurated the new season's replenishment of the stock of food, the prayer offered by the medicine-man to the spirits of the raspberry or the salmon was an essential element in the ceremony (ib. pp. 168 f., 171 f.). Agricultural ceremonies of all descriptions, and especially those connected with sowing and the harvest, have had a marked influence in the development of regularity in the occasions for prayer. At the time of sowing the Iroquois prayed to the thunder-spirit and at harvest they thanked him for the gift of rain (*GB*³, pt. i., *The Magic Art*, ii. 389). In the Malay Peninsula every one who is to take part in the rice cultivation must bring to the mosque half a quart of grain (for 'mother seed') in order that prayers may be read over it. When they are finished, every man goes to the rice-field, if possible on the same day, to begin to plough the nursery plot, and at the various stages of cultivation in the course of the ceremonies appropriate to each—e.g., in the sowing and in the ceremonial reaping by the *puwang*—charms or prayers are repeated. In the case of the ceremonial reaping the 'ten prayers,' which are in effect a petition for daily bread never to be lacking on earth or in heaven, have to be repeated in one breath (Skeat, p. 240). If there was danger that the crop might fail from drought or from other causes, offerings were made and magical ceremonies performed which were sometimes accompanied by prayers. The two elements are combined in a rain-making ceremony in Angoni-land when the people repair to the rain-temple and the leader pours beer into a pot, which is buried in the ground, and prays 'Master Chauta, you have hardened your heart towards us, what would you have us do? We must perish indeed. Give your children the rains, there is the beer we have given you.' On their return they find a pot of water set at a doorway by an old woman, in which they dip branches and scatter the water aloft (R. S. Rattray, *Some Folk Stories and Songs in Chinyanya*, London, 1907, p. 118). At the harvest feast of the Kiangnan Ifugao prayers were addressed to every class of spirit in whose control lay any kind of influence, for good or ill, on the crop—spirits that make men remember and forget, earth-gods, sky-gods, the spirits that control locusts, wind, rain, and drought. The earth- and sky-gods, who are especially concerned with the growth of plants, are asked to 'speed the harvesters, make the rice grains numerous as the sands, increase the rice' (Barton, p. 89 f.). One of the Igorot feasts was given by a man once every four or five years. To this feast he summoned all the rich men of the neighbouring towns and all the poor of his own. It was accompanied by a dance and a petition was offered up for favour to be shown to the host. The petitioners prayed to the *anitos* (spirits) and the souls of their dead ancestors not to destroy his plants and not to kill his animals, so that he might be able to use these animals to give another feast for the *anitos* (Robertson, p. 613). In the peculiar and exceptional *nanga* rites of Fiji prayers to the ancestors formed part of the ceremony; these rites also appear from the character of the offerings to have been in certain of their aspects a firstfruit ceremony (Thomson, p. 155).

In a few cases peoples of a primitive type have advanced beyond this conception of prayer as intermittent and have incorporated it as a regular function in their life.

Among the Todas, e.g., prayer both morning and evening is a regular part of the ceremonial of the *ti* dairies, while at the village dairies it is offered in the evening only. Each village has its own prayer, which is used in all the dairies of the village (Rivers, p. 213). Among the Masai and peoples of related culture, such as the Gallas, Nandi, and Suk, prayers form a regular part of their life. Not only are they offered on special occasions, such as the appearance of the new moon, a raid (when the warriors after victory give thanks and pray for safe return to their homes, while the women and girls who have been left behind also pray for their safety), the building of a house, etc., but the Nandi, e.g., believe that the deity takes an intimate interest in all affairs of their life and pray to him regularly. Among the Masai the women offer up prayer twice a day, while the men pray with regularity, though less frequently (C. Eliot, in A. C. Hollis, *The Masai*, Oxford, 1905, p. xix, and *The Nandi*, do. 1909, p. xix f.; K. R. Dundas, 'Notes on the Tribes inhabiting the Baringo District, E. Africa Protectorate,' *JRAI* xl. [1910] 61).

It must be admitted, however, that these cases are exceptional and that, generally speaking, prayer is a refuge in time of crisis for purposes of protection or propitiation. The primitive attitude in its crudest form is perhaps best indicated by the Solomon Islands belief that prayer is not available for all and sundry, but, to be acceptable to the power, ghost, or spirit addressed, it should be in a regular form of words known only to the person who has access to the power (R. W. Williamson, *The Ways of the South Sea Savage*, London, 1914, p. 73). The belief is not universally held in the Solomon Islands—natural calls for help are made in time of danger or distress—but in so far as it is held it places prayer on a level with the esoteric magic of the medicine-man, from which the ordinary individual is debarred.

3. Powers to whom prayer is addressed.—It would be impossible to give here a complete account of the powers, spirits, deities, whatever they may be called, to whom prayers are addressed. It will be sufficient to indicate briefly the general principles upon which the primitive mind works in turning to higher powers for assistance. Prayer has been defined as 'the address of personal spirit to personal spirit' (*PC*⁴ ii. 364). This definition, however, at any rate in regard to the lower culture, by specifying terms of personality, appears to apply too precise a conception to what is in all probability a somewhat vague attitude of mind. The Australian black-fellow's phrase, 'Strike! Kill!' is perfectly definite in its intention of producing a result by setting certain forces into operation, but the attention is focused on power rather than personality, whether that of the speaker or that of something external to himself. Prayer, in fact, develops through the conception of powers, or, as some would prefer to call it, using the Melanesian term, *mana*, rather than by an increasingly precise attribution of personality to the supernatural, a factor which comes into prominence only at a later stage. This is not necessarily inconsistent with the view that bases prayer on the analogy of human intercourse; for, while the form of spell and prayer may well be modelled on command and entreaty, the idea of the relative strength of the powers at the command of different individuals is perfectly familiar to primitive experience. The regular method of combating magic is to control a stronger magic.

The Creek shamans held contests to determine their superiority, and among the Shushwap, if two shamans with equally powerful spirits tried to bewitch one another, both died, one shortly after the other (G. Speck, 'The Creek Indians of Tuski Town,' *Mem. Amer. Anthropol. Assoc.* ii. [1903] 74; J. Telt, 'The Shushwap,' *Jesup N. Pacific Exped.* ii. 7 [1909], p. 613).

Failure to compel by magical ceremony a power adequate to the purpose would lead naturally to an attempt to secure the services of greater powers either through the expert—the medicine-man—or by propitiation and entreaty.

In Uganda, when a ghost troubles a family, prayers and offerings are made to a stronger ghost to secure its assistance (Roscoe, p. 236).

The extent to which such powers are attributed to the human individual and the relation of the ordinary man to a person endowed with these powers differ in degree and not in kind from the relation to the superhuman spirit world. This in some cases leads to a form of address which to all intents and purposes is a prayer.

It is recorded that the natives of Brazil, when they went to meet the medicine-man, prostrated themselves on the ground before him and said, 'Grant that I be not ill, that I do not die, neither I nor my children' (*GB*³, pt. i., *The Magic Art*, i. 558).

It must not be assumed that all objects of veneration, or of fear and awe, are addressed in prayer. Indeed, of some primitive races who recognize the existence of spirits it is not recorded that they made any use of prayer. Further, when

in the lower forms of religion the existence of a supreme spirit is recognized, this spirit is usually looked upon as otiose, propitiatory offerings and prayer being made to the lower spirits, who, if not actually regarded as more powerful, are held to be more actively concerned in human affairs. Even when this extreme view is not taken, the supreme being is often approached by intercession rather than directly.

Among the Philippine tribes to whom reference has been made above prayer is offered to the *anitos* and ancestral spirits in order that they may intercede with the *batala*, the supreme being (Robertson, pp. 472, quoting Loarca [c. 1550], 514, etc.). The Kayans, though addressing the gods by name in terms of praise and supplication, appear to believe that the prayers are transmitted to them by the souls of domestic pigs and fowls. One of these animals is always killed and charged to carry the message to the gods. Also a fire is always at hand, the ascending smoke of which seems to establish communication with the god. Oding Lahang, who is regarded by the Kayans as a deified chief, is also invoked for his intercession with Laki Tenangan (Hose and McDougall, H. 6ff.). On the other hand, the Masai group (using the term in the extended sense to cover all the peoples—Suk, Nandi, etc.—of related culture in N.E. Africa), whose exceptional position in the matter of prayer has already been noted, frequently pray to the supreme deity, the sky-god; e.g., the Masai women after childbirth pray for children to the god who thunders and rains, the old men pray for rain to the 'black god,' i.e. the god of the rain-cloud. This god is Engai, 'who is prayed to and hears' (Hollis, *Masai*, pp. 345 f., xix). Among the Galla the supreme deity to whom prayer is addressed daily is Wak; among the Nandi Asis, the supreme deity, is supposed to take a friendly interest in the details of their daily life, and at such events as, e.g., the building of a house prayer is offered. The potter, when baking pots, prays, 'God give us strength, let us bake them so that men may like them.' It is interesting to note, however, that the medicine-men, who are Masai, pray to their ancestors and not to the Masai Engai (Hollis, *Nandi*, p. xx f.). Among the gods and spirits summoned to the harvest feast of the Ifugao are the earth- and sky-gods, while the conception which underlies the Iroquois prayer to the thunder-spirit at sowing time and the thanksgiving at harvest is evidently an analogous appeal to the controlling powers of natural phenomena.

Natural objects, or rather the indwelling spirits, are not infrequently addressed in prayer.

When a Masai sees a new moon, he throws a twig or stone at it, saying, 'Give me long life,' or 'Give me strength,' and a pregnant woman will make an offering of milk and say, 'Moon, give me my child safely' (Hollis, *Masai*, p. 274). The Nandi also pray to the new moon (Hollis, *Nandi*, loc. cit.). In the Kei Islands, when the warriors have gone on an expedition, the women bring baskets containing stones and fruit, which they anoint and place on a board murmuring, 'O Lord, Sun, Moon, let the bullets rebound from our husbands, brothers, betrothed and other relations just as the raindrops rebound from these objects which are smeared with oil' (C. M. Pleyte, 'Ethnogr. Besch. der Kei Eilanden,' *Tyds. van het Ned. Aard Genootsch.* n. x. [1893] 805). The Baganda, before crossing any river, take a few coffee-berries and, after asking the spirit for a safe passage, throw them into the water (Roscoe, p. 319).

The magical element in prayer requires that the powers addressed should be adequate to carry out the request of the petitioner.

The Ifugao of the township of Cayan in cases of sickness summon an old woman, a *baylan* (priestess), who makes an offering and prays to the *anito*; if the prayer has been offered to the right *anito*, the patient recovers; but, if not, another priestess is summoned and a fresh offering is made to another *anito*, and so on until the right one is found.

This principle is still more clearly indicated when departmental spirits and deities are recognized.

In Uganda, e.g., there are four principal classes of objects of veneration: the fetiches which, though made by man in many cases, possess ghosts and hear and answer supplications; national gods whose duty is the protection of the king and the State; ghosts; and amulets. Appeals are addressed to the high gods on special occasions. To Mukasa, the great god, the king sent an annual offering, when a special appeal was made for the prosperity of the crops; Musisi, the father of Mukasa, was responsible for earthquakes, and, when an earthquake occurred, he was asked to keep quiet; Nagawonyi, the goddess of hunger, was addressed in times of famine; Mbale was resorted to by women who desired children; Nagadya interceded with the other gods when rain was required, and so forth (Roscoe, pp. 273, 298, 313 ff.).

The reverence for the ghost which forms part of the Baganda religion is one phase of the cult of the dead, which in various forms is wide-spread among primitive peoples. The offerings made to the dead either to secure their influence or to ward

off any harm that they might do are usually accompanied by some form of address.

In Central Africa among the Yaco the spirit of any deceased person, with the exception of wizards and witches, is regarded as an object of homage. In the prayers for the community on such occasions, e.g., as a petition for rain, the chief addresses his immediate predecessor as the representative of all who have lived in the village in past times and the whole line of his ancestors, and the individual may approach his dead relatives in the same way on his own behalf (Werner, p. 49). In the prayers of the Igorots the ancestors are invoked side by side with the *anitos* (Robertson, loc. cit.). The Bathonga, as has been mentioned above, pray to their ancestors. The medicine-man, in praying for the sick, will call on the god who caused the illness, asking him to bring with him all the gods who have helped, or he may call his own father, asking him to bring his grandfather and so on until all his ancestors, including collaterals, have been named. On the other hand, the priest, if praying for the country as a whole, will begin with the remotest ancestor and name the successors in order until he reaches his father. An exception is found in the Maluleke district, where at the cooking of the new yams an offering and prayer are made to the spirits of the Ba-Nyal (a people conquered by the Maluleke) as the original owners of the land (Junod, ii. 363, 367). The Vedda invocations are also addressed to the spirits of the dead; departmental spirits are invoked for success in hunting, in honey-gathering, and in getting food supply (Sehmann, pp. 133, 166, 272 f.); but the myths which attach to these spirits would suggest that they are a development of the cult of the dead, spirits which in course of time have become individualized as heroic figures.

4. Persons by whom prayer is offered.—The development of prayer is closely connected with the growth of a specialized class of priests. Although it is the case that at all stages of development prayers are offered by individuals on their own behalf, there are two influences which tend to confine the ceremony, or the principal part in the ceremony, to a particular class. One is the special knowledge of the requirements and powers of the spirit whose aid is to be invoked—a knowledge of the special magic for the occasion—and the other is the communal interest of the occasion on which prayer is offered.

(1) An example of the first, of frequent and wide-spread occurrence, is to be found in the treatment of disease, where, the specialist—the medicine-man—having been called in, it is naturally a part of his function that he should utter the invocations, if any should form part of the ceremonies of which his treatment consists. Instances have already been mentioned—e.g., among the Igorots, where, if one medicine-woman fails, another must be consulted until the spirit who can deal with the case has been found. On the analogy of other cases it might be assumed that in this case knowledge of the right formula is necessary to success, just as it is believed in the Solomon Islands that those who offer prayer must know the form of words acceptable to the power addressed.

In the Ifugao harvest feast, the prayers are uttered by the old men, who alone know the words which should be uttered, while the younger men act as acolytes (Barton, p. 83).

This is not an isolated instance, but it states explicitly a reason which may be held to account for the form of solo and chorus often followed in offering prayer.

(2) It is probable that the second influence has grown out of the first, and that magical power or knowledge is the basis of the union of temporal and spiritual which makes the chief the spokesman of the community in those invocations which seek the benefit of the whole community.

In such a ceremony as that of the Central African Anjanga, in which the chief utters prayers while alone in a small hut, while the people outside chant accompaniments and clap their hands (Werner, p. 63), the chief as rain-maker has become the chief as priest. In Fiji, where the offices of chief and priest were combined, the tribal gods could be approached only through the priests. In Uganda the national gods were approached through the intermediacy of their priests; at the sacrifice offered at the building of a temple to the god Mukasa it was the chief priest who prayed the god to accept the blood and grant an increase of cattle, children, and food, but the rebuilding of the temple could be undertaken only with the consent of the king; and it was the king who sent offerings

annually to secure prosperity of the crops (Roscoe, pp. 292, 294). In this instance, although the offices of king and priest are fully differentiated, there is a special and significant relation between the king and national religion and prosperity.

On the other hand, the duty of acting as the representative of the community may fall entirely on the medicine-man.

In the ceremonial dances of the Veddas the leader who utters the invocation and takes the chief part is invariably a shaman (Seligmann, *loc. cit.*), and in the firstfruit ceremonies of N. America the shaman utters the prayer, while the members of the community stand round in a circle. In Toda ritual, although the individual may pray for his private ends, the prayers upon which the prosperity of the dairy, the chief matter of tribal concern, depends are part of the duties of the priests or keepers of the dairy (Rivers, p. 229).

The position of a father or head of a family is analogous.

Among the Bathonga in all ceremonies connected with the family on which prayers are offered this is the duty of the father (Junod, ii. 302).

5. Conclusion. — In the preceding analysis of prayer in its development from the spell to an invocation addressed to high gods or to the supreme deity there is one characteristic in which it differs fundamentally from the conception of the higher religions, viz. that prayer is an entering into communion with the deity: the benefit for which petition is made is material and not spiritual, and the ethical note is almost entirely absent. The epithets 'good' and 'bad' in the prayer of the Maidu medicine-men to the spirits of disease have a tribal rather than an ethical significance. In fact, in the lower culture there is expressed neither a desire for moral goodness nor a request for forgiveness for moral sin. On the other hand, an Aztec prayer for the ruler recognizes the ethical principle in the words:

'Make him, Lord, as your true image, and permit him not to be proud and haughty in your throne and court; but vouchsafe, Lord, that he may calmly and carefully rule and govern them whom he has in charge' (Sahagun, quoted in *FC*, ii. 378).

LITERATURE.—L. R. Farnell, *The Evolution of Religion*, London, 1905; *GP*, pt. i., *The Magic Art*, London, 1911; *PC*, do. 1903, ii. 364 f. E. N. FALLAIZE.

PRAYER (American).—Any ritual observance designed to bring man into nearer relation with the unseen powers of nature is prayer. In this broad sense prayer includes not merely the spoken or chanted word, but also dramatic and symbolic ceremonies, and above all, for the American Indian, the 'dances' in which most of his cults centre. Such ritual prayer has elsewhere been discussed (see esp. COMMUNION WITH DEITY [American], MUSIC [American], SECRET SOCIETIES [American]). But, in a narrower and perhaps finer sense, prayer signifies a personal and intimate expression, non-ritualistic in spirit and commonly in form. The degree in which the native American could possess and consciously prize such expression may appropriately be indicated here.

Half magical spell, half articulation of desperate need, are the crude utterances of the Montagnais which so shocked Le Jeune:

'Their religion, or rather their superstition, consists besides in praying; but, *O mon Dieu!* what prayers they make! In the morning, when the little children come out from their cabins, they shout, "Come, Porcupines; come, Beavers; come, Elk"; and this is all of their prayers' (R. G. Thwaites, *Jesuit Relations*, Cleveland, 1896-1901, vi. [Quebec, 1635-36] 203).

Three centuries later another Jesuit says of the Kansas Indians—a thousand miles away:

'The religious sentiment is deeply implanted in their souls. . . They never take the calumet, without first rendering some homage to the Great Spirit. In the midst of their infuriate passions they address to him certain prayers, and even in assassinating a defenseless child, or a woman, they invoke the Master of Life. To be enabled to take many a scalp from their enemies, or to rob them of many horses, becomes the object of their most fervid prayers, to which they sometimes add fasts, macerations and sacrifices. What did they not do last spring, to render the heavens propitious? And for what? To obtain the power, in the absence of their warriors, to massacre all the

women and children of the Pawnees!' (*Life, Letters and Travels of Father Pierre-Jean de Smet*, 4 vols., New York, 1905, i. 234 f.).

Yet de Smet could find in these people 'natural Christians':

'When we showed them an "Ecce Homo" and a statue of our Lady of the Seven Dolours . . . we beheld an affecting illustration of the beautiful thought of Tertullian, that the soul of man is naturally Christian' (*ib.* i. 285 f.).

So Ragueneau had said of the Hurons (1647-48):

'Though they were barbarians, there remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, whom they invoked without knowing him. In the forests and during the chase, on the waters and when in danger of shipwreck, they name him *Aïsekony Soutanditenr*, and call him to their aid. In war, and in the midst of their battles, they give him the name of *Ondoutacé* and believe that he alone awards the victory. Very frequently, they address themselves to the Sky, paying it homage; and they call upon the Sun to be witness of their courage, of their misery, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the Sun and the Sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust and do not keep their word. So true is what Tertullian said of the most infidel nations, that nature in the midst of perils makes them speak with a Christian voice,—*exclamant vocem naturaliter Christianam*,—and have recourse to a God whom they invoke almost without knowing him,—*Ignoto Deo*' (Thwaites, xxxii. [Lower Canada, *Abenakis*, 1650-51] 225).

Perhaps more impartial and certainly not less sympathetic accounts of the Indian's attitude towards prayer have come from modern students; and among these none is more illuminating than Alice C. Fletcher's account of the initiation of the Omaha youth to the spiritual life:

'The rite [is] known by the name of Nonzhinzhon. The literal meaning of the word is "to stand sleeping"; it here implies that during the rite the person stands as if oblivious of the outward world and conscious only of what transpires within himself, his own mind.' The rite takes place at puberty, when the mind of the child has 'become white.' When the youth is at the verge of his conscious individual life, is "old enough to know sorrow," it was considered time that through the rite Nonzhinzhon he should enter into personal relations with the mysterious power that permeates and controls all nature as well as his own existence.' The history of the rite is given in a legend: 'The people felt themselves weak and poor. Then the old men gathered together and said: "Let us make our children cry to Wakonda that he may give us strength." So all the parents took their children who were old enough to pray in earnest, put soft clay on their faces, and sent them forth to lonely places. The old men said to the youths: "You shall go forth to cry to Wakonda. When on the hills you shall not ask for any particular thing. The answer may not come to you as you expect; whatever is good, that may Wakonda give." Four days upon the hills shall the youths pray, crying. When they stop, they shall wipe their tears with the palms of their hands and lift their wet hands to the sky, then lay them to the earth. This was the people's first appeal to Wakonda' (27 *RBEW* [1911], p. 128 f.).

The youth could repeat this rite from time to time until he came to marry; then, unless he were a priest, he gave it up. The Omaha recognized other powers besides Wakonda, as the Earth, the Sky, the Sun, the Moon, but personal prayers were addressed directly to this higher power, penetrating them all.

'A man would take a pipe and go alone to the hills; there he would silently offer smoke and utter the call, *Wakonda ho!*, while the moving cause, the purport of his prayer, would remain unexpressed in words. . . Women did not use the pipe when praying; their appeals were made directly, without any intermediary' (*ib.* p. 596).

From the illustrations given (and they are only fugitive examples from wide materials) it is obvious that the American Indians have two kinds of prayer: (1) spells and oaths and pleas addressed to the lesser, the environmental, powers of nature, expressed in a magical or hortatory mood; and (2) true spiritual supplications directed to a power variously interpreted as the Great Spirit, the Master of Life, the Heavenly Father. 'Father' is a frequent epithet in their invocations. J. Mooney says of the Arapaho *niga* or *anigu* that it 'is a term of reverential affection, about equivalent to "our father" in the Lord's prayer'; the ordinary word for 'father' is quite different (14 *RBEW* [1896], pt. ii. p. 966). Again it is

Mooney who says of one of the most pathetic of the Arapaho prayer-songs—'sung to a plaintive tune, sometimes with tears rolling down the cheeks'—that 'it may be considered the Indian paraphrase of the Lord's prayer':

'Father, have pity upon me!
I am weeping from hunger;
There is nothing here to satisfy me'

H. B. ALEXANDER.

PRAYER (Babylonian).—Prayer in the Sumerian-Babylonian religion was almost exclusively confined to the private cults, or services for individuals, and the types of prayer which these peoples evolved may be classified in two distinct groups. These two types of prayer designed for the rituals of atonement for individuals are distinguished by their origin and usage. (1) The public liturgies tended to develop a liturgical type of prayer as the last melody or recessional of the song service, and these final passages of the liturgies were adapted for private penance. Prayers of this type are always liturgical in character, metrical in form, and disconnected with every form of magic. (2) On the other hand, a type of prayer was evolved in connexion with the magic rituals of atonement, and formed part of those mysterious and involved rituals. They are free from liturgical formality and usually inspired with great individuality and spiritual sentiment. Inasmuch as the liturgical type of private prayer was the direct offspring of the public liturgies, we shall introduce their discussion by describing the forms of public prayers which ended the Babylonian liturgies.¹

1. The recessional of the public liturgies.—When the Sumerian liturgists of the 24th to the 21st centuries B.C. finally succeeded in the completion of the long and intricate public services, they introduced a new musical and liturgical motive to end the service. These epilogues or recessionals differ both in literary composition and in musical accompaniment from the various passages which compose the main body of the service. They were known as *er-sem-ma*² to the Sumerian liturgists, i.e. 'a song sung to the flute.' The choir appears to have been accompanied through the many choral passages of these public services by the lyre, drum, and cymbals, but in the final passage the instruments were changed to the flute for the prayer of intercession. In the ancient liturgies as well as in the main body of the completed products of the Isin period the element of prayer or intercession was not prominent. But these long and intricate services of the Isin period were completed by attaching the intercessions at the end, for the need of prayer pressed itself increasingly upon the religious consciousness of mankind. These intercessions were at first of a purely public character and in harmony with the communal nature of the whole liturgy. The following extracts from the recessional prayer at the end of an Enlil liturgy will serve as an example of these public intercessions at the origin of their use:

'Oh heart repent, repent; oh heart repose, repose.
Oh heart of Anu repent, repent.
Oh heart of Enlil repent, repent.

"Oh heart of the lord repose," let be spoken unto thee.
Unto thy city hasten in glory like the sun.
Unto Nippur hasten in glory like the sun.

Thy city Nippur be rebuilt.
Thy temple Ekur in Nippur be rebuilt.

¹ The Babylonian liturgies, which are numerous and fundamental to the discussion of Babylonian religion, are treated as a supplement to this article (below, §§ 13-18).

² The Semitic rendering of this term is still unknown. Reiser has suggested *takribti halhallati*, and this has been adopted by Jensen, but the evidence is not satisfactory.

May one utter petition unto thee.
May one utter intercession unto thee.
Oh heart be reconciled, oh heart repose.³

These Sumerian public services were employed without an interlinear translation by the Semites before 2000 B.C., but at some unknown point in the middle period of the history of Babylonia and Assyria the Semitic liturgists edited these texts with a Semitic version. They continued, however, to the very end of Babylonian civilization, as late as the last century before our era, to conduct the liturgies in Sumerian.

2. Rise of the penitential prayers.—Gradually the intercessions of these public services became more individualistic in thought and expression. In due time arose the beautiful responsive intercessions at the end of the liturgies, where the people and choir no longer voice the appeal of the city and nation, but represent themselves as penitents pleading for mercy before the deity to whom they had sung a long series of litanies. With the intercessional *er-sem-ma* of the Sumerian liturgy, quoted above, compare the following epilogue said at the end of a late liturgy to Marduk:

Choir:
'Oh lord, not wilt thou reject me, not, oh lord, wilt thou reject me.
Oh lord, divine ram of heaven and earth, not wilt thou reject me.
Oh lord Marduk, not wilt thou reject me.'

Priest:
'He that renders petition am I, thou wilt not reject me.
One of prayer am I, thou wilt not reject me.
One of intercession am I, thou wilt not reject me.'

Choir:
'A father who has begotten I am, thou wilt not reject me.
Oh soon repose, thou wilt not reject me.
How long, oh lord of righteousness? thou wilt not reject me.'

Priest:
"Turn thy neck unto him in faithfulness," I will say to thee.
"May thy heart repose," I will say to thee.
"May thy soul repose," I will say to thee.
Thy heart like the heart of a child-bearing mother may return to its place.
As a child-bearing mother, as a begetting father, to its place may it return.⁴

We have here a fully developed penitential prayer of the liturgical type, the new element of responses between priest and choir being introduced. The influence of the private confessional is obvious, and this public intercession was probably employed in the service of the confessionals. So arose under the influence of the public recessional the prayers of private penance said in secret with a priest in the seclusion of the temple cloisters and chapels. These penitential prayers were said in Sumerian, but are always provided with an interlinear translation for the more important lines.⁵ They were apparently unknown to the Sumerians; the pure Sumerian prayers of that type were probably composed by Semites. They are the direct offspring of the *er-sem-ma*, but, when employed for private penance, they were known as *er-sag-tug-mal*, 'weeping that appeases the heart.'⁶

3. The *er-sag-tug-mal*.—It is obvious that prayers of such formal character, said in the sacred language not understood by laymen and requiring intonation, could not become popular. The ordinary

¹ Taken from the epilogue of the liturgy to Enlil in H. Zimmern, *Sumerische Kultlieder aus altbabylonischer Zeit*, no. 12, restored by the present writer from a Philadelphia text in his *Liturgical Texts from Nippur*.

² The *er-sem-ma* of *en-zu ad-mar-mar* liturgy in S. Langdon, *Babylonian Liturgies*, pp. 114-123.

³ Pure Sumerian penitential prayers without Semitic translations were in use, as is proved by the fragment of one of this type in Langdon, *Bab. Liturgies*, K. 11874=no. 64, and C. D. Gray, *The Shamash Religious Texts*, Chicago, 1901, pl. xiii, K. 4795. See also Langdon, *Sumerian Liturgical Texts*, p. 118 (a penitential psalm to the god Amurru).

⁴ The Semitic rendering was probably *šgn*, the *שָׁן* of Hebrew poetry. This identification is based upon a comparison of iv. Rawl.² 64, no. 2, lines 14 and 21, *šgr*, with ib. line 17, *er-sag-tug-mal*, and rev. 19, *er-sag-tug-mal*.

Babylonian and Assyrian preferred the services of the magic cults, where he said his prayers in Semitic. Consequently few of the liturgical prayers of penance have been found, whereas a large and increasing number of Semitic prayers of the secret cults are known. Only educated and distinguished laymen employed the liturgical prayers. They are mentioned in connexion with a ritual for the king, where they are intercalated in the service of a magic ritual along with the prayers of 'the lifting of the hand,'¹ which were always accompanied by sacramental ceremonies. We possess many rituals of this kind both for kings and for laymen, but this is the only one which directs the use of the liturgical penitential prayers. The king is directed to recite these prayers, or sometimes the priest recites them for him. In this case the service seems to have been performed on the roof of the palace.²

Another ritual tablet of this class also orders the saying of an *er-sag-tug-mal* to Ishtar.³ So we have substantial evidence that these liturgical prayers could be employed in the magic cults, but perhaps only in the rituals for kings and educated laymen. Asurbanipal employed homage⁴ and liturgical prayers to appease the gods.⁵

Only ten penitential prayers of this kind are known. They may be readily detected by two easy tests even when the literary note is broken from the end of the tablets. Used in the proper sense, an *er-sag-tug-mal*⁶ must be written in Sumerian with interlinear Semitic version and be composed in liturgical style. The penitential psalms are:

- (a) and (b) On a neo-Babylonian tablet in Berlin—one psalm to the god Sakktut and one to Marduk.⁷ The psalm to Sakktut is responsive, but that to Marduk is sung for the penitent by the priest.
- (c) A long psalm to 'any god' and the best example of a deep sense of religious contrition for moral sin;⁸ sung throughout by the penitent.
- (d) Psalm to Aja, consort of the sun-god at Sippar; a fine responsive composition which imitates the public intercessions closely.⁹
- (e) Psalm to Innini-Ishtar in the same style as (d), but sung throughout by the penitent.¹⁰
- (f) Fragment of a beautiful responsive psalm:
He weeps and cannot restrain it
My deeds I will speak of, my unspeakable deeds.
My words I will rehearse, my word unrelatable.
Yea, oh my god, of my deeds I will speak, my needs not to be told.¹¹
- (g) Fragment of a psalm similar to (f).¹²

¹ See below.

² This ritual for the atonement of a king will be found in v. R. 2⁶⁴, no. 2, with additions on pl. 10 at the end.

³ H. Zimmern, *Beiträge zur Kenntnis der babylonischen Religion*, Leipzig, 1900, p. 164, no. 61.

⁴ *Takrittu*, a Semitic word for liturgy in this passage (?) (v. R. iv. 89).

⁵ The Semitic prayers, employed only in the magic cults, by long association in the cults of atonement for royal persons where the liturgical prayers were also permitted, were also erroneously called *er-sag-tug-mal*; e.g., the Semitic prayer addressed to Ishtar in a ritual for a sick man in iv. R. 2⁵⁵, no. 2, obv. 25—rev. 5 is called a *su-il-lil*, which is the proper title, but also an *er-sag-tug-mal*, which is erroneous.

⁶ The reading *er-sag-tug-mal* is also possible.

⁷ Text in Reissner, *Sumerisch-babylonische Hymnen*, no. 30; tr. in Langdon, *Bab. Liturgies*, pp. 124–130.

⁸ Text in iv. R. 10. The principal edd. are H. Zimmern, *Babylonische Busspsalmen*, Leipzig, 1885, pp. 61–74, and in *Der alte Orient*, vii. pt. iii. pp. 22–24; A. Ungnad, in H. Gressmann's *Altorientalische Texte und Bilder*, Tübingen, 1909, p. 90! The advanced ethical conception of sin in this text points to a rather late date. The tablet was copied from a Babylonian original for Asurbanipal's library.

⁹ Text in P. Haupt, *Akkadische und sumerische Keilschrifttexte*, Leipzig, 1882, p. 122 f.; ed. Zimmern, *Babylonische Busspsalmen*, pp. 51–61; A. H. Sayce, *Origin and Growth of Religion* (1887), London, 1909, p. 523.

(h) Responsive prayer in imitation of a public intercession to Enlil.¹

(i) A liturgical prayer similar to (h) mentioning an historical event; recited by the penitent (or choir?); possibly an *er-sem-ma*; ² intercession to Ishtar.

(j) Fragment of a beautiful prayer to a god.³

4. Semitic private prayers. — Besides these formal penitential prayers, a few Semitic prayers are known which probably represent the work of lay hymnologists, and hence approach more nearly our modern standards of poetry. They do not appear to have had any connexion with official worship. One of the best and longest examples of this type of private prayer is the fine appeal of Asurnasirpal I. to Ishtar of Nineveh in which he intercedes for help in governing his kingdom and mercy upon himself as a sinner. According to one passage of this prayer, it was made at the time when the king dedicated to Ishtar a bed of ebony in her temple.⁴ Another long Semitic prayer to Marduk, which devotes special attention to this god's mythical deeds, appears to be a real act of private devotion by Asurbanipal in which he asks Zerbant to intercede for him with Marduk.⁵ On an even more abstract and ceremonially detached plane stands the well-known hymn and prayer to the sun-god in which the best Babylonian ethical wisdom is discussed.⁶ A long but badly damaged secular prayer of this type to Nebo contains some remarkable lines.

'Oh lord open (hearted),
Thou of wide ears,
Oh Nebo open-hearted,
Thou of wide ears,
Oh wise lord, thou hast become angry against thy servant,
Upon him have fallen woe and suffering.
In the billows of the flood he is thrown, the deluge [mounts] over him.

The shore is far from him, far away is the dry land.
He has perished in a deep place, upon a reef he has been caught.

He stands in a river of pitch, he is caught in the morass.
Take thou his hand, not shall thy servant be brought to naught.

Cause his sin to go forth, lift him from the river of pitch.
Oh Nebo, take his hand, not shall thy servant be brought to naught.⁷

5. Acrostics.—To this class of secular prayer belongs a group of artificially constructed prayers arranged in sections so that each section has the same number of lines, and each of these lines begins with the same vowel or syllable. These initial syllables of the sections spell out a sentence.

9-33; Sayce, p. 521; Langdon, *Sum. and Bab. Psalms*, pp. 268–271.

¹ Text in iv. R. 21⁴, no. 2; ed. Zimmern, *Bab. Busspsalmen*, pp. 78–85.

² Text in iv. R. 19, no. 3 and corrections, pl. 4; ed. Zimmern, *ib.* pp. 74–78. The colophon is broken away and hence this intercession may be the epilogue of some liturgy. Other fragments of penitential prayers are published by T. Meek, *BASS* x. pt. i. [1913], nos. 16, 16 (fragments of three different prayers, one of which is also published in Langdon, *Bab. Liturgies*, p. 183), and 17; K. 4618 in the British Museum (unpublished) is also a psalm of this class.

³ Text in iv. R. 24, no. 3; cf. Haupt, p. 203; M. Jastrow, *Religion Babyloniens und Assyriens*, Gießen, 1905–13, ii. 110. The number of prayers of this class was certainly more numerous than the known examples would lead us to infer. A tablet, Rm. 2220, in the British Museum contains a few titles of such prayers; since it is a fragment of a large tablet, it originally contained a long list of these liturgical psalms.

⁴ Text in ZA v. [1890] 79 f.; tr. in Langdon, *Tammuz and Ishtar*, Oxford, 1914, pp. 65–69.

⁵ Text in J. A. Craig, *Assyrian and Babylonian Religious Texts*, Leipzig, 1895, i. 29–31; ed. J. Hehn, in *BASVS* v. [1903] 309–319; P. Jensen, *Texte zur assyrisch-babylonischen Religion*, Berlin, 1915, pp. 103–117. The first letters of the lines are an acrostic and read a-na-ku as-sur-ba-an-ap-li-ku il-lu-ka bu-ul-lu-ta-ni-ma ma-ru-du-uk da-li-li-ka lu-na-lul, 'I am Asurbanipal who pray to thee; grant me life, oh Marduk, and I will sing thy praise.'

⁶ A long text in four columns, published by C. D. Gray, pls. i, ii., ed. *ib.* pp. 12–23; also by A. Jeremias, in Roscher, s.v. 'Shamash'; see also Zimmern, *Der alte Orient*, xlii. pt. i. [1911] p. 23; A. Schollmeyer, *ib.* p. 80 ff., and P. Jensen, *Texte zur assyrisch-babylonischen Religion*, pp. 99–107.

⁷ Text in ZA iv. [1889] 252–255 and 256 f. Similar prayers to Marduk are published, *ib.* pp. 36–40, and ed. Hehn, *ib.* pp. 319–325; by Hehn, *ib.* p. 392 f., and ed. pp. 368–373.

Naturally a composition of that kind was bound to extend to a great length. The best example is the acrostic published by Zimmern¹ and Craig.² The text is badly damaged and only a few words of the acrostic can be read: *a-na-ku . . . ub-br-ib-ma . . . i-li u sar-ra*, 'I am . . . he has cleansed . . . of god and king.' Naturally the name of some king was spelled out after *a-na-ku*. Each section contains eleven lines, and each line is ruled into four accents, or word-groups. A fragment of an acrostic in sections of four lines has been published by Pinches³ which is obviously a royal prayer. Only one word of the acrostic can be read, viz. *zi-kur-su*, 'his name.' The best example of an acrostic in sections of four lines is a fragment of which only three sections are preserved.⁴ The lines begin and end with the same syllable.

'He whom thou hast seized	not shall be lifted up [his head]
Of the weak and down-cast	among the gods,
He that is entangled in pit	thou establishest the [founda-
and mire	tion],
May thy good wind blow	looks unto thee.
I have cried unto thee, Oh	
Nebo!	and I be delivered.
I am fallen low among men,	Receive me with favour and I
I am undone like magician	shall rejoice.
	I refuse sleep.
I cry aloud to the gods,	who knows not what he shall
The down-cast who puts his	pray for.
trust on thee	loudly calling.
Thou fortifiest the wall of	shall be satiated with abun-
the faithful,	dance.
Thou givest goodness	and establishest the foundation
The stone wall of the wicked	thereof.
	and putteth far away sin.
	thou turnest to clay.'

6. Prayers of dedication. — Closely allied to these unceremonial prayers and, like them, written for special occasions are the numerous prayers connected with dedications. The historical inscriptions of Sumerian rulers are usually written upon objects of art dedicated to a deity. At the end stands invariably⁵ the personal petition of the king.

E.g., the deeds of Lugalzaggisi, king of Erech, are written upon a vase dedicated to Enlil in the temple of Nippur and conclude with a prayer in prose. 'May Enlil, king of the lands to Anu his beloved father, repeat my prayer and to my life, life add. May he cause the world to abide in peace.'⁶ A statue of Gudea, patesi of Lagash, dedicated to the goddess Ninharasag to commemorate the building of her temple, ends with a prayer, 'The queen who in heaven and earth decrees fates, Ninlud mother of the gods may lengthen the life of Gudea who built this temple.'⁷

The Sumerians no doubt attached a magical influence to these prayers. They produced in a positive sense the intervention of the gods in the same way as the curses which they often attached to monuments were supposed to invoke the wrath of the gods upon those who violated the statue.

The Semites did not imitate the Sumerian prayers at the end of their historical inscriptions⁸ until late in the history of Babylonia. All the historical inscriptions of Assyria from the period of the early rulers of Aššur to the reign of Asurbanipal in the 7th cent. end with a curse. Although

in Assyria this Semitic conservatism in regard to ancient canons of historical composition remained to the end, yet we possess some examples of prayers on objects dedicated to deities as early as the 15th cent.,¹ and many other beautiful Assyrian prayers of this kind in later reigns.² These are regularly written in metrical form. The following are the best-known Semitic prayers of this kind:

- (a) A hymn and prayer on a gold censer dedicated to Marduk in his temple at Babylon, by Asurbanipal.³
(b) Hymn, prayer, and curse to Nusku written on an image of the storm bird.⁴

A tendency to add prayers to the end of historical inscriptions is found among the Semites only in Babylonia and is probably to be explained as a survival of Sumerian influence. The Babylonian inscriptions of Asurbanipal preface the curse by a prayer,⁵ and one of them ends with a metrical penitential prayer.⁶ The full consequence of this literary movement was realized in the historical inscriptions of the Neo-Babylonian empire. Here from Nabopolassar onwards the records of these kings end with admirable prose prayers, and the curse disappears. From a religious and literary point of view, this represents a great advance on all preceding historical composition. The prayers of this class and period are numerous and should be referred to by the student who wishes to study the secular Semitic prayers at their best. The following prayer of Nebuchadrezzar is intercalated in an unusual manner into the preface of his greatest historical inscription (it is addressed to Marduk):

'Without thee, oh lord, what were the portion of the king whom thou lovest, whose name thou callest as it seemed good to thee? Thou directest his being and guidest him in a righteous way. I am thine obedient prince, the creation of thy hand. Thou hast created me and hast entrusted me with the rulership of all peoples. According to thy kindness, oh lord, with which thou carest for all of them cause thy majestic rule to be merciful, and fear of thy divinity cause to be in my heart. Grant me what seems good to thee.'⁷

7. Rise of the *šu-il-la* and its later application to private prayer in incantations. — By far the most important and numerous class of prayers are the so-called 'prayers of the lifting of the hand'⁸ which arose out of the curse in the Sumerian incantations. In the early period the ritual of the incantations consisted in acts of symbolic magic accompanied by an invocation to one of the deities and a curse. The whole was said by the priest. The afflicted person in this period was supposed to have been attacked by the demons. Gradually a more ethical view of sin arose, in which the priests attributed the invasion of the spell (*mamit*) and the flight of the man's protecting deity to the penitent's own immoral deeds.⁹ *Pari passu* with this higher conception of sin increased the tendency to secure divine intervention by prayer and confession of these sins. Hence in the course of time the Babylonians developed a ritual of atonement, which, while preserving the magic acts and

⁸ Sumerian *šu-il-la*, Semitic *nîš hâti*.

⁹ On the principles of the Babylonian atonement see art. EXPIATION AND ATONEMENT (Babylonian)

the curses, introduces long prayers to the deities by the priest and penitent. Finally, a still higher ritual resulted in banishing the priest's prayers entirely and assigning them all to the sinner. In a ritual of the latter class the priest confined himself to the acts of magic which accompanied the prayers. Usually the directions for the magic ritual are written after each prayer said by the man seeking atonement from sin or healing of disease. Sometimes the prayers of the penitent are written on one set of tablets and the ritual for the priest on another.¹ Prayers said by a penitent are called 'lifting of the hand,' and were always said in the vernacular familiar to laymen. In those rituals where the priest took over a portion of the prayers we find them named by an ancient liturgical term *ki-sub*, 'prostration.' The priests almost invariably employ Sumerian in their prayers of the magic rituals, which were private ceremonies.

Since the ceremonial prayers of private penance were evolved by the Semites directly from the epilogues of the Sumerian liturgies, we should naturally expect that the prayers introduced into the ceremonies of the secret magic cults were modelled upon classic Sumerian incantation rituals. In fact, an Assyrian catalogue of official liturgies and recessional psalms adds also a long list of titles of Sumerian prayers of the 'lifting of the hand' to various gods,² and a small fragment of another catalogue contains several more.³ Since these have Sumerian titles, they perhaps may go back, like the liturgies, to Sumerian times. It will be seen, however, that *su-il-la* in these catalogues designated a liturgical public prayer. Only at a later period did the term apply to the Semitic prayers of penitents in the magic rituals. The present writer does not believe that the incantation ceremonies, as they came into the hands of the Semites in the age of Hammurabi, afforded any opportunity for the prayers of the sinner. They were too ritualistic and priest-ridden to permit of such concessions to laymen. Nor had they risen to the necessary conceptions of sin to produce private prayers as we have them in the later cults. When they passed on their rites of atonement to the Semites, they had probably arrived at the stage in which the priest alone adds prayer to the ban and the magic ritual. These priestly prayers were called *ki-sub* in the Sumerian ceremonies, and, when the Semites introduced their beautiful prayers for the sinner into those ceremonies, they called them *su-il-la*; since they take the place of the ancient 'curse,' they invariably bear also the title 'incantation.'

8. Prayers of the older type in Semitic times; the *ki-sub* of liturgies applied to priests' prayers.—Ceremonies of atonement of the Sumerian type in which the priest said part of the prayers on behalf of the sinner persisted in the Semitic religion of Babylonia. These are of course bilingual, said by the priests in Sumerian and possibly interpreted to the penitent by means of the Semitic interlinear version. The following are the best known examples of this class:

- (a) A long bilingual prayer to the sun-god, followed by a Semitic prayer of the penitent; part of a ritual of atonement for the king.⁴ A portion of the priest's prayer is as follows:

'To free the bound, to heal the sick is in thy power. The god of this man for his son stands humbly before thee to accomplish faithfully the freeing.

¹ E.g., the rituals for one of the rites of atonement in the 'house of washing' (*bit rimki*) will be found in Zimmern, *Beiträge*, pp. 122-135. The tablets of prayers to be said by the penitent (here the king) are also partially preserved (see L. W. King, *Babylonian Magic and Sorcery*, London, 1896, no. 1).

² *iv. R. 53*, iii. 44-iv. 28.

³ No. 103, in Langdon, *Bab. Liturgies*.

⁴ Text *iv. R. 17*; ed. A. Schollmeyer, *Sumerisch-babylonische Hymnen und Gebete an Samas*, Paderborn, 1912, no. 2.

The lord has sent me;

Yea, the great lord of Eridu has sent me.

Stand forth and learn his command and render his decision. When thou marchest the dark-headed people, thou directest: The light of peace create for him, and so may his trouble be smoothed out.

Punishment for sin has been laid upon a man, son of his god. His limbs are afflicted with pain; he lies suffering with sickness.

Oh sun-god, observe the "lifting of my hand."

Consume his food, receive his drink-offering and his god place at his side.

At thy command may his punishment be forgiven, his condemnation removed.

That which binds him let be undone, from his sickness may he live.

As long as he lives may he speak of thy majesty.

And I the magician, thy servant, will sing thy praise.¹

(b) Part of a similar series containing the priest's prayer to Shamash and the first line of the penitent's Semitic prayer. A portion of the Sumerian has no interlinear version.²

(c) Fragment of a similar series. Only the prayer of the priest to Shamash is preserved. The last lines duplicate no. (b).³

(d) Fragment of a similar series. Only about half of the priest's prayer to Shamash is preserved.⁴

(e) A complete series of prayers in the 'house of washing' for the healing and atonement of a king. The service begins by a long prayer of the priest, after which follows a section from the lower type of incantations, and then a short Semitic prayer of the king; finally a long prayer of the priest. This service is also said to Shamash.⁵

(f) Fragment of an incantation ceremony to Marduk. The end of one of the penitent's prayers in Semitic and most of one of the priest's prayers are preserved.⁶

(g) A complete prayer of a priest addressed to Shamash as an incantation to deliver a woman at childbirth.⁷

(h) Fragment of a ceremony in the house of washing, containing a portion of the priest's prayer and the end of the penitent's prayer.⁸

(i) Fragment of a ceremony addressed to Bau, goddess of healing; portions of the priest's prayer and beginnings of a few lines of the penitent's prayer.⁹

(j) A priest's prayer, called an 'incantation and prayer of prostration to the setting sun,' with catch-line for a succeeding Sumerian prayer.¹⁰

(k) A long and nearly complete bilingual prayer to the moon-god is called a *su-il-la* by the scribe, but it has more similarity to the epilogues (*er-tem-na*) of liturgies than to the prayers of priests in the magic ceremonies.¹¹ It was followed by a similar Sumerian prayer. This tablet testifies to the existence of a series of liturgical prayers probably written for public services and closely related to the liturgies.¹²

It is evident, therefore, that the Babylonians employed the word *su-il-la* originally for a Sumerian public prayer, and, although we have but one example of these, yet the catalogue shows that they possessed a great number. The titles of prayers in the incantations were, therefore, taken from the musical terminology of the public services. The name of the choral passages in the liturgies (*ki-sub*) was given to the Sumerian prayers of the priests in these magic rituals, and the name of public solo prayers of the temple choristers (*su-il-la*) came to designate the prayers of the

¹ This class of prayer usually has the title, *enim-enim-ma ki-[su-bi-im] dingir A-kum*, 'An incantation, prayer of prostration to the god X.' This title was taken from an old liturgical term, *ki-sub*, melody in a public liturgy.

⁷ Meek, no. 1.

⁸ Grav, *Shamash*, pl. vi.; ed. Schollmeyer, no. 20.

⁹ Text by Craig, pl. 18; ed. Martin, p. 70.

¹⁰ Text by G. Bertin, in *RAssyr. i.* [1886] 157-161 with tr.; see also Schollmeyer, no. 7. The purpose of this ceremony remains obscure. It may possibly belong to a series of prayers for the dedication of a temple or some similar service.

¹¹ Text in *iv. R. 9*; ed. E. G. Perry, *Hymnen und Gebete an Sin*, Leipzig, 1907, no. 1; and E. Combe, *Hist. du culte de Sin*, Paris, 1908, no. 1; Zimmern, *Der alte Orient*, vii. pt. iii. p. 11 f. The title of this prayer was entered in the catalogue (Langdon, *Bab. Liturgies*, no. 103, line 8) and the title of the colophon *enim-ma umun gir-ra* in the same catalogue (line 10).

¹² The bilingual prayer said at the close of the public services of the New Year festival by a priest is also called *su-il-la* (F. H. Weissbach, *Babylonische Miscellen*, Leipzig, 1903, pp. 86-41; *iv. R. 18*, no. 2).

laymen in these incantations. Both of these literary terms have, therefore, a double usage in Babylonia and Assyria, which proves clearly enough that the prayers of incantation ceremonies are of much later origin than the liturgies.

9. The *su-il-la* prayers of the magic cult.—From every point of view the prayers of the laymen, said in their own vernacular Semitic, form the largest and most valuable collection of private devotional literature of the Babylonians and Assyrians. The tendency to regard moral transgression as the cause of divine anger resulted in the increasing importance of the prayers of the penitent. Most of their best rituals of atonement have eliminated the prayers of the priests entirely. We possess a large number of these prayers of 'the lifting of the hand' to be used as the books of the various rituals appoint. They follow one another, each to a different deity, while the priest performs the necessary rites of magic. All the known tablets of prayers of this class belong to the late period, as we must expect; for fervent intercession based upon a spiritual consciousness of sin is of slow growth in any religion. It never was attained by the Sumerians, and the Semites themselves advanced to these higher forms of atonement only after 2000 years and more of their consecutive history. These prayers, despite their fine literary composition and lofty sentiment, always bear the title 'incantation and lifting of the hand,' but the former title, implying a low type of religion, appears here only because these prayers belong to the secret rituals of the priests of atonement. It is possible to give only lists of groups of these prayer-tablets, since their number is very great.

The earliest known incantation rituals, in which the prayers are either partly or wholly assigned to the laymen, belong to the city of Assur, capital of the early Assyrian empire, and probably belong to the period of Tiglathpileser I.¹ and his successors. These have been recently excavated by the German Oriental Society on the site of modern Kalah Sherghat. The religious texts recovered by the Germans at Assur were not published until late in 1915,² and consequently Assyriologists have not yet been able to make critical editions of them. The following list of tablets in the official publications will contain the more important of the early Assyrian prayers of this class:

No. 23: portions of two prayers to Marduk. Ritual accompanies each prayer.³

No. 25: part of a prayer to Nebo followed by the ritual and beginning of a prayer to Marduk.⁴ The Marduk prayer was employed in many other services and will serve as a good example of these Semitic compositions:

'Mighty and glorified one, splendid one of Eridu,
Lofty prince, first born of Nudimmud,
Marduk the terrible one, who maketh Egurra to rejoice,
Lord of Esagila, help of Babylon, who showeth mercy unto
Ezida,
Who giveth peace unto the soul, chieftain of Ennaitila, who
reneweth life,
Protecting shadow of the land, sparing the wide-dwelling
peoples,
Regent of the sacred chapels everywhere,
Thy name is good in the mouth of peoples everywhere.
Marduk, great lord, merciful god,
By thy mighty command may I live and prosper and look
upon thy divinity.

¹ 12th century.

² E. Ebeling, *Keilschrifttexte aus Assur Religiosen Inhalte*, Berlin, 1915, pts. I. and II.

³ It is somewhat rare to find these prayers addressed to the same god. A similar service, in which a succession of three prayers to Nebo occurs, will be found in King, *Bab. Magic*, no. 22. The first prayer to Marduk is a duplicate of the one mentioned in the following note.

⁴ The Marduk prayer is known from a service employed at Nineveh, where it occurs as the first prayer on one of the tablets of a series (King, *Bab. Magic*, no. 9). Naturally both copies came from Babylon. It has been ed. by Hehn, *BASS* v. [1905] 347-349. A nearly complete duplicate is the first prayer in Ebeling, no. 59.

Whatsoever I plan may I attain.

Fix justice in my mouth.

Cause to be words of goodness in my heart.

May guard and watchmen speak of (my) good deeds.

May my god stand at my right

May my goddess stand at my left

May a saving god be faithful at my side.

Oh grant to speak, and hear and be gracious.

The word which I utter, even as I utter it, may be favourably received.

Oh Marduk, great lord, bestow life.

Command that my soul live.

May I enjoy unto satiety walking in purity before thee.

May Enlil rejoice for thee, and Ea be glad for thee.

May the gods of the universe adore thee,

And the great gods make kind thy heart.

This prayer was followed in the Assur service by another to Marduk, then by one to Sin, the moon-god, and finally by one to Enlil. After each the scribe gives the ritual for the priest.

No. 26: a ceremony in which the priest introduces the penitent to Marduk, explaining his sorrows in Semitic. Then follows a very long prayer to Marduk by the penitent. The service ends with a complicated and long ritual.

No. 32 contains a long prayer to Shamash preceded by a ritual.

No. 55 contains a prayer to Shamash. As no ritual is given, it probably belongs to a series in which prayers and ritual were given on separate tablets.

No. 58 contains a prayer to Shamash and four to Nusku, the fire-god, without ritual.

No. 59 begins with the prayer to Marduk translated above, and is followed by one to Enlil.

No. 68 contains only one long and beautiful prayer to Enlil without ritual.

No. 80 begins with ritualistic directions for the priest, after which follows a long prayer of the penitent to Shamash.

The Asurbanipal library has been up to the present our principal source of information concerning these rituals of atonement. The tablets of prayers and ceremonies belonging to that collection have been published together in King's *Babylonian Magic and Sorcery*, and they have been widely studied in special monographs. These ceremonies, however, have never received a proper scientific treatment, since the various monographs founded upon them, by selecting only prayers for a particular deity, dissect the ceremonies and omit the rituals.¹

Prayers of 'the lifting of the hand' from Babylonia are also well documented. The longest, and in many ways the finest, of all these *su-il-la* prayers is addressed to Ishtar and contains 110 lines.² Several tablets from ceremonies of this kind belong to the collection of the University Museum in Philadelphia and have been published by D. W. Myhrman, *Babylonian Hymns and Prayers*.

No. 12 contains a prayer of 'the lifting of the hand' to Shamash by the king Shamash-shum-ukm. Ordinarily these prayers contain a blank space for the insertion of the name of the layman. This and no. 18, a prayer to Marduk, and Ebeling, no. 55, a prayer to Shamash by Asurbanipal, are the only known instances where the text gives the name of the person who used it. In fact, we have two Assyrian ceremonies which employed Myhrman, no. 12, both with the usual blank space for the name of the layman.³

No. 17: a prayer to Enlil, and first line of the next prayer to Ninil. This prayer illustrates Babylonian religion at its best:⁴

'Oh lord magnified, fortress of the heaven spirits,
Councillor of the earth spirits, solicitous prince,
Oh Enlil, lord magnified, fortress of the heaven spirits,
Councillor of the earth spirits, solicitous prince,
Self-renewing, the utterance of whose mouth is unalterable,
The word of whose lips no god has put aside,
Lord of lords, king of kings, father who begat the great
gods,
Lord of fate and of the designs of things, ordering heaven
and earth, lord of the lands.

¹ The various prayers to Sin, Shamash, Marduk, etc., are thus taken out of their connexion in these ceremonies and grouped together for special study. This method is peculiar to the Leipzig school of Assyriologists.

² Text in King, *The Seven Tablets of Creation*, London, 1902, II, appendix 5; ed. in I. 222-237. See R. W. Rogers, *Cuneiform Parallels to the OT*, New York, 1912, pp. 158-161, and literature cited.

³ King, *Bab. Magic*, nos. 6 and 10. This prayer was ed. by Schollmeyer, no. 14. See corrections to this edition in *AJSL* xxix. [1913] 209.

⁴ Ed. S. Langdon, *PSBA* xxxiv. [1912] 152-156; corrections by Zimmern, *ZA* xxvii. [1913] 68. The same prayer was employed in Assyria by the king at the dark of the moon (King, *Bab. Magic*, no. 19).

Who completest judgment, whose commandment changes not.
Fixing the fates of the gods altogether,
By thy order humanity has been begotten
Of king and prefect, the being thou definest.
Since to create god and king rests with thee,
And thou hast caused the weak to attain the measure of the strong,
Among the multitudinous stars of heaven,
Oh lord, I put my trust in thee, I adore thee, and my ears
are unto thee
The fate of my life decree.
Command that my name be created.
Undo the evil, create for me justice.
Pour out upon me a form, bestow upon me abundance.
Put upon me thy vast abundance.
May god and king hold me in esteem.
May lord and prince do what I command.
May there be unto me one that sees me.
In the assembly of elders may my speech be heard.
May the protecting spirit, commanding acceptance of prayer
and mercy,
Daily walk with me.
May the gods adore thee, may the goddess seek thee.
And I thy servant would live, would prosper.
Thy greatness I would glorify, thy praise I would sing.'

All the prayers discussed in the above section are designated by the literary note *su-il-la*, but they by no means exhaust the literature of this kind. The incantation rituals of the lower types, such as the *Maklû* and *Šuipû* series, often contain incantations which are real prayers, and they are often repeated by the laymen. But the scribes do not dignify them by the name *su-il-la*, and on the whole the distinction which they made, evidently on a ceremonial basis, holds good. In the *su-il-la* we have a real prayer in which the sinner takes no part in the ritual.¹ In the other ceremonies, where he utters the incantations, he himself takes part in the magic ritual. Consequently the incantations not designated as *su-il-la* are on the whole of a lower type as literature and from a religious point of view.

10. The *ba-gur-da-kam* prayers.—We possess one tablet of prayers which has the subscription, 'Incantation to cause god and goddess to repent.'² Since all prayers are incantations, we have here in reality evidence that the Babylonians possessed at least some series of private prayers for laymen, absolutely untrammelled by magic rituals. We may perhaps assume too much by this estimate of Babylonian religion, for which this tablet is at present our only evidence. But the three prayers which here follow each other are so lofty and fervent, and the second and third so monotheistic, that we cannot refrain from crediting the Babylonians with having attained this the highest level of all religion—private prayer.

A few lines of the second prayer will confirm this criticism.

'My god, I know not the sins of . . .
Thy revered name scoffingly have I spoken?
Thy titles have I forgotten and mightily have I . . . ?
Thy work in time of trouble have I neglected?
Thy boundaries have I transgressed?

Many are my sins; as I have done, mayest thou not requite.
Oh, my god, sever and undo, free the toils of my heart.
Forget my folly, receive my prayer.
Turn my sins unto favour.'³

¹ In a letter to the king concerning a list of rituals of the *nam-bur-bi* series (see below) the priest of incantation refers to the prayers or incantations in that service as *su-il-la*, and the letter implies that the priest himself said them. This illustrates the indefinite application of *su-il-la*. Here it is used for the lower type of prayer allied to the real incantations. See R. F. Harper, *Assyrian and Babylonian Letters*, Chicago, 1892, i. 23; ed. E. Behrens, *Assyrisch-babylonische Briefe*, Leipzig, 1908, no. 7.

² Craig, ii. 61., and duplicate in Myhrman, no. 14; ed. Langdon, *PSBA* xxxiv. [1912] 75-79; important corrections in *ZA* xxviii. [1913] 71, and *JSL* xxx. [1914] 228.

³ In Craig, p. 131., will be found a tablet with prayers which probably belong to this type of service. Here even the superscription, *šipû*, which precedes all prayers, is omitted. To an advanced type of ritual belongs the tablet in Craig, pp. 15-18, restored by Langdon, *RAssyr* xiii. [1916] 105-117, from Ebeling, no. 67. The prayers are addressed to Tammuz and Ishtar and are neither prefaced nor ended by a literary note to designate them as incantations.

11. The prayers of the *nam-bur-bi* series.—A much more extensive series of atonement rituals existed, apparently designed for the use of those upon whom had fallen some misfortune, by which the Babylonians inferred that the gods were turned against a man, and that atonement was necessary. This series, which aimed at providing for all sorts of emergencies, bore the title *nam-bur-bi*, 'the redemption.' An event of evil augury having occurred, the priests selected for the person concerned that part of the series which applied to his case. Much magic was employed, and the unfortunate man repeated a Semitic prayer provided by these books for the occasion.

E.g., the 135th tablet provided for the event, 'If a man has lost or [dropped] into the river a cylinder seal or a stone pestle (?)'. After an elaborate ritual to cleanse that man's house by the priest, the man himself prays to Ishtar. The ritual closes with other complicated magical acts.² Another tablet of this series provides for, 'If evil signs and omens come upon a king and his land.'³ The ritual seems to have preserved parts of two prayers said by the king or his delegate.⁴

Prayers and rituals from this series are frequently prescribed by astrologers at times of unfavourable omens.⁵ A letter from one of the priests of atonement to the king refers to the *nam-bur-bi*, 'If the moon and Saturn stand together in a misty ring,' which was taken as an evil omen.⁶ In the same letter the priest speaks of having read 21 tablets (!) of this series to avoid the ominous events. Another letter to the king informs him of a *nam-bur-bi* at the time of an earthquake.⁷ Another letter mentions an astrological event for which the series provided no prayers and rituals.⁸

Most of the great rituals of atonement contain prayers employed as incantations; consequently the number of these compositions is well-nigh unlimited. A ritual for purifying a newly-built house to prepare it for the owner's occupation contains two prayers intercalated with the ritual.⁹ The prayers of the priests in the rituals of the New Year celebrations during the first eleven days of Nisan belong to the public ceremonies and are said in a mixture of Sumerian and Semitic. These bear the title *šub*,¹⁰ always employed for the Sumerian prayers in distinction from the *su-il-la*, or Semitic prayers,¹¹ and were probably accompanied by music.¹²

12. Prayers of preparation (*ikrib*).—The intricate and comprehensive religious literature of the Babylonians provided rituals and prayers for every conceivable necessity, and one of the most important.

¹ The Semitic loan-word was probably *nam-bur-bi* (iv. R. 17b, 15: King, *Bab. Magic*, no. 6312); *nam-bur* means 'freeing,' 'unbinding,' and *bi* means 'to speak.' The same element *bi* is found in *šap-bi*=*māmitu*, 'curse.' For *nam-bur-bi* see Behrens, pp. 95-97.

² Text in Craig, p. 66 f.; ed. Martin, pp. 242-247.

⁴ See, for partial tr., *Babyloniaca*, iii. 25, and Schollmeyer, no. 6. A similar ritual certainly belonging to this series and also performed against astrological omens is King, *Bab. Magic*, no. 63.

⁵ See R. C. Thompson, *Reports of the Magicians and Astrologers*, London, 1900, nos. 88 and 82.

⁶ *Summa Sin u Šamaš ana tarbaši zinnatu iḫḫa iḫḫini* (Harper, *Letters*, i. 23, 15).

⁷ Harper, *Letters*, no. 355, 11.

⁸ A partial eclipse of the rising sun (ib. no. 470).

⁹ Text in Craig, p. 76 f., and Zimmern, *ZA* xxiii. [1909] 369. See also Langdon, 'Babylonian Magic,' in *Scientia*, xv. [1914] 239, and Jensen, p. 64.

¹⁰ An abbreviation of *kisub*.

¹¹ The *su-il-la* designated also Sumerian prayers of the priests, as already stated. When employed in this sense, they are related to the *kisub* or *šub*, the difference consisting probably in the use of a musical accompaniment for the *kisub* or *šub* prayers.

¹² The text of the New Year rituals will be found in iv. R. 40, and *RAssyr* viii. [1911] 42 (by P. Dhorme). These texts preserve most of the prayers and rituals for the days 2nd-5th Nisan. An unplaced fragment was published by Hehn, pp. 398-400, and ed. pp. 376-380. The final prayer of this service on 11th Nisan is called a *su-il-la* (see above). Some of these public prayers were translated by Langdon in *Exp* vii. viii. [1909] 153-158.

ant parts of a priest's duties was to prepare himself properly for his sacred services. Undoubtedly the prayers provided for such preparation were extensive, but our sources supply us with adequate information upon only one point. The diviners (*barû*) invariably prepared themselves for consulting the omens revealed on sheep's livers by performing long purificatory rites interspersed with prayers to the deities Shamash and Adad, who presided over the art of augury. These prayers are not called incantations, nor do they bear any of the Sumerian literary indices so common to the prayers of the official cults. This points to their Semitic and comparatively late origin. They were classified as *ikrib* prayers—a pure Semitic expression.¹ These prayers all end with a formula which is practically unvaried:

'In all that I offer to you, oh Shamash and Adad, stand by; in my discourse, my prayer, in whatsoever I do, in the inquiry which I present let there be trustworthiness.'

13. *Liturgies or public prayers.*—For their public worship the Babylonians and Assyrians adopted that of the Sumerians, without any appreciable change. And they continued to use in the daily liturgies of that vanished people the language in which they were originally written. Semitic Babylonia and Assyria presented a close parallel to the Roman Catholic Church, which still conducts most of its formal public service in the sacred language in which it was originally written. An investigation of the liturgies must concern itself primarily with the origin, evolution, and use of Sumerian public worship. When the liturgists of the late Sumerian period finally constructed the long public services, the Semites adopted them as sacred books, and in many cases we can trace the use of these litanies from Sumerian days to the 2nd century B.C. Many of the late Assyrian and Babylonian editions are edited with partial interlinear versions; sometimes musical (to us unintelligible) notes are added; comments and variant readings² often encumber the text, but the faithful adherence to the ancient Sumerian original is remarkable. Perhaps a few of the epilogues which were later adopted as psalms of private penance (*er-sag-tug-mal*) arose in Semitic times, but even this is uncertain.

14. *Public prayer older than private prayer.*—We have already seen that in the complicated rituals of the Semites the prayers of private devotion are the product of the Semitic mind. Even the formal prayers in which the priests took part, although composed in Sumerian, were probably the work of Semites. There is no proof that Sumerian worship possessed any of these private or public solo chants of the priests. It is of course possible that they originated the Sumerian *su-il-la* prayers which, as we have seen, existed alongside of the Semitic *su-il-la* prayers. But these were public prayers, chanted by a priest and closely related to the choral liturgies. On the other hand, the Sumerian people, apparently incapable of individualism in worship, found the full expression of their religious psychology in common devotion. And devotion *en masse*, public songs participated in by the whole people, arose at an extremely early period. The Sumerian cared only to lose himself in the fellowship of religious experience.

15. *Origin of liturgies.*—It is difficult for moderns to understand the problems that confronted mankind in constructing religious services.

¹ Most of the *ikrib* prayers and rituals will be found in Zimmermann, *Beiträge*, pp. 190-219. A ritual of *barû* preparations containing *ikrib* prayers to Adad and Sin will be found in Perry, *Hymnen und Gebete an Sin*, pp. 24-28. Another fragment of the same ritual with prayers to the astral deities, moon, Jupiter, and Venus is published by Langdon in *RAssy* xii. [1915] 189-192.

² *E.g.*, see the much glossed text iv R. 80, no. 1; ed. in Langdon, *Sum. and Bab. Psalms*, pp. 247-265.

In Sumer they began by using short chants based upon some calamity which had befallen the city. From the beginning music was essential to these public choral threnodies, and the earliest known compositions are characterized by refrains. In the early period anterior to the last dynasty of Ur each Sumerian city seems to have possessed its own corpus of sorrowful litanies based upon local calamities in its long history. At present Sumerian antiquities have produced only fragmentary examples of the public services of the early period.¹ But a few of these short threnodies survived and were current in the Ur and Isin periods, when the complicated liturgies were being worked out. The following public choral service of Lagash will illustrate the origin of these compositions (here the words are supposed to be uttered by Bau, the mother-goddess of Lagash):

'Oh city, alas the treasures! my soul sighs for thee.
My city Girsu, alas the treasures! my soul sighs for thee.
Oh brick-walls of Lagash, alas the treasures! my soul sighs for thee.
Oh abode of temple Ninnû, alas the treasures! my soul sighs for thee.
Oh my high altar of Ninâ, alas the treasures! my soul sighs for thee.
Oh brick-walls of my Sirar, alas the treasures! my soul sighs for thee.
Oh ye highlands (?) of Lagash, alas the treasures! my soul sighs for thee.
Of my city the treasures are scattered.
In shining Girsu the children are distressed.
Unto the interior of the city, oh day of woe!
Unto the exterior of Girsu, oh sorrow, my holy place.
Within the splendid sanctuary the transgressor came.
Unto my abode the transgressor came.
Unto joyful . . . the transgressor came.
Unto the consort of the great hero the transgressor came.²
From their queen he caused him to go forth.
From their temple the august queen he caused to go forth.
The queen of my city with misery [is afflicted]
The mother, the wild cow queen, with misery [is afflicted]
My city my father gave as a gift.
Girsu Enlil cared for faithfully.
In my city which he³ ruined altogether,
In Lagash which he ruined altogether,
In Sirar which he ruined altogether,
In Ninâ which he ruined altogether,
Oh afflicting shepherd, I will appease thee.
Oh afflicting shepherd, let me appease thee.
Oh lord of lamentation, by the woe of my city, by the woe of my temple, accept repose (?).'⁴

These early single song compositions were probably named after the musical instruments chiefly employed in their composition. The liturgy translated above was called an *er-sem-ma*, 'lament on the double flute.' All the known early liturgies are of this class. It is, however, probable that other song services were accompanied by stringed instruments, particularly the lyre, and were called 'lament on the lyre.'⁵ Choral passages of this kind were always known as *sur*, 'song,' to designate them as liturgical in character. A pronounced tendency to enlarge these single song services until they became of considerable length manifested itself at all the great temple schools. Some of them extend to nearly 100 lines.

16. *Rise of a standard breviary.*—As a national consciousness slowly permeated the disunited Sumerian communities, and the national myths and epics became common property, the various liturgical schools began to borrow from each other. If, *e.g.*, a choral song of Nippur possessed attractive words and a successful melody, the liturgists of other cities adopted it into their own breviary, inserting a line or lines to mention their own

¹ They are cited in Langdon, *Bab. Liturgies*, p. 1, note 8, and one is partially tr. in *PSBA* xxxv. [1912] 156.

² Note how the people inadvertently forget the situation and reveal the real fact that they themselves are wailing.

³ The pronoun refers to Enlil; all calamity was attributed to the anger of the gods.

⁴ Text in *Cun. Texts*, xv. 22, London, 1902; variant in Zimmermann, *Sumerische Kultlieder aus altbabylonischer Zeit*, no. 2, rev. ii. 10-42; ed. in Langdon, *Sum. and Bab. Psalms*, pp. 284-287.

⁵ See Langdon, *Bab. Liturgies*, p. xxxviii, and p. xlv, note 1.

temples and city.¹ The various lamentations to the weeping mother tended to produce catholicity, for she was a common possession of all Sumerian worshippers. Thus the growth of a standard breviary received on all sides a powerful impetus. And the priests of the prosperous and cosmopolitan age of Ur and Isin were not satisfied with these short songs. They desired longer services, more variety in melody, and more dogmatic theology. They began to evolve longer liturgies by the somewhat crude process of compiling a few old songs without regard to their content.² But such uncertain procedure was not tolerated to any great extent. The hymnologists naturally insisted upon working out a single religious idea and upon designing each liturgy for the worship of a single deity. They chose some ancient single song service for the first melody, reducing it to moderate length. The second melody was made by an extract from some old song. In this way the liturgists obtained the long services of 20 to 30 melodies, all selected from songs addressed to the same deity. Finally, the rule obtained that the next to the last melody should be a special theological litany, in which the names of all the gods are sung to a refrain peculiar to that service. This 'titular melody' is followed by the liturgical prayer, *er-sen-ma*, which gave rise to the *er-sag-tug-mal*, as explained above.

17. The word.—In most of these long liturgies we find at least one song to the 'word,' always described as the cause of all calamities. In the case of those liturgies sung to the great gods the word is described as going forth from the mouth of God to execute His judgment upon sinful mankind. In the weeping mother litanies the word seizes upon this mother-goddess, causing her to wail with her people. For all the liturgies addressed to the mother-goddess (Bau, Gula, Innini) represent her not as angered against humanity, but as sharing their sorrows and wailing with them in their lamentations.

18. The canon of liturgical literature.—Although we now know a very large number of these liturgies either complete or, as is generally the case, in fragmentary condition, we are far from possessing the whole number of the series of songs which formed the canon of sacred literature. The scribes of the Isin period probably drew up a list of the first lines of all liturgies that had received ecclesiastical sanction. Their number must have been large, possibly 600 or 700. At any rate, the canon was closed by the Sumerian liturgists themselves. Even in Assyria, which adopted the entire Sumerian canon of sacred liturgy, we find no mention of any Assyrian city or temple. The local cults of these northern Semites came too late to be entered into the songs of the public services, and they present the curious spectacle of a great people who said their public prayers in liturgies which never made any reference to themselves.

LITERATURE.—For the prayers of the private cults and the public solo prayers of priests the entire literature is cited in the notes. The subject of liturgies, which is much more extensive and difficult, may be studied in the following works:

1. TEXTS.—G. Reissner, *Sumerisch-babylonische Hymnen*, Berlin, 1896; H. Zimmern, *Sumerische Kultlieder aus altbabylonischer Zeit*, Leipzig, 1912-13; S. Langdon, *Babylonian Liturgies*, Paris, 1913; H. S. LANGDON.

PRAYER (Buddhist).—I. General.—Buddhism teaches that there is no personal creator or ruler of the world, and that the perfection of religious and moral ideals rests solely on one's own self-perfection. Thus in the Buddhist religion there is no room for prayer, in the sense of a petition or solicitation addressed to a god. This was the reason why Buddha so carefully guarded against the use of prayer (*manta*, Skr. *mantra*) addressed to a god for the purpose of securing a certain benefit through his special favour.¹ But, when prayer is understood in a broader way, there is the Buddhist prayer as an expression of earnest faith, determined intention, as a means of self-perfection in Buddhist ideals. Moreover, the Buddhist religion developed, after the death of its founder, in the direction of adoring him not only as a perfect human personality but as an embodiment of universal truth, i.e. in the conception of the *dharma-kāya*. In this developed form an individual striving for the attainment of *bodhi* ('enlightenment') stands to Buddha in the relation of the disciple to the Master, and of the saved to the Saviour. Here the practice of expressing the earnest intention of realizing Buddhahood gradually took the form of solemn vows taken to commit oneself to practise Buddhist morality, assisted by encouraging assurance given by Buddha, in his actual presence or in spiritual manifestation. Many of these vows are in reality prayers, addressed to Buddha as well as to the universal truth revealed by him. These vows, or prayers, are called *pranidhāna* in Sanskrit (Pāli *paññihāna*).

Now, in the Pāli books, *paññihāna* means concentration of mind upon a certain idea or object, which helps in tranquillizing the mind.

'That disciple should concentrate (*paññidhātta*) his mind upon a certain thing (*attha*) as the condition of tranquillizing; when the mind is concentrated upon that tranquillizing condition, cheer arises and from cheer joy arises . . . (Then he should think) I shall concentrate mind upon this thing and this thing being realized I shall now dwell on that.'²

In this sense *paññihāna* is a general name for various endeavours to calm and concentrate mind, such as *pasāḍha*, repose or faith in the Three Treasures and Buddhist morality; *chhanda*, earnest desire for realizing supernatural powers (*iddhi*); *sati*, thought intently fixed on Buddha and his teachings, etc.³ Indeed, Buddhism is exceedingly rich in these terms, ideas, and practices of mental concentration and spiritual drill, and they all play the part of prayer or orison, with a special emphasis laid on the concentration of mind on a certain point of Buddhist truths. These experiences are described by similes which enable us only to guess what were the effects of the mental concentration; and the total result of the spiritual exercise may be formulated as a direct assurance and personal experience of the unity of existence, which may be expressed as an expansion of self or an absorption of the cosmos into self. There are prescribed formulæ for these practices of meditation and for their results, and these capital passages in the scriptures served as manuals of practice as well as a kind of prayer, in the sense of inspiration and assurance. E.g., the fourfold faith (*pasāḍha*) mentioned above and the seven stages of enlightenment (*bodhiṅga*) were used for expelling the pain of disease, though the real import of these meditations consisted in something more and deeper than mere guards against ills.

¹ For the use of *mantra* in later forms of Buddhism see art. TANTRA.

² *Saṅghutta*, xlvii. 10 (PTS ed. v. 156).

³ Similar terms are *vipassanā*, *śamatha*, *pariyēsaṇā*, *cheto vimutti*, *jhāna*, etc.; cf. art. ETHICS AND MORALITY (Buddhist).

It was the same with the fourfold infinite expansion of mind (*appamāna-cheto-vimutti*) against hatred and ill-will and for realization of love, compassion, etc.¹

Buddhist ethics emphasizes the importance of thought and intention as the source of bodily acts and utterances of speech. It is on this ground that the concentration of thought is so persistently insisted on in the various methods of meditation and carefully formulated in their descriptions. Thought may be expressed in utterance, whether in reciting the holy texts or in confessing one's faith, and these expressions naturally take the form of prayer as found in any other religion. Prayer in this sense is not a petition, but an utterance of devotion to the Buddhist cause, of determination to accomplish Buddhist ideals, of conviction in the final destiny of mankind to reach Buddhist perfection.

Thus, Buddhist prayer is an expression as well as an inspiration—an expression of belief and intention and an inspiration of ideal and zeal. As an expression of faith, Buddhist prayer pays homage to Buddha, to his truth and community, mostly in adoration and exaltation, which serve at the same time as a confession of faith.² As an inspiration of ideal aspiration, it takes the form of a solemn vow to commit oneself to efforts in moral perfection, equally on the part of Buddha himself and on that of his followers. The latter aspect had an important bearing on the significance and development of Buddhist prayer, because it was this aspect that stimulated the Buddhists not only to follow the Master's steps but to emulate his work. The ideal perfection of Buddhist morality consists in the attainment of the *trihāgata*-ship, on the part of every Buddhist, and, just as Buddha Gotama is said to have passed a long training of the *bodhisattva*-ship, every Buddhist is expected, in Mahāyāna Buddhism, to be a *bodhisattva* (cf. art. ETHICS AND MORALITY [Buddhist]). The essential condition in starting for the *bodhisattva* training is regarded as an earnest determination (*chitta-utpāda*) to go through the severe discipline of *bodhisattva* morality, and the determination is expressed in the vow or prayer (*pranidhāna*). The vows are addressed to a certain Buddha, who testifies the oaths and gives assurance for their fulfilment. This act of Buddha is called *vyākaraṇa*, 'encouraging assurance,' and is the necessary counterpart of the vow. After the address of the vow to Buddha and its acceptance by him, a *bodhisattva* is expected to do the works of self-perfection with the wish to dedicate all the merits of his works to the Buddhist cause, i.e. for the sake of all fellow-beings, that they may participate in the joint stock of merits (*puṇya-kṣetra*) and proceed on the all-embracing sole road of Buddhist perfection.

2. Buddha's own prayer.—This model of taking vows is narrated in the introduction (*Nidāna-kathā*) to the *Jātaka* stories,³ where Buddha's first start on his long training is told in the adoration of his enthusiasm. It was in a remote past that a Brāhman Sumedha took vows before the Buddha Dīpaṅkara to march on the way to Buddhahood; and indeed this Sumedha proved, in the course of time, to be worthy of his determina-

tion and finally became Buddha Gotama, or Śākyamuni. The vows say:

'Since now I make this earnest wish [*adhiṅkāra*],
In presence of this Best of Men,
Omniscience sometime I'll achieve,
And multitudes convey across.
I'll rebirth's circling stream arrest,
Destroy existence's three modes;
I'll climb the sides of Doctrine's ship [*dhamma-ṇava*],
And men and gods convey across'

(verses 67 and 68, Warren's tr.).

Then Buddha Dīpaṅkara gives assurance of the fulfilment of the vows (verses 71-80), and Sumedha further commits himself to the practice of the ten methods of perfection (*pārami*). When he concludes his solemn pledge, the whole universe gives response to the vows.

'Now pondering these conditions ten,
Their nature [*subhava*], essence [*sarasa*], character [*lak-khana*],
Such fiery vigor had they all,
That all the worlds ten thousand quaked' (verse 176).

This corresponds to something like a voice from heaven—the prayer is accepted and will be fulfilled. This is a metaphor, and behind it lies the metaphysical idea of the oneness of existence, the unity of *dhammatā* (the fundamental nature of things). All existences are one in their basic nature; therefore the vows taken and prayers expressed are addressed to a certain Buddha as well as to one's own self and to the whole existence, while the acceptance of the prayer is expressed in Buddha's *vyākaraṇa*, whose consequences are the cosmic response and the *bodhisattva*'s practice of the ten *pārami*.

Now, the same thing is told about the preliminary training of Buddha, in the Mahāsaṅghika book *Mahāvastu*.¹ There the deeds (*chāryā*) of the *bodhisattva* are classified in four stages: (1) deeds in accordance with his inherent good nature (*prakṛti*), (2) deeds in accordance with his vows (*pranidhāna*), (3) deeds in accordance with his ideals (*anuloma*), i.e. the practice of the six *pāramitās*, (4) deeds in accordance with the indefatigable virtues (*anivartana*).² Then the story of Buddha's conversion is told. Buddha, when he was a Brāhman, determined to perfect himself, and expressed his desire and determination in presence of the Buddha Dīpaṅkara and his congregation. The prayer says:

'Indeed, let it be so, that I could be born as one who, having overcome the world, would work in the world for the benefit of the world and should live for the weal of this world,' etc.

Dīpaṅkara, knowing that the vow-taker would surely attain the supreme enlightenment, gives him the assurance:

'Thou shalt at a certain future time become a Buddha, being born as a son to the Śākya clan, and work for the benefit of men and gods.'³

3. In Mahāyāna Buddhism.—Now, this idea of *pranidhāna* and of its associate conditions was developed in Mahāyāna and applied to all Buddhists, who were, therefore, called *bodhisattvas*. The underlying idea was the same, yet the significance of *pranidhāna* was interpreted metaphysically by the doctrine of the basic unity of existence (*tathatā*) and its application made wider by the extension of the *bodhisattva* ideal. The metaphysical conception of oneness was identified with the ultimate entity of Buddha's personality (*dharma-kāya*), and the person of Buddha, who testified the vows, was conceived to be his blissful manifestation (*sambhoga-kāya*) or one of his earthly condescensions (*nirmāṇa-kāya*). Thus, the theory of the threefold personality (*tri-kāya*) of Buddha

¹ Recitation of holy texts plays a very important part in the Buddhist religion and serves as credo, prayer, hymn, ritual, and inculcation at the same time. A collection of the sacred texts, called the *Parittam*, is most widely used among the Buddhists of the south. In the north and east the text used varies according to sects, but the most widely used one is the *Lotus* (*Saddharma-puṇḍarīka*).

² See, e.g., *Ratana-sutta* in *Sutta-nipāta* (SBE x. [1898] pt. ii, pp. 36-39).

³ *Jātaka*, ed. V. Fausboll (fl. 11-28), tr. T. W. Rhys Davids, *Buddhist Birth Stories*, London, 1880, pp. 10-18; H. C. Warren, *Buddhism in Translation*, Cambridge, Mass., 1900, pp. 14-31.

¹ *Mahāvastu*, ed. E. Senart, Paris, 1882, introd. p. xxi, and 1. 1. The Chinese version of the same book (B. Nanjio, *Catalogue of Chinese Buddhist Tripiṭaka*, Oxford, 1883, no. 587) gives the story in more detail.

² The Chinese version omits the negative *a* and interprets this to mean the 'consummating transformation,' i.e. the transformation of human nature to Buddhahood.

³ *Mahāvastu*, i. 3.

was brought closer to the life of the *bodhisattva* and made the object to which the vows were addressed. Thus, every prayer addressed to Buddha is at the same time a vow by which the vow-taker commits himself to the practice of the ideas expressed therein. Vows are taken by a Buddhist and assurance is given by a Buddha, but the two parties are one in the basic entity, and the response given to a prayer is a necessary consequence of this oneness of existence. Yet, quite naturally, the vow and the response will remain void, unless the vow-taker practises his determination and dedicates all his goods to the broad cause of realizing the all-embracing Buddhist communion. This is the working out of the thought expressed in the vow, the practice of moral life with the intention of dedicating all goods to the Buddhist ideal, and is called *pariṇāmanā*, 'dedication.' The efficacy of dedication is guaranteed by the Buddha, who is a pioneer in the realization of the one road. In this way the Buddhist conception of prayer emphasizes the unity of its three phases, *pranidhāna*, *vyākaraṇa*, and *pariṇāmanā*.

After all, the Buddhist religion conceives the world as the stage of spiritual development in which all beings participate in, and contribute to, the realization of the truth of oneness (*eka-yāna* or *ekavāṇa*) or of the cosmic enlightenment (*bodhi-chitta*).¹ A prayer addressed to a Buddha, an enlightened soul, is meant and destined to awaken in one's own mind or soul (*chitta*) the same *chitta* as the Buddha's own. To worship a deity—which is admitted by Mahāyāna Buddhism—means, not to adore it as a being external to oneself, but to realize the excellent qualities found in the deity. Likewise, to pray may be understood to mean asking something of a deity, but the truth is that the one who is asked and the one who asks are one in the fundamental nature, and, therefore, the prayer is in its ultimate significance a self-incultation, a self-committal to the moral ideals of Buddhism. Although the Mahāyāna practice of offering prayer differs much, in its appearance, from the practice of primitive Buddhism, the final goal and the conception underlying the practice are the same—mental training for the attainment of Buddhahood.

Mahāyāna books are full of the stories of how a certain Buddha, in the preparatory stage, or a *bodhisattva*, started on his life of *bodhisattva*-ship, by taking vows in presence of his predecessor and master. All those narratives are modelled on the story of Sumedha, and the vows are essentially the same, consisting in an expression of the determination to save self together with others. As the typical representative of the Mahāyāna vows we take here the 'four great vows of the *bodhisattva*.' They say:

'There are beings without limit,
Let us take the vow to convey them all across.
There are depravities in us without number,
Let us take the vow to extinguish them all.
There are truths without end,
Let us take the vow to comprehend them all.
There is the Way of Buddha without comparison,
Let us take the vow to accomplish it perfectly.'

Here it is emphasized that, without striving to fulfil the first vow, of saving others, the following three are vain, even if they could be executed. Another prayer, more frequently recited, is taken from the *Lotus*,² and says:

¹ See art. ETHICS AND MORALITY (Buddhist); D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, p. 294 f.

² *Saddharma-piṇḍarīka*, tr. H. Kern, in *SBF* xxi. (1884). The quotation here given is a translation from the Chinese version of Kumārajīva, which is used as authoritative by the Eastern Buddhists. The extant original differs from this a little (cf. p. 171 of the Eng. tr. and p. 177 of the original, ed. Kern and Naujio, Petrograd, 1912).

'Let these merits (now performed) universally pervade all,
And let us, together with them, soon realize the life of
Buddhahood.'

Another point to be noted in the Mahāyāna notion of prayer is that great stress is laid on the *vyākaraṇa* given by the presiding Buddha, and the assurance takes the form of prophecy. A prophecy of this kind is an encouragement given to the *bodhisattva* as well as an exaltation of his future achievements. Glorifications in the prophecy are always proportional to the enthusiasm of the vows, and these together served to impress the believers with the grandeur of the start, the magnitude of the merits accumulated by the *bodhisattva*, and to stimulate the followers to the similar practice of *pranidhāna* and *pariṇāmanā*. The effects of these inspirations were great, and in many cases they gave an impetus to enthusiasts, who thereby became great teachers or reformers.

The greatest document of Mahāyāna Buddhism in this respect is the *Lotus of Truth*.¹ Besides various points of Buddhist doctrines expounded in it, the main topic of the book is the continuity of the vows taken, merits accomplished, and results attained, through the Buddhas of the past, Buddha Śākyamuni, and the future Buddhas.

The second chapter, entitled 'Tactfulness,' emphasizes the unity of all Buddhas in the purpose, methods, and goal of their long training.

'There shall be no one of beings, who, having heard the Truth, will not become Buddhas.'²

This is the earnest desire, vow, and prayer of all Buddhas. The discourse then proceeds to give *vyākaraṇa* to many disciples of Śākyamuni, by assuring them of Buddha's love of all beings and his power to lead them to the highest goal. Then, in ch. xii., entitled 'Perseverance,' Buddha's disciples are encouraged to emulate their predecessors' zeal and effort and to endure hardships in working among the perverted people of the latter days of degeneration. The disciples, in response, utter a prayer for endurance, pledging themselves to stand through all kinds of persecution and perils. After enumerating the perils, the prayer concludes with the following words:

'They will scold us and scorn and ridicule us. And thus we shall be repeatedly and repeatedly driven out of our own monasteries and sanctuaries. All this, hatred and persecutions, shall we bear in forbearance and perseverance, because we are mindful of our Lord's command. In whichever cities or villages, where there may be any one who would listen to us, we shall surely go there and preach as has been commissioned by Buddha. We are thy messengers, O Lord of the World, we have nothing to fear, in proclaiming thy truth. Now we take these vows in thy presence and in presence of all Buddhas, who have come here from the ten quarters. Mayst thou, O Buddha, know our intention and determination!'³

This prayer was not only an expression of ardent desire for the Buddhist cause cherished by many Buddhists, but was also a source of fiery inspiration given to many others who really lived their lives according to the dictates of the vows.

4. 'Adoration to the Lotus of the Perfect Truth.'—The *Lotus* played in Mahāyāna Buddhism a rôle similar to the Johannine literature in Christianity. Highest tributes were paid to the book by most Mahāyānists, from various points of view, doctrinal, ethical, apocalyptic. The final result was the formulation of a prayer to the book itself, as the embodiment of the whole content of Buddhist and cosmic truths. The man who standardized this formula was Nichiren (1222-82), a man of prophetic zeal who was intensely inspired by the 'Prayer of Perseverance,' cited above, and lived his life in perils and hardships. His formula was '*Namu Myō-Hōrenge-kyō*,' which

¹ Cited above, usually called *Lotus of the True Law* (q.v.), *SBF* xxi.

² ii. 99 (*SBF* xxi. 53).

³ This passage is in verse and is here taken from the Chinese version (cf. *SBF* xxi. 261).

was the Sino-Japanese form of 'Namô Sad-dharma-puṇḍarikâ-sūtrāya,' 'Adoration be to the Lotus of the Perfect Truth.'¹ We shall give a brief account of his theory and practice.

Worship, according to the Mahāyāna theory, amounts to the elevation of self to Buddhahood and the discovery of *bodhi* in self. This doctrine was formulated by the Chinese philosopher Chi-i (531-597) on the authority of the *Lotus*, as the truth of 'mutual participation' or interdependence of all existences. All existences are interrelated; therefore Buddhahood is found in every being, as demoniac nature is not lacking but subdued even in Buddha. The universe consisting of these interrelated existences is the stage on which the truth of interdependence manifests itself, on which universal truths realize themselves in particular existences. Nichiren adopted this theory and represented it in a palpable way. His representation of the universe was to have the 'sacred title' (of the *Lotus of Truth*) written down in the centre, and the names of Buddhas, sages, gods and men, spirits and demons, represented round the central truth. This symbolic visualization of the universe, or of the supreme being together with all beings, is, according to Nichiren, the best means of realizing the cosmic truth in every worshipper's soul. The adoration of the book *Lotus* in this way is not a mere bibliolatry, but the worship of the universal truth, as revealed in the book. Now, this adoration is uttered in speech, i.e. in the formula as shown above, and the oral utterance is prayer, hymn, confession, and oath of fidelity all at once. Although the utterance is an act of an individual, it is destined, by the very nature of cosmic structure, to awaken in one's self, together with all others, enlightenment in the quintessence of cosmic truths, and thus to accelerate the full bloom of the cosmic lotus-flower in every existence.²

This thought about the adoration is expressed by Nichiren as follows: 'The letters which open every chapter [of the Scripture] are five [in Chinese ideograms denoting the *Lotus of the Perfect Truth*] and the same conclude each one of the chapters. Thus, the beginning and the consummation, as well as the whole between them, amount to the seven letters [denoting] the Adoration of the Truth. To utter this Adoration is the sole clue to the propagation of the Truth in the latter days of degeneration. Any one who does not see the spirit of the Adoration and therefore fails to grasp the key to the essential principle [of the truth and its propagation] is not worthy of a teacher in the latter ages, but moreover misses the real spirit of Nichiren's teaching. For my, Nichiren's, disciples and followers there is no need of any other device than the sole practice [of the Adoration]. In short, the adoration is the means of realizing the truth of the mutual participation in every one's life, and the formula is a prayer addressed to Buddha and to the truths revealed by him, as well as to all beings and to one's own deeper self.'

5. 'Homage to the Buddha of infinite light.'—As we have seen, the stories of various Buddhas and *bodhisattvas* are told in Mahāyāna books, with their respective vows of salvation. These stories and vows became sources of inspiration and stimulants to emulation for the respective believers in the superhuman beings.³ Among the objects of adoration and devotion in this sense Amitābha, the Buddha of infinite light, played the most significant part, and his worship formed a distinct

¹ This kind of adoration paid to a sacred book is as old as the origin of Mahāyāna, and every Mahāyāna book opens with a homage paid to the book. In some cases the homage is extended to Buddha and his community, and the adoration takes the form of a prayer. This practice may be traced back to the Pāli books, in which the formula 'Namo tassa Bhagavato Arahato Sammā-Sambuddhassa' precedes the text. An introductory prayer of this kind is found in nearly every treatise on doctrines, one of which is cited below.

² Cf. M. Anesaki, *Nichiren, the Buddhist Prophet*, Cambridge, Mass., 1916.

³ One of those deities whose vows are adored and to whom many prayers are addressed is Avalokiteśvara, the chief figure of ch. xxiv (xxv. in Chinese) of the *Lotus*. For one of the prayers addressed to him see J. Estlin Carpenter, *Comparative Religion* (Home University Library), London [1913], p. 153 f.

stream of Buddhist pietism.¹ This form of Buddhism lays more emphasis on devotion than on emulation, in spite of the fact that the vows taken by Amitābha, while he was still a monk Dharmākara, are a specimen of the grand prayer for the salvation of all beings. In any case, the faith in Amitābha's all-embracing compassion and all-saving device caused many prayers of devotion to be uttered or written down, and the final result was a formulation of the prayer in a simple form, 'Namu Amida-butsu,' which is the Sino-Japanese form of 'Namo 'mitābhāya Buddhāya,' 'Homage be to the Buddha of infinite light.'

Before considering this simple prayer to Amitābha, we shall give a specimen of the prayers addressed to him. Vasubandhu opens his commentary on the *Sukhāvati-vyūha* (Nanjio, no. 1204) with a prayer:

'O Exalted One! I trust myself whole-heartedly

To the Tathāgata whose light pervades,
Without any impediment, the regions in the ten quarters,
And express my earnest desire to be born in Thy Land.

In realizing in vision the appearance of Thy Land,
I know that it surpasses all realms in the threefold existence,
That it is like sky, embracing all,
Vast and spacious without boundaries.

Thy mercy and compassion in accordance with the righteous way

Is an outgrowth of the stock of merits (accumulated by Thee),
which are beyond all worldly good,
And Thy light permeates everywhere,
Like the mirrors of the Sun and the Moon.

[Further description of the excellence of the Paradise.]

Let me pray that all beings, having been born there,

Shall proclaim the Truth, like Buddha Thyself.

Herewith I write down this essay and utter these verses,

And pray that I could see Thee, O Buddha, face to face,

And that I could, together with all my fellow-beings,

Attain the birth in the Land of Bliss.

(In this prose translation, the lines of the original verse are kept.)

Vasubandhu further prescribes the five methods of worship to those who desire the communion of the land of bliss: (1) reverence shown by bodily acts of worship; (2) adoration expressed in oral utterance; (3) earnest thought and prayer carried out by the fixation of mind; (4) intent thought to visualize the Buddha and his land; (5) dedication of all good will and works to the welfare of fellow-beings.

Among these five methods adoration by oral utterance, especially in calling the Buddha's name (*nāmadheya*), became an important factor in the worship, and the final result was the formula cited above. This kind of prayer tends very naturally to become a mechanical repetition of the name, and there were and are many Buddhists practising the method in that way. Yet we must know that devotional piety and earnest thought are kept and stimulated even by the repetition of the Buddha's name, and also that the leaders of this Buddhist pietism were always keen on emphasizing faith and moral life as manifestations of piety.²

Moreover, there is another interesting phase in the development of Amita-Buddhism, viz. that a special theory of prayer was propounded by one of its leaders, Shinran (1173-1262), a Japanese reformer. He explains the faithful thought to mean, not only a thought, but also reverence shown towards the Buddha, through one's moral life, as well as the adoration of his grace by oral utterance of his name. This adoration, the repeti-

¹ The story of Amitābha's conversion and vows is told in the *Sukhāvati-vyūha* (*SBE* xlix. pt. ii.). The scenes are depicted in a highly imaginative way and the vows taken are elaborate and high-sounding, yet all after the model of the story of Sumedha. This link of affinity between the two stories is a strong point against the theory that the belief in this Buddha was a product of Christian influence. Another point to the same effect is the development of the faith, which can be traced step by step in India, China, and Japan.

² The threefold thought in devotion is faithful thought, profound thought, and the thought to attain the final bliss by dedicating all good to that end (cf. *SBE* xlix. pt. ii. p. 188).

tion of the Buddha's name, ought to be uttered, never with any idea of petition, but always as an expression of absolute dependence on, and of gratitude towards, the Buddha's grace. Shinran taught this doctrine of prayer because he believed in the infinite strength of the Buddha's saving power, which reduces any idea of exertion or self-reliance, not only to useless redundancy, but to a harmful impediment to the true devotion. Thus, prayer is regarded by Shinran as an expression of absolute dependence, on our part, on the Buddha's compassion and redeeming plan.

Shinran's religion was, in this way, the antipodes of the religion of self-perfection, as we see it in the original tenet of Buddhism; yet, in strictly excluding the idea of petition from prayer, he returned to the original standpoint of Buddhism, in contrast to some of the prevailing forms of the Buddhism of his time.

LITERATURE.—See the works cited throughout, especially D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907, pp. 290-310. M. ANESAKI.

PRAYER (Chinese).—The idea of prayer has permeated the whole religious life of China, under whatever form that life has manifested itself from the earliest ages of which we have any knowledge down to the present time. The Chinese had 'in everything by prayer and supplication' made known their requests long before St. Paul wrote those words.¹

The present writer has heard extempore prayer in a temple,² but set forms are very largely used. Supplications are prepared to meet different circumstances with blanks to fill in personal particulars of names, etc. These are burned, this process, it is believed, ensuring their passage to the other world. Among such are prayers after bad dreams,³ and when some untoward event has been seen, as a crowing hen, a dog digging a hole, etc.

When Confucius was ill, one of his disciples wished prayer to be offered to the spirits for his master.⁴ The duke of Chow prayed for King Wu, his brother, to their great-grandfather, grandfather, and father.⁵ The famous general Chu Kohang in ancient times prayed for restoration to health.⁶ Sons pray for long life for their parents,⁷ and petitions are offered for offspring (the goddess of mercy is much sought after for that purpose). Confucius was born after prayer by his mother.⁸

Almost as varied as the objects of prayer are the deities to whom prayers are made, the first and highest being Shang Ti, the Supreme Ruler. From ancient times this worship of God has been regularly kept up by the sovereign.⁹ As one instance of it, the emperor Kien Lung 'in times of scarcity . . . begged grain from the Ruler above.'¹⁰

With this basis of monotheism there was also worship of the spirits presiding over rivers and hills of note, 'the mounds, dykes, plains, forests, and the spirits of sages and worthies of ancient times' who were subordinate to the Supreme Ruler.¹¹ The prayers to these were in the character of announcements, thanksgivings, petitions,

or adoration. Those of adoration are the only kind used in the worship to Confucius.

Heaven and earth, as the manifestations and revelations of the Supreme Being, were the objects of imperial worship¹ and also at times of that of the common people.

The present writer will never forget a most impressive instance of it during a terrific typhoon. Amidst the howling tempest, with many drowning, the Chinese nurse knelt down on the breaking verandah and poured forth an earnest and impassioned prayer.

Ancestor-worship is regularly engaged in by every family which is not Christian. Numerous gods and goddesses, deified heroes, sacred trees, smooth stones from the brook, bridges, etc., or their spirits, are worshipped with prayer and offerings.

Buddhist and Taoist monks and priests read liturgies and *sutras* in the temples and monasteries. There is no suggestion of prayer in the *Tao Teh King* of Lao-tzu,² though it soon appears in Taoism.

Buddhist gods are ideas personified, mostly 'fictitious personations,' so that Buddhist worship, except among the simple-minded in China, is but 'a homage rendered to ideas and is only supposed to be reflex in its effects. Their worship is useful as a discipline, but not effectual as prayer.' Prayer is not absolutely necessary to the Buddhist.³ But the common man or woman in China, like the rest of the human race, feels the need of prayer and is not concerned with this esoteric view.

The following prayer was used by the Ming emperors at the solstice worship of Shang Ti:

'All the numerous tribes of animated beings are indebted to Thy favour for their beginning. Men and creatures are emparadised, O Ti (Lord), in Thy love. All living things are indebted to Thy goodness, but who knows whence his blessing comes to him? It is Thou alone, O Lord, who art the true parent of all things. . . . The Service of Song is completed but our poor sincerity cannot be fully expressed. Sovereign goodness is infinite. As a potter Thou hast made all living things. Great and small are curtailed round. As engraven on the heart of Thy poor servant is the sense of Thy goodness, but my feeling cannot be fully displayed. With great kindness Thou dost bear with us, and notwithstanding our demerits dost grant us life and prosperity.'⁴

This very high level of spirituality is not reached in many of the ritual prayers.

Though a tablet to the emperor appeared in the larger temples, it is only recently that prayer for the government and those in authority has been desired, and the Chinese turned to the Christians for it, the emperor having been dethroned with his State worship.

One of the most eminent Chinese philosophers, a great Confucian commentator, said:

'Prayer is the expression of repentance and promise of amendment, to supplicate the help of the spirits. If there may not be those things, then there is no need for praying. In the case of the Sage (Confucius), he had committed no errors, and admitted of no amendment. In all his conduct he had been in harmony with the spiritual intelligences, and therefore he said: "My praying has been for a long time."'⁵

The spirit in which prayer is offered is considered by the Chinese to be of the utmost importance. The Master (Confucius) said: 'Hold faithfulness and sincerity as first principles,'⁶ and the spirit in which prayer is offered must be a sincere one. Some amount of ceremony is generally observed with prayer. Offerings of meat and vegetables are often presented and cups of wine; wax candles are lighted and incense-sticks and mock paper money burned.

The attitude taken in prayer is typical of reverence. Kneeling mats are provided in temples for

the worshippers, who not only kneel but often touch the ground with their foreheads and perform the kowtow. If weak and unable to kneel, the worshipper is told in pious books that he may stand. In prayer the hands are laid palm to palm with extended fingers and raised up and down several times.

LITERATURE.—Authorities are cited in the footnotes.

J. DYER BALL.

PRAYER (Christian, Theological).—The fact of prayer is the supreme proof of the importance of religion as an element in human life. Face to face with vast and mysterious forces, beset by dangers, urged on by unceasing needs, man turns instinctively for help to powers other and greater than himself. Prayer is wide as the world and older than history. The animistic savage and the polytheist, as well as the Christian, practise it. Even the Buddhist, though in strictness his creed should find no place for it, seeks solace in prayer. In the presence of such facts, it is not wrong to speak of prayer as an instinct of the human heart. It is an instinct springing from man's sense of his own weakness and limitations and from his recognition of the greatness of the universe in which he dwells. Prayer may truly be said to be prior to all definite creeds, to be indeed the expression of the need which all creeds seek to satisfy. 'He that cometh to God must believe that he is' (He 11⁹), we are taught, and the saying is true; but the belief is often implicit rather than explicit.

With the advent of monotheism, prayer reaches a new dignity and power. Belief in the one Deity, sovereign in the universe, carries with it a sense of security and of elevation which has an ennobling influence on thought and life. It makes men strong and free in the world. Here is the secret of the transformation which Islam effects for the African animist. Christianity offers better gifts, but the gifts of Islam are not to be despised. The monotheist, set free from the terrors of the animistic demon-world, or from the uncertainties and confusions of the polytheistic pantheon, lifts his face to heaven and gives his worship to the Supreme alone, and asks help from a Power which, he is assured, has no rival.

1. **Definition.**—Prayer is not necessarily petition, the asking for benefits. Any intercourse of a human soul with higher powers may rightly be termed prayer. For the monotheist prayer is intercourse with God. Prayer, says Jeremy Taylor, is 'an ascent of the mind to God.'¹ All forms of such ascent—adoration, confession, thanksgiving, as well as petitions seeking for definite gifts—may be included in the generic term 'prayer.' Prayer is, in general, the communion of the human soul with God.

This communion is not necessarily an inward consciousness of spiritual relationship with God. There is a tendency in modern writings on this subject to regard prayer as necessarily involving an apprehension of the Divine Presence in an essentially inward manner. But there is no proof of this. The inward apprehension of God is the soul of all mysticism; and it would be going too far to claim mystical experience for every prayer. Such experience is a mark of a somewhat advanced stage of religion. The child, the uneducated, and the simple unreflecting mind, as a rule, seek God above, not within. Hence the tendency of all such to speak prayers aloud, no matter how private and personal the prayers may be. The prayer of Solomon, 'Hear thou in heaven, thy dwelling-place' (1 K 8³⁰), expresses the natural thought of the simple mind.

2. **OT.**—Monotheistic prayer in its pre-Christian form reaches its greatest elevation in the OT. All the forms which the intercourse of the human soul with God is able to assume will be found there in unexampled nobility and splendour. The cry of the soul for God, as in Ps 42; confession of sin, as in Ps 51; intercession, thanksgiving, petition—all these are found in the OT, and especially in the Psalms and the Prophets, in forms which stand to-day as the most perfect utterances of spiritual devotion.

The principal elements which distinguish the prayers of the OT are: (1) a vivid consciousness of God as a living personal Presence and as possessing supreme power, and (2) an unflinching realization of His holiness, involving the conviction that only through moral goodness can men become acceptable in His sight. Ps 139 affords a striking instance of both these elements; but they are to be found everywhere. God as the living God, and righteousness of life as that which alone can bring man into harmony with Him—these are the essentials of the monotheism of the OT and they are the distinguishing marks of its prayers.

3. **NT.**—Christian prayer demands more detailed consideration. The NT is full of exhortations to prayer and promises of blessing to those who pray aright. It also contains many examples of prayer. So important a place does prayer occupy in its teachings that it may be affirmed positively that to doubt the efficacy of prayer is to shake the very foundations of Christianity. To determine the essential elements of Christian prayer, we must go to the teachings of Christ Himself. The fullest and most characteristic is contained in Mt 6⁵⁻¹⁶. A brief analysis of this passage will exhibit the principles of Christian prayer.

(1) Prayer must have spiritual reality. This truth is enforced by means of a warning against hypocrisy, *i.e.* against unreality. The warning is twofold: (a) against that unreality which uses the observances of prayer for outward show, in order to gain credit in the world, and (b) against vain repetitions, *i.e.* against using the forms of prayer as incantations or magical formulæ, the mere repetition of which will, it is imagined, avert some evil or effect some good. Prayer is to be real spiritual intercourse between the soul and God: 'When thou hast shut thy door, pray to thy Father which is in secret' (Mt 6⁶).

(2) In prayer the soul is to approach God as a child drawing near to a father, with perfect simplicity and directness, in confidence and love. 'Pray to thy Father'; and remember that 'your Father knoweth what things ye have need of, before ye ask him' (Mt 6⁸). He is a Father whose knowledge of your needs is infinitely greater than your own.

(3) Christ gives a form of prayer which is to serve as a pattern. The Lord's Prayer teaches us what to pray for. It also teaches us how to pray. In it we are taught to pray for the supreme end which God Himself seeks, and also for temporal and spiritual good for ourselves. Most remarkable is the order in which the petitions are arranged. The prayers for God's glory and Kingdom come before the prayers for personal blessing. From this we gather that all private and personal ends must be subordinated to the higher purposes of the Divine Will. All our prayers must be offered up with the condition that the supreme end, which is the universal good, must overrule all particular ends. There must be no selfishness in prayer. The greatest instance of the application of this principle is to be found in the life of Christ Himself. When confronted with the last great sacrifice, He prayed that He might be delivered, but added, 'nevertheless not my will, but thine, be done' (Lk 22⁴²).

¹ *The Rule and Exercises of Holy Living*, London, 1886, ch. iv. § 7, identical with Aquinas's 'ascensus intellectus in Deum' (*Summa Theol.* n. n. qu. lxxxiii. art. 13, 'de Oratione').

This is the same principle as that which Christ sets forth as the supreme rule of all true living: 'Seek ye first the kingdom of God, and his righteousness' (Mt 6³³). In this principle also we find the significance of the characteristic law of Christian prayer that it is offered 'in the name of Christ.' The mission, sacrifice, life, death, and resurrection of Jesus Christ form the means by which the Kingdom is established through the overcoming of evil and the perfecting of humanity. In and through Him human wills become identified with the supreme Divine purpose. 'If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you' (Jn 15⁷). Prayer which is truly 'in Christ' can never be in vain.

It is not going too far to say that, when these principles are grasped firmly, the difficulties which have so frequently troubled the minds of thoughtful people on the subject of prayer will be found capable of solution. Our purpose here is to exhibit this fact as clearly and simply as possible and to deal briefly with the deeper scientific and philosophical problems which are involved.

4. Two main difficulties.—Two great objections have been made against the efficacy of petitionary prayer.

(a) *The moral, or theological, objection.*—This difficulty has troubled devout minds in all ages. It assumes many forms, but, in its commonest shape, may be presented thus: God knows, better than we do, all that is good for us. Trusting in His supreme wisdom and power, we may rely upon Him to do what is best without any request on our part. To ask Him for gifts is really an effort to get Him to do something for us which we fear He may not do. Instead of being an exercise of faith, it is in truth a manifestation of doubt, perhaps even of selfishness. It is, in effect, an attempt to induce God to change His mind. Hence it is concluded that the only justifiable prayer is the prayer for resignation or, more properly, for submission of the will to God. The intercourse of the soul with God, it is said, should never be the asking for definite gifts, but always the bringing of the human will into harmony with the Divine.

In all this there would seem to be an element of truth and an element of error. The element of truth will be found in the final words in which the objection has just been stated: true prayer must always involve the bringing of the mind and will of man into harmony with the mind and will of God. This is another way of expressing the third condition of Christian prayer as given above: all private and personal aims must be subordinated to the higher purposes of the Divine Will. The element of error will be found in the supposition that this bringing of the human will into harmony with the Divine renders impossible the asking and the receiving of special benefits. The true inference is quite opposite. When the will has been brought into harmony with the great universal purpose of God, the soul becomes capable of benefits which were before impossible. To regard the Will of God as determining a fixed unalterable arrangement of events is inconsistent with that spiritual view of the universe which is the basis of the whole argument: it is to leave out of account the incessant action and reaction of the spiritual world. The unchangeableness of God does not mean that the universe is a perfectly articulated mechanical system in which everything is given from the beginning. It means, rather, that the principles and purposes of the Divine Providence are eternal and unchangeable. If God be a living God—a personal Life with whom our souls are in relationship—it follows that to every movement of

the human will there is some corresponding Divine reaction. When, therefore, the will of man is brought into harmony with the Will of God, the soul is rendered capable of blessings which were before impossible. The moral condition on which those blessings depend has been fulfilled. Now, prayer is essentially the fulfilment of this moral condition. True prayer is the movement of the human soul into a new relationship with God. Every true prayer, therefore, renders some blessing possible. An illustration will make this statement clearer. The forgiveness of sins is granted in response to the prayer which expresses true repentance. Confession of sin which has no spiritual reality behind it, which is a mere form of words, cannot call down pardon. Only when the soul moves into harmony with the Divine Will—a movement which finds its inevitable expression in the prayer of contrition—is the blessing bestowed. This instance is that selected by Christ Himself. Commenting on the petition, 'Forgive us our debts as we also have forgiven our debtors,' He says: 'If ye forgive men their trespasses, your heavenly Father will also forgive you: but if ye forgive not men their trespasses, neither will your Father forgive your trespasses' (Mt 6¹⁴). Here the condition of the great gift of pardon is the bringing of the mind and will of man into harmony with the mind and will of God. When that movement of the soul has taken place, the gift becomes possible. True prayer is the expression of a spiritual change which brings a new capacity to receive blessing from God. Nor is there any reason why this capacity should be relative only to spiritual gifts. The principle involved applies to the whole range of blessing, temporal as well as spiritual. In a moral and spiritual universe all the possessions and capacities of moral and spiritual beings must be morally and spiritually conditioned.

The whole force, then, of the moral, or theological, difficulty in relation to prayer is derived from an erroneous—indeed impossible—view of the nature of the spiritual universe. This view attributes to the spiritual a mechanical rigidity which is altogether alien from its true nature.

(b) *The scientific objection.*—This difficulty is one which has pressed with great weight upon the modern mind, for it derives its force from modern scientific conceptions of the universe. It depends upon the scientific principle of natural law. The advance of science, so wonderful in the modern world, has been secured by the progressive discovery of what are termed 'laws of nature,' i.e. a great order according to which events happen. Cause and effect are linked together in the natural world by certain unvarying uniformities of sequence. When one of these uniformities has been determined, it is found to be constant and unchangeable. And, the further science advances, the more fully does it appear that things and events in nature are subject to the sway of such uniformity. From this it seems to follow that the whole course of nature is a perfectly determined system. Everything that happens is the result of the previous state of things, in a relationship which is absolutely necessary.

The effect of all this on many devout minds has been such that prayer for benefits involving material elements has been regarded as meaningless. How can we pray for fair weather if we believe that the weather is determined by natural causes in a necessary order? How can we pray for recovery from sickness if we believe that sickness and health depend on the physical condition of the organism, and that that condition arises from certain antecedent causes in accordance with unvarying laws? Some of those who have been

influenced by this reasoning divide the world of human experience into two parts, spiritual and material. In the former, they think, prayer is efficacious; spiritual blessings may be obtained by it; in the latter they believe prayer to be wholly unreasonable and ineffective. Such thinkers, regarding the laws of nature as the expression of the Divine Will, hold that, when we pray for material results, we are guilty of the folly of asking God to abrogate His own laws.

It is not surprising that a conception of natural law which has had so great an effect upon sincerely religious minds should have been even more influential in relation to the common opinion of the modern world. Materialism and naturalism have become popular doctrines. They hold (the former more crudely, the latter in a more subtle manner) that the universe is a continuous development, necessarily ordered from beginning to end in accordance with natural law. In such a system there can be no place for Divine intervention; prayer is meaningless.

It is true that these doctrines find no place for God in the scheme of their thought, and therefore they are bound to deny altogether the value of prayer; but it must be remembered that many who hold these views as working hypotheses for scientific purposes are not prepared to go so far as this. Like the devout minds already mentioned, they are apt to think in water-tight compartments. They are materialists, or naturalists, while dealing with the physical world, but are inclined to admit the existence of a spiritual realm in which events occur which are not subject to the laws of physical causation. To such, an answer to prayer involving change in the physical order seems impossible, but in the spiritual realm the intercourse of a soul with God may well be a means of great and varied blessing.

In considering this mode of thought, it is necessary first to take account of the sharp distinction which is so frequently made between the material and the spiritual. In regard to the latter, it is admitted that prayer may have results; its efficacy in relation to the former is denied. And here again a distinction must be made. There are some who believe in a real response of God to the cry of the human soul seeking for spiritual blessing; there are others who think that the spiritual value of prayer is to be accounted for only by its subjective influence upon the devout mind: prayer attunes the soul to higher things; it brings peace, resignation, trust; these are its real benefits. None can deny these subjective effects; but, if prayer be no more, it loses even this value; for it becomes an impossibility for the enlightened. Who could seek peace in prayer, knowing all the time that his cry for help could bring no real response? This doctrine is but another form of the cynical view which regards religion as a useful superstition—an illusion which gives comfort to those whose ignorance permits them to enjoy it. More important is the view of those who hold that there is a real Divine response in the spiritual sphere, as distinguished from the physical. Many great religious thinkers of the 19th cent. made this distinction. Their reason for doing so has already been explained. It was a mode of thought characteristic of the time. More recent movements of science and philosophy have been showing that this sharp division between the two realms of being cannot be maintained. Psychology has been proving the greatness of the influence of mind upon matter, and physiology has been revealing the fact that the brain is an organ which subserves the directing agency of intelligence (see W. McDougall, *Body and Mind*, London, 1911; and H. Bergson, *Matter and Memory*, Eng. tr., do. 1911).

The brain has been compared by Bergson to a telephone exchange. It is the instrument by which the response of the organism to a stimulus from without is controlled.

In relation to all such forms of thinking, however, our common sense supplies a ready solution of the problem which we are now considering. And here common sense is most perfectly expressed in the simple words of Christ: 'Pray to thy Father.' When a child asks for some gift, he never pauses to think whether the gift is material or spiritual. His prayer expresses his need with the utmost simplicity and directness. As to material benefits, he knows perfectly well that his father can bestow them. Human beings can intervene to help one another. A man drowning in deep water cries out for help because he knows that human power may be able to save him. A sick man calls in a doctor because he knows that his medical skill is often able to arrest the progress of disease. We are all aware that there are limits to human power in its intervention in the course of natural events; but that, within those limits, its ability to produce changes in that course are infinite, we are assured by our commonest experiences. The mind and will of man can subordinate the course of nature to human purposes.

Further, this power is not inconsistent with the perfect fulfilment of the laws of nature. Man is able to use natural forces, and combine them in multitudes of ways, for his own ends; but every force so employed operates in accordance with its proper laws. Thus it is that all human works are accomplished. Thus almost the whole surface of the globe has been altered, the seas covered with fleets, the earth penetrated in pursuit of its hidden wealth. So it is that man can rise high in air in opposition to the force of gravitation, speak to a friend miles away, and send his messages round the world.

And not only is all this done in accordance with the laws of nature, but its very possibility is dependent upon the existence of natural law. The laws of nature are only another name for the trustworthiness of natural forces. When we find that nature is not capricious, but trustworthy, we are able to use physical forces to effect the purposes which we have in view. It is the knowledge of natural law as unfailing that gives man his power in dealing with nature. When man has grasped these unfailing laws, he finds the material world plastic in his hands.

Now, it is absurd to suppose that this characteristic of natural law, which gives to man all his power over nature, creates an obstacle in the way of Divine activity. Are we to suppose that the Supreme Spirit labours under a disability from which His creature, man, is free; that He is so shackled by His own laws that He is unable to respond to the changing needs of His creation? Surely it must be true that, if the uniformity of nature is the means by which human liberty, in dealing with the forces of nature, is secured, that uniformity must in some far higher way subserve the Divine freedom.

It is not difficult to discover the source of the confusion of mind which is so common on this question. We forget to take account of the practical side of science. When applying scientific principles, we think only of theoretical science. Theoretical science discovers the uniformities of nature; practical science makes use of those uniformities for the effecting of human purposes. But the history of discovery shows that the practical aim is really dominant throughout. Man has learned to master natural forces for his own benefit by finding out how they work. The one supreme lesson is that nature is thus mastered.

Forgetting to consider this, and regarding nature in an abstract theoretical way as a system of laws, we form a purely factitious conception of it from which all spiritual initiative is excluded. We then apply this conception to God's relation to the universe, and forget that the impotence which we thus ascribe to God should first be ascribed to ourselves. Thus arises the illusion which has darkened so many souls.

Far clearer in thought and truer in principle is the faith which passes with simplicity from the common earthly experience to God in relation to human need. The earthly father can and does help his child; how much more must the Heavenly Father be able and willing to answer the prayers of His children!

It may be urged as an objection against all this that, in the case of man, we can trace his intervention in the succession of natural causes; we see him at work, selecting and combining the elements with which he deals, and so bringing about the results which he has in view. The drowning man cries for help; his shout is heard; and, by means of a rope or a boat, he is pulled out of danger. But we see no sign of similar interventions by Divine agency in response to prayer. When devout souls believe that their prayers are answered, it will be found that the desired results have come about by means of the apparently undisturbed operation of natural causes. If this be, in truth, God's work in answer to prayer, His method must be very different from that employed by man when he controls the succession of events. This is an important objection, and, up to a certain point, perfectly sound. It is not to be supposed that God's response to prayer takes place in the superficial way characteristic of man's work. Whatever conception we may form of the Divine relation to the forces and laws of nature, we cannot believe that the Almighty works as man works. Man by constant and painful trial has burrowed a little beneath the surface of things and so made useful discoveries which enable him, in a manner which is marvellous for him, to guide the course of nature for his own purposes. But God's control of natural forces must be very different. Man works upon the surface; God directs things from the centre. What we call forces and laws of nature are but fragments abstracted from the whole and presented in forms which have been shaped by our human needs and methods. It is absurd to suppose that the Supreme Spirit must approach the material universe in the same limited way. But the objection assumes that there can be no other way in which to approach it—an absurd supposition. The whole meaning of the argument which has been presented above is just this: if man with his very limited knowledge and power is able to control natural forces for the satisfaction of human needs, how much more must the Eternal God, with His infinitely larger and deeper grasp of the material universe, be able to use the laws and processes of nature for the realization of the ends demanded by the spiritual relationships into which He enters with His human children! Neither in the human sphere nor in the divine is it necessary to suppose any violation or suspension of natural law.

5. *Some minor objections.*—The two difficulties which so far have occupied our attention are by far the greatest and most formidable of all in connexion with the subject of prayer. Some minor objections deserve a brief consideration.

(a) *The littleness of man.*—It is urged that man is too small a being to claim the interest and attention of the Almighty. The vastness of the physical universe as revealed by astronomy, and its immeasurable history as disclosed by geology and biology, teach us that man is of very little

account in the whole scheme. It is sheer presumption on his part to ask God to attend to his petitions. And how much more does this apply to the individual human being, who is but one out of many hundreds of millions of beings of the same sort?

In a similar spirit, it has been said that it is inconceivable that God can 'give serious ear and individual consideration to each and all' of the multitude of petitions, 'wise and unwise, selfish and unselfish,' which are addressed to Him 'daily and hourly by hundreds of millions of human beings' (C. Stewart, in *HJ* ix. 386).

In answer to such objections, it must be observed (a) that, no matter how small and weak man may be, he is yet a spiritual being, capable of knowledge, goodness, and love, able to enter into communion with God; and (b) that such arguments, instead of attributing greatness to God, really detract from His greatness. A worthy conception of God's greatness will discern that nothing is little, nothing insignificant, in His sight. He is not like a collector who prizes a thing because it is rare, nor like a megalomaniac who admires only the gigantic, nor like a tired official who finds details wearisome and settles every question by red tape. In God's universe the midge is as perfectly formed as the whale, the snowflake as harmonious as the solar system. But, above all, God's supreme greatness is His spiritual perfection. To Him spiritual ends are supremely important. Therefore the perfecting of every human being possessed of personality must be a matter outweighing all material considerations.

(b) *The inconsistency of human prayers.*—It is often said that petitions addressed to God are so conflicting, owing to the diversity of human interests, that it is impossible to suppose that they can be rightly offered, or can call down an answer. One farmer prays for rain, another for fair weather. In every war both sides pray for victory.

It is indeed astonishing that this objection has been seriously entertained by some reasonable people. Every true prayer must be offered up, as we have seen, with the condition that the granting of it is not inconsistent with the higher purposes of the Divine Will. 'Not my will, but thine, be done' must express the spirit of every prayer. Further, every true prayer, recognizing the fact of human ignorance, must involve the 'if it be possible,' which even Christ Himself uttered. And it is surely true that no Christian soul ever expects the answer to his prayer to take precisely the shape fashioned by his own desires and imagination. On the contrary, he is convinced that, whatever the appearance may be, the God who knows 'our necessities before we ask, and our ignorance in asking,' will always give to His children more and better than they can ever 'ask or think' in response to their petitions.

(c) *Prayer inconsistent with self-reliance.*—The habit of prayer, it has been thought, tends to weaken character. Men should learn to exert themselves, and so win, by their own efforts, what they require, and not look continually to some great power above them for help. The records of Christianity afford a sufficient answer. St. Paul, Athanasius, Augustine, Luther, Cromwell, Wesley, Gordon, were not moral weaklings. Christianity is the religion of the most vigorous races. The fact is that a true dependence upon God cannot weaken any character, because the true life of every soul is to be found in God. The identification of mind and will with God brings with it the consciousness of a new strength. It is also to be observed that many prayers are answered through the normal exercise of human powers. Thus the

prayer, 'Give us this day our daily bread' (Mt 6¹¹), finds its usual response in the reward which comes to man when he exerts himself in taking advantage of the opportunities presented to him. No religious mind regards this response as the less providential on that account. On the contrary, the offering of the prayer involves the recognition that we are to expect a blessing upon our work, and is therefore a stimulus to exertion. 'Work out your own salvation . . . for it is God which worketh in you' (Ph 2^{12a}), is a principle which pervades all Christian devotion and life.

(d) *Experimental test.*—It has been urged that the effects of prayer, if it has any, must be of such a nature as to be open to proof by ordinary scientific methods. Tyndall proposed that two wards in a hospital should be selected; in one the patients should be treated by medical science, in the other they should be made the subjects of prayer only (*CR* xx. [1872]210). Others suggested tests by observation. Sovereigns and royal princes are prayed for more constantly than other people; can we see, in the records of such persons, that they have enjoyed longer life and been endowed with greater blessings, spiritual and temporal, than those who have not been so much prayed for? (F. Galton, *Fortnightly Review*, new ser., xii. [1872] 125).

The crudeness of these suggestions is perhaps more obvious now than at the time when they were made.

(1) It is now known that the influence of suggestion upon both mind and body is very great, and there is clear evidence that suggestion can act subconsciously. Also there is good evidence for telepathy, i.e. the influence of mind upon mind at a distance and independently of material and sensational methods of communication.

(2) It would therefore be impossible to determine the real conditions of such an experiment as Tyndall proposed. It is obvious also that royal princes, in their relation to their mental and moral environment, are in a position very different from that of ordinary men. Further, it is impossible to isolate any human soul from the influence of prayer.

In addition to these considerations, it should be remembered that Tyndall's proposed experiment would violate the very first principle of true prayer. It would be altogether lacking in spiritual reality. It would be an exhibition of doubt rather than of faith. It would be treating the Almighty as if He were a chemical reaction.

(e) *Intercessory prayer.*—There is a peculiar difficulty involved in prayer of this kind. We have seen that, when a soul turns to God in sincere prayer, the spiritual movement which the prayer expresses establishes a new relation of the soul to God which makes possible blessings that would otherwise be impossible. Thus the prayer of contrition fits a soul to receive the Divine pardon. This consideration enabled us to perceive that true prayer is not inconsistent with a perfect submission to the unchanging purposes of the Divine Will. But how, it will be asked, can the movement of a soul towards God be efficacious for the benefit of another?

The problems involved in this question are very profound, and to consider them with any fullness would lead us very far. Two principles may be laid down which will be found to give help. (1) Modern psychology has shown that one mind can influence another in other ways than by speech and sight, and therefore can alter to some degree the moral relationship in which the other mind stands to God. (2) A soul which yields itself to God in prayer may become the channel through which Divine influences can flow to others as well as to

itself. As the influence of goodness in a human being can spread from soul to soul, so surely, only in a far greater degree, can the influence of Divine goodness pass through one human soul to another.

6. *Deeper problems.*—(a) *Conception of God.*—Prayer assumes the being of God. But in what sense? We are now concerned only with Christian monotheism. The essence of this doctrine is that God is one, holy, supreme in the universe, and standing in a moral relationship with His creatures. All our arguments so far have gone upon this postulate. But this doctrine is capable of several interpretations.

(1) God is sometimes conceived as altogether transcendent. He is a creator who called the world into being, giving it a certain definite constitution. This thought of God is founded on an analogy from human work. An engineer makes a machine, fitting its parts together, so constructing an instrument by means of which certain desired results can be accomplished. So God, having a great purpose in view, created the universe. Out of this conception a very great difficulty is apt to arise. It is only a very imperfect machine which requires to be continually set right. If the universe needs constant interference in the shape of answers to prayer, or miracles, it must be a very imperfect construction. On the other hand, if God foresaw and ordered everything from the beginning, what place can there be for changes in answer to the petitions of men? To this question there can be only one possible answer. It is an answer which some theologians have not hesitated to give: both the prayer and its answer must be parts of the original Divine plan (*J. McCosh, CR* xx. 777).

It must be confessed that this solution seems to make prayer unreal; the spontaneity of human initiative has disappeared; everything is settled beforehand. The truth is that it is the conception with which we started that is at fault. We have pushed a useful analogy too far.

(2) Our thoughts on this subject can be to a great degree corrected by introducing another conception. We can think of God as the immanent Life of the universe. This conception brings our thoughts into very suggestive relationship with modern ideas of evolution. It also enables us to think of God as one with whom we ourselves and every other living being, and every element in nature, are in continual intercourse and contact. We are thus lifted out of those purely mechanical ideas within which the former conception confined us. At the same time, the idea of immanence is in constant danger of drifting into pantheism, and therefore of losing belief in that moral relationship between God and man which is the very life of a monotheistic creed, and the foundation of all faith in the efficacy of prayer.

(3) There is a higher conception of Divine transcendence which is not inconsistent with belief in the immanence of God. This conception is founded on a full recognition of all the data of experience. Discerning in the principle of personality our surest guide to the nature of the ultimate reality, it takes account of the moral freedom of the human individual. It therefore thinks of God as the supreme personal Life, within the sphere of whose being there is room for the free interaction of the whole multitude of finite persons. He is at once the Infinite in whom we live and move and have our being, and the Father of spirits on whose love and providence we depend. The difficulty of making this conception perfectly consistent is simply due to the difficulty of reconciling in one scheme of thought the diverse elements of the world of our experience. The true value of this view of God, as at the same time immanent and

transcendent in this higher sense, is that it takes account of all the facts and holds fast to that fundamental monotheism which is the ultimate justification of the conviction that the moral aim is supreme in the universe.

(b) *The unchangeableness of God.*—The conception of God which has just been set forth gives us the true solution of this problem. When we speak of God as unchangeable, we do not mean that the whole universe is fixed by His fiat in a complete rigidity. That is the mechanical conception which, as we have seen, is wholly inconsistent with the facts of life and morality. God is unchangeable in the sense of being absolutely trustworthy. His purpose cannot be altered. That purpose is the realization of the moral ideal. It is the good of all and the good of each. It is the Kingdom of God, or Kingdom of Love. In its application to the infinite variety of human and moral situations, this unchangeable purpose must take the form of an unfailing Divine response to every element and tendency of good in the character and life of finite personalities.

(c) *Conception of law.*—Much confusion has been caused by the failure to distinguish between the various meanings of the word 'law.' We speak of the laws of nature, and also of the moral law. It has sometimes been asked, Are we to pray to God to abrogate His own laws? The reference is to the laws of nature which have been ascertained by science; but the whole force of the question resides in the connexion of the word 'law' with God, and our reverence for the great moral laws which we have been taught to trace to Him. A law of nature is merely an observed uniformity, a sequence of physical cause and effect, a certain order in the way in which events follow one another. Such a law is not, in itself, capable of effecting anything. It is even wrong therefore to speak of nature as being governed by laws. A law of nature is, in fact, simply our way of grouping our observations. It is a description and nothing more. Nor are we at all sure that such descriptions of grouped natural processes as have been so far ascertained, and labelled laws, are anything but provisional statements. There are indications that even such vast generalizations as the law of gravitation or the law of the conservation of energy may some day be merged in larger descriptions of the sequences which they include.

A deeper philosophy is now showing good reason to believe that these laws of nature, which are essentially the description of natural processes in terms of human intelligence, are relative to our mode of grasping our experience of the physical world with a view to the satisfaction of our needs (see Bergson, *Creative Evolution*, Eng. tr., London, 1911, ch. ii.). They have, that is, been shaped by the practical aims of human life. It is altogether in harmony with this doctrine that the knowledge of these laws is the very means which man employs in order to control natural processes for his own purposes. His amazing success in this work is revealed at every turn in our wonderful modern world. The absurdity of supposing that the discovery of these laws makes it improper for us to pray to God for benefits which involve changes in the physical sphere is therefore manifest.

The most notable expression of the doctrine that the laws of nature forbid prayer is Tyndall's famous attempt to show that the principle of the conservation of energy rules out all possibility of Divine intervention in the physical world.

'The principle,' he writes, 'teaches us that the Italian wind gliding over the crest of the Matterhorn is as firmly ruled as the earth in its orbital revolution round the sun; and that the fall of its vapour into clouds is exactly as much a matter of necessity as the return of the seasons. . . . Without a disturbance of natural law, quite as serious as the stoppage of an

eclipse, or the rolling of the St. Lawrence up the Falls of Niagara, no act of humiliation, individual or national, could call one shower from heaven, or deflect towards us a single beam of the sun' (*Fragments of Science*, p. 35 f., 'Prayer and Natural Law').

This argument, enforced as it was by the authority of a distinguished man of science, had an enormous effect at the time when it was first presented (see Stopford Brooke, *Christ in Modern Life*, p. 132) and is not without influence even now. But, as Oliver Lodge points out, it is open to objection—

'Even from the strictly scientific point of view: the law of the conservation of energy is needlessly dragged in when it has nothing really to do with it. We ourselves, for instance, though we have no power, nor hint of any power, to override the conservation of energy, are yet readily able, by a simple physical experiment, or by an engineering operation, to deflect a ray of light, or to dissipate a mist, or divert a wind, or pump water uphill' (*Man and the Universe*, p. 7; see also chs. I.-III., and *Life and Matter*).

George Stokes deals with objections of this kind in a similar manner and with equal clearness and decision (*Natural Theology*, p. 220). These utterances of competent scientific authorities are in perfect accord with what has been said above on this subject. The principle which they express is just this: natural law is indeed unfailing, but all experience proves that this constancy does not prevent human intelligence and skill from making use of physical forces and so effecting results which the natural course of things, left to itself, could never bring about. If human power can do so much, why should Divine power be helpless? As we have seen, the existence of those constant uniformities which we call the laws of nature is the very foundation of all human power in dealing with the forces of nature. Therefore we have reason to believe that, in a far profounder way, the order of nature subserves the operations of Divine Providence.

(d) *Prayer and miracle.*—Objection is sometimes made that prayer is in essence the request that God should interfere miraculously for our benefit. Fundamentally, it is said, answers to prayer and miracles, if such things happen, are indistinguishable. This is not the place to discuss the great and intricate question of the miraculous (see art. MIRACLE). Let it suffice to say that those who believe in miracles do not, in our time, suppose that a miracle is a violation of law. It is usually held to be the manifestation of forces, and possibly of laws, which do not enter into our ordinary experiences. But, while all this is admitted, it must be remembered, as shown above, that natural laws, as we apprehend them, belong to abstract realms of experience and are probably relative to our mode of apprehension. There is a sense also in which it must be said that the miraculous is relative to our mode of apprehension. As the control which civilized men exercise over natural forces appears, or might appear, miraculous to the intelligent savage, so a superhuman control of natural forces may well be the true nature of what we call miracle. There is therefore no objection to miracle on the ground of scientific principle. But this is not a sufficient account of the matter. The Christian miracles, as recorded in the NT, are not mere wonders. They are not even mere displays of superhuman power. Their distinctive quality is to be found in the fact that, while exhibiting superhuman power, they also reveal Divine character. They might be described as 'acts of revelation.' Here is the force of the term 'signs' (*σημεῖα*) by which they are designated. This consideration at once makes clear the distinction between a miracle and an answer to prayer. It may well be that, so far as the method of their performance goes, there is no difference between them. But the former is intended to reveal the operation

of One who is able to exert superhuman power and, in exerting that power, to manifest His character. The latter is for the simple bestowing of a benefit. In the former the Divine element is made startlingly manifest in order to attract attention. In the latter we must expect that the Divine direction of events takes place secretly, in the inmost heart of things, producing results which are as obviously natural as the falling of a leaf or the flowing of a river. The difference between the two is to be found rather in the purpose which guides the operations of Divine Providence than in the nature of the method by which the results are effected. Miracles are therefore exceptional. They 'do not happen,' to quote a famous phrase, in our ordinary experience. Answers to prayer occur every day.

7. Summary.—The result of our whole investigation is this: to a believer in a living God the efficacy of prayer is capable of ample justification. None of the objections which have been made against it on scientific or philosophical grounds can be sustained.

C. F. D'ARCY.

PRAYER (Christian, Liturgical).—If prayer is the natural and necessary outcome of belief in God, it is most natural and most necessary to the Christian believer. Before the Christian dispensation God was far off from man, unapproachable, unknowable, far above man and the needs of man. The incarnation of the Son of God brought man as it were into touch with God. God revealed Himself to man in the Incarnate Christ, and the Son of God, by taking our nature upon Him, lifts humanity into close communion with God. God was no longer far away, beyond the ken of mankind, no longer so far beyond man as to seem unable to condescend to the needs, the longings, and the understanding of His creature. The Son of God reigning in highest heaven is also Son of Man, understanding and knowing by virtue of His incarnation

man's needs and man's weaknesses, loving man not only with a love divine, but with a perfect sympathy inasmuch as in virtue of His manhood He is of the same substance as man. Prayer then, since the Incarnation, became something infinitely more real than ever it could be before—a real and intimate connexion between heaven and earth, between God and man. Our spiritual aspirations and worldly needs can be brought before the Eternal Father by the mediation of Him who lived and prayed and died among us, and ascended to the right hand of the Father to be our Mediator and Saviour.

Our Lord bade us pray, and Himself in this as in all things sets us an example. First there is individual prayer, which concerns the needs of the individual, whether spiritual or temporal. But there is another aspect of prayer. Our Lord teaches us above all things the brotherhood of man, that the whole race of humanity is one great family with a common Father. So prayer must also be collective, consisting of worship which is due from the whole family alike to God their Father, and supplication for those many necessities both of body and of soul which are common to all men. Our Lord has therefore taught us to pray in common, and indeed His own model prayer, 'Our Father,' is a common prayer.

Individual prayer is essentially private, bearing on personal and private needs. Such a prayer as 'O God of the crosses that are laid upon us, help thy servant Apollonius,' which has survived in a 4th cent. fragment (*Ox. Pap.* vii. [1910] no. 1058), may be taken as an example of prayer to God in time of intense personal need—such a prayer as has been prayed millions of times.

Collective prayer is public, the common prayers used when the family of God gather together to give Him the worship due from all. The history of common prayer is to be found in the liturgical service of the Church. Christ came to fulfil the law, not to destroy it. The Christian Church regarded itself as the fulfilment and the perfection of the Jewish Church. Christ Himself taught in the synagogues and took part in the synagogue worship. He went up to Jerusalem and took part in the Temple worship at the great feasts. The Eucharist was instituted by Him at the Passover Supper, and is the Christian Passover, the memorial of our redemption. So we find the Apostles in Jerusalem after the Ascension still frequenting the Temple and taking part in its worship. The Eucharist only seems to have been their own distinctive act of worship. St. James the Lord's brother frequented the Temple till the day of his death. Even St. Paul used the synagogue worship as long as he could, and it was not the Church that cut the connexion with Judaism, but Judaism that cast off the Church.

Thus, when we come to consider Christian prayer in its public forms, we should naturally expect to find that it is a Christian development of Jewish forms of worship. Unfortunately there exists very little Jewish liturgical material of the time of Christ, but none the less it seems, from that which is extant and from what we know from other sources, that Christian worship is based upon the worship so familiar to the majority of the first generation of Christians before they came to the faith of Christ.

Jewish public worship consisted of the synagogue worship and the Temple worship. The synagogue services were held every Sabbath day, and there were also services on the third and fifth days of the week, Tuesday and Thursday. The synagogue service was definite and fixed, and we know from the Mishnah of what it consisted. It began with the Shema ('Hear, O Israel'); then came a lection

from the Law and a lection from the Prophets; then came the blessing, followed by the Targum, an explanation in the vernacular of the Hebrew lections, and a discourse or sermon on what had been read. Such a service our Lord, as we know from the Gospels, was not only present at on Sabbath days, but frequently took part in as reader and preacher.

The Temple service existed of course only in Jerusalem. Here day by day there was the morning and the evening sacrifice. In connexion with these was the singing of psalms, and the eighteen benedictions or ascriptions of praise to God were made daily. Then there were the great annual festivals, at the chief of which, the Passover, many thousands of Jews gathered together from all parts of the world. The ritual of the Passover Supper we know partly at least from the Mishnâh, which probably represents the use of our Lord's time. The liturgy of the Paschal Supper begins with ritual question and answer, and then the celebrant recites the Haggādâh, the story of God's mercies to Israel, speaking of the bitter treatment of the people in Egypt, and of their wonderful redemption from slavery, and closing with a burst of worship and praise.

1. The Eucharist.—It is almost a certainty that the Eucharist was instituted by our Lord at this Passover Supper. The Haggādâh is doubtless represented by the expression, 'when he had given thanks'; then followed the giving of the Bread and the Cup to the disciples, with the charge that they should always do this in remembrance of Him. Thus we see how closely Christian worship is bound up with the older worship, how true was the feeling that there was an unbroken continuity between the old and the new dispensations, and how the new dispensation of Christ was but the fulfilment and perfecting of the old. For the Eucharist was the central act of Christian worship from the very first.

Of the early ritual of the Eucharist we know very little. In the Acts the Sunday reunions of Christians for 'the breaking of bread' doubtless imply the Eucharist, whether in connexion with the Agape or not. Elsewhere of course the expression 'breaking of bread,' as, e.g., at Emmaus, simply implies an ordinary meal. In St. Paul's references to the Eucharist in connexion with the abuses at Corinth (1 Co 11) we are told nothing definite; but the words that he uses—'For I have received of the Lord that which also I delivered unto you' (v. 23)—seem to imply some recognized outline, at least, in the form of thanksgiving used, which would apparently include some reference to, or perhaps recitation of, the account of the institution. The *Didache* gives forms which are most certainly Eucharistic prayers, but the date of the *Didache* is so uncertain, and the authority of the work so doubtful, that it is not safe to build too much on these forms. They seem to be a form of the grace before and after meals specially adapted to the Eucharist. These forms of grace are found again in the tract of St. Athanasius *On Virginity*, but simply as graces.

The first actual description of the Eucharist is found in St. Justin Martyr (c. A.D. 150) in his *First Apology* (65), and there are several references to it in his *Dialogue*. According to the description in his *Apology*, the Eucharist begins with the kiss of peace, then the offering of bread and the mixed cup is made, and the celebrant proceeds to offer praise and worship and thanksgiving, to which the people answer, 'Amen,' and then follows the communion. Elsewhere he speaks of the *εὐχαριστία*, or thanksgiving prayer, as including thanksgiving for the creation of the world and all that is in it, for our redemption, and for the breaking of the power

of evil (*Dial.* 41). His reference to the words of institution perhaps imply that they were included in the thanksgiving. But there were as yet no forms fixed except in outline. Justin's description implies that everywhere the Eucharist would be celebrated in the same way, but, on the other hand, he states definitely that the actual wording of the prayers was left to the celebrant.

But, according to Justin, the Eucharist proper was preceded by another service in close connexion with it (*Apol.* i. 67). This consisted in lections from the Gospels or Prophets or both, then a sermon by the bishop or celebrant, and this was followed by prayers. Closely on this followed the Eucharist. One is struck at once by the similarity between this service, which is the later *Præanaphora* of the liturgy, and the synagogue Sunday service, and we are drawn to the conclusion that this first part of the Eucharistic liturgy is based upon the synagogue worship just as the anaphora, or Eucharist proper, is based upon the ritual of the Passover Supper.

St. Clement of Rome, St. Irenæus, Tertullian, and St. Cyprian also refer occasionally to the Eucharist. In Cyprian the beginning of the Eucharistic prayer already has a technical name, the 'Preface' (*præfatio*). Also in certain non-orthodox works of the end of the 2nd cent. or the beginning of the 3rd, the *Acts of John* and the *Acts of Thomas*, we are given partial descriptions of the celebration of the Eucharist.

It is when we reach the era of the Church Orders, however, that we first come to definite accounts of the actual Eucharistic ritual. The Church Orders seem to have been almost authoritative, or certainly of very wide vogue, and are certainly based on the writings of Hippolytus. There seem to be two recensions of the Church Order, the first about A.D. 250, existing now in various versions, Latin, Coptic, Ethiopic, Arabic (including the so-called *Canons of Hippolytus*), and Syriac (embedded in a work called *The Testament of our Lord*, and in its present form of about A.D. 350). The second recension seems to have been made in the 4th cent., and in this the original Greek survives, with versions in Coptic and Ethiopic.

In addition to these there is what is known as the *Didascalia*, a work which forms the basis of the first six books of the *Apostolic Constitutions*, the 8th book of which is the latest recension of the Church Orders. The 7th book of the *Apostolic Constitutions* is based on the *Didache*, the whole work belonging to the second half of the 4th century. In this extremely valuable collection of documents we have a detailed description of the Eucharistic liturgy of the 3rd and 4th centuries.

The two divisions of the Eucharistic liturgy are still clearly marked. First comes the *Præanaphora*, consisting of a series of lections from Law, Prophets, Gospels, Acts, and Epistles, apparently unfixed in number, interspersed with psalms which survive in the introit, gradual offertory, and communion of the Latin Church. These are followed by the sermon, and then, as in Justin, comes the prayer for all estates, after which catechumens and those under penitence depart. Then follows the anaphora introduced with the kiss of peace. The anaphora begins with the 'Sursum corda' and Preface. The Preface, or thanksgiving, contains thanksgiving for all God's mercies to mankind, leading up to the Passion and an account of the institution, and ending with the anamnesis, or formal act of remembrance, and the invocation of the Holy Spirit, the whole concluding with the Lord's Prayer. After the communion come the act of thanksgiving and the dismissal.

This construction of the liturgy appears in all these documents, the later recensions already show-

ing developments. Thus in the earlier Church Order it is still definitely left to the celebrant to use his own words, the forms provided being apparently a model, or for the use of those who had not a ready flow of words. It is in the invocation of the Holy Spirit that the most interesting development took place. The invocation was originally an invocation of the Holy Spirit on the act of communion, a prayer that those receiving might receive the full virtue of the sacrament. This idea extended gradually to the idea of the invocation of the Holy Spirit on the elements that He might make them the Body and Blood of the Lord. The invocation of the *Apostolic Constitutions* is half-way between the two; that of St. Cyril is definitely on the elements, as is the invocation in all later Eastern liturgies, which, however, retain some signs of the earlier idea. In the liturgy of Sarapion, bishop of Thmuis in Egypt (c. A.D. 360), we have perhaps the first example of a liturgy used as it was written. This liturgy consists of the anaphora only, and is interesting, moreover, in the fact that the invocation is of the Word and not of the Holy Spirit. The liturgy generally tended to become definitely a fixed and written service about the end of the 4th century.

In the East the extant liturgies are all of the same structure as that of the *Apostolic Constitutions*, and have developed only in length.

In the West the history of the liturgy is not so clear. In the work once attributed to St. Ambrose, the *de Sacramentis* of c. A.D. 400, there is an account given of the liturgy. This liturgy is apparently that underlying the later Roman Mass, and already contains the chief prayers of the latter. The later history in the West is obscure. In Charlemagne's time there were two types of liturgy extant in the West, the Roman and that called the Gallican. The latter type, less formal and much more verbose than the Roman, was displaced by it, and survives only in the Mozarabic rite and in the Ambrosian Liturgy of Milan, though the latter has been very much Romanized.

It is from the Roman that all other Western liturgies are derived. Thus the uses of England—the Sarum, York, Hereford, and Bangor—are all Roman, with the exception of certain prayers peculiar to the use added. And this is true of very many Continental uses, all of which had their own peculiarities, and of which those of France survived till the middle of the 19th cent., when they were displaced by the Roman rite. All alike are fundamentally Roman. The English Prayer Book is based on the older pre-Reformation uses, and is thus Roman in type. See also art. LITANY.

2. The daily offices.—The Eucharist was from the first the central act of Christian worship, but alongside of this other forms of additional worship very soon sprang into being. We have seen, e.g., that the liturgy is formed of two parts, the *Præanaphora* and the *Anaphora*, and that the union of these two was at first very loose. In fact, it seems that the former could be and was used separately with a sermon. So it was used, in certain places—e.g., Alexandria—on the station days, Wednesday and Friday. But the growth of other services was very early, and this too seems to have been a Christian development of Jewish devotion. In the book of Daniel there is a reference to three set hours of prayer, and perhaps the same is implied in Ps 55¹⁷: 'Evening, and morning, and at noon-day, will I pray.' Again in the Acts we find the three hours—the third, sixth, and ninth—observed as times of prayer. In the *Didache* the Lord's Prayer is ordered to be said three times a day. Tertullian and the Church Orders refer to prayer at the third, sixth, and ninth hours, but these were private devotions only and said at home.

There were, however, apparently, when it was possible, morning and evening prayers said publicly, and forms of these prayers are given in the *Testament of our Lord* and the *Apostolic Constitutions*, consisting of psalms and prayers. Gradually the three hours began to become times of public service, and this was perhaps largely due to the rise of monasticism, by which these hours tended to become common services in the case of men and women living in communities. In addition to these there was the night office, which originated apparently from the vigil of Easter, which in early days was strictly kept, and was extended to the eves of local saints and thence became a definite night service. The night service seems to have originated as a regular observance in Syria, and it was introduced into the West by Cassian—the mattins of the Breviary. In the *Peregrinatio of Etheria (Silvia)* we are told that the hours observed at Jerusalem were mattins, the sixth hour, the ninth, and vespers, and to these in Lent was added the observance of the third hour. Eventually the offices in the Breviary amounted to eight—mattins, lauds, prime, terce, sext, none, vespers, and compline. Originally monastic, they were enjoined on all clergy, and the laity were expected to (and did) attend at least some of them.

3. Popular devotions.—But the hours tended to become more and more a clerical office, and the devotional book of the laity from the 10th or 11th cent. is the *Little Hours* or the *Primer*. The 'little hours' were originally additional devotions in honour of the Blessed Virgin, and were generally called 'the Hours of the Virgin.' But they speedily became the popular devotion of the laity, and as such tended to develop so as to meet the needs of lay folk. Thus the 'little hours' contained a series of hours of prayer, sometimes several such series—e.g., 'the Hours of the Virgin,' 'the Hours of the Cross,' 'the Hours of the Holy Ghost.' To these were appended the gradual psalms, the penitential psalms, sometimes the whole Psalter; also the offices of the dead, the commendation, generally a litany, and various prayers for various purposes. These *Horæ* were very popular and very common, both in Latin and in the vernacular. They are frequently mentioned in wills, and a considerable number of them survive to the present day. Other popular works there were, such, e.g., as the *Layfolks' Mass Book*, instructing folk how to occupy their time devoutly at the Mass. But the *Primer* remained the book of the laity.

The Reformation of course made a great difference. The fact of the Reformed service-books being in English tended rather to obviate the need of such books as the *Primer*. But for some time after the Reformation editions of the *Primer* continued to be issued. Three primers were issued in several editions in the reign of Henry VIII. Of these the first, Marshall's *Primer*, contained a good deal of novelty. It contains the hours of prayer, dirge, and the commendations, but with an admonition against praying for the dead. It also contains a good deal of instruction and exposition of a reforming type. This book appeared in 1534, and was denounced in Convocation, but was reissued at least twice. In 1539 the *Primer* of John Hilsey, bishop of Rochester, appeared. This contains the hours and dirge, but many of the lessons are changed to new ones, the litany with many of the saints omitted, and an instruction on hearing Mass, and other matter of a devotional and instructive kind. Both these primers were superseded by *The King's Primer* in 1545 and its Latin form, the *Orarium* (1546). These were much less pronounced than the former books, and contained the hours, penitential psalms, litany, dirge, and commendations, the psalms and devotions of the

Passion, and a few private prayers. *The King's Primer* was reprinted in the reign of Edward VI., and again in 1551 with some omissions—e.g., the 'Hail, Mary,' and the names of the saints in the litany—and again in Mary's reign. In 1553 appeared the *Primer* of Thomas Cottesford. It is of an entirely different character from the preceding books, and is simply a book of private prayer for each day of the week, followed by the collects and 'sundry godly prayers,' omitting entirely the hours, etc.

In Elizabeth's reign the *Primer* of 1551 was reprinted in 1559 and a very similar edition in 1566. The *Primer* of 1553 was reprinted in 1560 and 1568. Also in 1560 she published a Latin form of her primer, the *Orarium*, differing, however, in some respects from the English book. In 1564 appeared her *Preces Private*, containing a Latin order for mattins and evensong similar to but not the same as that of the Prayer Book, with hymns, and a large collection of various forms of devotion. This was republished with some additions in 1573. A *Book of Christian Prayers* appeared in 1569, and was several times republished (with some alterations from the original edition) in Elizabeth's reign and in the reign of James I. This consists of many devotions for various occasions, and has the litany as an appendix.

By this time the English *Book of Common Prayer* seems to have become to lay people what the *Primer* was to them in the days of the old Latin services. Devotional books henceforth were put forth only by private enterprise, and were simply intended to be used with the Prayer Book. One exception perhaps may be instanced, and that is Cosin's *Collection of Private Devotions*, which he published in 1627, and which is based on the *Primer* of Elizabeth of 1560 and follows the old arrangement of hours. Later devotional books which had a great vogue may be instanced, such as Bishop Andrewes' *Preces Private* (Oxford, 1675), Jeremy Taylor's *Holy Living and Holy Dying* (London, 1636), Bishop Wilson's *Sacra Privata* (London, 1900), and through the 18th cent. the Prayer Book was commonly bound up with a *Companion to the Altar*, containing devotions for preparation for communion and for communion, and forms of thanksgiving. In the 19th cent. an immense number of devotional books has been issued—too many to deal with here.

PRAYER (Egyptian).—Of forms of prayer in Egyptian ritual little is known. Among the magical formulae, addresses, statements, and adorations in the daily ritual of the temples there are few, if any, words of request; in one passage, when the officiant in the temple of Amen-re exclaims, 'Come unto me, Amen-re, open for me the gates of heaven, throw open for me the gates of earth,' etc., the demand seems directed to carrying out the immediate objects of the ritual on behalf of the deity rather than the direct benefit of any one (cf. A. Moret, *Le Rituel du culte divin journalier en Egypte*, Paris, 1902, p. 81 [several prayers in this tr. would be better interpreted as direct statements]). The funerary ritual is similar,

but late copies contain a short prayer to all the gods for the welfare of the dead (E. Schiaparelli, *Il Libro dei Funerali*, Rome, 1882-90, ii. 108).

While attitudes of adoration, submission, etc., are represented frequently on the monuments, there seems to be none which is distinctive of prayer. Of times and places for prayer also little can be said; sunrise and sunset appear to have been the special hours for adoration of the forms of Re, the sun-god; the graffiti on temples and sacred places belonging chiefly to the late ages of paganism show that prayers were offered in and about them.

From the Old Kingdom very little is preserved in the nature of prayers beyond the funerary formula (see below); this applies even to the enormous body of the Pyramid Texts in which ritual charms and hymns are brought together for the welfare of the dead king. The texts of the Middle Kingdom are more productive in this respect. In the New Kingdom, especially after the days of Akhenaton (the enthusiastic monotheist and heretic at the end of the XVIIIth dynasty), an age of personal piety began in which the worshipper turned naturally to his god for protection, help, and comfort. This spirit, finding utterance in combined hymns and prayers, was never lost, though formalism and magic reasserted their sway with greater strength than ever in the lives and writings of the ultra-religious Egyptians.

The funerary formula.—A form of prayer for the comfort of the dead, beginning with an obscure phrase, 'Grace that the king grants, grace that Anubis (or other gods) grants,' is seen everywhere from the Old Kingdom onwards, and continues almost to the end of paganism. In the Old Kingdom the prayer, as prescribed on the great tombs, usually for a good burial after a good old age, for food, etc., daily and on the feast days, and 'to travel on the roads on which worthy veterans travel,' etc., is addressed to the funerary gods; later it was addressed also to local and other deities and often greatly developed according to individual taste. Tombstones request the passer-by to repeat it, adjuring him by his love of life, hatred of death, and devotion to his local god, and by his desire to bequeath his office to his children, and remind him that it will cost him no more than a little breath.

Salutations.—In speech and in writing these were prayers. After the name of royalty or a superior it was proper to add, '(May he continue) living prosperous and in health.' Letters of the Middle Kingdom end, 'May your hearing (of this) be fortunate.' In the New Kingdom a letter addressed to a king begins with prayers for his prosperity and long life (Griffith, *Hieratic Papyri from Kahin and Gurob*, London, 1898, pp. 67 ff. and 91). In later times a petition or letter to a great man commences, 'May Ammon cause his life to be long.'

In early times to 'lift up the voice' (probably wanton shouting) in the tomb chapel was considered a gross offence, and doubtless both tomb and temple were places of solemn silence during the greater part of the day; hence religion tended to be associated with silence. On the vivid realization in the New Kingdom of personal relationship between the individual worshipper, however humble, and his protecting deity, we find insistence laid upon the value of secret prayer and contemplation.

'Thoth is as a sweet well to him who thirsts in the desert, closed to him who finds utterance, open to him who is silent' (*Papyrus Salher*, i. 8, 5-7); 'Be not of many words, for in silence thou shalt gain good. . . . As for the precinct of God, his abomination is crying out; pray thou with a desiring heart whose every word is hidden, and he will supply thy need and

hear thy speech and receive thy offering' (*Maximes d'Art*, 3, 1-4; see J. H. Breasted, *Development of Religion and Thought in Ancient Egypt*, New York, 1912, p. 355).

At the same period models of human ears and stelæ sculptured with ears were dedicated in the temples to the succouring god or goddess, 'who heard the prayer of the traveller afar off'; and in a group of little shrines in the necropolis of Thebes votive stelæ were set up in honour of various deities, recording the plagues inflicted on the sinner and their goodness to the repentant who sought their aid.

The goddess 'is a lion; she smiteth as a fierce lion smiteth and pursueth him that trespasseth against her. I cried to my mistress and found that she came to me with sweet breath. She was gracious to me after she had caused me to see her hand. She turned again to me in favour, she let me forget the sickness that was on me,' etc (Erman, 'Denksteine aus der thebanischen Grabstadt,' in *SBZ*, 1911, p. 1036).

LITERATURE.—An elaborate examination of the funerary formula by Gardiner, who explains it as a statement rather than a prayer, is printed in N. de G. Davies and A. H. Gardiner, *The Tomb of Amenemhät*, London, 1915, p. 79 ff. Hymns and prayers prefixed to the *Book of the Dead* are tr. by E. A. Wallis Budge in various edd. of that text.

F. LL. GRIFFITH.

PRAYER (Finns and Lapps).—I. Ancient Finns and Lapps.—The ancient Finns and Lapps attributed to every natural object a living spirit. The Lapps sometimes called these spirits 'men'; water-spirits, e.g., were known as *cacce-olmak*, 'water-men.' Indeed the relations between men and spirits were at first, as Castrén has pointed out,¹ like those between men and men. As a man would naturally call a neighbour to his assistance rather than a stranger, so the ancient Finns and Lapps would pray to familiar spirits, like those of well-known trees and streams, rather than to remote beings, like sky-spirits, whom they did not know and could not expect to control. But spirits came to be thought of as free, personal beings, able to move about and occasionally visible, whose existence was not entirely dependent upon the objects of which they were the spirits and guardians, so that the spirit of one object might guard also other objects. In the course of time (before A.D. 600) they were named *haltiat* (Finnish) or *haldek* (Lappish), a Scandinavian word meaning 'rulers' or 'guardians.' The most important spirits were undoubtedly those of the dead. So awe-inspiring were the spirits of dead men buried in the forest or by the side of lakes and rivers, and so much more full of power than any other spirits of land or water, that they were credited with the guardianship of animals and fish, which could not be taken without their permission. Thus, when the Lapps prayed for help in hunting, as we are told they did every morning and evening,² to Leib-olmai, 'alder-tree-man,' the spirit to which they prayed was a forest-god, who was probably, like Tapio and Hiisi, the forest-gods of the Finns, connected with the cult of the dead, and who was the tutelary spirit of the bear, the most powerful animal that they knew. Again, when they prayed, as they did constantly,³ to 'water-men' to aid their fishing, they were addressing themselves to local spirits of the dead who guarded different fishing-places. Moreover, the spirits of the dead were thought to be still in very close relationship with the living, whom they could either help or injure, so that their favour was in every respect of the utmost importance. There were several methods by which they might be approached, viz. through (1) idolatry, (2) reincarnation, (3) shamanism, and (4) the use of special means and instruments.

³ *Id.*

(1) Among the ancient Finns spirits were located in pillars of stone or wood, in rocks or trees of peculiar appearance, and in pebbles, twigs, or rude images.¹ All the Finnish tribes seem to have possessed as household gods loose stones or faggots, images, or dolls, which almost certainly embodied the spirits of dead ancestors.² The Lapps too worshipped idols of stone or wood called sometimes by the Scandinavian name *stortjunkare*, 'great governors,' sometimes *seitas*, sometimes *passagedge*, 'holy stones.'³ Every Lapp family and clan had their *stortjunkare* standing near their settlement, and private persons sometimes had one or more of their own. Prayers were offered to these idols with both communal and private oblations.⁴

The Lapp Fjellner described to von Düben a communal sacrifice of which he had been an eye-witness, where the worshippers knelt down and prayed after a sacrificial meal.⁵ A man, before going to hunt or fish, kissed his *seita* three times, and promised it some of his prey.⁶ A Lapp told Fellman that his *seita* helped him as long as he kept it in a good humour.⁷ If *seitas* did not help, they were often whipped or abandoned.⁸

(2) Spirits of the dead might also be embodied in the person of a living man. They then became his guardians, and he could make a bargain with them that they should help him whenever he called upon them. According to the Lappish *saivo*-doctrine, ancestors came to life again in persons named after them; by obtaining the names of several ancestors a Lapp could obtain several guardian-spirits.

(3) Both Finns and Lapps at one time made use of intermediaries between themselves and spirits. These were the shamans (Finnish *noitas*, Lappish *noaides*), men who, owing to their exceptional nature and training, could communicate with the spirits of the dead, and through them learn the wishes of remote gods. The Samoyed shamans sent their spirits up to the sky-god Num to ask his will.⁹ Various Finnish tribes practised divination for a like purpose, and Esthonian and Karelian shamans are sometimes described as 'diviners.' The Lapps divined through their magic drums, but they retained the primitive mysteries of shamanism; for, when their divination failed, as often happened, it was still necessary for the *noaide* to make a journey to the world of the dead, to appease the spirits or to obtain their help.

(4) Distant spirits, like those of the dead, could not hear men's feeble voices. But, if ordinary words and tones could not reach them, they might perhaps hear strange shouts, mysterious whispers, or the noise of a drum. Two special means were used by the Lapps to attract the spirits' attention: (a) *juoigen*, incantation, and (b) *myran*, magic action, especially magic drumming.

(a) *Juoigen*.—This was a sacred chant, 'the tenor of which no Lapp has ever been willing to confess.'¹⁰ It was taught to every Lapp boy, 'so that the boy, before he could speak distinctly, had mastered the elements of this rude melody, or rather, if it pleases better, this howling.'¹¹ Acerbi described it as the most

Högstrom (p. 193) calls these idols *saivos*. Their connexion with the *saivo*-cult, or worship of the dead, was first established by Castrén, p. 207 ff.

⁴ It should be stated that women were rigidly excluded from this worship. They paid their devotions apart to certain birth-goddesses.

hideous kind of yelling.¹ In E. Lindahl and J. Ohrling's *Leaicon Laponicum* (Stockholm, 1780, p. 96) *juoket* is defined as 'Laponum more canere, tremulo cantu canere'. The words of such incantations are not known.² Fjellner said that some prayers were presented in a whisper with words not used in ordinary speech.³ The omission of one word would render the chant ineffective, and might cause a shaman's death.⁴

(b) *Myran*.—When the help of spirits was sought on important occasions, several *noaides* went into a hut set apart for the purpose, and there shamanized 'per rō juoigen et myran,' i.e. by incantations mixed with magic action and especially drumming.⁵ Although the magic drum was adapted by the Lapps and others to divination, its original object was to attract the attention of the spirits of the dead who lived underground out of ordinary ear-shot, and who were thereby summoned to place themselves inside the drum and help the shaman.

The *kantanie* of the Lapp *noaides* resembles that of Siberian and other shamans, and the best accessible account is that translated from Mikhailovskii in *JAI* xxiv 145 f.⁶ The *juoigen* which accompanied it was of great importance, and, if the on-lookers ceased singing during the *noaide's* trance, he could never come to life again.⁷ Nevertheless, the main feature of the performance was coercive action. Prayer was in a very rudimentary stage.

2. *Finns of Finland*.—It seems certain that the Finns of Finland, like other members of the Finno-Ugrian family, anciently used shamanistic methods of coercing spirits similar to those of the Lapps. But they soon left the Lapps far behind, partly because they came under Christian influences some centuries earlier, but chiefly because their higher intelligence led them even before that time to assimilate the culture of more advanced neighbours. The Finns must have reformed their old religion long before the 12th cent., when Christianity was introduced to them. There is evidence of this in their traditional poetry, known chiefly through Lönnrot's compilation, the *Kalevala*⁸ (*q.v.*), which, though very largely mediæval, is not entirely so, and reflects much of the old life of the Finnish people, but has little or nothing to say of primitive shamanism.⁹ The heroes of Finnish poetry are magicians, but they do not perform any shamanistic actions.¹⁰ Their magic is carried out by the utterance of word-charms. For instance, the rivalry between Finnish and Lapp wizards which is expressed in the strife of Väinämöinen and Joukahainen in *Kalevala*, vi., is a contest not in *kantanie* but in the singing of spells. Divination is practised by rhabdomancy¹¹ or by the sieve.¹² The magic drum has been forgotten and is never mentioned.¹³ The rude incantations which accompanied the shaman's performances have given place to those magic songs which are so prominent in Finnish poetry. Of the large number of such songs published by Lönnrot in 1880 under the title *Loitsurunoja*¹⁴ most seem to be later than the 12th

cent., and few can have come from professional magicians. They are certainly popular products, and presuppose a revolt against the official shamanism which prevailed generally among Finno-Ugrian peoples.¹ As a result of this reformation laymen must have taken to themselves the power of approaching spirits which had been restricted to an initiated class. Personal supplications, and word-charms which were always benevolent and which were gathered mainly from the common stock of European magic, entirely superseded the crude mimetic actions and unintelligible incantations by which the official wizard tried to enforce his will on spiritual powers. Thus the prayers and spells of the Finlanders were not, like the Accadian formulae to which Lenormant compared them,² priestly incantations in a secret tongue, nor, like the Lapp *juoigen* and *myran*, mere mechanical acts of sorcery, but they were aids to popular religion belonging generally to mediæval and comparatively modern times, when a man had learnt to approach the spirit world on his own account either with spells or with genuine prayers.

Lönnrot's collection comprises, besides general formulae of magic, a large number of exorcisms, which are borrowed mainly from Scandinavia, and include some well-known and wide-spread charms, such as the Merseburger Gebet.³ It also contains 'origins,' or 'births' (*synty*),⁴ songs which describe fantastically, and often in a derisive manner, the genesis of animals, diseases, and other things, the aim of the singer being, apparently, to demonstrate the feebleness of the object and induce it to act as he wishes. The remaining 73 songs are called 'prayers,' most of them having several variants, some as many as 80. They are addressed indifferently to old Finnish gods and spirits, such as Ukko, Husi, Tapio, Ahti, etc., and to various objects of Christian worship, the most popular of whom is the Virgin Mary. She is addressed sometimes by her own name, but often by beautiful Finnish epithets such as *Suveltar*, 'daughter of summer,' *Etelatar*, 'daughter of the south wind,' *Luonnotar*, 'daughter of creation,' *Kivutar*, 'daughter of pain.' A large proportion are hunters' and fishers' prayers. Most of these seem comparatively modern, and so do the agricultural prayers, excepting perhaps those relating to a vegetation-spirit known as *Sampsä Pellervoinen*, which were sung at the spring sowing festivals of 'Ukko's Cup' and 'Ukko's Chests,' vestiges of which have been noted in recent years. These sowing charms may be read, woven together by Lönnrot, in *Kalevala*, ii.⁵

The 'prayers' generally bear out Lencqvist's remark that the Finns pray only for material benefits.⁶ Nevertheless, they reveal the kind and simple heart of the Finn, his warm love of nature, and his peculiar but genuine gift of poetic imagination. We may quote a short sailor's prayer:⁷

Ilo-tuntu ihmäinen.

'O bird of joy, bird of the air,
Fly whither I command,
Fly to the infinite East,
Fly to the chambers of the morning Sun!
Puff out your cheeks,
And blow a favouring gale;
That I may have a fair wind,
And may freely pass
Over the wide waters,
Across the far-spread sea.

LITERATURE.—Most of this is indicated in the notes; other critical literature is published in Finnish.

CHARLES J. BILLSON.

PRAYER (Greek).—I. Expressions used to denote prayer.—The normal expression in Greek for 'prayer' is *εὐχῇ*, for 'to pray,' *εὐχεσθαι*, with

¹² Lencqvist, p. 61; *Loitsurunoja*, p. vii f.

¹³ The only allusion to it known to the present writer is in *Loitsurunoja*, p. 29, where *kankannus*, 'hand-drum,' is used as a synonym of the Laplander. Friis's view (pp. 147, 199) that *sampo* was a magic drum is quite untenable.

¹⁴ A good deal of this material had been used in the *Kalevala*, and some had been published by earlier collectors; e.g., see

compounds *προσεύχεσθαι*, *ἐπεύχεσθαι*. Another word, used chiefly by the poets, is *λιτή*, or rather *λιταί*, with its corresponding verb *λίσσεσθαι*.

In Homer the regular verb of prayer addressed by men to the gods is *εὐχομαι*. Only in one passage (*Il.* ix. 501) does he use *λίσσομαι* in this way. On the other hand, Homer has *εὐχῆ* (in plur.) only in *Od.* x. 526; *λιτή* (in plur.) in *Od.* xi. 34, *Il.* ix. 502.

Although, naturally enough, these expressions tend to get confused, it seems to the present writer that there is a fundamental distinction between them. *Εὐχομαι* corresponds very closely to the Latin *voueo* in its double sense of 'vow' and 'wish' and hence is the regular word for a prayer to the gods for future blessing. On the other hand, *λιταί* are not properly prayers for future blessing, but are in the nature of prayers for forgiveness, prayers of atonement. This is borne out by the use of the corresponding Latin verb *lutare*, which is not 'to pray,' but 'to propitiate.'

Thus, to take first *Od.* xi. 34 f. (the passage occurs in the *Nekyia*): Odysseus digs a trench into which he pours offerings to all the dead. He then vows to perform certain sacrifices to them on his return to Ithaca. Then the passage proceeds: τοὺς δ' ἐπεὶ εὐχολήσῃ λιτήσῃ τε, θύεα νεκρῶν, ἀλλοσύμην, where one may suppose that *εὐχολαί* refers to his vows, *λιταί* to his entreaties or propitiatory prayer.

Turn now to *Il.* ix. 496 ff., which Leaf translates thus: 'Therefore, Achilles, rule thy high spirit; neither beseecheth it thee to have a ruthless heart. Nay, even the very gods can bend (συνεπτοὶ δέ τε καὶ θεοὶ αὐτοῖ), and theirs withal is loftier majesty and honour and might. Their hearts by incense (θύεσσιν), and reverent vows (εὐχολῆς ἀγανέρσιν) and drink offering (κοῦρῃ) and burnt offering (κνίστῃ) men turn with prayer (λίσσόμενοι), so oft as any transgresseth and doeth sin. Moreover, Prayers of penitence (λιταὶ) are daughters of great Zeus, halting and wrinkled and of eyes askance, that have their task withal to go in the steps of Sin (Ἄρν). For Sin is strong and fleet of foot, wherefore she far outrunneeth all Prayers, and goeth before them over all the earth making men fall (βλάπτουσα ἄνθρωπους), and Prayers follow to heal the harm (αἰ δ' ἑξάκλονται ὀπίσσω). Now whosoever reverenceth Zeus's daughters when they draw near, him they greatly bless and hear his petitions; but when one denieth them and stiffly refuseth, then depart they and make prayer unto Zeus the son of Kronos that Sin may come upon such an one, that he may fall and pay the price. Nay, Achilles, look thou too that thou attend upon the daughters of Zeus the reverence that bendeth the heart of all men that be right-minded. For if Atreides brought thee not gifts and foretold thee not more hereafter, but were ever furiously wroth, then I were not he that should bid thee cast aside thine anger . . . but now he both offereth thee forthwith many gifts, and promiseth thee more hereafter, and hath sent heroes to beseech thee . . . dishonour not thou their petition.'

An examination of Greek literature confirms this view of *λιταί*.

Hesiod has neither *λιταί* nor *λίσσομαι*, and only one case of *λιτανεύω* (*Theog.* 469)—of the prayer of Rhea to Earth and starry Heaven, before the birth of Zeus. On the other hand, *εὐχαί* occurs (*ib.* 419) of prayer to Hecate and (*frag.* 246) in a proverbial line, ἔργα νέων, βουλὰι δὲ μέσων, εὐχαὶ δὲ γερόντων. *Εὐχομαι* occurs in *Theog.* 441, *Works and Days*, 465, 788, and *frag.* 81; *εὐχολή* in *Sc.* 68. Theognis has neither *λιταί* nor *λίσσομαι*, but he has *εὐχῆ* (341) and *εὐχομαι* (13, 129, 171, 1141, 1151). In the group of early lyric poets—Archilochus, Simonides, Mimnermus, Solon, Tyrtaeus—there is no case of either *λιταί* or *λίσσομαι*, while *εὐχομαι* occurs in Simon. *frags.* 7, 84, and Solon, *frag.* 5. In Pindar *λίσσομαι* has become practically the same thing as *εὐχομαι* (*Pyth.* i. 71, *Ol.* xii. 1, *Nem.* iii. 1, *frag.* 90, *Pyth.* iv. 207), and in *Isth.* v. (vL) 45 is combined with *εὐχαί* *εὐχαῖς ὑπὸ θεοπετάλαις λίσσομαι*. But *λιταί* occurs only twice: *Ol.* ii. 88, where Thetis Ζηνὸς ἱπποῖ λιταῖς ἐπεισε, and got Achilles conveyed to the Islands of the Blessed, and *Ol.* viii. 8. What appears to be an adjectival form occurs twice: *Ol.* vi. 78, *λιταὶ θυσίαι* (sacrifices of propitiation offered to Hermes, no doubt in his character of ψυχοπομπῆς—the right use of *λιταί*) and *Pyth.* iv. 217, *λιταὶ ἐπασιδαὶ* (propitiatory incantations—again the normal use of *λιταί*). In *frag.* 21, *ἄλτην* 'Hé, it is, as the scholiast says=εὐκαταίαν. In Bacchylides *λίσσομαι* occurs in v. 100, where it is definitely of prayers to appease the anger of Artemis—a chthonian deity—and in x. 69, where it is used in the Homeric sense of an appeal by mortals to mortals. He has no example of *λιταί*.

When we turn to the dramatists, we find that Aeschylus has *λίσσομαι* once only (*Suppl.* 748), in an appeal by a mortal to a mortal; *λιταί* he has in *Prom.* 1009, *Sept.* 143, 173, 214, 320, 326, 620, *Pers.* 499, *Ag.* 223, 396, *Eum.* 362, *Suppl.* 173, 378, 621. An examination of these passages confirms our general view. *Εὐχομαι* and *εὐχαί* occur in Aeschylus very frequently, and are his normal expressions for 'pray' and 'prayer.' The usage of Sophocles is quite in accordance with our position. He has *εὐχαί* in *Œd.* *Tyr.* 239, *El.* 633, *εὐχῆ* in *Ph.* 771, and *εὐχομαι* frequently. *Λίσσομαι* as a general term for entreaty occurs some seven or eight times; *λιταί* occurs in *Ph.* 60, 495, *Œd.* *Col.* 485, 1015, 1311, 1554, *El.* 137, *Ant.* 1006—all normal uses. In Aristotle

phanes *εὐχαί* occurs three times, *εὐχῆ* twice, *εὐχομαι* twenty times, *εὐχολή* once; he has no case of *λιταί*; *λίσσομαι* occurs in *Pax*, 382, addressed to Hermes; *λιτομαι* is coupled with *εὐχαί* in *Th.* 313; in *Th.* 1040 *λιτομαι* is definitely 'supplicating.'

Of prose authors Herodotus has *εὐχομαι* and *εὐχολή*, no case apparently of *λίσσομαι*, but *λιταί* (s. 105) of propitiatory prayer. Thucydides has no example of *λίσσομαι* or *λιταί*, nor do the words occur in any of the orators.

Εὐχαί, then, is the normal Greek word for prayer; *λιταί* are in the nature of penitential or propitiatory prayer; *προσεύχομαι* is normally 'thanksgiving' (e.g., Aristoph. *Plut.* 841, 958, *Ran.* 891, *Pax*, 560), though also used (e.g., Plato, *Crit.* 106 A) as practically equivalent to *εὐχομαι*.

Other expressions for 'prayer' and 'pray' are *ἀρή* (*ἀρά*) and *ἀρόμαι*.

There is no clear distinction in Homer between *ἀρόμαι* (occurring some 39 times) and *εὐχομαι*, with which, indeed, it is frequently expressly equated, as, e.g., *Il.* v. 114, 121, x. 295 f.; and the same is true of *ἀρή* (occurring six times)—e.g., *Il.* xv. 377, *εὐχόμενος* followed by *ἀρόων* (378). The fact is that 'prayer' and 'curse' are essentially undifferentiated. Thus it happens that Althaea's prayer (*Il.* ix. 565 ff.) is a prayer for death to her son Meleager, and is therefore a 'curse,' just as it happens that *ἀρήσας* 'Ερινύς' (*Od.* ii. 136) is a summoning of the Erinyes to exact vengeance and so amounts to a curse. The notion that it could mean 'curse the Erinyes' is utterly wrong, being consonant neither with the Homeric use of *ἀρόμαι* nor with Greek syntax. It is noticeable that Homer has *ἀρήσας* = 'priest' (*Il.* i. 11, 94, v. 78). In Hesiod *ἀρόμαι* does not occur and *ἀραί* in the one example of it (*Works and Days*, 726) = 'prayers.' Pindar has *ἀραί* once only (never *ἀρόμαι*) in *Isth.* v. (vi) 43, where it = 'prayers.' But in the dramatists 'curse' is the normal, or even the invariable, sense of *ἀρά* (*ἀρα*)—e.g., Aesch. *Sept.* 70, 695, 833, 894, 954, *Eum.* 417, *Ch.* 406, 593; Sophocles, *Œd.* *Tyr.* 295, 744, 820, *Œd.* *Col.* 152, 956, 1377, 1386, *Ant.* 423, etc. So *ἀρόμαι* is 'curse' in Aesch. *Prom.* 912, *Sept.* 633 (the only examples); Soph. *Œd.* *Tyr.* 251, 1291, etc. Yet Sophocles has the verb in the sense of 'pray' three times (*Ag.* 504, *Œd.* *Col.* 1447, *Tr.* 48). In later Greek the sense of 'curse' prevails completely.

2. Attitude in prayer.—The most striking characteristic of the Greek attitude in prayer is directness of address. The worshipper endeavours to be, so far as possible, literally in touch with his god.

Thus, in Pindar, *Ol.* vi. 58, when Iamus prayed to Poseidon, 'he went down into the midst of Alpheus [Poseidon being a river-god as well as a sea-god] and called on wide-ruling Poseidon his grandsons . . . and he stood beneath the heavens, and it was night.' So, in *Ol.* i. 71, Pelops 'came and stood on the margin of the grey sea, alone in the darkness of the night and called on the deep-voiced Lord of the Trident.' So, too, in Hom. *Il.* i. 348-351, 'Achilles wept and sat down apart . . . on the beach of the grey sea, gazing over the boundless deep; he stretched forth his hands and prayed instantly to his dear mother, 't e. to Thetis, a sea-deity.'

Typically, when Zeus or any other of the Olympians was invoked, the worshipper turned his face to the heavens (e.g., Hom. *Il.* iii. 364 f.: 'Thereat Atreides groaned, looking up to the wide heaven: "Father Zeus," etc.), the hands uplifted palms upwards (χείρες ὑπέρλα [Philostr. *Imag.* 341; Plutarch, *Compar. Philopolem.* et *Tit.* 2: τοῦ Ἰέρου τὰς χεῖρας εἰς τὸν οὐρανὸν ὑπέρλας ἀνατείνοντος, ἐστὼς καὶ προσευχομένου]; cf. the *manus supinae* of the Roman prayer [Verg. *Æn.* iii. 176, Ovid, *Met.* viii. 681; Hor. *Carm.* iii. 23. 1]). Of the veiled head (*caput velatum*) of the Roman worshipper (Verg. *Æn.* iii. 545; Cic. *de Nat. Deor.* ii. 3. 10, etc.) there is no trace in Greek, nor of the turning to the right (east) so typical of Roman prayer (Pliny, *HN* xi. 45, 251; Plut. *Marcell.* 6; Plaut. *Curc.* i. 69; Val. Flacc. viii. 246; Sueton. *Vitell.* 2; Stat. *Theb.* vi. 215; Livy, v. 21). Prostration was regarded as Oriental and un-Greek. Normally the Greek prayed standing upright. Yet a fragment of a bas-relief from the Asklepieion shows Asklepios standing upright and a woman on her knees before him, touching his ἰπέρτιον with her right hand (*REG* xxix. [1916] 131, p. 78).

If a sea-deity were invoked, the worshipper stretched his hands towards the sea (Hom. *Il.* i. 351), though Polyphemus, praying to Poseidon (*Od.* ix. 527), raises his hands to the starry heaven. In prayer to river nymphs the worshipper fixed his eyes on the water (Hesiod, *Works and Days*, 737 f.). Achilles in Troad, addressing his home

river Spercheios, looks over the sea (*Il.* xxiii. 143 f.). In prayer to a chthonian deity the hands were held downwards or placed on the ground:

'Come now swear to me by the inviolable water of Styx, and with one of thy hands grasp the fertile earth, and with the other the shining sea, that all may be witnesses to us, even all the gods below that are with Kronos,' etc. (*Hom. Il.* xiv. 271 ff.; cf. *Bacchyl.* v. 42, vii. 41).

Sometimes, to reinforce his prayer to a chthonian deity, the worshipper would beat the ground with his hands:

Althaea, 'grieved for her brethren's death, prayed instantly to the gods, and with her hands she beat upon the fertile earth, calling on Hades and dread Persephone, while she knelt upon her knees and made her bosom wet with tears, to bring her son (Meleager) to death; and Erinyes that walketh in darkness, whose heart knoweth not compassion, heard her from Erebus' (*Hom. Il.* ix. 565 ff.). 'Straightway the ox-eyed lady Hera prayed, striking the earth with the flat of her hand, and spake saying, "Hearken to me now, O Earth and the wide Heavens above, and ye gods called Titans, dwelling beneath earth in great Tartaros"' (*Hom. Hymn. Apoll.* 332 f.). 'So spake she and lashed the earth with her stout hand; and earth, giver of livelihood, was stirred, and Hera, beholding it, was glad at heart, for she deemed that her prayer would be fulfilled' (*ib.* 340 ff.); cf. *Paus.* vii. 15. 3: 'I know too that on the most important affairs most of the Phoenicians swear by the Petroma. There is a round cover on it, which contains a mask of Demeter Oldaria: this mask the priest puts on his face at the greater mysteries, and smites the Underground Folks with rods—I imagine, in conformity with some legend.' On Theocritus, vii. 106, 'And if, dear Pan, thou dost those things, may the Arcadian boys not smite thee on sides and shoulders with squalls, when there is little meat,' the schol. remarks: *Μουσικός φησὶν ὁρτῆν Ἀρκαδικῶν εἶναι ἐν ᾧ οἱ παῖδες τὸν Πᾶνα σκόλας βάλλουσι*; *γίνεται δὲ τοῦτο ὅταν οἱ χοροὶ λεπτὸν ἱερὸν θύσωσι καὶ μὴ ἰκανὸν ᾖ τοῖς ἐσθλούς*. Similarly, in *Colluthus, Rape of Helen*, 46 ff., Strife, who had not been invited to the marriage of Peleus and Thetis, 'rose often from her stony seat and again sat down: and with her hand she smote the broad bosom of earth and heeded not the rock. She would fain have burst the bars of the darksome hollows and roused the Titans from their pits beneath the earth and laid waste the heavens, the seat of Zeus who rules on high.'

3. The utterance of prayer.—Normally prayer was not merely thought, but uttered aloud. The same was the case among the Jews, as is well illustrated by the prayer of Hannah (1 S 1st):

'And it came to pass, as she continued praying before the Lord, that Eli marked her mouth. Now Hannah, she spake in her heart (מְדַבֵּרָה לְעַלְיָהּ); LXX, *ἐλάλει ἐν τῇ καρδίᾳ αὐτῆς*; only her lips moved, but her voice was not heard: therefore Eli thought she had been drunken.'

It would be easy to illustrate this practice from all periods of Greek literature:

Hom. Il. i. 450, ni. 275: *μεγάλ' εὐχέτο*, 'prayed loudly'; so *μέγα εὐχέτο* in *Od.* xvii. 280. Prayer is overheard (*Il.* xix. 255 f., *Od.* xvii. 248; *Xen. Sympos.* iv. 55: *καὶ πρῶτον ἐγὰρ σου ἤκουον εὐχόμενον πρὸς τοὺς θεούς*).

The loudness of the voice increased with the fervour of the prayer. It may rise to a *βοή*, or loud cry:

ἐγὼ δὲ θεοῖς ἐπιβόωμαι αἰὲν ἰόντας (*Hom. Od.* i. 278, ii. 143), precisely as, in a moment of great peril, Nestor *βόωσε παῖδα* *For* (*Pind. Pyth.* vi. 86).

Similarly, among the Romans, the mother prays more loudly for beauty in the case of her daughters than in the case of her boys, according to *Juvenal*, x. 289 f.:

*Formam optat modico pueris, maiore puellis
Murmure, cum Veneris fanum videt anxia mater.*

When prayer is not uttered or is uttered in a low voice, the motive is generally expressed or implied. And the motives are several.

(a) In *Hom. Il.* vii. 194 ff., the motive is apparently the fear that the knowledge of the prayer might enable the enemy to counteract it by some more potent spell; it might in fact 'give useful information to the enemy.'

Ajax is about to fight with Hector in single combat, and he asks the Greeks, while he is putting on his armour, to pray to Zeus 'in silence by yourselves that the Trojans may not know, or even openly, since we fear no one' (*σιγῇ ἐφ' ὑμῶν, ἵνα μὴ Τρῳεὺς γε γινώσκωσι*; *ἢ καὶ ἀμφαδῶν, εἴπει οὐ τινα δεῖδιμεν ἔμπης*).

(b) External circumstances might make a spoken prayer impossible.

Thus Odysseus, swimming for his life, 'prayed in his heart' (*εὐχέτο ἐν καρδίᾳ θυμῷ*) (*Od.* v. 444); and this may be the motive of *Il.* xxiii. 769, where Odysseus in the crisis of the footrace 'prayed to grey-eyed Athens in his heart.'

(c) Again, the motive might be a natural desire for privacy—a desire, as we say, to be alone with God.

Thus, in *Od.* xii. 333 ff., Odysseus says: 'Then I went away through the island that I might pray to the gods, if haply some one should show me the way to go. And when on my way through the island I had avoided my comrades, I washed my hands where was a shelter from the wind, and prayed to all the gods who keep Olympos.' So *Pind. Ol.* i. 71 f.: Pelops 'went nigh unto the gray sea alone in the darkness' (*ὅλος ἐν ὀρφνῇ*) to pray to Poseidon. So 'going apart' (*ἀπὸνυθεὶς κίων*) is said of one who prays (*Il.* i. 35, *Od.* ii. 260).

(d) The motive is obvious which makes Orestes pray silently or rather in a low voice in presence of Aigisthos:

*δεσπότης δ' ἔμειβε
ταῖαντι' ἤχε'*, οὐ γυγνίσκων λόγους (*Eur. El.* 808 f.).

(e) Another motive is modesty. This is especially the case with the prayer of the lover.

Thus *Pind. Pyth.* ix. 97 ff., of the successful athlete: 'Full many times at the yearly festival of Pallas the maidens have seen thee victorious and mutely prayed each for herself that such an one as thou, O Telesikrates, might be her beloved husband or her son' (*ἀφῳοί θ' ὡς ἑκάστα φίλτατον παρθενικαὶ πόσιν ἢ υἱὸν εὖχοντο*, δὲ *Τελεσικράτες*, ἔμμεν).

The opposite of *μέγα φθέγγεσθαι* is *ψιθυρίζω*, 'whisper,' and doubtless this explains the cult-title of *Ἀφροδίτη ψιθύρος*, to whom prayers were whispered (cf. *Tibull.* ii. i. 83; *Catull.* lxiv. 104).

(f) A leading motive is that the prayer is a shameful prayer.

Pythagoras (*Clem. Alex. Strom.* iv. 26, § 173) enjoined *μετὰ φωνῆς εὐχεσθαι*. *Seneca, Ep.* x. 5, quotes from *Athenodorus*: 'Know that you are free from all desires when you reach a stage where you ask nothing from God except what you can ask openly,' and he goes on to say that 'men now whisper the most shameful prayers to the gods; if any one hearkens, they become silent, and they tell to God what they do not want man to hear'; cf. *Hor. Ep.* i. 16, 59 f.; *Pers.* ii. 3-75; *Mayor*, on *Juv.* x. 280 f. Cf. the 'loud voice' of the Prayer Book.

(g) The prayers or incantations of the magician are naturally spoken in a low voice.

So in the OT is *619*: 'Seek unto them that have familiar spirits and unto the wizards, that chirp and that mutter' (*LXX* *ζητήσατε τοὺς ἐγγαστριμύθους . . . οἱ ἐκ τῆς κοιλίας φωνοῦσιν*).

4. The relation of the suppliant to his god.—In the earliest times the suppliant compelled his god to do his will—traces of which may be found in the beating of the ground and the flagellation of Pan mentioned above, and the smiting of the *ὑποχθόνιοι* in *Paus. loc. cit.*

The next stage is one of bargain, which is the typical form of prayer in Homer. This bargain-theory of prayer may assume different forms.

(a) If ever I did that for thee, so do thou this for me.

Thus *Hom. Il.* i. 35 ff. of the priest Chryses: 'Then went that old man apart and prayed aloud to King Apollo, whom Leto of the fair locks bore: "Hear me, lord of the silver bow, that standest about Chryse and holy Killa, and rulest Tenedos by thy might, O Smintheus! if ever I built a temple pleasant in thine eyes, or if I ever burnt to thee fat flesh of the thighs of bulls or of goats, fulfil thou this my desire." So *Od.* iv. 763 ff., *Il.* xv. 373 ff.

(b) If thou do this for me, I will do that for thee.

A typical example is *Hom. Od.* iii. 380 ff., where Nestor prays to Athens: 'Be gracious, O queen, and give me fair fame—for myself and my children and gracious wife; and I in turn will sacrifice to thee a heifer,' etc.; cf. *Il.* vi. 115.

One form of this is the explicit assertion that it is for the advantage of the gods to protect their worshippers.

Thus *Theognis*, 778 ff.: 'O Lord Phoebus, thyself didst build the High City, doing a favour to Alcathous son of Pelops; thyself keep from this city the froward host of the Medes, that with joy the people may send thee glorious hecatombs when spring comes round, rejoicing in cithara and delectable mirth, in psalm choir and song around thy altar.' Similarly and still more frankly, *Aeschylus*, in *Sept.* 76 f., makes Eteocles pray to the gods to save Thebes: 'Be our refuge. And I think I speak for our common interest: for a prosperous city honours the gods.'

(c) The third type is that which J. Adam (*The Religious Teachers of Greece*, Edinburgh, 1908, p. 46) has compared to our

'God of our fathers, be the God
Of their succeeding race,'

i.e., even as thou didst of old, so do also now.

Thus Hom. *Il.* i. 450 ff.: 'Then Chryses lifted up his hands and prayed aloud for them: "Hearken to me, god of the silver bow, . . . even as erst thou didst hear my prayer and didst me honour and greatly afflictedst the people of the Danaans, even so now fulfil me this my desire."' Cf. *Il.* i. 453 ff., v. 118 ff., x. 273 ff.; Pind. *Isth.* vi. 421. In *Il.* x. 284 ff. this type is combined with type (b).

(d) There is the type in which man makes no bargain, the normal type from the 5th cent. B.C.—e.g., Pind. *Ol.* xiv. 5, *Pyth.* v. 124; Aesch. *Ag.* 946 f.; Soph. *Ed. Tyr.* 187 f.; Demosth. *de Cor.* i., and *passim*.

It is to be noted that the personal piety of the worshipper—*εὐσέβεια*—was considered by the Greeks to make his prayer more likely to be answered.

Thus Hom. *Il.* i. 218: *ὅς τε θεοῖς ἐπιειθέσθαι, μάλα τ' ἔκλονον αὐτοῦ*, 'if a man obeys the gods, they surely hearken to him,' and Pind. *Ol.* viii. 8: *ἀνέται δὲ πρὸς χάριν εὐσεβίας ἀνδρῶν λαοῖς*, 'fulfilment is granted to the prayers of men for the sake of their piety.' Cf. Xen. *Mem.* i. 8. 3; Eur. frag. 946. Contrast the case of the wicked man: 'No god hears his prayers' (Aesch. *Ag.* 387; cf. Hor. *Carm.* iii. xxiii. 17; Pers. *Sat.* ii. 73).

5. The ritual of prayer.—The simplest form of prayer is little more than an ejaculation, and is typically expressed in Greek by the name of the god in the vocative case, followed by an infinitive (dependent on some word for 'give' or 'grant' understood) expressing the request.

Thus Hom. *Il.* vii. 175 ff.: 'So he spake and each marked his lot, and they cast them into the helmet of Agamemnon, son of Atreus; and the people prayed and lifted up their hands to the gods; and thus would one say as he looked unto the wide heaven:

Zeῦ ἄνα ἢ Δία τ' ἄλκ' αἰεὶ, ἢ Τυδῆος νιόν,
ἢ αὐτὸν βασιλῆα πολυχρῆστο Μυκῆν' ἴσ'!

Cf. Herod. v. 105, where Darius, hearing that Sardis had been burnt by the Athenians, 'called for a bow, and, having received one, he put an arrow into it and shot it into the air, with these words: *ὦ Ζεῦ, ἐκγενέσθαι μοι Ἀθηναίους τίσασθαι*.'

A still shorter form of the ejaculatory prayer is the use of the vocative alone—e.g., *Ἀπόλλων ἀποτρόπαιε* (Aristoph. *Av.* 61, etc.); Herondas, vii. 74: *Ἐρμῇ τε κερδεῶν καὶ σὺ, κερδῇ Πιεθοῖ*; cf. such expressions as 'Hercle,' 'mehercule,' 'medius fidius,' in Latin. The ejaculatory prayer is commended by Marcus Aurelius, v. 7.

The more elaborate ritual will be best explained by definite examples.

(a) The account of the Argonauts starting on their voyage in quest of the Golden Fleece:

'Now when that goodly crew were come to Iolkos, Jason mustered them with thanks to each, and the seer Mopsos prophesied by omens and by sacred lots, and with good will sped the host on board. And when they had hung the anchors over the prow, then their chief, taking in his hands a golden goblet, stood upon the stern and called on Zeus whose spear is the lightning, and on the tides of waves and winds and the nights, and the paths of the sea, to speed them quickly over, and for kindly days and the friendly fortune of a return. And from the clouds a favourable voice of thunder pealed in answer, and there came bright lightning flashes bursting through.

Then the heroes took heart in obedience to the heavenly signs; and the seer bade them strike into the water with their oars, while he spake to them of happy hopes; and in their rapid hands the rowing sped untiringly' (Pind. *Pyth.* iv. 188 ff.).

(b) Compare with this the famous passage in which Thucydides tells of the start of the Athenian expedition to Sicily in 415 B.C.:

'Now when the ships were manned and everything with which they were to put to sea was on board, the signal for silence was given by the trumpet and they made the customary prayers before putting to sea, not ship by ship but all together, led by a herald (*κέρυξ*) throughout all the army, marines and generals alike making libation with cups (*ἐκπόματα*) of gold and silver. And in their prayers joined also the general crowd on shore, not only Athenians but any other friendly person who was present. And when they had sung the psalm and finished their libations (*παιονίσαντες δὲ καὶ τελεῶσάντες τὰς σπονδὰς*) they put to sea' (vi. 82).

(c) Or, again, take what is really a Greek view, though it refers to a Carthaginian—the story of the conduct of Hamilkar during the battle of Himera:

'The following story is related by the Carthaginians with great probability, that whilst the barbarians were engaged with Greeks of Sicily in that battle, which began early in the morning and lasted to the twilight of the evening, Amilkar, continuing in the camp, sacrificed entire victims upon a large pile: and

when he saw his army flying, as he happened to be pouring libations on the victims, he threw himself into the flames, and thus, being burnt up, disappeared' (Herod. vii. 167).

(d) Precisely the same ritual meets us in the account given by Herodotus vii. 54 of the prayer of Xerxes as he was about to cross the Hellespont for the invasion of Greece:

'The rest of the day was spent in disposing all things in order to their passage: and on the next day they waited for the sun, as they wished to see it rising, and in the meantime burnt all sorts of perfumes upon the bridges, and strewed the way with myrtle branches. When the sun was risen, Xerxes, pouring a libation into the sea out of a golden cup (*σπένδων ἐκ χρυσοῦς φιάλης ἐς τὴν θάλασσαν*), addressed a prayer to the sun, that he might not meet with any impediment so great as to prevent him from subduing Europe.' Then follows a less Greek incident. 'After which he threw the cup into the Hellespont with a bowl of gold and a Persian scimitar. But I cannot determine whether he wished by throwing them into the sea to consecrate these things to the sun, or whether he repented of having scourged the Hellespont (vii. 85), and as a compensation made that gift to it.'

The normal ritual of prayer is: (1) the hands are washed (if this were omitted, libation and prayer are vain [Hes. *Works and Days*, 724 ff., 740 f.; Hom. *Il.* vi. 286 ff.]); (2) prayer is made; (3) after the prayer comes the sacrifice; (4) last of all comes the pouring of libations.

Thus Hom. *Il.* i. 447 ff.: 'They set in order for the god the holy hecatomb about his well-bulld altar; next washed they their hands (*χερσὶν ἴβαντο*) and took up the barley corns (*ὀλοχόρυται*). Then Chryses lifted up his hands and prayed. . . . Now when they had prayed and sprinkled the barley corns, first they drew back the victims' heads and slaughtered them and flayed them, and cut slices from the thighs and wrapped them in fat, making a double fold, and laid raw collops theieon, and the old man burnt them on cleft wood and made libation over them of gleaming wine.' Next they feasted, and then, 'when they had put from them the desire of meat and drink, the young men crowned the bowls with wine, and gave each man his portion after the drink-offering had been poured into the cups. So all day long they worshipped the god with music, singing the beautiful psalm, the sons of the Achaeans making music to the Archer-god; and his heart was glad to hear.'

6. Mode of addressing the deity (*ἐπικλήσις*).—It was a matter of importance that the deity invoked should be addressed by his right cult-titles.

Thus Achilles (*Il.* xvi. 233 f.) at Troy invokes Zeus as *Zeῦ ἄνα, Δωδωναίε, Πηλεασγικέ, τρηχόθι ναίων, Δωδωνῆς μετέων δυσχεμεύου*. Apollo is invoked by Chryses in *Il.* i. 37 f. as *ἀργυροτόμος* and *Σμυνεύς*. Especially noteworthy is Aeschylus, *Ag.* 100 ff., where we find the curious expression 'Zeus whoever he be, if it please him so to be called, by that title I address him,' on which the commentators refer to Plato, *Cratyl.* 400 D1: 'One excellent principle which, as sensible men, we should follow: that with regard to the gods we know nothing, either with regard to themselves or the names by which they call themselves; for it is evident that they call themselves by their true names. The second best principle of correctness is, as it is customary in our prayers to pray, that we ourselves call them by the names and titles, whatever they may be, by which they like to be named (*ὅστις τε καὶ ὅσους χαίρουσιν ὀνομαζόμενοι*), since we know no more; for that appears to me a right custom.' The phrase *Zeῖς ὅστις ἴστω* (cf. Eur. *Troad.* 885, *Herc. Fur.* 1203, frag. 483 [Melanippe]) carries out this principle (imitated Hor. *Sat.* ii. vi. 20; Milton, *Par. Lost.* iii. 1-7). In the same way Callim. *Hymn to Zeus*, 4: 'How now shall we sing of thee? as *Diktaios* or *Lykaeos*?', *Hymn to Apollo*, 69 ff.: 'O Apollo, many call thee *Bocdromos* and many call thee *Klaros*, . . . but I call thee *Karnaios*': cf. *ib.* 47: *Φοῖβον καὶ Νόμιον*, and Pind. *Pyth.* ix. 66: 'Agreus and Nomios and by some called *Aristaios*'; cf. Eur. frag. 781. 11 f.

7. To whom prayer is addressed.—The general phrase for offering prayer is 'pray to the gods' (*θεοῖς εὐχεσθαι, δαίμοσιν ἀρῆσασθαι* [Hom.]), but the particular deity addressed varies with the situation: the poet prays to Apollo or the Muses, the hunter to Artemis, the farmer to Demeter, and so on. Not an unusual thing is to pray to Zeus and the particular god more especially concerned; e.g., Hesiod (*Works and Days*, 463) bids the farmer pray to Zeus and Demeter. Again, a god may be invoked under a special cult-title in reference to the particular boon desired—e.g., *Zeῖς Ὀμβριος* for rain, *Zeῖς Οὐριος* for a favourable wind, and so on; hence the point of the amusing prayer of the Achaean farmer as he holds up his tattered garment to the light:

ὦ Ζεῦ Διόπτ' αὖ καὶ Κατόπτα πανταχῇ
ἐνσκενέσασθαι μ' ὅλον ἰδύσασθαι
(Aristoph. *Acharn.* 485 f.)—an excellent example of the *Stoichebet*.

Particularly interesting is the case of prayers made by special classes of people to minor deities or semi-divinities, in whom they have a, so to say, 'superstitious' faith. Thus, e.g., the sailor prays not merely to Poseidon but to the 'Samothean gods,' i.e. the Cabeiri or the Dioscuri (Callim. *Ep.* 47; Diod. iv. 43; Theophrast. *Char.* xxvii. [xxv.]).

8. The dead and the chthonian gods.—Prayers to the dead and the chthonian gods have certain special characters in common, which cannot be discussed here. The ἀνάκλησις, or solemn evocation of the dead, is illustrated by Aeschylus's *Persae* and *Choephoroe*. The chthonian gods are especially powers of vengeance.

In Hom. *Il.* ii. 278 f., they are specially appealed to as punishers of perjury:

καὶ οἱ ὑπὲρθε καμόντας
ἀνθρώπους τινύσθον, ὅτις κ' ἐπιορκῶν ὁμόσση

(the dual indicating especially, in all seeming, Ζεὺς καταχθόνιος and Persphone). It is to their ministers, the Erinyes, that Penelope will appeal for vengeance (*Od.* ii. 135). It is to them that people 'devote' enemies by a solemn *devotio* (κατάδεσμος). It need only be said here that the ritual of the curse is so far at least like the prayer that it apparently requires to be spoken (even the κατάδεσμος was in all probability inscribed to the accompaniment of a recital of its contents).

Thus in Aesch. *Ag.* 226 ff. the lips of Iphigenia are gagged to prevent her uttering a curse. Similarly, in the *Choephoroe* (83 f.) Electra does not know what words to utter as she makes an offering at her father's tomb, but she feels that she can hardly do it without some prayer spoken; to do so would be just like throwing out refuse:

ἢ σὺν ἁτίμῳ, ὥσπερ οὖν ἀπώλετο
πατήρ, τὰδ' ἐκχέουσα, γάστον χύσιν,
στρίχου, καθάριαν ὡς τις ἐκπέμψας πάλιν
δικοῦσα τεύχος ἀστροφίῳσι δμῶσιν (88 ff.).

9. The occasions of prayer.—No business of importance was begun without prayer; indeed, the pious man begins no business of any sort without first praying:

Socr. 'It would be your business, it seems, to speak next, after duly invoking the gods' (καλέσαντα κατὰ νόμον θεούς). *Tim.* 'All men, Socrates, who have even a little portion of right feeling, on starting upon any business, small or great, always call on God. And we who are about to discuss the nature of the Universe—how it was created or exists uncreated—if we are not completely out of our wits, must certainly call upon gods and goddesses and pray that our words may be acceptable to them and consistent with ourselves' (Plato, *Tim.* 27 C; cf. Xen. *Mem.* v. 19 f.). Prayer was made on all solemn occasions, at the opening of the ecclesia or the law-courts, on the new moon (Demosth. *Aristop.* 99), etc.; at sunrise and sunset (Hesiod, *Works and Days*, 333 f.).

For prayer at sunrise cf. Plato, *Symp.* 220 D, where Socrates, having stood in a trance from one morning to the next, prayed to the rising sun and went home (εἰσέρχεται μέχρι ὧς ἐγένετο καὶ ἥλιος ἀνίσχεν' ἑπειτα ὅτεσ' ἀπὸν προσευξάμενος τῷ ἡλίῳ).

10. The content of prayer.—It would not be true to say that the Greek prayer was never a prayer of thanksgiving. This conception is more a question of language than anything else, and προσεύχεσθαι gives more nearly what we generally include in 'prayer' than εὐχεσθαι. But it is undoubtedly true that prayer in general, as we find it in the Greek authors, is essentially a petition for blessings of a utilitarian kind—health and wealth, children, success in business and in battle. The special circumstances of the case make it absurd to quote Simonides, frag. xxii. 17 ff., as an example of the prayer of a contrite heart.

The refinements of the philosophers perhaps hardly concern us here.¹ Socrates emphasizes the efficacy of the prayers (and the curses) of parents in Plato, *Legg.* 931 C.

He himself 'prayed to the gods simply that they would give him good things, believing that the gods know best what sort of things are good. As for those who prayed for gold or silver or a tyranny or such like, he believed that was just as if they prayed for gambling or battle or any thing else the issue of which is uncertain' (Xen. *Mem.* i. 3. 2).

¹ See Max. Tyr. xi. 8 (prayer a δμῖλια καὶ διάλεκτος πρὸς τοὺς θεοὺς περὶ τῶν παρόντων, ποτ' ἀν' αἰτίῃς τῶν οὐ παρόντων); Marc. Aurel. iv. 23, ix. 40; Philostr. *Apoll.* *Tyran.* iv. 40 (ὡς εὐχόμεναι, δ' θεοὶ, δοίητέ μοι τὰ δευλιόμενα); Sen. *Ep.* x. 5, xli. 1.

Not altogether unlike is Pindar's

'Some pray for gold and some for limitless land: but mine be it with the favour of my townsmen to hide my limbs in earth, praising what is worthy of praise and sowing rebuke on sinners' (*Nem.* vii. 36 ff.).

In Plato, *Alcib.* ii. 143 A, Socrates is made to say:

'He seems to have been a wise poet, Alcibiades, who, seeing, as I believe, his friends, who were foolish men, praying for and doing things which it was not good for them to do, offered a prayer in behalf of them all to this effect: "King Zeus, what things are good, give us even without asking; but what is evil, keep away from us even if we ask them"'

His prayer in Plato, *Phaedr.* 279 B,

'O dear Pan and other gods who are here, grant me to become beautiful within (καλῶ γενέσθαι τὰνδον), and grant that whatever outward possessions I have may be friendly to that which is within. Let me count the wise man a wealthy man. As for gold, give me just so much as none but the prudent man could bear or carry,'

is very close in spirit to the prayer of Pindar just referred to which commences:

'O father Zeus! never may such a character be mine, but let me cleave to simple [i.e. honest, true] paths of life, that when I die I may leave to my children no evil name.'

LITERATURE.—In addition to general works on Greek religion, see L. R. Farnell, *The Evolution of Religion*, London, 1905; C. Arndt, *Die Græcorum precationibus quaestiones* (Fleckenstein, *Jahrbücher*, Suppl. xxvii.), Leipzig, 1903; C. Ziegler, *Die Græcorum precationibus quaestiones selectae*, Breslau Dissert., 1905; E. von Lasaulx, *Der Fluch bei den Griechen und Römern*, Würzburg, 1843; S. Sudhaus, 'Laues und leises Beten', *ARW* ix. [1906] 135 ff.; L. Radermacher, 'Scheitlen und Fluchen', *ARW* xi. [1908] 11 ff. A. W. MAIR.

PRAYER (Iranian).—Zoroastrianism being essentially a religion of ritual observance and of practical morality, Zoroastrian prayer is bound to be different from that of religions of a more cultural or devotional type. What we call 'prayers' in the Avesta are either mere invocations of gods and celestial powers—a recitation of names in a list of deities, such as often occurs in the *Yasna*—or confessions of a more theoretic or dogmatic character, as the *Ahuna Vairya*, the *Ashem vohu*, and other formulas. We also find—especially in the *Gāthas*—personal petitions, more for instruction and mental enlightenment, however, than for help or direct salvation. A system of prayers for the dead is included in the ritual. Requests for material gifts are far less important in the Avesta than, e.g., in the Vedic ritual.

1. Ritual invocation.—The usual form in the *Yasna* is the following, repeated continually:

'I announce and I (will) complete (my offering) to Ahura Mazda, the Creator, the radiant and glorious, the greatest and the best . . . the most firm, the wisest. . . I announce and complete to Vohu Manō, Asha Vahista, Khshathra-Vairiya, Spenta Armaiti . . . etc. . . . Yea, all ye lords, the greatest ones, holy lords of the ritual order, if I have offended you by thought, or word, or deed, whether with my will, or without intending error, I praise you (now the more) for this' (*Ys.* i. 1-22).

Another form (as in *Ys.* xvii. 11 ff.) is:

'We worship thee, the Fire, O Ahura Mazda's son! . . . We worship the good and best waters Mazda-made. . . We worship the Māthra-spenta . . . We worship the good and pious prayer for blessings . . . and all the greatest chieftains, lords of the ritual order.'

Most of the verbs used in these texts are of the ritualistic type: *nivāedhayemi*, *hañkārayemi*, 'I announce and complete,' *yazamaidē*, 'we worship' (in the sense of performing devotional acts). The verb *stuye*, 'I praise,' in i. 22, means oral praise, as known from the Sanskrit *stotra*, 'hymn'; all these terms convey the idea of glorifying the deities and the religion.

Sometimes, as in *Ys.* xviii. 4, the worshipper may ask for the blessings of religion:

'Grant me, Thou maker of the plants and waters, Immortality, Mazda!';

but ordinarily he expects to possess these prerogatives as a 'righteous' man (i.e. a Zoroastrian) and offers Mazda his praise in return for salvation:

'As to those, Immortality, the Righteous Order, and the Kingdom of Welfare, which Thou, O Mazda! hast given through (holy) deeds, words, and the sacrifice . . . gifts [shall] be offered (by us) in return to Thee, O Ahura! (*Ys.* xxxiv. 1);

and now he begs Mazda to continue to uphold this order of salvation and to keep his followers in the truth.

'We pray for Thy Fire, O Ahura! strong through Righteousness, most swift, [most] powerful, to the house with joy receiving it, in many wonderful ways our help, but to the hater, O Mazda! it is a steadfast harm as if with weapons hurled from the hands' (*ib.* 4).

2. Petitions for personal enlightenment.—Petitions for mental enlightenment take up a great deal of space in the *Gāthas*; not a few of the holy truths are communicated in the form of questions and requests addressed by the prophet to Ahura Mazda or Vohu Manō. The whole of *Yasna* xliv., dealing with the theory of creation and cosmology, is in this form:

'This I ask Thee, O Ahura! tell me aright: who, as a skilful artisan, hath made the lights and the darkness?' (5).

Such questions assume the typical character of prayer when the worshipper asks for special instructions necessary for his own personal salvation:

'(Come Ye) and show me the worthy aims of our faith, so that I may approach and fulfil them with (Thy) Good Mnd, the offering, O Mazda! of the One like You, or the words of praises offered with Righteousness. And give Ye, as Your offering (of grace to me) the abiding gifts of Your Immortality and Welfare!' (*Ys.* xxxiii. 8).

In most of the *Gāthas* the prophet continues in the same idealistic but intellectualistic way. As the Zoroastrian believer must know—and receive—the truth in order to be saved, Zoroaster, as an example to his followers, must pray for his own and for their enlightenment.

3. Prayer for the dying and dead.—Another form of praying for salvation is seen in the prayers for the dying and the dead who belong to the religious community; unbelievers are excluded from salvation. These prayers, which are still made among the Parsis after the death of a beloved one (see J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 313, n. 2), are called *āfrīngān* and *srōsh darīn* in Avesta. Their aim is to secure for the dead eternal bliss and happiness in heaven and in the future world, and they consist in sacerdotal ceremonies, celebrated on various occasions, but especially at the time when the dead are expected to visit the earth, and in connexion with funeral festivals. At these ceremonies the priests invoke many gods and genii, especially the angel of death, *Srōsh* (Sraosha), the psychopompos of the Iranians, who carries the dead to heaven and protects them from demons. In this dangerous task Sraosha needs the assistance of the offerings and prayers of the survivors. Yet the ceremonial act is an *opus operatum* of mere invocations, no immediate petitions being made in the ritual. Only the final words (of late date) in *Srōsh Yasht Hādōkat* (*Yast* xi.) express a direct request for bliss for the deceased:

'[Give] unto that man brightness and glory, . . . give him the bright, all-happy, blissful abode of the holy Ones!' (*Yt.* xi. 23).

4. Prayer for material gifts.—Material gifts are desired and asked for in the Avesta as in other religions, particularly as the general aim of the Zoroastrian religion is the conservation and renovation of the material world. Such petitions occur more frequently in the later Avesta than in the *Gāthas*, whose abstract and solemn character forbids them to descend to personal and private desires. The earthly bliss that the *Gāthas*-singer longs for is more the general state of material happiness than any single advantage. A typical strophe in this respect is *Ys.* xxxiii. 10:

'All prosperous states in being which have been enjoyed in the past, which men are now enjoying, and which shall be known in the future, do Thou grant (me) these in Thy love. (Yea), cause (our) bodily and personal life to be blest with salvation.'

The paraphrases of the commentators are usually far more concerned with concrete and individual

happiness—e.g., Neriosangh comments on this strophe:

'Let them continue to live well, and be prosperous in all things, those females who are born thus,' etc. (*SBE* xxxi. 77, n. 7).

They breathe the spirit of the later Avesta, which is more realistic in tone and is always seeking for the material help of the gods.

An offering is made to Mithra, Ashi Vanguh, and the other gods of the *Yasts* for bringing 'swiftness to our teams, strength to our own bodies, and that we may watch with full success those who hate us, smite down our foes, and destroy as one stroke our adversaries' (petition to Mithra, *Yt.* x. 24). 'O ye waters, I beseech of you for wealth of many kinds, power, and for an offspring self-dependent whom multitudes will bless' (to Ardvī Sūra Anāhita, *Ys.* lxv. 11). In the *Fravardīn Yasht* (xiii.) to the Fravashis such petitions abound, and the genii bestow wealth and fertility on their own kindred, when they make offerings to them, saying: 'May my country grow and increase!' (68), offering to them 'for a dominion full of splendour, for a long, long life, and for all boons and remedies . . . to withstand the evil done by oppressors' (135).

The piety of the Zoroastrians was more realistic in the later Avesta, but not more personal or devotional than in the times of the *Gāthas*. On the contrary, in these hymns of old we meet with strophes of a very noble tenor, where the prophet tells of his sufferings and hopes and ardently beseeches his Lord and Master for help and consolation in his striving:

'How shall I console Thee (grace) O Lord? . . . Therefore I cry to Thee; behold it, Lord! desiring helpful grace for me, as friend bestows on friend. . . Thee, for mine exhorter and commander, Living Lord! I choose' (*Ys.* xlvii. 1-3).

LITERATURE.—There is no general discussion of the subject; for details see the introductions to the ritualistic hymns in J. Darmesteter, *Le Zend Avesta*, 3 vols., Paris, 1892-93, esp. his general introduction to the *Yasna*. K. F. Geldner, *GAAP* ii, [1896-1904] 23, gives a short description of the prayers (§ 20). The ritualistic hymns are translated by L. H. Mills and Darmesteter in *SBE* xxxi. [1897] and xxiii. [1893].

E. LEHMANN.

PRAYER (Jain).—It is extraordinarily difficult to discover the exact place that prayer holds in the Jain system. Every Jain is on the defensive lest his creed should be considered atheistic, and is unwilling to make any admission that might seem to point in that direction. Again, Jainism, like every other Indian faith, is so influenced by its environment and, in especial, borrows so much from Hinduism that not infrequently orthodox Jains in actual practice do many things not really in harmony with the principles of their religion; the difficulty is further enhanced for the investigator by the inexplicable ignorance which prevails among many Jains as to the articles of their creed. The most satisfactory way, perhaps, of arriving at any conclusion is to divide the subject of prayer into various elements, such as petition, intercession, adoration, confession, worship, and thanksgiving, and to note under each head the actual practice and the sometimes conflicting opinions of the Jains.

1. Petition.—As the Jain system is based on the root-idea of previously acquired *karma* automatically conditioning every incident of a man's life, past, present, and future, there is no subject which could logically be affected by petition. If a man is strong, happy, and wealthy in this life, it is owing to the merit that he has acquired in previous births; but no petition can prolong his fortunate condition. Again, if he is ill, unhappy, and poverty-stricken, it is due to his separate sins in a previous existence, and, as long as the accumulated energy of past bad actions lasts, his lot is evil and continues to be so until the moment arrives when the ill-omened energy is expended, the mechanism stops, the clock runs down, and the man, having worked out that particular sentence, passes on to endure the good or evil effects of the succeeding *karma* that he has attracted. But no petition can affect the mechanism of *karma*, no prayer mitigate his sentence of lives-long imprison-

ment to it. The Jains therefore hold that logically it is of no use to pray for health, wealth, or fame, since all are inexorably fixed by *karma*.

Again, not only is there no subject that could be affected by petition, but there is no one to whom prayer could be addressed, since the Jains acknowledge no supreme God, not knowing Him either as Creator, Father, or Friend. Nor would it, logically, be of any avail to pray to the deified men who have passed to the still land of endless inaction; for they take no more interest in worldly affairs. 'Of what use would it be for us to pray to a Siddha?', said a Jain gentleman to the present writer, 'he would no more hear us than would a dead animal.' Consequently, though the Jains perhaps lay greater stress on the duty of forgiving others for all personal slights, injuries, and offences than the followers of any other religion, one great subject of petition—forgiveness for sin—is, they hold, logically excluded, since there is no one to forgive the sin, no one greater than the mechanism of *karma*, no one who has never experienced its sway.

2. *Intercession*.—In the same way there is no room in the Jain system for intercession. As the belief in *karma* dries up all sympathy for the suffering of others, so it impedes any intercession for their deliverance. A child-widow is merely expiating the sin of adultery committed in a previous birth; a leper is only serving his sentence for some former, though unremembered, crime; and no intercession could mitigate or shorten their penal term of suffering.

Indeed, not only is intercession ineffectual, but to Jain ideas it is tainted by actual sin—the sin of spiritual bribery. If (since human need and human longings are greater than any creed) a prayer is wrung from an anguished mother in her extremity as she watches beside the sick-bed of her little child, she is told that she has committed the grave sin of *lokottara mithyātva*,¹ under which would also be included a childless woman's vow that, if a son be born to her, she will offer a cradle at some saint's shrine.

No people in India are prouder than the Jain community of their loyalty to British rule, but it is impossible for them logically to offer up prayers for the success of the Allied cause, as the Mūhāmadans and Hindus frequently do; all that is permissible for them is to hold meetings to express their ardent good wishes and fervent desires for a victorious peace.

Some well-instructed Jains account for the fact that some of the members of their community do use such phrases as 'O Lord (*Prabhu*), give me wealth,' 'O Lord (*Prabhu*), forgive me my sin,' by saying that the prayer is addressed neither to a supreme God nor to a deified man, but to their own inner consciousness, to stir themselves up to greater efforts; others, again, say that such phrases are metaphorical; a third explanation sometimes given is that they are due to the pervading influence of Hinduism.²

3. *Adoration*.—A Jain said to the writer: 'We are not beggars, and we cannot petition for boons like beggars, but by remembering our Tīrthaṅkara, we can pluck up heart to follow their example.' To this extent one element of prayer—adoration—is found in the Jain system. A *Sthānakavāsī* (non-idol-worshipping) Jain will declare that he rises before sunrise and, rosary in hand, adores the great saints and the great principles of the Jain creed; but, when the meaning of his devotion is fully explained, one realizes that the act is salutation rather than adoration. The attitude of the

worshipper seems (to quote an illustration which all the Jain friends consulted by the writer have accepted) nearer to that of a French soldier paying his homage at the tomb of Napoleon and saluting the memory of a great hero than to the warm, personal adoration and loving faith connected with the Hindu idea of *bhakti*. Indeed, a Hindu told the writer that the vital distinction between the two creeds seemed to him to lie in the fact that the Jain system had no room for *bhakti*. The Jain telling his rosary of 108 beads would salute the Five Great Ones (Arihanta, Siddha, Āchārya, Upādhyāya, and Śādhu) and the great principles of knowledge, faith, character, and austerity. Then, repairing to the monastery or to some quiet place in his house, he would perform *sāmāyika*,¹ during which, after begging forgiveness for any injury done to the tiniest insect on his way to his devotions, he would promise to commit no sin for the space of forty-eight minutes, and then praise the twenty-four Tīrthaṅkara, saluting each by name in a set form of Māgadhī words, and would conclude by a salutation to a director (*guru*) if present; if not, to the north-east corner of the building.

4. *Confession*.—This is followed by the confession of sin, or *padīkamanam*, which is an essential part of Jain worship. The object of this confession, the Jain says, is not to obtain forgiveness of sins and removal of the guilt, but, by confessing and carrying out the penance imposed by the director, to perform an austerity, in the fire of which it is hoped to burn up some of the *karma* acquired by sinning. A difficulty has occasionally arisen in the minds of students of Jainism owing to the use of such expressions in Jain prayers as 'I crave forgiveness,' whereas the accepted Gujarātī comment or translation of such words appears to be little more than an expression of desire to be free from the fruit of such sin.² In this formal confession, however, the worshipper acknowledges his sins in the most careful way, confessing if he has sinned against knowledge in any of the fourteen special ways, or against faith in five ways, or if he has uttered any of the twenty-five kinds of falsehood, or committed any of the eighteen classes of sin, or in any way sinned against the Five Great Ones of the Jain faith, being specially careful of course to confess any sin against animal life, the taking of which is the most heinous crime to a Jain. This is followed by a repetition of the salutation to the Five Great Ones, and this, in turn, by another form of confession of the sins of that particular day, by a vow to fast in some way or other, if only for an hour (for the Jains lay the greatest stress on fasting), and the whole is concluded by an act of general praise. A devout Jain will repeat these religious exercises (which generally take about forty-eight minutes) in the evening. It is illuminating to notice that the director never seems to pronounce an absolution; he imposes a penance, generally concerned with fasting in some way or other, and the penitent simply goes away and performs it to the satisfaction of his own conscience.

No Jain is content with the austerity of a confession of sin night and morning; it is also incumbent upon him to examine his conscience still more scrupulously every fortnight, even more thoroughly at the four-monthly confession, whilst the most important of all is the great yearly confession at *Samvatsarī* (see art. FESTIVALS AND FASTS [Jain]).

After the evening confession the Jain, before sleeping, sings the praises of the Tīrthaṅkara, and

¹ M. Stevenson, *Heart of Jainism*, p. 131.

² A Śvētāmbara Jain friend of the writer keeps Hindu gods in his house, that he may address petitions to them.

¹ For further details see Stevenson, *Heart of Jainism*, p. 255 ff.

² Cf. *Sāmāyik* (in Māgadhī, with Gujarātī tr.), p. 11: 'May what I have done wrong be without fruit to my *jīva*.'

tells his beads, again making salutation to the Five Great Ones.

5. Temple-worship.—Besides meditation and confession, the daily devotions of a Svetāmbara Jain include a visit to the temple, which he circumambulates three times before entering (as he crosses the threshold he touches it and utters three times the word '*Nissahi*,' which puts on one side all sins and worldly cares). The morning ritual¹ has eight parts—bathing the idol, marking it with the auspicious mark, offering it flowers and garlands, waving a lighted incense-stick in front of the image, waving a lamp before the shrine, offering rice, offering sweetmeats, and offering nuts. The first part, bathing the idol, can be performed only once, so only one worshipper can do that, but any man who has time to bathe at the temple and to don the special dress may mark the idol, offer flowers to it, and wave the incense-stick, which all involve entering the inner shrine and therefore are forbidden to any not in special clothes and to all women, who, however, may perform the remaining acts of worship. Before leaving the temple, the worshipper may sing the praises of the Tīrthankara (this can be done at any time by any one entering the temple), and he then strikes a gong to show that he has finished. As he recrosses the temple threshold, he says, '*Avissahi*' before resuming his usual vocation. About sunset he would perhaps go to the temple again and perform the evening worship, which consists in waving a lamp before the idol. On great festivals and at pilgrim resorts the worship is of course more elaborate.

6. Thanksgiving.—Just as no Jain can beg boons, so no Jain returns thanks for answered prayers, for sins forgiven, for hopes fulfilled. Every good thing that happens to him in this life is in direct payment for his own good actions in a past existence.

'Certainly,' says a recent writer,² 'the Jaina does not hope to ride into heaven on the "back of another." To him hope has about the same meaning as it has to the scientist who knows that H₂O would never fail to give him a drop of water if he would only take the trouble to work out the formula in practice.'

Perhaps for a European the whole Jain attitude to prayer is best summed up in Henley's words:

'I am the master of my fate;
I am the captain of my soul'—

lines which it is interesting to compare with the *śloka* which many devout Jains repeat at night after they have read their sacred books:

'The soul is the maker and the non-maker, and itself makes happiness and misery, is its own friend and its own foe, decides its own condition good or evil. . . . The soul is the cow from which all desires can be milked, the soul is my heavenly garden.'

LITERATURE.—The information contained in this article has been derived directly from Jain informants. The reader may also consult the present writer's *Notes on Modern Jainism*, Oxford, 1910, *The Heart of Jainism*, do. 1915, and vernacular prayer-books and hymn-books, such as *Śrī Sāmāyaka tathā Suddha Śrautidhā svarūpa*, Ahmedabad, 1899, or *Anupūrnā ane Sādhuvandana*, do. 1894; and *SBE* xxii. [1884], xiv. [1895].

MARGARET STEVENSON.

PRAYER (Japanese).—The prayers of Shintō, the Japanese national religion, are of a type conforming more to the formulæ of primitive magic than to modern Western prayer (see *MAGIC [Japanese]*, vol. viii. esp. pp. 296^b, 299^b, *in fine*). They can be best understood by analyzing the characteristics of prayer in the earliest times.

1. By whom offered.—Private individual prayer, addressed by the worshipper directly to his god, scarcely ever occurs in the earliest sources. The *Kojiki* and the *Nihongi*, collections of the traditions of the mythology and early history of the empire, are naturally not concerned with the details of

individuals, and merely mention now and then the worship of some legendary hero or important personage in some temple (e.g., *Kojiki*, tr. B. H. Chamberlain², Tōkyō, 1906, pp. 216, 238, 260, etc.). But, when we notice that among the numerous archaic poems preserved in those collections (111 in the *Kojiki*, 132 in the *Nihongi*) there is not a single hymn or other such religious effusion, we are almost forced to the conclusion that prayer must have been of little moment in the everyday life of the primitive Japanese. On the other hand, individual prayers are fairly often mentioned in the poems of the *Manyōshū*, which are not much later in date (9th cent.); but it is often difficult to distinguish the true Shintō element in these from the Buddhist influence already in evidence. In the pre-Buddhist period, then, we have scarcely any evidence of prayer except in its official, public form—offered, i.e., in the name of the whole people first by the Mikado in person, whose office, according to etymology (*matsurigoto*), implied the idea of worship, then, when he delegated his sacerdotal function and retained only his political power, by the priests officiating as his representatives, the *nakatomi*, 'intermediary ministers,' the privileged, hereditary reciters of the *norito* (rituals). Another hereditary corporation, however, the *imibe*, 'abstaining' priests, used to read certain of the *norito* (nos. 8 and 9 in the *Engishiki* collection; see *MAGIC [Japanese]*, vol. viii. p. 297). Apart from the emperor, the heads of noble families had charge of certain forms of cult—which explains the establishment, in 577, of a hereditary corporation for the worship of the sun. Finally, as the priesthood underwent organization, different classes of local priests performed similar functions, from the *kannushi*, chief priests in charge of a temple, down to the *hafuri* or *hōri*, inferior priests who were originally sacrificers but whose name came to be written with the Chinese characters meaning 'prayer-officials,' and the *negi*, also of humble rank, whose name seems simply to come from the verb *negafu*, 'to pray.'

2. To whom offered.—The *norito* were addressed sometimes to one or several individual gods, sometimes to a class of gods (e.g., in 866 to the deities of all the provinces of the Nankaidō district), and sometimes to all the gods (see *MAGIC [Japanese]*). An interesting point to notice here is that, with the development of the imperial prestige on the one hand, and ancestor-worship under Chinese influence on the other, the custom arose of addressing prayers to deceased Mikados. These prayers are not mentioned in any of the *norito* of the *Engishiki*, but only in the later *norito* (9th cent. onwards).

Prayers for rain were made in 841 to the emperor Jimmu and the empress Jingō: in 850 Jimmu was again besought to cure an illness of the reigning Mikado; in 864 and 866 prayers were offered to the emperor Ōjin, who, under the name Hachiman, was destined to become one of the favourite figures in the Japanese pantheon.

3. For whom offered.—Prayer was made for the emperor, his court, and his people (see *MAGIC [Japanese]*, vol. viii. esp. p. 296^b, rituals 1-3, p. 297, rituals 4, 8-10, p. 298, rituals 12, 15, p. 299, rituals 25, 27). But it must be observed that in this very simple conception there is none of the moral ideas that lead us at various times to pray specially for the just, or for sinners, or for infidels, and so on. Similarly, there were no prayers for the dead, the idea of the soul's survival and fate in another world being very vague among the primitive Japanese (see *ANCESTOR-WORSHIP [Japanese]*, vol. i. p. 456^b).

4. For what offered.—Prayer was not made for the spiritual blessings that are regarded as the primary object of prayer in the West, but for far more practical and everyday boons. The Christian

¹ For further details see Stevenson, *Notes on Modern Jainism*, p. 102 ff.

² In the *Jaina Gazette*, Lucknow, Aug. 1915, p. 196.

prays for whatever will help him to attain his final goal, viz. happiness in the future life; when he asks for grace, virtue, or other spiritual blessings, it is with this ideal in view; and he does not pray for bodily or material blessings, such as health and success, except as means to this end. The primitive Japanese had no such ideas. Their *norito* have no conception of moral progress or eternal salvation; they simply seek for earthly goods—for the emperor health, long life, protection of his palace from all forms of destruction, especially fire, safe journeys for ambassadors to foreign lands, and internal and external peace for his empire (see art. MAGIC [Japanese], vol. viii. p. 297, ritual 8 f., p. 298, rituals 11 f., 14 f., p. 299, rituals 23, 27); for the people a good harvest, protection of the crops from inclement weather or floods, rain in times of drought, safety from epidemics, and general prosperity (*ib.* p. 296^b, ritual 1, p. 297, ritual 4, p. 298, ritual 13, p. 299, ritual 25). The idea of purification, which often appears in these texts (*ib.* p. 297^b, ritual 10, and *passim*), is confined mainly to ritual purity, though the moral element is not quite excluded. Sometimes the *norito* is meant to appease the anger of the gods, when the care of their temples or the precautions for ritual purity necessary for their worship have been neglected. Finally, besides petitions and expiations, the *norito* is sometimes a means of announcing some important piece of news to the gods—an accession to the throne, the changing of the name of an era, an enemy invasion, the nomination of a prince as heir or of a vestal of imperial blood, and so on. The most interesting among these announcements are unquestionably those advising a deity of his promotion, by the emperor, to a higher rank in the celestial hierarchy (based on the Chinese system of official ranks, in the 7th century).

In 672 three deities supplied some useful military information; as soon as the war was finished, the emperor, upon the report received from his generals, raised these deities to higher rank. In 838 a similar distinction was bestowed on a young god in defiance of seniority, and a jealous goddess showed her anger by pouring a volcanic shower on the eastern provinces. In 840 the great deity of Deha sent a shower of stones, and the emperor conferred the second grade of the fourth rank on her, with congratulations on her marvellous power. In 851 Susa-no-wo and Ōho-kun-nushi (see NATURE [Japanese], vol. ix. p. 235^b, and HEROES AND HERO-GODS [Japanese], vol. vi. p. 662^b) obtained the second grade of the third rank, and, eight years after, the first grade of the same rank, which, however, does not make them higher than an important minister or a successful chamberlain. In 880 a volcano of Satsuma was placed in a lower subdivision of the second grade of the fourth rank. In 888 the gods of Hirota and Ikuta, caused seismic shocks, and were immediately presented with a diploma. In 898, 340 gods were promoted by the emperor Daigo as a bounty, at his happy accession. In 1078 and 1172 promotions were made *en masse*.

These examples show the essentially positive character of the *norito* and the distance that separates them from the lyrical outbursts that we think of when we speak of prayer properly so called. Even in those *norito* which approach most nearly to normal prayer the formula is more of the nature of a contract with the gods; gifts and vague praises are offered to them in exchange for their benefits, and they are promised further rewards, if necessary, should their services turn out satisfactory (see MAGIC [Japanese], vol. viii. p. 296^b, rituals, 1-3, p. 297, ritual 4).

5. Nature of prayer.—We must distinguish between the basis and the form, the moral dispositions and the material conditions. As regards the inner feelings, a reading of the *norito* shows that the primitive Japanese, though they felt sincere regard for the beneficent gods (see NATURE [Japanese], vol. ix. p. 233), never had that implicit confidence in addressing them which is generally considered, especially among Christian peoples, an essential quality in prayer. On the contrary, it is clearly seen that they often distrusted their gods, for they sometimes made them conditional offerings

only (*e.g.*, MAGIC [Japanese], vol. viii. p. 296^b, ritual 1, and below, ritual 3). This attitude throws light on the magical rather than religious character of their invocations.

As regards the material conditions, it is not surprising to find that this people, always so polite, maintained a most respectful attitude towards their gods. Sometimes they bowed to the ground (the verb *wogamu*, 'to pray,' comes from *wori-kagamu*, 'to bend,' according to the native philologists); sometimes they bent the knee 'like the stag,' or 'plunged down the root of the neck like the cormorant'; they clapped their hands (*kaishi-hade*)—a mark of respect in ancient Japan; they 'humbly presented' or 'raised aloft' in front of them or on their heads (*itadaku*) their offerings, which, they declared, had been 'prepared with profound respect'; and in the same deferential attitude they 'lifted their eyes' (*awogu*) to the heavens (see *TASJ* vii. [1889], pt. ii. pp. 116 f., 130, pt. iv. pp. 426, 433 f., 444, etc.). But there is no doubt that the essential point was the perfect accuracy of the formula pronounced, for on it depended the magical virtue of the prayer (see, *e.g.*, MAGIC [Japanese], vol. viii. p. 298^a). The Japanese, however, gave the gods the credit of being sensitive to the literary beauty of the text, to the sonorosity of their long, majestically balanced periods; *e.g.*, in one version of the *Nihongi* (i. 46; tr. W. G. Aston, London, 1896, i. 49) the sun-goddess is represented as having been won over by the harmonious language of the ritual composed to persuade her to leave her cavern and light the universe again.

6. Place of prayer.—The place for offering prayers naturally depended on the ceremonies with which they were connected. It was often the palace itself (*e.g.*, to mention only some of the important rituals, nos. 1, 8, 10, 12, etc.), the great temple of Ise (*e.g.*, nos. 16-24), or other sacred places, and sometimes the temple of a local god (*e.g.*, no. 5, at Hirano, a village in the province of Settsu). In many cases the chief ceremony took place at Kyōto and was repeated in the province. There were also domestic celebrations, as at the *Nihiname* (see MAGIC [Japanese], vol. viii. p. 298^b, ritual 14), which, besides its public rites in the temple, was performed privately in the family, and to which no stranger was admitted—for fear of pollution, no doubt. What the texts never mention is the intimate individual prayer in the inner chamber which the gospel recommends (Mt 6^a). This seems to have had practically no place in the devotions of the primitive Japanese.

7. Times of prayer.—Sometimes prayers were monthly (the title of the 7th ritual, *Tsukinami no Matsuri*, shows that originally at least it was a 'monthly' celebration), sometimes twice a year (*e.g.*, 10th ritual), sometimes annual (*e.g.*, 1st ritual), at certain appointed months and days (*e.g.*, 1st ritual on 4th day of 2nd month; 10th ritual, on last day of 6th and 12th months), and at fixed hours (*e.g.*, 3rd ritual, at sunrise; 10th ritual, at sunset). Others were used only when the occasion for which they were suited arose (*e.g.*, 14th ritual, at the accession of a new emperor). The priestly functionaries, from the Mikado himself, seem to have prayed much more frequently; we know, *e.g.*, that a high official called *haku*, who presided over the Jingikwan ('Department of Religion'), took the emperor's place whenever he was prevented by illness from saying his daily prayers. But here again the texts make no mention of daily prayers, far less of prayers twice or thrice daily, among the people, and it is probable that they were usually content to leave that duty to those whose professional function it was to offer prayers.

8. Typical example of Shintō prayer.—As a

typical example, in which the general features of the rituals are combined under the recognized form, we may quote the 3rd *norito*, which is neither among the finest nor among the poorest, but is a good average, and is short. It is addressed to the goddess of food, one of the great figures in Shintō (see *NATURE* [Japanese], vol. ix. p. 239^b, last paragraph, and p. 240), and, secondarily, to the gods of ravines who send water to irrigate the imperial farms.

'He [the *nakatomi*, in the name of the Mikado] declares the august name of the sovran god whose praises are fulfilled at Kahahi in Hirose [a village in the district of Hirose, where the goddess has a secondary temple, her chief temple being at Ise]. Declaring her august name at the Young-food-woman's augustness [Waka-uka-no-me no mikoto, one of the alternative names of the goddess], who rules over the august food, he fulfils praises in the august presence of this sovran deity. He says: "Hear all ye *kannushi* and *hafuri* the fulfilling of praises, by sending the princes and councillors to lift up and bring the great august offerings of the sovran august grandchild's augustness." He says: "Deign to declare in the presence of the sovran deity that as to great august offerings which are set up, he deposits in abundance and offers up, as to august clothing, bright cloth, glittering cloth, fine cloth, and coarse cloth, the five kinds of things, a mantlelet, spear, and august horse, and as to august liquors, raising high the beer [sake]-jars, filling and ranging in rows the bellies of the beer-jars, in soft grain and in coarse grain [i.e. hulled rice and paddy]; as to things which dwell in the mountains, things soft of hair and things rough of hair [birds and beasts]; as to things which grow in the great field plain, sweet herbs and bitter herbs; as to things which dwell in the blue sea plain, things wide of fin and things narrow of fin, down to weeds of the offing and weeds of the shore." He says: "Declare in the presence of the sovran deity that, if the sovran deity with peaceful and tranquil heart accepts as peaceful august offerings and sufficient august offerings the great august offerings thus set up, and if the sovran deity will deign to perfect and bless in many-bundled ears the sovran deity's harvest-fields in the first place and also the late-ripening august harvest which the august children [princes of the blood], princes, councillors and great august people of the region under heaven shall make by dipping the foam from their arms and drawing the mud together between the opposing thighs, in order that it may be taken by the sovran august grandchild's augustness with ruddy countenance as his long august food and distant august food, he will draw hither the firstfruits both in liquor and in husk, even to a thousand plants and many thousands plants, and pling them up like a range of hills, will offer them up at the autumn service." He says: "Hear all ye *kannushi* and *hafuri*." He sets up the great august offerings of the sovran august grandchild's augustness, bright cloth, glittering cloth, soft cloth, and coarse cloth, the five kinds of things, down on the mantlelet and spear, in the presence of the sovran gods also who dwell in the entrances of mountains of the six august farms of the province of Yamato. As to the setting up of offerings in this way, if the water which the sovran gods deign to send boiling down the ravines from the entrances of the mountains which they rule be received as sweet water, and ye [gods of the mountains] will deign to bless the late-ripening harvest which the great august people of the region under heaven have made, and deign not to inflict on it bad winds and rough waters, the princes, councillors, functionaries, down to the male and female servants of the six august farms of the province of Yamato, will all come forth on the [number] day of the [number] month of this year, to set up the firstfruits in juice and in the husk, raising high the beer-jars, filling and ranging in rows the bellies of the beer-jars, pling up the offerings like a range of hills, and plunging down the root of the neck cormorant-wise in the presence of the sovran gods, will fulfil praises as the morning sun rises in glory" (*Hirose oho-mi no matsuri*, tr. E. Satow, in *TASJ* vii. pt. iv. p. 433).

g. Modern prayer.—Later, when the nationalist scholars tried to revive pure Shintō, in opposition to Buddhism and Confucianism, the most devout of them, Hirata, composed in 1811 a book of prayers called *Tamadasuki*, which, unlike the ancient *norito*, was meant for private worship. It is interesting to see how prayer was conceived by the chief theologian of modern Shintoism. Hirata's views are as follows:

'As the number of the gods who possess different functions is so great, it will be convenient to worship by name only the most important, and to include the rest in a general petition. Those whose daily affairs are so multitudinous that they have no time to go through the whole of the following morning prayers, may content themselves with adoring the residence of the emperor, the domestic *kami-dana* [the shelf on which the household gods are placed], the spirits of their ancestors, their local patron god, and the deity of their particular calling in life. In praying to the gods, the blessings which each has it in his power to bestow are to be mentioned in a few words, and they are not to be annoyed with greedy petitions; for the Mikado in his palace offers up petitions daily on behalf of his people, which are far

more effectual than those of his subjects. Rising early in the morning, wash your face and hands, rinse out the mouth, and cleanse the body. Then turn towards the province of Yamato, strike the palms of the hands together twice, and worship, bowing the head to the ground. The proper posture is that of kneeling on the heels, which is ordinarily assumed in saluting a superior.'

Then follows a specimen prayer: 'From a distance I reverently worship with awe before Ame no Mi-hashira and Kuni no Mi-hashira, also called Shina-tsu-hiko no kami and Shina-tsu himie no kami [the god and goddess of wind; see art. *NATURE* [Japanese], vol. ix. p. 236^a], to whom is consecrated the palace built with stout pillars at Tatsuta no Tachimu in the department of Heguri in the province of Yamato [cf. art. *MAGIC* [Japanese], vol. viii. p. 297^a, ritual 4]. I say with awe, deign to bless me by correcting the unwitting faults which, seen and heard by you, I have committed, by blowing off and clearing away the calamities which evil gods might inflict, by causing me to live long like the hard and lasting rock, and by repeating to the gods of heavenly origin and to the gods of earthly origin the petitions which I present every day, along with your breath, that they may hear with the sharp-earedness of the forth-galloping colt.' (Other analogous prayers follow, addressed to other deities, for which see Satow, 'The Revival of pure Shin-tau,' in *TASJ* iii., App., Yokohama, 1883, p. 72 ff.)

Without emphasizing the artificial nature of these prayers, which, in spite of the express aim of their author to the contrary, are patently inspired largely by Buddhist tendencies and especially by Chinese ideas, we may question whether they were ever used by the worshippers for whom they were intended, for the first five volumes of Hirata's book were not printed till 1829, and the following four not till some time after his death, which occurred in 1843.

Official *norito* are composed to this day, for all special occasions (e.g., the conferring of posthumous honours on early Mikados, invocation of the gods of war, etc.). On the other hand, the common people offer informal prayers to various familiar gods—e.g., to Inari, originally the protector of agriculture, then a kind of Japanese Providence, when they are sowing rice or beginning a commercial enterprise, etc. The worshipper who may be seen standing in front of a temple, pulling the white cord that rings a bell to attract the attention of the god, and then praying for a moment with clasped hands, is usually offering a personal petition of the most paltry kind. The more general type of modern prayer asks for 'peace to the land, safety to the household, and abundant harvest.' But modern Shintō prayers, like those of twelve hundred years ago, are always essentially positive, inspired by human wisdom alone; and, whenever a somewhat elevated moral or mystical idea appears in them, it is the result of Buddhist influence.

LITERATURE.—See the sources cited in the article.

MICHEL REVON.

PRAYER (Jewish).—I. BIBLICAL AND PRE-TALMUDIC.—As far back as we can trace its history, we find prayer occupying a central position in the Jewish religion. It was an inseparable accompaniment of sacrifice, and its significance in the religious life of the individual and of the nation at large increased in the same degree as the knowledge of the power, justice, and goodness of God advanced. A profound conception of the nature of prayer is betrayed in the designation *tephillah*, which, according to Goldziher, really means 'invocation of God as judge.' In the mouth of almost all the important characters of the OT, from Abraham onwards, we find personal prayers—prayers of thanksgiving and praise, of intercession and confession. A very characteristic example is found in Solomon's prayer at the dedication of the Temple (1 K 8¹²⁻⁵⁸), which, although undoubtedly of a later date, contains all the four kinds of prayer mentioned above. Down to the last days of the first Temple there were no formal prescribed prayers—not even a general command to pray. Prayer was rather, both in form and in contents, an individual thing, nor was there any kind of precept as to its time or place. In Dt 26¹⁰⁻¹² 12-15

we meet for the first time with forms of prayer, which are to be uttered on the occasions of offering the firstlings and the tithes. Among the prayers of individuals before the Exile those of the prophet Jeremiah are of the highest order (Smend, *AT Religionsgeschichte*², p. 263 f.).

1. The prophets.—The work of the prophets in making religion more of an inward thing, which found expression chiefly in their low estimate of the sacrificial cult, did not have its full effect among the mass of the people till the time of the Exile, when it found its natural expression in the prayers of the Jews. Towards the end of the Exile a prophet (Is 56⁷) describes the temple of the future as a 'house of prayer for all peoples.'

2. The Psalms.—At a later date the prayers known to us as 'the Psalms' took their rise, but, owing to a tendency of a still later period, they were referred back to remote antiquity—to the time of David. They are far more probably the fruit of the religion of the prophets, giving in prayer-form the thoughts that had entered into the consciousness of the people from the teaching of the prophets. After the return from the Exile, and when the second Temple had been erected, the Psalms became the Temple liturgy, in spite of the fact that, to a considerable extent, they formed a protest against the sacrificial cult of the Temple. That God desires and needs no sacrifice, but only the pure heart and the good deed, is a constantly recurring theme of the Psalms. Besides the moral teaching of the religion of the prophets, the Psalms deal chiefly with the sufferings of the people—particularly of the righteous—the sins of the nation and of the individual, memories of the nation's past, hopes of the final mercy of God, and His justice and power in nature and in history.

The collecting of the Psalms, which was gradually accomplished between the Exile and the Maccabean period, was undoubtedly made in the first place for liturgical purposes; still it is very questionable, in the case of many Psalms, whether they were originally composed as songs for the congregation, while, in the case of others, the titles themselves as well as internal evidence point to their liturgical use. In form the Psalms are very varied and differ much in value, but, as far as their contents are concerned, they represent the highest product of the religious poetry of all nations.

'After reading the prayers of other nations, no unprejudiced critic would deny that the Hebrew Psalms stand out unique among the prayers of the whole world, by their simplicity, their power and the majesty of their language, though, like all collections of prayers, the collection of the Psalms also contains some which one would not be sorry to miss' (Max Müller, 'On Ancient Prayers,' in *Semitic Studies in Memory of Rev. Dr. Alexander Kohut*, Berlin, 1897, p. 40).

3. The synagogue.—The Psalms, which indeed still presuppose the sacrificial cult, and were sung in connexion with it, symbolize the transition to the new form of worship which we find in the synagogue. The origin of the synagogue is hidden in obscurity, but it is pretty certain that the work of Ezra, in introducing the Tōrah as the law-book and book of devotion for the whole people, led to the institution of the synagogue (*bēth hā-kōl-nēseṯh*, 'house of assembling'; then translated Gr. *synagōgē* along with *προσευχή*). The first mention of synagogues seems to occur in a Maccabean Psalm (74⁸). In the first place the synagogue served the purposes of religious instruction, and was the means by which the Tōrah entered into the flesh and blood of the people—a result which we see clearly in several Psalms (19⁹⁻¹² 119). In the reading of the Tōrah, with accompanying translation and explanation in the Aramaic dialect of the people, which took place on all the Sabbaths, feast-

days, and the market-days (Mondays and Thursdays), the people were at first entirely passive, being merely listeners. Gradually prayer was added—at first only in the form of several important sections of the Tōrah, which bore the character of a devotional or edifying reading, and which were repeated by the people as a sort of confession. This is the so-called *Shema* (Dt 6⁴⁻⁸ 11¹⁸⁻²¹, Nu 15³⁷⁻⁴¹). It was regarded by Josephus (*Ant.* iv. viii. 13) as an institution that had long existed. Gradually the *Shema* was provided with a framework of introductory and concluding pieces, which were no longer taken from the Tōrah, but were original compositions that, as far as their contents were concerned, were prayers in the real sense of the term.

Besides these, there arose, perhaps at the same time, a quite independent prayer, which was designated as the prayer *kar' ēloḥīm*, as *t'phillāh*. This prayer, which has gone through a considerable historical development and in its later form was called *Shemōneh 'Esrēh* (i.e. 'eighteen,' because it contains eighteen benedictions), seems to be influenced in some way by the Hebrew Psalm of Sirach (51¹²). The oldest part of the prayer is composed of the first three and the last three benedictions. The *Shemōneh 'Esrēh* remains to the present day the real congregational prayer of Judaism. It is very well suited to this purpose, as it unites in simple speech the four chief kinds of prayer (thanksgiving, praise, petition, and confession), and gives expression to them from the standpoint of the people as a whole.

4. Family prayer.—Along with the synagogue the home also became a place of worship. It is doubtful whether the praying three times a day mentioned in Ps 55¹⁷ and Dn 6¹⁰ was a standing institution. In any case it is certain that at an early date family prayer, with a special liturgy for the evening of the Passover and for the beginning and end of the Sabbath (*Qiddush*, *Habhdālāh*), was customary. Then, too, prayer was offered at the beginning and end of every meal; and, later, on the occasion of every enjoyment whatever, at the commencement of every important work, at every outstanding event or experience, a special *berākḥāh* (blessing) was spoken. Thus in course of time every activity of life, every place, and every portion of time were permeated with thoughts of God. The demand that every action should be *l'shem shāmāyim* ('to the name of God,' 'consecrated to God') was thus literally fulfilled and 'the whole of life became a Divine service with interruptions' (M. Steinschneider).

5. Rivalry between synagogue and Temple.—This new form of worship in the synagogue and in the home constitutes perhaps the greatest and most radical reform in the whole history of the Jewish religion. For, although we possess no historical report of any revolt against the introduction of this worship, there naturally existed from the beginning a deep-seated opposition between the ancient Temple cult, which presupposed only one central sanctuary, and the synagogues, which existed in countless numbers and could be erected even beyond the confines of Palestine, wherever Jews were to be found. In the Temple a hereditary priestly aristocracy conducted the service, while the new form of worship was based on a purely democratic foundation, and any one who possessed sufficient knowledge and commanded respect might officiate. In the one case sacrifices, which at least in part were of a sacramental nature (e.g., the sacrifices of atonement and purification), formed the chief part of the service, while the liturgy had only a secondary place. In the synagogue, on the other hand, the model of a purely spiritual service was seen for the first time. Here

there was to be found nothing mystical or symbolical—only prayer and instruction, without any ritual accompaniment. In this respect the synagogue is the most real result of the prophetic religion. It made Judaism entirely independent of the Temple, and prepared men's minds for its overthrow.

6. Use of the popular dialect.—It is also worthy of mention that everywhere the dialect of the people was used in prayer along with Hebrew. In fact, in many important prayers the popular language was prescribed for those who did not know Hebrew. The Egyptian Jews in particular, who used the Septuagint instead of the Hebrew originals in divine service, developed also a Greek prayer-book. The numerous prayers contained in the Apocrypha and the Pseudepigrapha indicate how rich this literature must have been.

The early Christian liturgy is entirely modelled on the Jewish. This is seen not only in the Lord's Prayer, which is entirely composed of parts of Jewish prayer, but also in the other ancient Christian prayers as well as in the whole organization of the service.

7. Consequences of the destruction of the Temple.—After the fall of Jerusalem and the destruction of the Temple the synagogue, which had for long been the most important representative of Jewish religious life, became the only centre uniting the Jews of the Dispersion. From this time onwards the scribes sought more and more to establish, as far as possible, uniformity in the services. With the exception of a few ancient prayers in the Aramaic dialect (e.g., the *Qaddish*), Hebrew alone came to be used in public prayer. The language of the prayers also became more fixed; in particular, the *Sh'moneh Eserah* underwent what was for the time at least a final revision; new prayers for the service of the congregation were composed; the time and the outward form of the service as a whole were more and more fixed with painful exactness. While at an earlier date the element of instruction held the chief place, now prayer came to occupy an equally important position. The reading, translation, and explanation of the Scriptures on Sabbaths and feast-days continued to form an integral part of the service. In addition to the reading of the Tōrah, lessons were also read from the Prophets, to which the name *haphṭarāh* (i.e. 'closing') was applied, because they concluded the service, or because they concluded the reading of the Tōrah. The explanation of the sections read from the Tōrah was called the *Midrāsh*, and developed gradually into lectures based on a Scripture text and embracing the whole body of Jewish religious and national ideas. These lectures formed the model for the Christian sermon.

The classical work of Zunz, *Die gottesdienstliche Vorträge der Juden*, gives a critical history of the *Midrāsh* and at the same time of the synagogue service, while it brings out clearly the intimate historical connexion between prayer and sermon, which mutually completed and enriched each other.

The content of the prayers was widened after the destruction of the Temple, when the desire for the restoration of political independence, the rebuilding of the Temple, and the re-introduction of its worship came to occupy an important place. This desire appears, for the most part, in connexion with the Messianic hope, which is found in prayers from the time of Sirach, but first obtained decisive significance in the consciousness of the people after the great national catastrophe. This hope appears now in a gross form in the purely external conception that an earthly saviour would free the people from misery and servitude, now in a deeper and more spiritual form in the vision of the coming of the Kingdom of God (*Malḳūth shāmāyim*), i.e. the time when God shall be acknowledged and worshipped by all peoples, and when righteousness and peace shall reign on the whole earth.

This thought finds full expression in the prayers appointed for the New Year Festival and for the Day of Atonement, partly composed at the beginning of the 3d century A.D.

As an example we may refer to the prayer ascribed to Rabb (175-247) based on Sirach 36 (33)^{18r}: 'Lay then Thy fear on all Thy creatures, that all beings may worship, that all whom Thou hast created may fall before Thee, and that all may make one only covenant to do Thy will with all their heart, as we have long known that the power and the might belongeth unto Thee, and that Thy name is exalted over all that Thou hast created.'

In the liturgy associated with these two festivals the creative religious genius of Talmudic Judaism was specially manifested. For the richness of this New Year's liturgy in beautiful and thoughtful prayers was really the first thing to lend a religious significance to this festival, and to give it the place which it has since held in the popular consciousness alongside of the festival of the Day of Atonement as one of the chief festivals of the year. These prayers, in which the national element recedes into the background, ascribe to God the dignity of the world's Judge on the one hand and that of the forgiving Father on the other, and offer us a clear view of the whole Jewish system of doctrine regarding sin, repentance, and forgiveness.

II. TALMUDIC AND MEDIEVAL.—I. Prayer and service in the Talmud.—The predominating place which the synagogue service came to occupy in the religious life finds outward expression in the fact that the *Mishnāh*, the official law-book (closed about A.D. 200), begins with the treatise *Brākhōth*, which deals with prayer in all its aspects. The wealth of material contained in this treatise, as well as in the treatises *M'gillāh* and *T'arṁith* in the *Mishnāh*, and in the contemporaneous but unaccepted collection *Tosephta*, was materially increased in the following three centuries in the high schools of Palestine and Babylon, and its religious and historical significance has never been sufficiently appreciated. In spite of the scruples entertained among Jewish scholars about reducing prayers to a fixed form, and although they even censured those who could not vary them, and opposed the writing down of prayers ('Those who commit prayers to writing burn the Tōrah' [Tos. *Shabbāth*, xiii. 4]), the necessities of life brought about a uniformity in the synagogue service and partially even in family worship. This was the case among the whole people, the individuality of the worshipper being disregarded. It required several centuries, however, before congregational prayer really assumed a fixed form. Within the prescribed prayers room was of course left at various places for the individual needs of the worshipper.

This stated synagogue service was of the greatest importance in the religious training of the people. Prayers were offered three times every day (*shaharīth*, *minḥāh*, *ma'aribh*); on Sabbaths and feast-days a fourth supplementary prayer (*mūsāph*) took the place of the earlier sacrifices. By means of these services the most important religious duties, the chief doctrines of Judaism, and the most important hopes of his nation were ever afresh brought home to the consciousness of the worshipper, so that he never was actually freed from the atmosphere of prayer.

On the other hand, there was a danger in these prayers which were fixed and unchangeable as to hour, content, and form. They tended, among the masses of the people, to make prayer a purely external and mechanical affair. Hence the scholars who were the framers of the public liturgy constantly emphasized that prayer was to be regarded not as an obligatory service, but as a 'worship with the heart'—that 'God desires only the heart'

Accordingly, short prayers were frequently recommended, and as early as the beginning of the 3rd cent. a short extract was taken from the *Sh'moneh 'Esrēh* (*Häbbinūnū*). In this connexion there is a specially significant conception for which we have no term in any other ancient language—not even in the NT—namely, *karwānāh*, 'devotion' (more exactly *karwānāth hallēbāh*, 'direction of the heart'). The *karwānāh* is, in numerous passages in the Talmud, demanded as the chief requirement for every prayer. These passages have been collected by Maimonides (12th cent.), who has expressed the demand for contemplative devotion in the following form:

'Prayer without devotion is no prayer at all. The man who has prayed without devotion ought to pray once more. He whose thoughts are wandering or occupied with other things need not pray. . . . What then is devotion? One must free his heart from all other thoughts and regard himself as standing in the presence of God. Therefore, before engaging in prayer, the worshipper ought to go aside for a little in order to bring himself into a devotional frame of mind, and then he must pray quietly and with feeling, not like one who carries a weight and throws it away and goes farther. Then after prayer the worshipper ought to sit quiet for a little and then depart. The pious folk of old waited an hour before prayer and an hour after, and engaged in prayer for a whole hour. . . . One ought not to go to prayer immediately after jest or frivolous talk, or conversation, quarrelling or anger, but only after a discourse of a religious tenor' (*Mishnēh Tōrah, Hilekhūth Tephullāh* iv. 15f.).

2. Social significance of the service.—Since in the prayers of the congregation the individual's private interests had to take a second place, the public services constituted an important social factor. In the synagogue there was no room for egoistic prayers, and even in the prayers for the congregation requests for material good were subordinated to petitions for the enlightening of the spirit and for moral power. As these prayers did not satisfy the individual needs of the worshipper, a number of personal prayers were formed for private devotion which differed in outward form from the prayers of the congregation by the use of the singular, while the latter invariably use the plural. These personal prayers were said at the end of the public worship (cf. Elbogen, *Studien*, p. 41). They are characterized by a special tenderness and inwardness and only a few of them have been included in the Jewish Prayer Book. As an example of these private prayers we may quote the prayer of R. Yehuda, the redactor of the *Mishnāh*, which is still preserved in the daily morning prayer:

'May it be Thy will, eternal God, our God, the God of our fathers, to keep us [in the Prayer Book 'me'] from insolence that is foreign to us, or arrogance that is our own, from an evil man, an evil fate, an evil instinct, an evil companion, an evil neighbour, from the tempter who brings destruction, from a cruel judgment-seat and a cruel enemy, be he a son of the covenant [i.e. a Jew] or be he a stranger' (*Berākhot*, 16b). A number of other private prayers are found translated in the present writer's *Boussel's Rel. des Juifs* . . . *kritisch untersucht*, p. 99 f.

Beautiful thoughts on prayer are to be found scattered through the whole of the Talmudic literature, and they testify to a sound moral judgment as well as to keenness in psychological insight. We may here quote the most interesting sentence:

'It can be discovered from the prayers of a man, whether he be a *talmūdāh ḥābhām* [i.e. a man of culture in the moral and religious sphere] or a *bōr* [i.e. an uncultured person]' (Tos. *Berākhot*, i. 8, and parallel passages).

3. External form of the service.—Regarding the external form of the service, we can gather very little from ancient sources. The reason for this silence is, of course, to be found in the absolute simplicity of the service, which was devoid of anything like ceremony. Owing to the lack of any written prayer-book in the age of the Talmud, the prayers had to be spoken by a reciter (*sheliach ṣibbār*, lit. 'deputy of the congregation'; later, *hazzān*), and the people took part in them, repeat-

ing in many places 'Amen,' but often expressing their agreement in longer responses. Any full-grown male Jew might act as leader in prayer, but the duty was preferably entrusted to the most learned. The leader went (at least in Babylonia; cf. Elbogen, *Studien*, p. 33) to a lower place in front of the worshippers and prayed standing, with his face turned towards the sacred ark. The congregation, consisting of at least ten male adults, stood during a part of the prayers (particularly during the *Sh'moneh 'Esrēh*, which thus came to be called '*Amīdhaḥ*'). At other parts they bent their heads, and at some portions sank down on their knees. During prayer the worshippers covered themselves with the prayer-cloth (*talit*), which was provided with fringes (*ṣiṣit*). On week-days the phylacteries (*tephillin*) were also worn on the head and the left arm. The use of these was based on the literal interpretation of the two passages contained in the *Sh'ma* (viz. Dt 6^s and Nu 15^{27c}). The *talit* and *tephillin* were supposed to serve as memorials ('*ōth*'), but not as amulets. Neither to any of the customs mentioned nor to prayer at all (contrasting with Christianity) was there any kind of material influence ascribed. Nor, as was expressly emphasized, did the benediction of the priest have any external effect, 'as God but not the priests can grant blessing' (*Siphre*, § 43, on Nu 6²⁷). Moreover, the strict monotheism of the Jews permitted no kind of mediation in prayer by higher beings. Only in a few places (and in none of the official prayers) do we find the angels called on to intercede, while eminent scholars protested emphatically against the custom. It was not till the Middle Ages, when, owing to external oppression and internal ignorance, a darker spirit took possession of Judaism, that the expression 'the angel of mercy' was introduced into the Prayer Book by the *Kabbālā*. Even the names of the angels invoked in prayer—Sandalphōn and Metatrōn—show that we have here to do with ideas introduced from without.

The close of the Talmud (c. A.D. 500), when all Jewish traditions were reduced to writing, did not by any means give the liturgy a stereotyped form, although prayer-books can be traced back to the 7th century. On the other hand, we have now, much more than formerly, alongside of the statutory prayers, to reckon with the *minhāg*, i.e. the local usage which not only decided on form and use and created many new prayers, but also often directly opposed the Talmud. In consequence of the dispersion of the Jews in the different lands, climate and external circumstances exerted quite as strong an influence on the *minhāg* as the language, customs, and civilization of the neighbouring peoples. In order to restrict the variety that thus arose in the ritual, the *Gōnīm*, or heads of the Babylonian high schools, whose authority was recognized by all Jews, gave reasoned decisions, in answer to questions addressed to them. These decisions were then collected, and are preserved to the present day. We have to thank the *Gōnīm* for the first ordered form of prayer with reasons for the same, called *Siddūr*, of which the oldest extant is that of *Gāōn 'Amrām* (9th century). Special importance attaches to the *Siddūr* of *Gāōn Sa'adya* (10th century). The later and more complete collections of this kind were called *Mahzōr* (lit. 'year-cycle')—an expression which came to be used for prayer-books generally, particularly in connexion with the feast-days.

In spite of all decisions and ordered forms for prayer, in spite also of all endeavours of the great codifiers (among them Maimonides [q.v.]), the attempt to obtain uniformity of service was not successful. In fact, there came to be two groups

of sharply contrasted liturgical services which were further subdivided into many smaller groups: (1) the Palestinian group, which permeated the nations of N. Europe, and thus came to be called the 'German'; and (2) the Arabic group, which drew its adherents from the Jews dwelling round the Mediterranean (with the exception of Greece and Italy), and, as it was in use principally in the Peninsula, was called the 'Spanish' group. These two groups, which still exist alongside of each other, differ particularly with regard to the poetical prayers which, since the 8th cent., it has been customary on the feast-days and on certain Sabbaths to insert in the principal prayers.

4. The synagogue poetry.—Little can be discovered with regard to the origin of the synagogue poetry—*piyyūt*, as it was called.

It is not at all improbable that the Syrian and Greek hymns of the Church had an influence in the matter. The term applied to the poet of the synagogue—*paštān* or *payyūt* (from *ποιητής*)—points at once to a foreign origin. Zunz rightly emphasises the fact that the Jews had in their Psalms an ancient foundation, to build on which they required only the fitting materials. Any account of the history of the *piyyūt* must be based on the work of Zunz, *Die synagogale Poesie des Mittelalters*.

The oldest poetical compositions were without rhyme or metre, and for the most part with alphabetical arrangement of the lines and sections. Rhyme is found as early as the 8th cent., while verse measure was introduced by Spanish poets after the second half of the 10th century.

Zunz traces the origin of synagogue poetry to the tendency 'to give to the history and sacred traditions of Israel a form ennobled by art and beautified by song, and (by changing the commanded service into a spontaneous homage) in this way to make the synagogue to the Jew what the Olympic games and tragedies had been to the Greek—a place where the national genius was embodied and spiritualized, where it was seen and felt to be the costliest possession of the community and of every individual' (*Literaturgesch. der synagogalen Poesie*, p. 22 f.).

The authors of the oldest synagogue poems are unknown to us. These were composed, no doubt, for the most part by the leaders in prayer themselves, and were, to begin with, only listened to by the congregation but not repeated. Before long, however, these poems were also sung, so that the voice of song in divine service, which had been silent since the destruction of the Temple, was heard once more, and the leader in prayer became the precentor. Poetical sections were first inserted in the passages preceding and following the *Shema*; hence their names (*yōsēr*, *ōphān*, *zūlāth*). But the main endeavours of the *paštānīm* were directed towards adorning the first blessings of the *ḥaḥlālāh*. The compositions belonging to this class were called *qerōbbāh* (cf. Syr. *kūrōbbhō*, 'mass'). Further poetical compositions were provided for the Day of Atonement (*ābhōdhāh*, a description of the Temple service at that day in old times), for *shābhūt* (*āzhārōth*, enumerations of the precepts of the Tōrāh), for the 9th of Ab (the day of mourning for the destruction of the Temple, called *qindōth*, 'lamentations'), and for the seventh day of the Feast of Tabernacles, called *hōshānōth*.

In course of time the *piyyūt* found its way into every part of the religious life and every portion of the service. Nor was it confined to the synagogue. It entered into the family, and had its place there at the Sabbath meals, at the close of the Sabbath, in the joys as well as in the sorrows of the house, at births and at funerals' (Zunz, *Die synagogale Poesie des Mittelalters*, p. 70).

Material for the *piyyūt* was found in the inexhaustible wealth of ideas contained in the Midrāsh, whose place was gradually taken in the course of the centuries by the *piyyūt*, as the ever-increasing number of poetical compositions quite displaced the lecture.

A specially important kind of synagogue poetry is the *s'liḥāh*, prayer for forgiveness, penitential prayer. The service for the Day of Atonement was the first to be enriched with special prayers, which

belong in part even to the age of the Talmud. The length of the service, which lasted from morning till evening, and the special significance of the day led to the expansion of the liturgy. Thus Bible verses referring to God's forgiveness were collected, and poetical prayers dealing with the same subject were composed. The *qerōbbāh*, along with these *s'liḥōth*, was called *ma'amādāh*. The *s'liḥōth* became in course of time even more artistic in form and rich in content. Special pieces provided with a refrain were called *pizmōn*. The difference of content between the *piyyūt* and *s'liḥāh* is thus stated by Zunz:

'The *piyyūt* gives history and Midrash, the *s'liḥāh* feeling and presence; the *piyyūt* tends to become prophecy, the *s'liḥāh* a psalm' (ib. p. 83).

While in the *piyyūt* the element of teaching is in the forefront, the *s'liḥāh* is in form and content more the expression of the feelings with which the people were filled, and thus more a prayer in the strict sense of the term. The chief theme, which is treated in endless variations, is sin and suffering. The unceasing affliction which a thousand years of persecution brought upon the Jews finds as touching expression as does the believing humility with which they sought the reason of their misery in themselves rather than in the injustice of God. We also find the undying hope that God will finally put an end to their sorrows. Thus the *s'liḥōth* are the most valuable testimony to the piety of the Jewish people during the Middle Ages, and must from this point of view be regarded as the continuation of the Psalms.

See, further, for the synagogue poets, LITERATURE (Jewish), III. 5, IBN GABIROL, IBN EZRA, HALEVI.

5. Influence of philosophy.—In spite of the fact that we possess synagogue poems from almost all the Jewish philosophers of the Middle Ages, from Sa'adya onwards, and although the greatest poets were also philosophers, we have comparatively only a few philosophic prayers (e.g., 'the King's Crown' of Gabirol). The reason for this striking phenomenon is probably to be found not so much in the difficulty of clothing philosophic thought in prayer form as in the fact that prayer was an attempt to satisfy the claims of the heart by warm personal outpourings, which the coldness of philosophic rationalism rendered well-nigh impossible.

6. Influence of mysticism.—If there are few traces of philosophy proper in the prayers of the synagogue, mysticism, on the other hand, has exercised a most harmful influence, since the end of the 12th cent., on both the conception and the content of prayer.

'Although the more respectable mystics did something for spiritual religion and for devotion as opposed to thoughtless formalism, yet the liturgy lost more than it gained by their influence' (Zunz, *Die Ritus*, p. 24).

Since the beginning of the 16th cent. the liturgy has hardly been enriched except by additions from the Kabbalā, which only burdened the form and content of the service. On the other hand, the mystical sect of the Ḥasidīm, which arose about the middle of the 18th cent., originated a most important movement among the people. This movement directed itself chiefly against the rigid codification of all matters relating to prayer brought about by Joseph Caro's ritual code, called *Shulḥān 'Aruḥ* (1565), which had been generally acknowledged since the end of the 16th century. In opposition to it, the Ḥasidīm denied that the traditional form and the appointed times of prayer were binding, and, in place of meaningless habitual repetitions, demanded devotion springing from personal inspiration. Unfortunately this important movement, which at first seemed likely to be so fruitful, soon exhausted itself, owing to the opposition of the rabbis and to internal degeneration.

III. *MODERN CONDITIONS*.—Since the last quarter of the 18th cent., when the Jews, especially in Germany, began to participate in general culture, an important change has gradually come over the Jewish service. It was no real innovation to provide the Prayer Book everywhere with a translation into the language of the country, for, as early as the 16th cent., Italian, Spanish, and Jewish-German translations had appeared. The innovation rather concerned the service itself. Refined taste demanded a corresponding form, and changed circumstances called for a partial change in the contents of the prayers. In particular, the greater part of the poetry of the synagogue no longer suited the needs of modern times. It was only after bitter contests that in the course of the 19th cent. a series of reforms were generally accepted in the whole of W. Europe. In the first place, the sermon in the language of the country, which in Germany and elsewhere for various reasons had wholly fallen into disuse, was reintroduced. Prayers in the popular speech, alongside of those in Hebrew, and the curtailing of the synagogal poetry, have not, however, been so generally accepted. A number of congregations have also introduced choir-singing and even organs to accompany the prayers, as well as a shortening and reformation of the old chief prayers. One congregation in Europe (viz. the reformed congregation in Berlin, founded in 1845) and many American congregations have absolutely broken with tradition, by keeping the Sunday instead of the Jewish Sabbath, by almost entirely abolishing Hebrew as the language of prayer, by creating a completely new liturgy, which omits all the national memories and hopes, by doing away with the separation of men and women in the synagogues, and by praying with the head uncovered. In this way the unity of the liturgy is irrevocably lost. Thus the divine service, which for more than two thousand years had been the chief mark of the unity of Judaism, has become a bone of contention among opposing parties—a circumstance which has not failed to exercise a baneful influence on the whole religious life.

FELIX PERLES.

PRAYER (Mexican).—The great repository of Mexican aboriginal prayer is the work of Bernardino de Sahagun, *Historia General de las Cosas de Nueva España* (3 vols., Mexico, 1829), in which

he furnishes us with numerous examples of Aztec devotion, of a public and ritual as well as of a private character. As he lived and worked in the generation immediately succeeding the Spanish conquest of Mexico, and had abundant opportunities of meeting and speaking with natives who well recalled the times of Aztec paganism, there is no reason to believe that these productions are not the genuine outpourings of the Aztec mind or that they have in any manner been sophisticated.

The ritual and public prayers consist for the most part of appeals made to the various gods on the occasion of religious festivals, war, sacrifices, baptisms, funerals, and purifications, or in time of pestilence, and are extremely hortatory in tone, the purpose being the edification of the hearers. Particularly noteworthy are the prayers to Tezcatlipoca on the occasion of confession. These are of the most intense earnestness and lofty in tone and language. Nearly all the ritual prayers are of considerable length, and are obviously the products of a priesthood possessing ample time for pious consideration. It is only occasionally that Mexican prayer throws any light on the theological beliefs of the Aztec people, and, as practically every deity is addressed in the most exalted terms, it is impossible to judge the relative importance of the gods from the prayers offered up to them.

Private prayers, which appear to have been of a ritual character, were offered up to avert poverty, to obtain the necessaries of life, for agricultural reasons, and, indeed, for heavenly assistance in every activity of life. The exhortations of parents to children, which have frequently been called prayers and are so characteristic a feature of Mexican life, are, in reality, advisory sermons embracing codes of conduct for young people. The whole body of matter has been brought together in the sixth book of Sahagun's work mentioned above.

LEWIS SPENCE.

PRAYER (Muhammadan).—I. The ritual of the daily *salât*.—The most important part of the Muslim liturgy was, from the beginnings of Islâm, the ritual prayer, the so-called *salât*. Muhammad's intention in prescribing this ceremony as a religious duty to his followers was undoubtedly to imitate the ritual prayer of the Christians and Jews in the Orient, at least as far as it was known to him. Like this prayer, the Muslim *salât* consisted chiefly of prostrations, praises of God, the reciting of formulæ, etc. The name *salât* is not originally Arabic, but borrowed from the language of the Eastern Christians and the Jews (viz. the Aramaic *šm'lt*).

The Muslim law prescribes in great detail how a Muslim must perform his *salât*. A considerable proportion of these regulations may really be based upon the old *sunna* (the common practice) of the Prophet and his contemporaries, but many of the rules concerned with details, as to which there still existed difference of opinion in the first centuries after Muhammad's death, must be of later date.

When performing a *salât*, a Muslim stands, raises his open hands on either side of his face, and says: '*Allâhu akbar!*' ('God is most great!'). This ejaculation is called *takbîr* (or *takbîrah*). Then, still standing, he recites some verses of the Qur'ân, especially the Fâtihah (i.e. the opening chapter, i. 1–7). After this recitation the various inclinations and postures follow (described, e.g., by E. W. Lane, *Manners and Customs of the Modern Egyptians*, London, 1895, ch. iii., with figures in the text): (1) the worshipper first inclines his head and body till his hands reach the height of his knees, and then rises again (this is called the *rak'at*, 'inclination'); (2) then he proceeds to the first prostration (*sujūd*), dropping gently on his knees, placing his hands on the ground a little in front of his knees, and putting his forehead also to the ground; (3) he raises his head and body (but his knees must remain on the ground) and performs the second *sujūd*. This completes a *rak'at* (i.e. one of the subdivisions of the *salât*). Having finished one *rak'at*, the worshipper rises to his feet and goes

through the same again (the recitation of some verses of the Qur'ān, the *rukū'* and the two *ṣuḥūds*). Before the *rukū'* and before and after each *ṣuḥūd* of every *rak'ah* he recites the *takbīr*; and after the last *rak'ah* he recites: (1) the *shahādah* (i.e. the confession of faith); (2) a salutation over the Prophet, and (3) a second salutation (the *taslīmah*, i.e. the invoking of a blessing, saying '*al-salām 'alaikum*'), which is considered by most Muslims to be addressed to the guardian angels who watch over the worshipper.

At first—at least immediately after the *hijrah*—the Prophet used to turn his face towards Jerusalem during the *ṣalāt*, like the Jews. But in the second year after his arrival at Medīna a revelation (Qur'ān, ii. 136–145) changed this, Muhammad having quarrelled with the Jews in that town. Ever since that time the Muslim must turn his face towards Allāh's house, the Ka'bah at Mecca, to perform the *ṣalāt*.

While performing the *ṣalāt*, the worshipper is in a state of consecration (*ihrām*) and must observe special prescriptions. According to the primitive conceptions, every worshipper was supposed to be exposed to particular dangers from evil spirits when he was adoring his Lord. Many of the religious observances of the *ṣalāt* may originally have had no other purpose than to protect the worshipper against the maliciousness of the demons.¹ Thus (1) he must take care that his body is sufficiently covered; according to the Muslim lawbooks, a woman must cover her whole body during the *ṣalāt* (except her face and her hands); and a man at least the part of his body between his waist and his knees; the heads of both men and women are also supposed to be covered. (2) He must say before reciting the Qur'ān verses: 'I seek my refuge near God from Satan' (cf. Qur'ān, xvi. 100), and raise his hands in pronouncing every *takbīr* in order to avert the evil spirits that may be present (or, according to the Ḥanafites, he must do so only in pronouncing the first *takbīr*, the *takbīrat al-ihrām*; cf. Goldziher, 'Zaubererlemente im islamischen Gebet,' in *Festschrift-Noldeke*, Giessen, 1906, i. 320–325). (3) Special emphasis is laid on ritual ablution before the *ṣalāt*. It was a general custom of the ancient Arabs to employ water as a charm against demoniacal influences (see Goldziher, 'Wasser als Dämonenabwehrendesmittel,' in *ARW* xiii. [1910] 20–46); some of the earlier Muslim scholars held that an ablution was necessary before every *ṣalāt* (cf. Qur'ān, v. 8), but this view was rejected by other *faqīhs* (see Goldziher, *Die Zāhiriten*, Leipzig, 1884, pp. 48–50). According to the four orthodox *fiqh*-schools, a ritual ablution (*wuḍū* or *ghusl*) is required before the *ṣalāt* only when the worshipper is in a state of ritual impurity. It must be observed, however, that the ritual ablution is usually considered simply as a purification (see art. PURIFICATION [Muslim]); the original purpose of this ceremony may have been forgotten by the Muslims. (4) Further, it is desirable for a Muslim to recite the formulæ of the *adhān* (i.e. the call to prayer; see below) before beginning a *ṣalāt*—at least when he is not already summoned by the *adhān* that is chanted from the mosque. This usage must also be regarded as a kind of charm; the demons are supposed to flee when they hear the sacred words of the *adhān*.

2. Obligatory and supererogatory daily *ṣalāts*.—Some of the earlier verses of the Qur'ān (see xi. 116, xvii. 80 f., xxx. 16 f., lxxiii. 1) require Muslims to perform the *ṣalāt* thrice every day—in the morning before sunrise, at the close of day, and during a part of the night. To these *ṣalāts* another was added after the *hijrah*, the 'middle *ṣalāt*'

¹ See for the following rules especially A. J. Wensinck, 'Antimismus und Dämonenglaube im Untergrunde des jüdischen und islamischen rituellen Gebets,' *Der Islam*, iv. [1915] 219 ff., and 'Die Entstehung der muslimischen Reinheitsgesetze,' *ib.* v. [1914] 68–80, I. Goldziher, 'Die Enttöschung des Hauptes,' *ib.* vi. [1916] 801 ff.

(*ṣalāt al-wustā*), mentioned in Qur'ān, ii. 239, probably an imitation of the Jewish mid-day prayer (the *minhāh*). Moreover, the Prophet, according to the tradition, used to perform *ṣalāts* on various other occasions. In the first generations after his death it was a subject of discussion which of the daily *ṣalāts* must be regarded as obligatory, and there was also difference of opinion as to the exact times of day at which the Prophet had usually performed his devotions.¹ But gradually it was recognized in the whole Muslim world that the five following *ṣalāts* were obligatory for every Muslim: (1) the *ṣalāt al-subḥ* (at daybreak); (2) the *ṣalāt al-ẓuhr* (at noon, or rather a little later, when the sun has begun to decline); (3) the *ṣalāt al-aṣr* (in the afternoon, about half-way between noon and nightfall); (4) the *ṣalāt al-maghrib* (at sunset, or rather about five minutes later, for it is forbidden to perform a *ṣalāt* just at sunrise or sunset, because the heathen Arabs used to do so); and (5) the *ṣalāt al-ishā'* (at nightfall, when it is quite dark). Each of the five prescribed periods ends when the next commences, except that of the *ṣalāt al-subḥ*, which ends just before sunrise. The worshipper is recommended, however, to perform every *ṣalāt* as near the beginning of the prescribed period as possible. The *ṣalāt* at daybreak must consist of two *rak'ahs*, that of sunset of three, and each of the others of four; it is meritorious to add some supererogatory *rak'ahs* to each of the five daily *ṣalāts*. The four *fiqh*-schools disagree as to the exact number of these voluntary *rak'ahs*.

The three following daily *ṣalāts*, though not prescribed by the law as obligatory, are regarded as commendable and meritorious:

(1) The *ṣalāt al-tahajjud* (the night-*ṣalāt*) mentioned in some verses of the Qur'ān (see above).—This *ṣalāt* had evidently been gradually neglected by most of Muhammad's followers at Medīna; not all the members of the continually increasing Muslim community could show so much zeal for the service of their Lord, and Allāh at last yielded to their wishes! (see Qur'ān, lxxiii. 20). This *ṣalāt* was no longer to have an obligatory character. Nevertheless it is still regarded as very meritorious by the Muslims. It must consist of an even number of *rak'ahs*—two, four, or more. The middle third of the night is thought to be the best time for this devotion. Hence in many Muslim lands a sign is given in the mosque about midnight to announce the time of the *tahajjud*.

(2) The *ṣalāt al-witr*.—It is meritorious to make odd the even number of *rak'ahs* of the last *ṣalāt* of the night (i.e. the *ṣalāt al-ishā'* or the *tahajjud*) by adding an odd number of *rak'ahs* or at least one *rak'ah*. Usually the *ṣalāt al-witr* is added to the *ṣalāt al-ishā'* (since most people neglect the *tahajjud*). A well-known tradition says: 'Allāh is *witr* (odd) and loves the *witr*,' and the Muslims therefore pay a certain respect to every odd number. According to the Ḥanafites, the *ṣalāt al-witr* is even obligatory.

(3) The *ṣalāt al-ḡha* (*ṣalāt* in the morning) at the time between sunrise and noon, consisting of from two to twelve *rak'ahs*.—This ceremony also is not obligatory, though some of the earlier Muslim scholars thought it was. According to some traditionalists, it was a custom of the Prophet to perform this *ṣalāt* every morning, but this is denied in many other traditions.

3. The mosque and the daily public service in the mosque.—The so-called mosque of the Prophet at Medīna was only an open enclosure, adjacent to his dwelling. On one side there was a kind of portico, a flat roof supported by wooden pillars. This was where Muhammad usually performed his *ṣalāts*, either alone or with some of his followers. But this *masjid* was used also for various other purposes; it was, e.g., the place where Muhammad received the embassies of Arabian tribes and where he gave banquets to his guests. We may assume that the houses of other men of rank at Medīna had also a *masjid* of the same type.² Originally

¹ See, for further details, M. T. Houtsma, 'lets over den dagelijkschen ṣalāt,' *Theolog. Tijdschrift*, xxiv. [1890] 127 ff.; Goldziher, 'Die Bedeutung der Nachmittagszeit im Islam,' *ARW* ix. [1906] 293 ff.; T. Noldeke and F. Schwally, *Gesch. des Qur'āns*, Leipzig, 1909, p. 57, n. 1; E. Mittwoch, 'Zur Entstehungsgesch. des islamischen Gebets und Kultus,' *ABAW*, Phil.-hist. Klasse, 1913, p. 11 ff.; Wensinck, in *Der Islam*, iv. 232 ff.

² Maqrizī (*Khitāt*, Bulāq, 1270, ff. 270–11) says that there

the mosque in Muslim society took the place of the old heathen *maylis*, the open space near the tent or dwelling of the head of the tribe where all deliberations of the tribesmen took place (see H. Lammens, 'Ziād ibn Abihi,' in *Rivista degli studi orientali*, iv. [1911-12] 240 ff.; L. Caetani, *Annali dell' Islam*, Milan, 1905, i. 432 ff.; C. H. Becker, 'Zur Gesch. des islamischen Kultus,' in *Der Islam*, iii. [1912] 394 f.). Once a week the Muslims were convoked to an assembly in Muhammad's *masjid*—a usage probably originally introduced by the Prophet in imitation of the weekly congregations of the Christians and Jews. But the Muslims assembled on Fridays—at least at Medina, some time after the *hijrah*. One Friday, just before the service, a caravan with merchandise arrived at Medina, and most of the believers forgot their religious duty, being occupied in buying and selling. Then Qur'an, lxii. 9, was revealed:

'When the call to prayer soundeth on Friday (or on the day of the congregation), then go to praise the Lord and abandon business,' etc.

About A.H. 7 or 8 a *minbar*, a sort of wooden throne or raised seat with two steps, was placed in Muhammad's *masjid*, and the Prophet always sat upon this when presiding at the meetings (see Becker, 'Die Kanzel im Kultus des alten Islam,' in *Festschrift-Noldeke*, pp. 331-351). On special occasions Muhammad and his followers went out of Medina to the *musallā* (the place where the *ṣalāt* and other ceremonies were performed in the open field). Later, a lance was carried before the Prophet as an emblem of his authority; on the *musallā* this lance was stuck into the ground before him, marking the direction of the Ka'bah.¹

After Muhammad's death the Muslim liturgy remained very simple. In the great encampments of the Arabs in the conquered countries each of the tribes had its own *masjid*, where the tribesmen assembled. There was also a general *masjid* near the dwelling of the *walī*, the head of the place or the governor of the province. Originally this head mosque was very simple, often being only a large open square, surrounded by a ditch or by walls and with an open portico in front facing towards Mecca, supported on stone pillars and covered with a roof (see, e.g., Tabari, i. 2489). It was a general place of meeting, not reserved for the Friday service and other religious purposes. When general deliberation was necessary, the believers were convoked to a public *ṣalāt* before the further transactions, and the *walī*, or, in the residence, the *khalīfah* himself, presided at these meetings (see Goldziher, in *ZDMG* xlix. [1895] 315; Belādsori, ed. M. J. de Goeje, Leyden, 1866, p. 229. 3 [*Fragmenta hist. arabic.*, ed. de Goeje and P. de Jong, do. 1869, p. 217. 5]; al-Bayān al-Mughrib, ed. R. Dozy, do. 1848, p. 55. 16; al-Fahri, ed. W. Ahlwardt, Gotha, 1860, p. 95. 11; Becker, in *Der Islam*, iii. 395; and Lammens, in *Rivista degli studi orientali*, iv. 242 ff.). The Umayyad *khalīfahs* and also many of their high functionaries in the provinces used to sit on a *minbar* in these assemblies just as the Prophet had done before them. At first, however, this was regarded by some people as improper for a *walī*; the *khalīfah* 'Umar forbade 'Amr, his governor of Egypt, to sit on a *minbar*.

It was only gradually that the mosque became a place exclusively dedicated to worship; a regular daily service was instituted, and the Muslim were nine *masjids* at Medina besides that of the Prophet; see also the traditions concerning the *masjid al-ḡibrā* (mentioned in Qur'an, ix. 108).

¹ At a later time it was still a custom in some Muslim countries to indicate the direction towards Mecca by means of a staff or lance, behind which the leader of the *ṣalāt* placed himself. The *ṣalāt* was then performed 'ala 'l-'aṣā (i.e. in the direction of this staff).

liturgy began to develop and take fixed forms. The service of the Christian churches and Jewish synagogues may have influenced this development (see esp. Mittwoch, 'Zur Entstehungsgesch. des islam. Gebets und Kultus'; and Becker, 'Zur Gesch. des islam. Kultus'). It became a general custom to announce the times of the daily *ṣalāt* from the minarets of the mosque (the origin of the minaret is discussed in detail by H. Thiersch, *Pharos: Antike, Islam und Occident: Beitrag zur Architekturgeschichte*, Leipzig, 1909). The *adhān*, which is chanted from the minaret by the *muad-dhin*, consists of the following formulæ:

'God is most great' (this is said four times), 'I testify that there is no God but Allāh' (twice); 'I testify that Muhammad is Allāh's apostle' (twice); 'Come to prayer' (twice); 'Come to security' (twice); 'God is most great' (twice); 'There is no God but Allāh.'

The public *ṣalāt* in the mosque requires a leader, since all worshippers must perform the prescribed ceremonies together and at the same moment; every mosque has its own *imām*, who officiates over all who may be present at the times of the daily *ṣalāts*.¹ It must be observed that the position of this *imām* is very different from that of a priest, since he does not perform any sacramental action; he is only the leader of the *ṣalāt*, and, according to the theory of Muslim law, he may even cede his place to any other member of the congregation who is competent for the office. The beginning of the *ṣalāt* is announced in the mosque by a second call to prayer, the *iqāmāh*, which consists chiefly of the same formulæ as the *adhān* (most of the formulæ of the *iqāmāh*, however, are recited only once, and the words, 'The time of the *ṣalāt* is [now] come,' which are twice repeated, must be inserted after the formula, 'Come to security'). The *imām* then places himself before the *mihrāb*, the niche that indicates the direction to Mecca,² and performs the *ṣalāt* with the congregation. Only the voice of the *imām*, who recites the prescribed formulæ, may be heard during the *ṣalāt*. In the great mosques, however, where the congregation is usually so numerous that the believers cannot all see and hear the leader, the *takbīrs* of the *imām*, marking the various postures of the *ṣalāt* (see above), are repeated loudly by persons especially charged with this office (the *muballighs*).

4. The Friday service and the public *ṣalāt* on feast-days and other occasions.—On Friday the *ṣalāt al-jum'ah* (the *ṣalāt* of the Friday) must be substituted for the ordinary noon-prayer. It is a service celebrated by the whole community in the head mosque (*jāmi'*) of the place, consisting chiefly of two parts: the *khuṭbah* ('sermon') and a *ṣalāt* of two *rak'ahs*. In later times the *khuṭbah* preceded the *ṣalāt*; but this was not the original usage. According to Muslim tradition, it was an innovation introduced by the first Umayyad *khalīfah*, Mu'awiyah. Before the beginning of the sermon the *adhān*, which has already been chanted from the minarets, is repeated in the mosque. The preacher (*khatīb*) then delivers his sermon, standing on the *minbar*, and holding, as prescribed by ancient custom, a staff or wooden sword (or a bow) in his hands (see PREACHING [Muslim]). When the *khatīb* has finished his *khuṭbah*, he descends from the *minbar*, then the *iqāmāh* is chanted, and the whole congregation performs the two prescribed *rak'ahs* of the *ṣalāt al-jum'ah*. It is considered meritorious to perform, before and after the obligatory Friday *ṣalāt*, the usual supererogatory *rak'ahs* of noon.

The Friday service formerly required a general

¹ Other persons perform the lower offices in the mosque—lighting the lamps, sweeping the mosque, attending to the receptacles for water necessary for the ablutions, etc.

² See further, on the *mihrāb*, N. Rhodokanakis, in *WZKM* xix. [1905] 296 ff., and xxv. [1911] 71 ff.

assembly of the whole community. Muḥim law therefore forbids that this service should be celebrated in different mosques of the same town, unless the place is so populous that it would be practically impossible to assemble in one mosque. Moreover, according to the Shāfiʿites, the *ṣalāt al-jumʿah* is valid only when at least forty persons join in it; the Hanafites, on the other hand, hold that no fixed number is required, and that the Friday service can be validly celebrated by an *imām* and only three persons.

Twice a year, on the two Muslim feast-days (at the end of the fasting month and on the 10th of the month of Dhū'l-hijjah, in connexion with the sacrificial feast of the pilgrims in the neighbourhood of Mecca) a special service, the *ṣalāt al-ʿid* ('feast-*ṣalāt*') is celebrated which resembles the Friday service in many respects. There are, however, some points of difference: (1) the time recommended for the *ṣalāt al-ʿid* is the morning, about half-way between sunrise and noon; (2) it is supposed in the lawbooks that this ceremony should take place not in a mosque but in the open field; (3) the service consists of a *khutbah* and a *ṣalāt* of two *rakʿahs* like the Friday service, but the *ṣalāt* must precede the *khutbah*; and (4) the *adhān* and *iqāmah* are omitted; the *muadḍih* before the service only calls: '*Al-ṣalāta jāmiʿatan!*' ('[Now perform] the *ṣalāt* together!'). We may assume that in all these respects the feast-*ṣalāt* is still more ancient than the Friday service.

Another religious assembly takes place on each evening of the fasting month. It is counted meritorious to perform the *ṣalāt al-tarāwīḥ* ('the *ṣalāt* with pauses') after the daily *ṣalāt al-ʿaṣr* in this holy month. This ceremony consists of twenty *rakʿahs*, each pair of which is separated from the rest by a *tastīmāh* (see above). Though this *ṣalāt* is not obligatory, many persons usually take part in it. This great zeal for the *ṣalāt al-tarāwīḥ* can only be explained by its particular connexion with the holy fasting month.

When there was a great drought, the pagan Arabs tried to induce rain by enchantments. These heathen practices were replaced in Islām by the *ṣalāt al-istisqāʾ* ('the *ṣalāt* for imploring rain'), a public service that differs little from the service on the two feast-days. It is still characterized by the following ceremony: after the *ṣalāt* the *imām* and the other worshippers who are present move about and shake their upper garments; this custom is probably to be regarded as a survival of Arabian heathenism (see Goldziher, 'Zauberelemente im islamischen Gebet,' pp. 308-312). During an eclipse of the sun or moon a public service is celebrated which resembles the feast-*ṣalāt* in most respects. As regards details of the liturgy on these and other occasions, the opinions of the different *fiqh*-schools disagree.

LITERATURE.—Besides the works mentioned throughout see esp. C. Snouck Hurgronje, *Mekka*, Hague, 1888-89, II. 78 ff.; *The Achehnese*, Leyden, 1906, I. 61 ff., 80 ff., 230 ff., II. 288, and 'Islam und Phonograph,' in *Tydschrift van het Bataviaasch Genootschap*, xlii. [1906] 401-404; E. Sell, *The Faith of Islam*, London and Madras, 1880, p. 138 ff.; A. J. Wensinck, *Mohammed en de Joden te Medina*, Leyden, 1908, p. 102 ff., and the first and second chapters of the various Muslim *fiqh*-books.

TH. W. JUYNBOLL.

PRAYER (Roman).—As in many other phases of religion, the religious life of the Romans offers an exceptional opportunity for the study of prayer. Between the prayers of Cato and those of Marcus Aurelius we have, as it were, a complete gamut of religious experiences, and, though these two landmarks are less than 400 years apart, Cato represents many centuries before his time, and Marcus Aurelius is the prototype of many centuries to follow. Prayer, as distinguished, on the one hand, from magic and, on the other, from mystical ab-

sorption, is the orthodox communication between man and those powers outside of him which are called God or gods according to circumstances. Upon the orthodoxy of the act depends this distinction, and it is this element of orthodoxy alone that distinguishes primitive prayer from the mazes of magic, and advanced prayer from the formlessness of mystical absorption—so true is it that primitive prayer is closely akin to magic, and advanced prayer to religious absorption.

But, before we begin even this outline study of Roman prayer, we should make ourselves fully aware of three facts: (1) that the actual number of Roman prayers transmitted to us is relatively small; (2) that many prayers, so called, especially those in the poets, do not represent trustworthy evidence, and are apt to be either fanciful or under Greek influence, and therefore not available for our present purpose; and (3) that there is scarcely an operation in the world more delicate, and therefore more difficult, than the attempt to deduce the religious attitude of the individual from the formal experiences handed down to us.

1. Primitive prayer.—Here it should be noted that this title includes not only prayer as practised in the historical period which we call primitive and prayer as practised in later times by persons of primitive intelligence, but also many primitive forms of prayer retained by religious conservatism and practised by all orthodox persons. This observation is very necessary owing to the peculiar conditions under which the religious life of ancient Rome had its development. This development represents a series of accretions—a mechanical rather than a physiological growth. Man's spiritual evolution expressed itself not nearly so much in the transforming of the old formulæ as in their absolute conservation and the adding to them of outer coatings, new tree-rings of more modern thought. This was possible because of the absolutely formal character of all Roman religious concepts; and the only exceptions to it are found in the more spiritual cults of the Orient and in the impotent enthusiasms of a spiritual philosophy. The success of primitive prayer depended principally upon two things—the scrupulous exactness of expression and the correctness of the name and title of the deity addressed. Exactness of expression is an absolute requisite. This idea is, of course, common to both prayer and magic, and the orthodoxy of the one and the illegitimacy of the other form almost the only criterion of distinction. The question whether all primitive prayers were of a rhythmical character—the *carmina*, common to both prayer and magic—is a difficult one to answer,¹ but certainly very many primitive prayers were, for we have instances of them.

Every effort was made to obtain the strictest verbal accuracy, on the theory² that whatever was said had legal validity.³ The formulæ themselves were collected and preserved in the books of the priests.⁴ The formulæ were never changed, even though the language was so archaic that the priests themselves scarcely understood it. This was true, e.g., of the prayers of the Salii, of which Quintilian⁵ says:

'The prayers of the Salii were scarcely understood by the priests themselves, but religious conservatism forbade the changing of them, and the consecrated forms must still be used.'

¹ Cf. R. Westphal, *Theorie der griech. Metrik*, Leipzig, 1887, III. 1, 67, *Allgemeine Metrik*, Berlin, 1892, p. 223; O. Zander, *Vers Ital. antiqui*, Lund, 1890, p. 36.

² *Verba certa*, Cic. *de Nat. Deor.* II. 10, and Paul. p. 88, s.v. 'Fannus.'

³ Cf. Festus, p. 173: 'As the tongue has spoken, so is the law'; and Cic. *de Orat.* I. 245.

⁴ Gell. xiii. 28. 1.

⁵ *Inst. Or.* I. 6. 40.

In the cult of the Arval Brothers¹ a similar state of affairs existed, and as a safeguard against mistake the priests used prayer-books out of which they sang as they danced. In other cases the worshipper repeated the words of the prayer as they were said by an assistant.² The penalties for an error were indeed great, for a trifling mistake rendered the whole performance null and void. In the year 176 B.C.,³ at the celebration of the Latin Festival, the officiating magistrate from Lanuvium forgot to pray for the Roman people, and, when the matter was discovered, the senate referred it to the pontifical college, who in turn decreed that owing to the omission the festival could not be considered as performed and must be gone through all over again, and, as the magistrate from Lanuvium had made the mistake, Lanuvium must pay the cost of the new performance; and Plutarch remarks:

"In later ages one and the same sacrifice was performed thirty times over because of the occurrence of some defect or mistake or accident in the service—such was the Roman reverence and caution in religious matters."⁴

In relation to this verbal accuracy, we find ourselves between the realm of magic and that of law. Regarded as a charm, the prayer needed to be absolutely accurate in order to be effective, but in prayer regarded as a legal transaction such accuracy was equally important.

E.g., in the year 200 B.C. we read that "the Roman people directed the consul to vow games and an offering to Jupiter. But the vow suffered a delay; the Pontifex Maximus Licinius asserted that one could not make a vow of an indefinite sum because this money ought not to serve for the needs of the war but should be put apart at once and kept apart and not be mixed with any other money, for, if such a mixture took place, the fulfilment of the vow would be irregular. . . . The consul was asked to consult the College of Pontifices to know whether it were possible to vow in regular form an indefinite sum. The Pontifices replied that the vow was possible and entirely regular. The consul, repeating the exact expression of the Pontifex Maximus, pronounced the vow in the form employed previously for five year vows."⁵

We shall have occasion below to return to the legal aspect of Roman prayer, but, before leaving the interrelation of prayer and magic, it is important to notice that they have one other point in common, namely, that they depend for their effectiveness upon a knowledge of the exact name of the object addressed. In order that a prayer may be effectual, it must be addressed not only to the proper deity, but to some particular phase of that deity's activity as expressed in some adjective or *cognomen*. Hence the development of a great science of nomenclature—lists of gods and lists of *cognomina*.⁶

It is the same line of reasoning that makes it desirable to keep secret the name of one's special deity so that one's enemies may not be able to take advantage of it in prayer and call forth one's gods by the mysterious process of *exauguratio*. Hence Servius⁷ tells us that in pontifical law special precautions were taken that the gods of the Romans should not be called by their right names, in order that they might not be exaugurated. Similarly, Macrobius says:

"It is certain that every city has a god under whose protection it is placed; and the Romans had a mysterious custom, of which many persons are ignorant, that when they were besieging a city and thought they were on the point of capturing it, they worked the deities by means of a certain formula. Without this they did not think the city could be captured, or, at least, they would have considered it a sacrilege to take the gods captive. It was for this reason that the Romans always kept concealed the name of the god who protected Rome, and even the Latin name of the City."⁸

¹ Cf. art. ARVAL BROTHERS.

² *Verba praeire praefari; Sacra Carmina praecantare.*

³ Cf. Livy, xli. 16.

⁴ *Coriol.* 25. ⁵ Livy, xxxi. 9.

⁶ Cf. the *Indigitamenta*; G. Wissowa, *De dis Romanorum indigitibus et nominibus disputatio*, Marburg, 1892; J. B. Carter, *De Deorum Romanorum Cognominibus*, Leipzig, 1898; Warde Fowler, *Rel. Exper. of the Roman People*, p. 158.

⁷ *En.* ii. 351.

⁸ *Sat.* iii. 9.

Of course, much nonsense was talked among the antiquarians regarding the secret name of Rome and of the god who protected Rome, and very possibly the secret names were so secret that they never existed, but the principle underlying the whole discussion is a genuine one.

Practically all the writers on Roman religion, with the exception of Warde Fowler,¹ have unduly emphasized the magical and the legal bargaining aspects of Roman prayer. These two aspects were indeed prominent, but alongside of them existed, if only in embryo, the concept of the power and greatness of the deity and the powerlessness of man. "The language is the language of prayer, not of compulsion or even of bargaining."² We see this most clearly in the famous four prayers in Cato's "Farm Almanack"—prayers which are such precious and unique documents that the quoting of them in full is better than many pages of explanations.

Prayer for the cattle at the flowering of the pear-trees (Cato, *de Re Rust.* 181 f.): "At the flowering of the pear-trees make sacrifice for the cattle. . . . Thus shall the offering be made. Give to Jupiter Dapalis a measure of wine, as much as you see fit. On the day of the sacrifice let there be a holiday for the cattle, the herdsman, and for those who make the sacrifice. When you have to make the offering, you shall do as follows: "O Jupiter Dapalis, in regard to the sacrifice of a measure of wine which I make to thee in my house and in my family, mayst Thou be graciously increased by this sacrifice." Then wash your hands and afterwards take the wine, saying, "O Jupiter Dapalis, mayst Thou be increased by this sacrifice which I make unto Thee, mayst Thou be increased by this wine which I offer Thee."

Prayer before the harvest (ib. 184): "Before commencing the harvest, it is necessary to sacrifice a pig in the following manner: The sacrifice of a female pig should be made to Ceres before harvesting the following—spelt, wheat, barley, beans, and turnips. Before sacrificing the pig, invoke with incense and wine Janus, Jupiter and Juno. Present the pig to Janus with this prayer, "O Father Janus, in offering Thee this pig I pray that Thou wouldst be propitious to me, to my sons, to my house, to my family. Be Thou increased by this offering." Then offer the sacred pig to Jupiter, saying, "O Jupiter, in offering Thee this pig, I pray that Thou wouldst be propitious to me, to my sons, to my house, to my family. Be Thou increased by this offering." Afterwards give wine to Janus as follows: "O Father Janus, just as in offering the pig to Thee I prayed good prayer to Thee, for the sake of this thing mayst Thou be increased with the wine which I offer Thee." And thereafter pray to Jupiter as follows: "O Jupiter, mayst Thou be increased with this offering, and mayst Thou also be increased with the wine which I offer Thee." Thereupon slaughter the pig."

Prayer on making a clearing (ib. 189): "According to the custom of the Romans, thus should a clearing be made. Make an expiatory sacrifice of a pig and recite the following prayer: "Whether Thou be god or goddess to whom this wood is sacred, be there paid to Thee thy due, the expiatory sacrifice of a pig for the cutting of this sacred wood. For this purpose, whether I perform the sacred act or others do so at my command, may it be well done, even as it has been done. With this intention I sacrifice this pig in expiation, and I turn to Thee my pious prayers that Thou shouldst wish to be kindly disposed toward me, my house, my dependents, my sons. Therefore mayst Thou be increased by this pig of expiation which I am offering to Thee."

Prayer at the lustration of the farm (ib. 141): "Thus should the lustration of the fields take place. Thus shall you order the suovetaurilia to be led about them: "With the consent of the gods and with every favourable omen, I commit to you, O Manius, the task of leading the suovetaurilia about my farm, my fields, my land, in whatsoever part you should think best that they should be led about." Then make libation with wine and invoke according to formula Janus and Jupiter, and speak as follows "O Father Mars, I pray and beseech of Thee that Thou wouldst be well willing and propitious to me, to my house, to my dependents; and for this reason I have ordered that the suovetaurilia should be led around my fields, my land and my farm, that Thou shouldst hold back, hinder and drive away sickness visible and invisible, desolation, ruin, damages and storm; and that Thou shouldst cause to grow and prosper the fruits of the soil, the grain, the vineyards and the thickets; that Thou shouldst keep in safety the shepherds and the sheep; that Thou shouldst give prosperity and health to me, to my house and to my dependents. For these reasons, and because, as I have said, I am lustrating and causing to be lustrated my farm, my lands, and my fields, mayst Thou be increased by this suovetaurilia which is being offered Thee. O Father Mars, mayst Thou be increased by this suovetaurilia which is being offered Thee."

2. Prayer as a votum.—Prayer in the religion of the Roman State was virtually a bargain

¹ *Rel. Exper. of the Roman People*, p. 182 ff.

² *Ib.* p. 189.

between man and god, whereby man, the party of the first part, agreed to pay to the god, the party of the second part, such and such things if the god, the party of the second part, performed certain acts for man, the party of the first part. Such prayer was called a *votum*, a 'vow,' because the important and distinguishing feature was the promise to pay if service was rendered. As a rule, payment was not made until the deity had performed the desired acts. But there was one important exception to this general rule, the *devotio*, in which case payment was made in advance. It is not at all impossible that such payment in advance may have been intended as a means of binding the god and thus exercising a species of compulsory magic. The *devotio* is the vow uttered by a Roman general in the moment of battle whereby he agrees to give up his own life in order that his army may be victorious. If he succeeded in this act of self-destruction, it was felt that the gods had accepted his death, and that, having accepted it, they were compelled to grant the victory to his side. This curious reasoning was carried one step further, and it was thought that the gods were free from any obligation if the enemy succeeded in opening their ranks and letting him pass through unharmed.

The *devotio* may therefore be considered as in a certain sense forming the link between the magical and the legal point of view, for all ordinary *vota* were a strictly legal performance. The favours demanded of the gods were as infinitely various as were the promises to pay in case of fulfilment. These promises included votive offerings, games, sacrifices, the building of an altar or of a temple.

3. Outward characteristics of Roman prayer.—The worshipper faced the image of the god, and, as the god usually faced west, so the worshipper usually faced east. His position, as a rule, was standing, though occasionally he walked round the altar.¹ During the actual prayer itself the worshipper often held the altar.² Generally the hands were raised, but sometimes special positions were required; e.g., in a prayer to Neptune the hands were stretched out towards the sea,³ while in praying to Tellus or Ops the suppliant touched the earth.⁴ We also find references to kneeling.⁵ At the end of the prayer there followed the moment of adoration (*adoratio*), when the worshipper put his right hand to his mouth.⁶

Prayers were normally said in a distinct and usually a loud voice. This was the natural method in antiquity, just as all reading was done aloud. This fact makes possible many scenes in the drama when prayers are overheard.⁷ Silent prayer was sometimes motivated by modesty,⁸ and sometimes by shame;⁹ but whispered prayers were not orthodox,¹⁰ and he who indulged in them fell readily under the suspicion of practising magic.

4. Spiritual prayer.—Philosophy and the spiritual cults of the Orient, which entered Rome at the beginning of the empire, tended to introduce gradually an entirely new concept of prayer.

It was no longer a formal process by which man obtained physical benefits from the gods either by compulsory magic or by legal bargaining. It became instead an effort of adoration, a communion with God, a moment of spiritual exaltation;¹ and it was into this atmosphere that Christianity came.

JESSE BENEDICT CARTER.

PRAYER (Teutonic).—1. Prayer to the gods.—Our knowledge of heathen prayer among the Teutonic peoples is very scanty, and comes almost entirely from Scandinavian sources. From the prose Edda we learn that prayer was a regular part of the worship of the Aesir and Asynjur. Njorðr is to be invoked for sea-voyages and for hunting (*Gylfaginning*, xxiii. [*Die pros. Edda*, ed. E. Wilken, Paderborn, 1912, p. 32]). Freya is particularly well-disposed towards those who pray to her for help in love affairs (*Gylf.* xxiv. [p. 34]). In the sagas we frequently hear of men who have a special devotion to Thor, whom they invoke in difficulties and whom they consult before any important undertaking. In these cases it is hard to distinguish between prayer and divination.

Thorolf Mostrarskegg made a great sacrifice and went to consult with Thor, his beloved friend' (F. Holthausen, *Altisland. Lesebuch*, Weimar, 1896, p. 64). 'Helgi was very mixed in his faith. He put his trust in Christ and named his homestead after him; but yet he would pray to Thor on sea-voyages, and in hard stresses, and in all those things which he thought were of most account to him' (*Löndnamabók*, iii. xiv 3, in G. Vigfusson and F. Y. Powell, *Origines Islandicae*, Oxford, 1905, i. 149). 'Then Aur-lyg called upon bishop Patrec, but as for Coll he called upon Thor' (*ib.* i. vi. 2).

In *Vigaglum's Saga*, 9, there is an interesting example of prayer to Frey:

'Thorkel had been forced to sell his land to Glum. Before he departed from Thverdi, he went to the temple of Frey, leading thither an ox, and said: "Frey, who long hast been my patron, and hast accepted many gifts from me and rewarded me well, now I give this ox to thee, so that Glum may leave Thverdi and as much against his will as I do now; let me see some token whether thou acceptest it from me or not." At this the ox bellowed loud and fell dead, which Thorkel liked well, and he was less sad because he thought his prayer was heard' (P. B. du Chailly, *The Viking Age*, London, 1889, i. 352).

There are several stories of Earl Hakon's devotion to Thorgerðr Holgabruðr (also Hörðabruðr, Horgabruðr) and the earnest prayers that he was wont to make to her in moments of crisis. On one occasion Hakon desired her help for his friend Sigmund, whom he led into her temple.

'Hakon and Sigmund with a few others went into this house, where there were many gods; it had also many glass windows so that there was no shadow in it. At the inner end was a woman magnificently dressed. The Earl threw himself down at her feet, and lay there a long time. Then he rose up and told Sigmund that they should make her some offering, laying the money on the seat in front of her, "and we shall have this token," said he, "whether she will accept it or not, that I have wished her to let go the ring that she has on her hand. From that ring you will obtain good luck." The Earl then laid hold of the ring, and it seemed to Sigmund as if she closed her hand, so that he could not get it off. The Earl lay down again before her, and Sigmund noticed that he was in tears. Again he stood up, and laid hold of the ring, and this time it was loose. He gave Sigmund the ring' (*Flateyjarbók*, i. 144, quoted in W. A. Craigie, *Scandinavian Folklore*, London, 1896, p. 83).

An instance of prayer addressed to a stone occurs in *Hord's Saga*, 37:

'Hord's brother-in-law Indrði wished to slay the bondi Thorstein Gullknapp (gold-button), and waited for him on the way to his sacrificing house, whither he was wont to go. When Thorstein came, he entered the sacrificing house and fell on his face before the stone he worshipped, which stood there, and then he spoke to it' (du Chailly, i. 388).

⁹ Cf. Hor. *Epist.* i. 16. 60, where a man prays aloud to Janus and Apollo, and whispers a petition to Laverna to give him success in cheating; cf. also Persius, ii. 3 ff.

¹⁰ Cf. Seneca, *Ep.* x.: 'Speak to God as though all men were listening.'

¹ Cf. Seneca, *Ep.* x. 5, xl. 1.

K. Hildebrand, Paderborn, 1912, p. 56), 'Beträ's öbeſit an sé ofblótít,' may perhaps be translated, 'It is better not to pray at all than to sacrifice overmuch'; but it is not clear whether sacrifice and prayer are here contrasted or considered as practically synonymous. Certainly in Teutonic as in other religions the two modes of worship were closely connected.

'Sacrifice is a prayer offered up with gifts. And wherever there was occasion for prayer, there was also for sacrifice' (Grimm, *Teut. Mythol.* i. 29).

Ibn Fadhlān gives a detailed account of the worship of the Scandinavian Russians:

'As soon as the ship arrives in the haven, each one of them goes ashore, taking with him bread, meat, onions, milk and intoxicating drink, and makes his way to a tall piece of wood set up, which has something resembling a human face and is surrounded by small statues behind which are erected still other tall pieces of wood. He goes up to the great wooden image and throws himself down before it, saying, "O my lord, I am come from distant lands, bringing with me such and such a number of maidens, and such and such a number of sable skins." When he has counted up all his stock, he proceeds: "I have brought this gift to thee," and lays down what he has brought before the wooden statue and says: "I desire that thou wouldst provide me with a merchant who has plenty of gold and silver and will buy from me all that I wish to sell and will challenge nothing that I say." He then goes away. If, however, his trade does not proceed favourably and his stay is too protracted, he comes again, bringing a second or even a third gift. If he still has difficulty in obtaining what he wants, he brings a gift to each of the little images and asks them for their intercession, saying, "These are the wives and daughters of our Lord"' (C. M. Frahn, *Ibn-Fadhlān's und anderer Araber Berichte über die Russen alterer Zeit*, Petrograd, 1823, p. 7 ff.).

Prayer was not always accompanied by offerings. Sigdrífa, having been roused from a magic sleep by Sigurd Fáfnirbane, makes this invocation: 'Hail day! Hail sons of day! Hail night and her kinswoman! With favourable eyes, look upon us who are sitting here, and grant us victory! Hail asir; hail asynjur! Hail also to the bountiful earth! Give wisdom and eloquence to us two glorious ones, and hands of healing during our lives!' (*Sigdrífumál*, ll. 3 [Hildebrand, p. 217 f.]).

When Earl Hakon and Gudbrand were pursuing Hrapp, who had plundered the shrine dedicated to Thor, Thorgerðr Holgabruðr, and Irpa, 'the earl went aside by himself, away from other men, and bade that no man should follow him, and so he stays awhile. He fell down on both his knees, and held his hands before his eyes; after that he went back to them' (*The Story of Burnt Njál*, tr. G. W. Dasent [Everyman's Library], London, 1911, p. 156).

During his fight with the Jomsborg Vikings Hakon prayed to Thorgerðr Hörðabruðr, but his prayer proved unavailing until he had sacrificed his son Erling (cf. Craigie, p. 33).

3. Manner of prayer.—Little is known of the form and manner of heathen prayer. Tacitus (*Germ.* x.) informs us that among the Teutons divination was practised by a priest or paterfamilias, 'having prayed to the gods and glanced up to heaven.' In the sagas we hear frequently of worshippers prostrating themselves before images of the gods.

'The island was thickly wooded, and Hakon went to a clearing in the forest, where he lay down, looking to the north and prayed in the way he thought best, calling upon her in whom he put all his trust, Thorgerðr Hörðabruðr' (Craigie, p. 33; for the heathen custom of turning to the north in prayer cf. Grimm, l. 84).

Paul's *Grundriss der germanischen Philologie*, iii. 384 ff.

END WELSFORD.

PRAYER (Tibetan).—Prayer is more prevalent among the people of the Land of the Lāmas than among any other nation perhaps in the world. This is owing partly to the extreme devotion fostered by the hierarchy which wields the temporal rule of the country, and partly to the intense piety engendered by generations of extreme isolation from the rest of the world, amidst environments where Nature in her severest moods tends to inspire a superstitious dread of malignant spirits, who can be appeased or coerced only by prayer and sacrifice. Prayers are thus ever on the lips of the laity in all spare moments, apart from the daily priestly services in the temples, and in the

houses of the well-to-do, which generally possess a small shrine with miniature altar, before which domestic prayer is rendered.

1. General character of the prayers.—The prayers are generally genuine petitions addressed to one or more bountiful Buddhas or Buddhist divinities, whose spiritual or material succour is entreated; or they may be stanzas uttered in praise of the particular deity or deities invoked; and, in nearly all, one or other Buddha, human or celestial, is referred to in addition to the other deity implored. The frequent repetition of such formal prayers tends to degenerate into a mechanical routine. Yet, although the prayers consist usually of formal litanies and other rituals extracted from the Indian and Tibetan Buddhist canonical scriptures, spontaneous private prayers are not uncommon. The present writer has often heard Tibetan votaries, after making an offering of lamps on the altar of wayside temples, address God for spiritual and temporal blessing, for prevention of bodily peril or ailment, and for provision for daily wants, very much after the manner of Christian worshippers at the present day.

2. Buddhist form of Tibetan prayers.—The formal prayers, collected in printed or written manuals, consist mainly of extracts from the Indian Buddhist canon or from the rituals composed by early Indian and Tibetan monks. The class of canonical works furnishing these prayers is generally the same as that employed by the 'Southern' Buddhists of Ceylon, Burma, and Siam for the purpose, under the name of *paritta* or *pirit* (= 'protection'), and are *suttas* from the Pāli canon specially composed and prescribed by Buddha himself¹ to be recited as prayers to avert malign influence, for recovery from disease, to remove physical difficulties, and to procure happiness and a good rebirth. They are addressed to the moon, sun, and various other divinities, especially the *yaksha*—a general term for the orthodox Buddhist gods on Asoka's monuments (250 B.C.), though latterly viewed as more or less malignant. While the Tibetans thus use for prayers the corresponding canonical texts to the Hinayāna Pāli canon of the Southern Buddhists,² they have the advantage over the latter in that they have translated these texts into the vernacular so that the people can understand the meaning of the prayer or praise, whereas the Southern Buddhist laity repeat the texts in the foreign and long dead Pāli, which is unintelligible to them, making the 'prayer' an unmeaning mummary. Even the ingenious Bon religionists in the remoter districts have now generally assimilated their prayers to the type of the dominant Buddhists.

3. Deities and saints invoked.—The gods chiefly invoked by the Tibetans are found by the present writer to be orthodox Buddhist gods. For, contrary to the statements of Western writers on primitive Buddhism,³ he finds that gods enter very largely into the religion of Sākyamuni himself, as evidenced in the earliest Pāli canonical books, and into that of his greatest propagandist, the emperor Asoka, not only in his inscribed monuments at Bhārhut, but also in his edicts. Thus the latest authoritative reading of the Sahasrām rock-inscription states:

'Men in Jambu-dvīpa (India) who up till this time had been unassociated with the gods, have (now) been made associated with the gods.'⁴

¹ Cf. D. J. Gogerly, *Ceylon Buddhism*, Colombo and London, 1908, ii. 328; and L. A. Waddell, 'Dhāraṇī Cult in Buddhism,' *Oriental. Zeitschr.* ii. [1913] 155 f.

² For list of the Buddhist canonical texts used as prayers in Pāli, and tr. of several, see Gogerly, ii. 329-393.

³ E.g., T. W. Rhys Davids and H. Oldenberg, *passim*.

⁴ Tr. by E. Hultzsch, *J.R.A.S.*, 1911, p. 1115; cf. also Waddell, 'Dhāraṇī Cult,' pp. 155-171.

The first deity or divine saint to be invoked is Buddha himself, though not the most frequently addressed by the Tibetans. This also is paralleled in Southern Buddhism, which is supposed to represent the primitive form of Gotama's religion, wherein Gotama (Sākyamuni), although regarded as having passed away totally from the world, is not regarded as 'extinct,' as in the later mystical Buddhism, but is invoked as a still existing divinity, and not a mere pious memory:

'I bow my head to the ground and worship
The sacred dust of his holy feet:
If in aught I have sinned against Buddha
May Buddha forgive me my sin.'¹

He is also invoked daily in the refuge-formula: 'We go for refuge to Buddha, to his word or law (*Dharma*), and to his order of monks (*Saṅgha*),' in Tibetan² as in Southern Buddhism, as if he were still existent.

More frequently than the quondam human Buddha are invoked the celestial Buddhas of Indian Mahāyāna Buddhism. They are regarded as everlasting gods, and are reflexes of the Hindu gods to whom the title of 'Buddha,' or Buddha's other favourite title, 'Jina' or 'the Victor,' has been transferred. Of these the primordial self-existent god, corresponding to the late Brāhmanist creator-god Brahṃā, is Adibuddha, and he bears various titles according to different sects of Lāmas. Thus he is the 'Thunderbolt-Holder' (rDorje 'chan=Skr. Vajradhara), or the 'Thunderbolt-Souled' (rDorje sems-dpa=Skr. Vajrasattva), or 'Receptacle of Light' or 'Ever-shining' (rNampar snan-mtsad=Skr. Vairocana), presumably a form of the popular solar Buddha, Amitābha, or the 'Boundless Light,' the god of the Western Paradise, though nominally different from the latter. Latterly there was a fivefold division of these celestial Buddhas according to the five directions, namely the four quarters and the zenith.³

Much more frequently implored are the celestial *bodhisattvas*, or nominally potential Buddhas among the gods, most of whom are everlasting gods of an energetic order and invoked for their active aid. One of these, common to Southern Buddhism and Indian Mahāyāna, is the Buddhist Messiah, Maitreya (Tib. Byams-pa), who was placed by Sākyamuni in the heaven of Indra or Sakra. Gotama's (or Sākyamuni's) frequent references to him and to his abode in Indra's heaven offer another confutation of the statement so frequently made by the Pāli school of writers that Buddha was atheistic and did not recognize the Hindu gods in his system. Of this Buddhist Messiah many colossal images are carved on cliffs along roads in Tibet, and are the object of prayer to passers-by. But the most frequently worshipped and invoked of all is the Indian Buddhist goddess the 'Saviouress' (sGrol-ma, pronounced Dō-ma, the Skr. Tārā), who is the primordial Mother-goddess, Māyā, which was also the name of Buddha's mother; and, under the name Māyā, Tārā is worshipped by the Burmese and other Southern Buddhists. She is the special patron of women and children, and succourer in distress on land and sea. She is the Queen of Heaven, independently on her own account as well as in the form of consort to the Indian Avalokita (sPyan-ras-

zigs, pronounced Chā-rā-si), the 'All-seeing One' (lit. 'Clad with Eyes,' according to its Tibetan translation). The latter as the god of transmigration is the special favourite and patron-god of the Tibetans, and is associated with two others, as the defenders of Lāmaism, who also are of Indian origin, namely the 'Thunderbolt-Wielder' (Phyag-rdor, Skr. Vajrapāṇi), the Saivist Jupiter Pluvius, and the 'Sweet-Voiced' god of wisdom or Buddhist Apollo ('Jam-dbañs, Skr. Mañjuśrī)—all three of whom are in great request, though Avalokita, to whom the *Om manipadme Hūm* formula is addressed, is the most frequently invoked of all, and by all sects. The other popular *bodhisattva* gods and goddesses are enumerated in the list of their prayer-spells below, § 6.

Of the saints who are specially invoked for aid, each different sect of monks gives pre-eminence to its own particular founder; thus the Yellow-caps invoke Tsongkhapa; the new Red-Cap, Dug-pa, invoke Marpa or Milārāpa; and the old Red-cap, the original founder of the order of the Lāmas, Padmasambhava or Padmakara (*q.v.*). The laity, however, of all the sects especially invoke the last-named saint and esteem him to be practically as powerful as their favourite god, and he receives full divine honours—though this is paid covertly in communities where the Yellow-cap priests predominate, by whom he is banned as unorthodox.

'Demons' are not ordinarily invoked as such, or directly, even by the unenformed Red-caps, except on certain rare occasions of 'feeding the devils' and in disease- or death-ritual; and even then the invocation is usually preceded by some Buddhist ceremony, although embodying aboriginal Bon rites. But the Saivist forms of the Thunderbolt-Holder as the 'Defender of the Faith,' although not technically regarded by the Tibetans as devils, are really demoniacal and are identical with the demonist forms of the Hindu god Śiva as the spirit of destruction and death. These demonist forms were not inventions of the Tibetans, as generally asserted, but were all borrowed by the Tibetans ready-made from mediæval Indian Buddhism, which, to maintain its popularity, had been forced to adopt these depraved elements from the degenerated Indian Brāhmanism, while the poor deluded Tibetans believed that they were all right, as they imported them from the home of Buddhism at Bodh Gaya. As a result, each Tibetan monk has to select one of these demonist Śivas as his tutelary,¹ and each morning he privately invokes him for his protection throughout the day. But the unsophisticated layman invokes for this purpose the deified saint Padmasambhava, and the women implore Dō-ma, or Tārā, when they proceed beyond the self-sufficient *Om manipadme Hūm*.

4. Prayers in celebration services.—The priestly arrangement of prayers for the worship of each Buddhist divinity among Tibetans is usually divided into seven stages, and the text is printed or written in separate little pocket manuals or prayer-books for each deity, all in vernacular Tibetan. The stages are:² (1) the invocation—calling to the feast or sacrifice; (2) inviting the deity to be seated on the altar; (3) presentation of sacrificial offerings—sacred cake, rice, water, flowers, incense, lamps, musical instruments; (4) hymns in praise; (5) repetition of the special spell of the deity in Sanskrit; (6) prayers for benefits, present and to come; (7) benediction. When demons have been worshipped, they are 'invited to depart' before the benediction.

5. Specimen of ritualistic prayer.—A good example of the formal prayers is seen in the follow-

¹ Pāli *Pāṭimokkha*, Dickson 5; this does not appear in the version translated by Gogerly, i. 160-210, and is therefore presumably not used by all Ceylonese Buddhists; but it is found almost literally in the Tibetan versions—e.g., E. Schlagintweit, *Buddhism in Tibet*, London, 1863, p. 126f., where the text specially adds: 'I believe that the body of all the Buddhas does not enter into Nirvāṇa (of Extinction),' evidently intended to confute as a heresy the doctrine of total extinction.'

² Waddell, 'Lāmaism,' in *Gazetteer of Sikkim*, Calcutta, 1894, p. 808.

³ For details see Waddell, *Buddhism of Tibet*, London, 1895, pp. 348-352.

¹ See Waddell, *Buddhism of Tibet*, pp. 152, 222f.

² For details see *ib.* p. 424f.

ing extract from the ritual of Tārā, the Queen of Heaven, which has been translated in full by the present writer.¹ It is composed in metre.

Invocation.

'Hail! O verdant Tārā! The Saviour of all beings!
Descend, we beseech thee, from thy heavenly mansion at Potala,
With all thy host² of gods, titans, and deliverers.
We humbly prostrate ourselves at thy lotus-feet!
Deliver us from all distress, O holy Mother!'

Presentation of sacrificial offerings.

'We hail thee, O revered and sublime Tārā!
Who art adored by all the kings and princes
Of the ten directions,³ of the present, past and future.
We pray thee to accept these offerings
Of flowers, incense, perfumed lamps, precious food,
The music of cymbals and the other offerings!
We sincerely beg thee in all thy divine forms⁴
To partake of the food now offered.
On confessing to thee penitently their sins
The most sinful hearts, yea, even the committers of
The ten vices and the five boundless sins
Will obtain forgiveness and
Reach perfection of soul, through thee!
If we have amassed any merit in the three states,⁵
We rejoice in this good fortune, when we consider
The unfortunate lot of the poor (lower) animals
Still piteously engulfed in the ocean of misery.
On their behalf, we now turn the wheel of religion!
We implore thee by whatever merit we have accumulated
To kindly regard all the (lower) animals.
And for ourselves, when our merit has reached perfection,
Let us not, we pray thee, linger longer in this world.'

Hymns in Tārā's praise.

(The hymns are in verse, the metre of which is not here reproduced.)

'Hail! exalted Tārā-the-Saviouress!
Heroic mother, the messenger
Of the three-world Lord,
Rich in power and compassion.

Hail to thee whose hand is decked
By the golden lotus,
Eager soother of our woe,
Ever tireless worker, thou!'

(and so on for 21 verses).

Repetition of the spell and prayer of the deity.

Here is repeated 108 times on the rosary, or, if time presses, as often as possible, the special mystic spell of Tārā in Sanskrit, namely:

'Om! Tā-re tu Tā-re tu-re Svā-hā!'

Prayers for blessings.

'We implore thee, O revered Blessed One,⁶ Victorious and Merciful Mother! purify us and all other beings from the two evil thoughts. . .

Wherever we dwell, we beg thee to soothe there disease and poverty, fighting and disputes, and increase the true religion. . .

Let us obtain the favourite tutelary angels⁷ of our former lives and entry into the paradise of the Buddhas of the past, present and future.'

Benediction.

'Now, O mighty Worker, speedy Soother and gracious Mother,
Holding the utpal-lotus flower, may thy glory come and all happiness!'

One of the ordinary hymns to Buddha opens as follows:

'Om! Hail to the Omniscient Ones: Buddha, (His) Law, and (His) Order of Monks!

Hail to the blessed Buddha, the victorious and all-wise

Tathā-gata Arhat, who has gone to happiness!

He is the guide of gods and men.

He is the root of virtue and fountain of treasure.

He is adorned with perfect endurance and all beauty.

He is the greatest flower of all the race.

He is admirable in all his actions, in the eyes of all.

He delights in the faithful ones.

He is the Almighty Power, the Universal Guide.

He is the father of all the Bodhisats,

¹ See Waddell, *Buddhism of Tibet*, p. 435.

² 'khor = 'circle.'

³ That is the four cardinal points, the intermediate half-points, the zenith and nadir.

⁴ This goddess has different forms and names as incorporating all aspects of the primordial divine mother; see Waddell's *tr* of Tibetan *Dhāraṇīs*, in *JA* xlii. [1914] 37-95.

⁵ The three mystic worlds of Brāhmanism: desire, form, and formlessness (*kāma*, *rūpa*, and *a-rūpa*).

⁶ *Bhagavatī*, the feminine of *bhagavat*, the ordinary title for Buddha in the Pāli and often in the Sanskrit.

⁷ Lit. 'spirit' or 'gods' (*lha*).

The king of the revered ones and leader of all the dead.
He owns infinite knowledge, immeasurable fortitude.
His commands are all-perfect, his voice all-pleasing.
He is without equal, without desires, without evil.
He delivers all from sorrow, from sin, from worldliness.
His senses are the sharpest. He bravely cuts all knots.
He delivers all from deepest misery, from earthly woes.
He has crossed the ocean of misery.
He is perfect in foreknowledge.
He knows the past, present and future.
He lives far from death.
He lives in the pure land of bliss, whence enthroned he sees all beings!'

6. Rosaries. — The supposed efficacy of the mechanical repetition of prayers as devotional exercises has led in Tibet, as in the Roman Church, to the extensive use of the rosary; and nearly every layman and woman in Tibet carries a rosary to register the performance of these pious tasks. The rosaries are formed of various materials of mystical significance,¹ and the beads reach the mystic number of 108. The leading prayer-spell formulæ recited on these beads are of a Sanskrit character, and are shown in the following table along with the deity or saint to whom they are addressed and the kind of rosary employed.

Deity.	The prayer-spell.	Kind of rosary.
1. Cha-ra-si, Skr Avalokita.	Om! <i>maṇipadme</i> <i>Hūṃ</i> .	Conch-shell or crystal.
2. Dorje jik-je, Skr. Vajrabhairava.	Om! <i>Yamāntaka</i> <i>Hūṃ phat</i> .	Human skull or 'stomach'-stone.
3. Cha-na dorje, Skr Vajrapāṇi.	Om! <i>Vajrapāṇi</i> <i>Hūṃ phat</i> .	Raksha-seed.
4. Do-mā (green), Skr. Tārā.	Om! <i>Tā-re tu Tā-re</i> <i>ture Svā-hā</i> .	Bodhi - tree wood or turquoise.
5. Dō-ka (white), Skr. Sita-Tārā.	Om! <i>Tā-re tu Tā-re</i> <i>mama āyur pun-</i> <i>yed-sanyana push-</i> <i>gitta kuru Svā-hā</i> .	Bodhi - tree wood.
6. Dorje p'agmo, Skr. Vajravārāhi.	Om! <i>Sarva Buddha</i> <i>dakṣiṇā Hūṃ</i> <i>phat</i> .	do.
7. 'Ozer chan-ma, Skr. Marichī.	Om! <i>Marichyē mah</i> <i>Svā-hā</i> .	do.
8. Gon-po nagpo, Skr. Kālanātha.	Om! <i>Śrī Mahākāla</i> <i>Hūṃ phat Svā-hā</i> .	Raksha-seed.
9. Nam-sé, Skr. Vairocana.	Om! <i>Vairocana-ye</i> <i>Svā-hā</i> .	Naga - pāni-seed.
10. Dsanilha-la, Skr. Jambhala.	Om! <i>Jambhala-dal-</i> <i>endra-ye Svā-hā</i> .	do.
11. Sen-ge-da, Skr. Sinhanāda.	Om! <i>Śrī Sinhanā-</i> <i>da Hūṃ phat</i> .	Conch-shell or crystal.
12. Jam-yang, Skr. Mañjuśrī.	Om! <i>Ara-pa-a-na-</i> <i>dhī</i> .	Yellow.
13. Demchog, Skr. Samvara.	Om! <i>Śrī ha-ha</i> <i>Hūṃ Hūṃ phat</i> .	Bodhi-tree.
14. Padma-jungna, Skr. Padmasambhava.	Om! <i>Vajra Guru</i> <i>Padma</i> <i>Siddhi</i> <i>Hūṃ</i> .	Coral or bodhi-tree.

7. Graces before meat. — Before drinking tea, the usual beverage, the Lāmas, like the Romans in regard to wine, pour out a little as a libation to the *lares* and other gods. A usual grace for tea is:

'We humbly beseech thee that we and our relatives throughout our life-cycles may never be separated from the Three Holy Ones! May the blessing of the Trinity enter into this drink!'

Then, before drinking, they sprinkle a few drops with the tips of the fingers on the floor or ground, and continue the grace:

'To all the dread local demons of this country we offer this good Chinese tea! Let us obtain our wishes, and may the doctrines of Buddha be extended!'

When any flesh-meat is in the diet, '*Om abhira khecara, Hūṃ!*' is repeated to counteract the sin of slaughter and of eating flesh, and by the efficacy of this prayer-spell the animal whose flesh is eaten is supposed to be reborn in a higher state of existence, and even in heaven.

8. Prayer-wheels and prayer-flags. — With the laity the paṇacea prayer-formula is the ubiquitous

¹ For details see Waddell, *Buddhism of Tibet*, pp. 202-210.

Om manipadme Hum, which is the Pater Noster of Tibetans, though it is of Indian origin. In virtue of the supposed efficacy of its mechanical repetition, it is printed thousands of times on long strips of paper which are coiled inside revolving metal cylinders to form the so-called hand-‘prayer-wheels’ which are the most conspicuous part of the pious outfit of the Tibetans, laity and lāmas, and are carried spinning in their hands, in the belief that each revolution of the printed sentences is equivalent to uttering the formula an equal number of times (cf. art. PRAYER-WHEELS). On the ‘prayer-flags,’ which are erected on tall masts in the neighbourhood of temples and wayside shrines, and, fluttering in the breeze, form a very artistic and picturesque feature of the landscape, are inscribed various prayers of an astrological kind, especially for the good fortune of the person erecting these flags, which are really ‘luck-flags.’ Their name *lung-rtā* has been shown by the present writer¹ to incorporate the Chinese *long-ma*, ‘horse-dragon,’ which has an analogous ritual. After several spells in Sanskrit we find written in Tibetan:

‘May all the above deities [Avalokita and others] prosper the year [there is inserted the year of birth of the individual votary] and prosper the body, speech, and mind of this year-holder and may the true religion [of Buddha] prosper!’

Analogous paper banners, in the shape of dragons and other animals, are offered also by the Southern Buddhists of Burma at temples and other shrines inscribed with similar sentences in Pāli and the vernacular, such as:

‘May the man born on Friday gain reward by this pious offering.’ ‘May the man born on Monday be freed from sickness and the three calamities.’ ‘By the merit of this may Wednesday’s children be blessed by spirits and men.’²

These Tibetan luck-flags are also tied to certain bushes over dangerous parts of streams and near carns, like the rag-bushes in Muhammadan and other Eastern countries.

LITERATURE.—See the works quoted throughout

L. A. WADDELL.

PRAYER, BOOK OF COMMON.—I. Introduction.—(a) The English Prayer Book, as we now have it, is a very composite production. A study of the title-page alone is sufficient indication of this. It runs thus:

‘The Book of Common Prayer and Administration of the Sacraments, and other Rites and Ceremonies of the Church according to the Use of the Church of England; together with the Psalter or Psalms of David, pointed as they are to be sung or said in Churches; and the Form and Manner of Making, Ordaining, and Consecrating of Bishops, Priests, and Deacons’

The cumbersome of this title is not merely a relic of the days when such prolix titles to books were in fashion, but is also due to the fact that by the middle of the 16th cent. the still recent invention of printing and the constant improvements in it enabled our Reformers to begin to bring together into a single volume all the more necessary services and other materials for public worship, which had as a rule hitherto been copied out with much labour in several separate tomes.⁴ Thus ‘the Common Prayer’ represents the former Breviary (and perhaps we may add the Primer); ‘the Administration of the Sacraments,’ etc., represents the Missal and the Manual; the ‘Psalter’ speaks for itself; and the ‘Form of Making,’ etc., stands for the old Pontifical. This, of course, is far from exhausting the books in use before the Reformation, such as the Hymnary (of which we now have

¹ Waddell, *Buddhism of Tibet*, p. 412 f.

² Shway Yoe (J. G. Scott), *The Burman, his Life and Notions*, London, 1882, i. 235.

³ The title originally ended here; until 1662 the Psalter had its own separate title-page and the Ordinal still has, though since 1662 it has also been printed on the front page (see below).

⁴ Cf. the Preface of 1549: ‘by this order the curates shall need none other books . . . but this book and the Bible and . . . the people shall not be at so great charge for books as in time past they have been’ (these words are now omitted).

no authorized representative), the Antiphoner, Lectionary, etc. Some of these (e.g., the Antiphoner) have been almost entirely removed from the services in the present book, the reason being thus stated in the Preface of 1549.

‘For this cause be cut off Anthems, Responsds, Invitatories and such like things as did break the continual course of the reading of the Scripture.’¹

Others are either provided for as by the references in the Table of Lessons or printed in full as in the Epistles and Gospels of the Day, etc., while the use of hymns in numerous unauthorized collections has taken the place of the ancient Hymnary.² The musical notes, however, which the old books often supplied are now wholly wanting,³ except by prescriptive use, though the rubrics in various places contain references to the clerks and their singing, which obviously recognize the place of music in public worship as legitimate; and the Psalter is specially said to be ‘pointed’ for singing or saying ‘in churches.’

In the Ordinal, which was first issued separately in March 1549–50, the most notable omission, when we compare it with the ancient Pontificals, is of any provision for the consecration of churches and for the coronation of the sovereign. It is not easy now to account for this serious oversight, which, at least in the case of opening new churches for public use, has been a great drawback ever since. We have no exact guide as to what was the mind of the Church at that period, and the celebration of the divine mysteries as an essential of the rite has usually been almost entirely lost sight of.⁵

(b) We may now proceed briefly to review the reasons and principles which guided the first compilers of the new book, and which have been accepted in the bulk by all subsequent revisers.

(1) One main reason for the fundamental change of substituting English for Latin throughout is the obvious one and is thus stated in the Preface of 1549: ‘that the people might understand and have profit by hearing the same.’ But it is a mistake to suppose that this was an entirely unheard-of innovation in the reign of Henry VIII. Apart from the fact that it was after all only a return to primitive practice,⁶ it is worth noting that in the marriage service of the unreformed rite the betrothal had from of old taken place in the mother tongue, though the rest of the ceremony was conducted in Latin, while for at least 150 years the private devotions of the laity had been provided for in English by the Primers, which were put forth by authority from time to time.⁷ These contained some of the more important prayers, canticles, etc., from the Breviary offices,

¹ A few traces, however, are left: (1) the reference to the Advent antiphon ‘O Sapientia’ (16th Dec.); (2) the mention of the anthem ‘In Quires and Places where they sing’ at Mattins and Evensong; this rubric, however, dates from 1662; (3) old antiphons have been introduced into (a) the Litany (‘O God,’ etc.), (b) the Burial Service (‘Man that is born,’ etc., and ‘I heard a voice,’ etc.), and (c) the Visitation of the Sick (‘O Saviour,’ etc.), and (d) the collect for the Sunday after Ascension day is an adaptation of an old antiphon.

² Only one metrical hymn is now contained in the Prayer Book, viz. ‘Veni Creator’ (in two versions) in the Ordinal.

³ Merbeck’s notation (1550) was apparently to be the norm at one time; but see Procter and Frere, *New Hist. of the Book of Common Prayer*, p. 42 f.

⁴ ‘Sing’=recite with musical inflexions; ‘say’=recite in monotone.

⁵ Obviously, if this contention is correct, the usual method of a priest celebrating the Holy Communion before the consecration by the bishop is uncanonical and reduces the Episcopal service almost to a farce. In the order of consecration provided in the American Prayer Book, Holy Communion does form an integral part, though it is rather spoilt by too much attention being directed to Matins which precede it.

⁶ Cf. A. Fortescue, *The Mass*, new ed., London, 1914, p. 126. ‘There was no idea of a special liturgical language at that time [for the first 2 centuries]; people said their prayers in the vulgar tongue.’

⁷ For the Reformed Primers of Henry VIII’s reign see Procter and Frere, p. 43 f.

and thus for a considerable period the more thoughtful and religious lay-folk had become familiarized with a certain portion of the Church services. Still the restoration of the use of the vernacular into public worship—a use which had ceased for many centuries—was a new departure of the very highest importance and was under God due to Henry VIII. and his advisers.¹

The first step taken in that direction was in 1543, when the Canterbury Convocation ordered Lessons from the English Bible to be read at Mattins and Vespers. But the first service proper to be published in English was the Litany in the year following (1544). It is interesting to note that the reason which suggested this was very similar to that which originated litanies in the West in the 5th and 6th centuries, viz. the prevalence of bad seasons and other troubles at home and of wars abroad.

The next step in the same direction was at the beginning of Edward VI.'s reign, when—pending the decision as to the use of English in general—an Order of Communion in English was issued in March 1548. This² contained the Exhortation, Confession, Absolution, the 'Comfortable Words,' the Prayer of 'Humble Access,' nearly as we have them now, and was to be inserted in the Latin Mass before the Communion of the people. The Epistle and Gospel were also to be read in English.

Three other principles guided the Reformers in compiling the Prayer Book, as the original Preface makes clear.

(2) They aimed at clearing away that which was only legendary and calculated to foster superstition:

'Here are left out many things, whereof some are untrue, some uncertain, some vain and superstitious,'

and at restoring the continuous and orderly reading of the Holy Scripture day by day together with the monthly recital of the whole Psalter.

(3) They greatly simplified the forms and ceremonies in vogue:

'The number and hardness of the rules . . . and the manifold changes of the service was the cause that . . . many times there was more business to find out what should be read than to read it when it was found out.'

At first this process was much more drastically carried out in the case of the Daily Offices than in that of the Liturgy proper, where in 1549 a very considerable portion of the ancient usages was retained, whilst those in Morning and Evening Prayer were reduced to a bare minimum—suitable, as it was thought, for the busier members of the laity as well as for others. But later changes (especially in 1552) in the Liturgy itself were far less conservative and liturgically defensible. Even so the first paragraphs of the present Preface drawn up by Robert Sanderson, bishop of Lincoln, and prefixed to the original portion ('concerning the service,' etc.) so late as 1662 still profess

'to observe the like moderation as we find to have been used . . . in former times. And therefore . . . we have rejected all such [alterations] as were . . . of dangerous consequence as secretly striking at some . . . laudable practice of the Church of England or indeed of the whole Catholic Church of Christ.'

(4) They desired uniformity of use throughout the kingdom.

'Whereas heretofore there hath been great diversity . . . some following Salisbury use, some Hereford use, etc. . . . now, from henceforth all the whole Realm shall have but one use.'³

¹ Of the two schemes drawn up before 1549 by Cranmer (recently published by Henry Bradshaw Society, vol. I. [1915]) the first retains the Latin language throughout, but the second introduces the use of English for the Lord's Prayer and the Lessons.

² Published by H. Bradshaw Soc., vol. xxxiv. [1908].

³ It is curious to reflect that after the Council of Trent (1563) the Roman Curia followed suit, and since then has rigorously repressed local uses, with rare exceptions.

(5) Yet another principle of the Reformers has so far been taken for granted rather than asserted, except as the use of the English tongue and supplantation of the forms give evidence of it, viz. their intention to give the laity proper facilities for joining in the divine service. This of course specially refers to the Daily Offices. The theory always had been that the people as well as the clergy should attend the day hours in the parish church, though it may be doubted if it was ever very generally put in practice. In 1549 and onwards the aim was to facilitate the practice as much as possible, though still with doubtful success.

The Preface, as it now (since 1662) stands, bids 'all Priests and Deacons to say daily the Morning and Evening Prayer either privately or openly, not being let by sickness or some other urgent cause' (in 1552 'preaching and studying of divinity' had been particularized). 'And the Curate . . . being at home and not being otherwise hindered . . . shall cause a bell to be tolled thereunto a convenient time before he begin, that the people may come to hear God's Word and to pray with him.'

Fresh emphasis was likewise given to the obligation in 1662, when the words 'daily to be said and used throughout the year' were added to the first title of 'Morning and Evening Prayer.'

It should be observed that much of the original Preface recalls the language of Cardinal Quignon's Preface to his Breviary (1535), because it shows that the Spanish Reformer's ideas had clearly as much influence on Cranmer as, if not more than, those of Luther and other less conservative Reformers on the Continent.

2. Historical résumé.—It is now matter of common knowledge that, though a great deal of the work of constructing the Prayer Book had been done in Henry VIII.'s reign, yet the first edition was not actually published till 1549, when Edward VI. had been on the throne more than a year. It was to come into use on Whitsunday, 9th June.¹ But the great and rapid progress made by the extreme Puritan party during this reign availed very soon to bring about much more radical changes, and by All Saints' day 1552 the First was superseded by the Second Book, the contents of which are much more nearly what we are familiar with in our present Book; in fact most of the subsequent modifications have been by way of addition to, rather than alteration of, its text.

Edward died in July 1553, and during the reign of Mary the old unreformed services and ceremonies were restored in their entirety.

When Elizabeth in her turn came to the throne (1558), she had to be content with the fewest possible improvements in the Second Book, which was then again (1559) brought into use: such as the addition of Sunday Lessons, the omission of the petition against 'the Bishop of Rome and his detestable enormities' from the Litany, and the present words of distribution in the Holy Communion, which combine the formulas of 1549 and 1552. By the end of her reign the Puritans had regained such strength that they hoped on the accession of James I. (1603) to get rid of much that they disliked, but at the Hampton Court Conference, to which both sides were summoned, hardly any of their demands were conceded. The most important change was the addition to the Catechism of the part about the sacraments (by John Overall, then dean of St. Paul's, afterwards bishop of Norwich), which the Puritans can hardly have regarded as favouring their views.

The next stage in revision was at the Restoration of Charles II. (1660), when the Prayer Book was brought back into use, after being suppressed during the Commonwealth. In 1661 a conference was held in the Savoy, at which it was again felt

¹ But without the Ordinal at first (see above, p. 205).

impossible to entertain most of the Puritan proposals, such as the doing away with the sign of the cross in Holy Baptism and with the kneeling posture at Holy Communion. A fair number of changes were, however, admitted under the direction of John Cosin, bishop of Durham, and they were mostly by way of distinct improvement. They came into force in the year following (1662).

Another attempt at revision made in 1689 was ineffectual, and not much has been done since then. We may note, however, (a) that of four State services drawn up for occasions of national importance in the 17th cent. only one has been retained since 1859, that for the king's accession (revised 1901); (b) that a new Lectionary was issued with the sanction of Canterbury and York Conventions in 1871; and (c) that a limited permission was given in 1872 to shorten or modify the service and use hymns. Of these changes the first two must be reckoned as of advantage, while the third is of more questionable value. But that the time has come, or ought to have come, when yet another general revision should be taken in hand to meet modern needs on carefully considered and wisely conservative lines is obvious to most thinking Churchmen. But so far only tentative proposals are forthcoming and 'adhuc sub iudice lis est,' though a certain amount of progress has recently been made.

3. The contents of the present Book in detail.—It will not be possible to describe in full the various contents under separate heads. We must be content with drawing attention to salient features as best we can.

(a) *The Preface*.—The first five paragraphs were prefixed in 1662, having been composed by Sanderson of Lincoln and slightly altered by Convocation before approval.

(b) *Concerning the service of the Church*.—Here the original Preface (1549) began; it was probably the work of Crammer, as was also the section that follows, *Of Ceremonies*; but the latter was transferred from the end of the Book to its present place in 1552, while *Certain notes for the more plain explanation and decent ministration of things contained in this Book* were then expunged.¹ Besides one or two verbal alterations of small importance, three interesting sentences are now omitted. The first has been already quoted (p. 205, n. 4), the second justifies the adoption of a single use throughout the realm, and the third, which only in a general way bound to the saying of the Daily Offices such of the clergy as serve the congregation in cathedral and other churches, has given way to the present much more definite and stringent regulation (see above, p. 206).

(c) *The order how the Psalter is appointed to be read* originally contained a special provision for the first three months of the year, by which 31st Jan. and 1st March were to be treated as if they were 1st and 26th (or 30th) Feb. respectively and the rest of the days of the month shifted forward by one (i.e. 1st Feb. became 2nd and so on); and in leap-year on the intercalary day (between the 25th and 26th) the Psalms (and Lessons) of the previous day were to be repeated. The order about repeating 'Gloria Patri' at the end of each Psalm, always provided for in the rubric, was not originally inserted here.

(d) *The order how the rest of the Holy Scripture, etc.*—The original provisions in this section were modified in 1871 to suit the New Lectionary now in use. It is impossible here to compare the old with the new course or to indicate the changes made and the principles of selection.

(e) *The Calendar* proper as published in 1549 contained but few commemorations and of these the only one that calls for notice is [St. Mary] Magdalen (22nd July), because it was at first furnished with a special Introit, Collect, Epistle, and Gospel, but in 1562 all mention of her was removed. The bare name, however, was restored in 1561 together with several other names, St. Anne (26th July) among them.

The list of commemorations underwent various vicissitudes (1561, 1604, 1662) chiefly in the way of addition, though it is not always easy to arrive at the reasons for the selections: some of the saints are very obscure—e.g., Valentine Bp., Nicomede Mart., Eucherius (Evortius) Bp.,² and Machutus Bp.—and there are some notable omissions (e.g., of Eastern worthies).

The following details are to be observed: (1) St. Alban's day, now 17th June, is usually the 22nd, and St. Cyprian's, now 26th Sept., the 14th; (2) the Transfiguration (6th Aug.) was not formally authorized in the West till 1457 (to commemorate the

deliverance of Belgrade from the Turks); it now has a proper Collect, Epistle, and Gospel in the American Prayer Book; (3) the Name of Jesus (7th Aug.) was never a very general commemoration; (4) Eucherius Bp. (7th Sept.) is probably a misprint for Evortius, bishop of Orleans (4th cent.), (5) it is somewhat strange to find the Visitation (2nd July) and Nativity of B.V.M. (8th Sept.) included, since her falling asleep (15th Aug.), a much more general feast-day, is omitted, (6) 'O Sapientia' (16th Dec.) marks the beginning of the series of Advent antiphons before Christmas, though no provision is made for their use in Magnificat during that season, (7) K. Charles Mart (30th Jan.) was added in 1662 and has been omitted without authority, since the special service of that day was abolished in 1869.

(f) *Tables and rules for feasts and fasts*.—These were first added in 1662, probably at Cosin's suggestion. Hitherto they had been kept according to tradition and custom only, except that in the Calendar the vigils had been marked. It is to be noted, (1) that only the 'red letter' days among the feasts are here mentioned; (2) that the Friday fast is of unusual strictness, being now only relaxed when Christmas falls on that day of the week, the ancient rule extended the relaxation to all Fridays within Easter and Christmas tide and those on which a feast falls; and (3) the distinction between fasting and abstinence (as if the latter were less strict than the former) is to some extent a modern (Roman Catholic) innovation.

(g) *The tables for finding Easter* are too technical and elaborate to find treatment in this article (cf. CALENDAR [Christian]). And the same may be said about the 'Ornaments' Rubric, that stands before the Order for Morning Prayer.¹

(h) *The Daily Offices*.—Roughly speaking, Morning Prayer is compiled from the mediæval offices of Mattins, Lauds, and Prime, Evening Prayer from those of Vespers and Compline, with certain new elements added to each later. Thus the former, from the first Lord's Prayer (with which in 1549 the service began) to 'Te Deum,' followed the lines of Mattins and, from the second lesson to the third collect (with which it ended), the lines of Lauds. But Evening Prayer was made to conform more to the new Mattins, and therefore the materials taken from the ancient Vespers and Compline were subjected to rather greater changes, though here again the first part up to Magnificat more or less corresponds to Vespers and the latter part to Compline. The opening sentences, Exhortation, Confession, and Absolution, were added to Mattins in 1552 and to Evensong in 1662. The concluding prayers were transferred from the end of the Litany to their present place in 1662. Of these the second was composed in 1604; the others were inserted in 1559, the first dating from 1545 (or possibly 1554) and the third being found in the so-called 'Gelasian' Sacramentary. The fourth concludes the Deacon's Litany before the 'Little Entrance' in the Liturgies of St. Basil and St. Chrysostom. It stands therefore suitably at the end of our Litany, when it is followed by Holy Communion, as was originally intended, but is less suitable at the end of Mattins and Evensong.

(i) *Quicumque vult* before the Reformation had been appointed for daily use at Prime. In 1549 it was turned into English and ordered to be used immediately after Benedictus on the six great festivals; and in 1552 seven saints' days were added, which brought up its recitation to about once a month throughout the year. The direction that it is to be said 'instead of the Apostles' Creed' was added in 1662.

(j) *The Litany* in its present form is perhaps Crammer's greatest liturgical triumph. Any one acquainted with mediæval litanies will appreciate the mastery skill with which he has by various devices (such as the grouping of petitions drawn from different sources² and the exarising of great wisdom both in selection and in omission³) turned the old forms from barren strings of names and short petitions into an astonishingly rich and satisfactory instrument of devotion—at all events for occasions when humiliation of the soul and deep penitence are timely, even if we could desire an alternative form which should be more suitable for times of uplifting and rejoicing.

As to the second part of the Litany after the Lord's Prayer, it is impossible to give here a complete description of the materials of which it is built up. The first versicle, response, and collect are taken from Luther's Litany; the collect, however, is ancient, being that 'In Missa pro tribulatione cordis' (Sarum); the 'Amen' has never been printed. Then follows a section taken from a litany for Rogationtide; it consists of anthem and psalm with 'Gloria Patri'; only (perhaps by accident) the repeated anthem⁴ precedes the 'Gloria' instead of following it, as it ought to do. The versicles and responses,⁵ which come next, ought properly to be sung by the clerks: they were for special use 'in tempore belli' in the Sarum use.

¹ Much that is reasonably and usefully to be said on opposing views of this rubric will be found in F. O. Eeles' tract no. 17 in Mowbray's *Churchman's Penny Library* and in G. Hartford's art. s.v. in *Prayer Book Dictionary*, p. 516 ff.

² Not only did he use the old Roman forms, but he also used Luther's Litany (1529) and the Deacon's Litany in the Liturgy of St. Chrysostom.

³ At first (1544) invocations of St. Mary Mother of God, the angels, blessed spirits, patriarchs, etc., were retained, but in 1549 they were removed.

⁴ The variation in the anthem is unusual.

⁵ The address 'O Son of David' probably stands for the original 'Fili Dei vivi,' as if it were 'Fili Davidis.'

¹ But partly incorporated (much modified) in the rubrics at the beginning of Morning Prayer.

² Not included in the Elizabethan Calendar (1561), but added in 1604, perhaps because it had been Elizabeth's birthday and therefore a public holiday for some years. Similar national or even local reasons may have guided the selection in other cases (e.g., St. Audrey [17th Oct.], the great E. Anglian fair-day).

The concluding versicle, response, and collect are freely adapted from the Sarum Rogations. The Grace (2 Co 13) was added in 1559.

(k) *Holy Communion*.—We here deal mainly with the present order, characterizing the contents *seriatim* as briefly as may be. The *first Lord's Prayer* and the *Collect for Purity* appear in the Latin rite among the private devotions of the priest before the Mass; hence perhaps comes his repeating the former alone, 'Amen' and all.

The *Ten Commandments* have been a special feature of our service since 1552.¹ Apparently they are intended to recall or represent the *Lectio Prophetica* (the OT lesson) of the early Liturgies. Their present use with the tenfold (instead of the former ninefold) repetition of 'Kyrie eleison' (specially applied to each individual soul) is a very happy inspiration of Cranmer's, to which, in spite of certain difficulties of interpretation and application, English Christianity owes much of its certainty as to the true standard of good living.

The (alternative) *Collects for the King*, composed in 1549, were then ordered for use after the collect of the day, not before as now.

The *Collects proper* may be divided into three classes: (i.) those which belong to the pre-Reformation period, some of them as old as the 'Leonine' or 'Gelasian' or 'Gregorian' books;² (ii.) those first issued in 1549; (iii.) those issued in 1662. But it must be remembered that many of the older forms have received important additions or modifications in either 1549 or 1662 or at both dates.

As to the *Epistle* (during which the right position for the people is that of sitting), it is worth noticing that out of 90 passages chosen seven are taken from Isaiah or one of the Prophets (only one of these being for a Sunday, viz. that next before Advent), thirteen out of the Acts, and four out of the Revelation (of which two are from the last book for Sundays, viz. Whitsunday and Trinity Sunday).

As to the *Gospel* (for which the rubric especially orders the people to stand), all that need be said is that the ascription before ('Gloria be', etc.) inserted in 1549 was removed in 1552 and was not restored in 1662, though Cosin desired it and it had been inserted in the Scottish Office (1637) together with 'Thanks be', etc., afterwards.

The rubric ordering a *Sermon* after the Creed is one of the very few references to preaching during service in the Book, the others being in the baptismal and marriage services, while in the Ordinal the Sermon is put before the Litany instead of in the usual place. The traditional and natural place for exposition or exhortation is after the reading of God's Word.

Offertory sentences.—In 1549 one or more of these were to be sung 'where there be Clerks,' but this direction was removed in 1552 and now only the saying of them by the priest is mentioned.

The *Prayer for the Church* [+Militant here in earth, 1552].—This portion of the Canon of 1549 was separated from the consecration of the elements and placed here in 1552: and at the same time the Lord's Prayer,³ with which in accordance with ancient use the Canon ended, was placed after the Communion of the people as now, and the first of the two following prayers was likewise cut off and put separate, as an alternative to the Thanksgiving.

It is to be observed (1) that with the Church militant are now included 'all thy servants departed this life in thy faith and fear' (which is strictly inaccurate), and (2) that 'oblations' are generally considered to mean the sacred elements in contradistinction to the 'alms' for the poor; but there are grounds for holding that they more correctly refer to the people's contribution to the support of the clergy or their offerings in general.

The three *Exhortations* which follow are a special feature of our Book originally introduced in 1549; since then they have been subjected to many changes, and are still printed though but seldom used, the need of them having now in a large measure gone. Nevertheless, they contain much valuable teaching and advice, though some of it has given rise to unfortunate misunderstandings (e.g., as to the 'unworthiness' of those who receive). The first is for ordinary use in giving notice of Communion, and suggests the lines on which private confession to a minister is desirable in the English Church; the second (attributed to Peter Martyr) is to be substituted when there is negligence as to attendance; the third is to be used at the Communion itself, after the communicants have been 'conveniently placed' for the reception. No reference to the withdrawal of non-communicants now remains.

The section from 'Ye that do truly,' etc., down to 'We do not,' etc., came after the Consecration and immediately before the people's Communion at first (see above, p. 206). It was

removed to its present much less appropriate position in 1552, the Prayer of 'Humble Access' being then separated from the rest of the section by the first part of the Canon.

The Canon began with 'The Lord be with you, Ky and with thy spirit,' in 1549, in accordance with ancient usage; but this was omitted in 1552. It is now much broken up, and other traces of unobjectionable pre-Reformation beliefs and practices besides those mentioned have been obliterated. In particular the beautiful Epiclesis of 1549 has gone: 'With thy holy spirit and word vouchsafe to bless and sanctify these thy gifts and creatures of bread and wine, that they may be unto us the body and blood of thy most dearly beloved Son Jesus Christ.' The directions for the manual acts, removed in 1552, were brought back in 1662.

The present form of words at the people's Communion happily combines both the forms of 1549 and 1552 and dates from 1559 (see above, p. 206).

The *second post-Communion prayer* of thanksgiving was composed in 1549 and then stood alone, but is now (since 1552) an alternative for the prayer of oblation (see above).

The '*Gloria in Excelsis*' in 1549 occupied its ancient place between the 'Kyrie' and the collect, but was removed in 1552 to the end of the service; and, though this position is contrary to all precedent, it may justly be considered a fitting conclusion to our worship.

The *Blessing* (1549) is likewise a distinct improvement on the rather abrupt ending of the Roman Mass ('Ite missa est'), to which, however, since 1604 an appendix with a short blessing has been added.⁴

The last six collects, of which the first, second, and fourth are old and the rest date from 1549, were originally appointed for use 'after the offertory, when there is no Communion,' but may now be used at other times.

(l) *Holy baptism*.—Of the three offices now supplied the first, as issued in 1549, was mostly derived from the ancient services considerably modified and simplified. From the first the use of salt and the *Ephphatha* were omitted, but the chief points then retained and now since 1552 given up are the exorcism, the anointing, and the chrism; the interrogations, the sign of the Cross, and the reception into the Church are, however, still kept. The novel feature is the insertion of the several exhortations suggested by Luther's *Baptismal Book* and Hermann of Cologne's *Consultatio* (1543).

A second form (for private baptism and subsequent reception into the Church, if the child survived) also appeared in 1549 and has always been retained with such modifications (esp. in 1662) as were required to safeguard the validity of the sacrament and also to bring it into conformity with the first office as altered in 1552.

The third form (for baptism of adults) was inserted in 1662 (George Griffith, bishop of St. Asaph, being the chief member of the committee that drew it up) to meet the growing needs of the natives in our 'plantations' (=colonies) and others converted to the faith (from anabaptism, etc.). It follows the lines of the first office with such adaptations as are appropriate, and the rubric prefixed definitely recognizes (1) that the bishop is ultimately responsible for the administration of the sacrament 'per se vel per alium,' and (2) that fasting as well as instruction and prayer should form part of the candidate's preparation.

(m) *Catechism*.—The former part was drawn up and issued in 1549 and has not been altered since. The latter part (on the sacraments of the Gospel) was due to Overall, dean of St. Paul's in 1603. In spite of certain defects,⁵ which need rectifying, the whole is a valuable manual of elementary instruction in Christian doctrine, so far as it goes.

(n) *Confirmation*.—The order in 1549 began at 'Our help,' etc., and included the signing on the forehead as well as the laying on of hands; but the former of these ceremonies was abolished in 1552 and the present prayer at the imposition of hands substituted for the older form. The preliminary exhortation, which incorporates the substance of a former rubric (and this accounts for its complete inappropriateness)⁶ together with the bishop's question and the answer, were not added till 1662. This addition has had the unfortunate effect of obscuring the true meaning of the rite in the minds of many.

(o) *Holy matrimony*.—This office has remained without any change of much importance since 1549. But the following are of sufficient interest to be noted: (1) a phrase *in parenthesis*, 'after bracelets and jewels of gold given of the one to the other for tokens of their matrimony,' after 'as Isaac and Rebecca' in the prayer 'O Eternal God,' etc., was omitted in 1552, when the words in the rubric which suggested it were also omitted: 'a ring, and other tokens of spousage as gold or silver'; (2) the phrase about the sending of 'thy Angel Raphael to Tobias and Sarah the daughter of Raguel' was altered to the sending of 'thy blessing upon Abraham and Sarah' in the prayer 'O God of Abraham,' etc. (an undoubted improvement); (3) the phrase 'loving . . . husband' in the prayer 'O God who,' etc., was substituted in 1662 for a quaint reference to the wifely virtues of Rachel, Rebecca, and Sarah which had stood there hitherto; (4) before the address in 1549 the rubric ran: 'Then shall he begin the Communion, and after the Gospel shall be said a Sermon,' etc., whilst another rubric required the newly-married persons to receive the Communion the same day. These indica-

¹ See Fortescue, p. 392 ff.

² E.g., the answer does not usually contain the gist of the question; the unity of God is not established, and there is no mention of the Church and its constitution.

³ See F. H. Chase, *Confirmation in the Apostolic Age*, London, 1909, p. 12 n.

¹ In the Nonjuror's Prayer Book (1718) Mt 22:37-40 was substituted for them. The Scottish Office (of 1764) allows these verses as an alternative for the Decalogue. The present American Prayer Book (1892) allows the alternative only on days when the Decalogue has already been recited.

² This nomenclature is misleading, but much of their contents belongs to the 5th cent. at least. The great majority of the 'Sarum' Collects are drawn from them.

³ The present position of the Lord's Prayer here seems to be in accordance with a principle of the Reformers noticeable elsewhere; it occupies a similar position at Baptism, Confirmation, Matrimony, and Burial, i.e., when the principal or essential ceremony has been performed.

tions of the retention of a nuptial mass were not obliterated till 1662, when the present rubric before the address was substituted, and afterwards it is only stated to be 'convenient' (i.e. suitable) that they should communicate at the first opportunity.

(p) *Visitation of the sick*.—After the salutation the form in 1549 proceeded with Ps 143 (omitted 1552). The second collect, 'Hear us,' etc., made mention of Peter's wife's mother, the captain's servant, and Tobias and Sarah preserved from danger by the angel, in 1549, the last reference was omitted in 1552, and the other two in 1662, when the present form was adopted.

The second part begins with an exhortation and proceeds to an examination of the sick person with a view to his confession and absolution, if he feel his conscience troubled with any weighty matter (on the lines laid down also in the Holy Communion Office (see above)). Since 1662 the sick person is to 'be moved' to do this; previously it had been left to his own initiative. The form of absolution here is naturally more authoritative and personal than those in the Daily Offices and at Holy Communion.

The third part consists of collect (partly old) and Psalm 71 with anthem ('O Saviour,' etc.) and blessing. The commendation to God's mercy was added in 1662 and also the appendix (containing four well written though somewhat long occasional prayers).

A service for anointing the sick if desired, which was included in 1549, has been omitted since 1552.

(q) *The Communion of the sick*.—The present form (with certain alterations in 1662) has been in use since 1552, when preservation of the sacrament for the sick in the modified form of 1549 was abolished.

(r) *Burial of the dead*.—The present form dates practically from 1552, when the definite expressions of prayer for the dead and the provisions for Holy Communion made in 1549 were omitted. The last 'collect' was originally the collect at the Communion. The alternative Psalms were not added till 1662; and the lesson was then transferred to its present place, having previously been read at the grave between the anthem ('I heard a voice,' etc.) and the Lesser Litany. The Grace was added in 1662.

(s) *Churching of women*.—The title (1549) was 'Purification of women,' altered to its present form in 1552. In the first rubric (1) the phrase 'decently apparelled,' added in 1662, is thought to refer to the old custom of wearing a veil, which had been discarded during the Commonwealth; (2) the words 'convenient place' had been more carefully defined as 'nigh unto the quire door' (1549), or 'nigh unto the place where the Table standeth' (1552). Ps 121 (1549) was replaced by Ps 116 and the alternative Ps 127 also added in 1662. The final rubric shows that the office is intended as the woman's preparation for Communion.

(t) *A Communion* was for use on Ash Wednesday only in 1549. The present title was given to the service in 1552, when it was ordered to be used at 'divers times in the year.' Its use on Ash Wednesday was again specified as well in 1662.

The opening address advocates the restoring of the primitive church discipline of open confession and penance, which had gradually given way to private confession (whether occasional or regular). The final prayer of humiliation by meter and people is called an 'anthem to be said or sung' in 1549. The special form of Blessing (from Nu 6^{24ff}) was added in 1662.

(u) *Prayers to be used at sea*.—Those were first inserted in 1662, though some provision of the sort had been made previously in 1644 by order of parliament.

(v) *The Ordinal* (see above, p 205).—The Preface was altered in 1662 (1) better to guarantee episcopal ordination after the laxity which had prevailed during the Commonwealth, (2) to raise the age of deacons from 21 to 23, (3) to restrict the times of ordination usually to the Ember seasons.

The present rubric (1662) orders candidates for either the diaconate or the priesthood to be 'decently habited.' The exact meaning of this is doubtful; probably it was intended to restore such distinctive clerical attire (e.g., cassock, surplice, and hood) as had fallen into desuetude during the Commonwealth, and that is how it is now interpreted. In 1550 they were to wear 'a plain alb'; in 1552 no direction is given at all. So, too, in 1550 the 'Gospel Deacon' was 'to put on a tunicle' (for which see also the 4th rubric before Holy Communion (1549)). But since 1552 this direction has been omitted.

The special petition in the Litany did not actually mention either the deacon's or the priest's office till 1662; in fact the petition was omitted altogether in 1550.

Since 1885 the Oath of the Royal Supremacy has not been administered to either priests or deacons during the service.

The present Gospel (Lk 12^{35ff}) at the *Making of Deacons* was substituted for the Gospel of the day in 1662.

In the *Ordering of priests* the first presentation of candidates came after 'Veni Creator,' which followed the Gospel, till 1662, when the present arrangement was made.

The present Epistle (Eph 4^{7ff}) was substituted for two others, which were alternative, in 1662.

Jn 20^{19ff} has been a third alternative Gospel (for priests) in 1552, but this was omitted in 1662 and is now one of three alternatives at the consecration of bishops.

Veni Creator.—The first and shorter version (in all probability by Cosin) was added in 1662 and is far superior to the diffuse anonymous version of 1550, which has been slightly touched up and improved since then but is very seldom used.

The *Commission* 'Receive the Holy Ghost.'—The very important addition 'for the Office and Work of a Priest . . . hands' was made in 1662.

The ancient ceremony of handing 'the chalice or cup with the bread' to the priests has been omitted since 1552.

VOL. X.—14

In the *Consecration of bishops* the collect was added and the present selection of Epistles and Gospels was made in 1662. There has been no *traditio instrumentorum* since 1552; in 1540 the bishop elect received the pastoral staff and the Bible was laid on his neck. The present vaguer injunction (to read and be a good shepherd) was substituted in 1552. In 1550 he was to wear a surplice and cope, so likewise were the bishops who presented him (also their staffs), in 1552 no direction was given; the present rubric 'vested with his rochet' was added in 1662.

(w) *Accession service*.—This is now the only survivor of four State services (see above, p. 207). The present revision, which provides three separate forms, was made in 1901 and is on sound liturgical lines. We may note in particular the careful way in which the method of pointing preserves the composite character of 'Te Deum.'

(x) *The Articles of Religion* (1671), though usually printed in the volume, form no proper part of our Prayer Book.

LITERATURE.—Of the large number of books that have been published on the subject only some of the more practically useful (and mostly more modern) are here mentioned.

(a) *The Irish Prayer Book*, 1877, the Welsh (only a tr. from the English), 1667 and onwards, the Scottish, 1637; the Communion has important differences which have undergone various vicissitudes (see J. Dowden, *Annotated Scottish Com. Office*, London, 1884), the American, 1789; alterations have since been made in 1877, 1880, 1889, and 1892.

(b) C. Wheatley, *A Rational Illustration of the Book of Common Prayer*, ed. G. E. Corrie, Cambridge, 1888; W. Palmer, *Origines Liturgicæ*, Oxford, 1846; J. H. Blunt, *Annotated Book of Common Prayer*, London, 1896; F. Procter and W. H. Frere, *New Hist. of the Book of Common Prayer*, do. 1902; *Teacher's Prayer Book*, ed. A. Barry, do. 1892; *Prayer Book Commentary*, ed. F. B. Warren, do. 1905; J. H. Maude, *Hist. of the Book of Common Prayer*, do. 1899; Leighton Fullan, *Hist. of Book of Common Prayer*, do. 1900; E. Burridge, *Liturgies and Offices of the Church*, do. 1885; W. E. Scudamore, *Notitia Eucharistica*, do. 1876; J. Dowden, *Workmanship of the Prayerbook*, do. 1902; *Further Studies in the Prayerbook*, do. 1903; H. B. Swete *Church Services and Service-books before the Reformation*, do. 1896; *The Prayer Book Dictionary*, do. 1912; F. E. Brightman, *The English Rite*, do. 1915; *Cranmer's Liturgical Projects*, ed. Henry Bradshaw Society, 1 (1915); W. H. Frere, *Some Principles of Liturgical Reform*, London, 1911; C. Gore, *Body of Christ*, do. 1901; J. Wordsworth, *Ministry of Grace*, do. 1901.

C. L. FELTOE.

PRAYER FOR THE DEPARTED (Christian).—I. The custom earlier than the develop-

ment of doctrine.—That prayers for the faithful departed do not, as a matter of history, depend necessarily on any particular doctrine of the intermediate state between death and judgment is seen from the fact that they existed long before the doctrines on that subject were developed. Even in comparatively late times the form of the prayers for the departed was framed before the teaching was stereotyped. The only thing that the custom necessarily assumes is that the departed, or some of them, can make progress in holiness after death and before the Last Day.

The custom does not necessarily even assume that the departed are conscious; for it is quite conceivable that progress might be made by an unconscious soul. But it was the practically universal belief of Christian antiquity that the souls of the departed, good and bad, are conscious, the belief being based chiefly on passages such as the promise to the penitent robber (Lk 23⁴³), the descent of our Lord to Hades (1 P 3^{18ff}, etc.), the parable of Dives and Lazarus (Lk 16^{19ff}), and on the desire of St. Paul to be absent from the body and at home with the Lord, to depart and be with Christ (2 Co 5⁸, Ph 1²³).

This article, then, will not deal with doctrines about the intermediate state except so far as it is necessary to refer to them in order to explain the historical custom of prayers for the departed.

2. Jewish background of the custom.—It was only in the two centuries immediately preceding the Christian era that Jewish conceptions about the dead were developed. But in 2 Mac 12⁴⁴⁻⁴⁶ we find prayers for the departed mentioned and defended. For the soldiers who had fallen, when it was discovered that under their garments were consecrated tokens of idols and that this was the cause of their death, their companions 'betook themselves unto supplication, beseeching that the sin committed might be wholly blotted out'; and Judas Maccabæus sent alms to Jerusalem to offer a sacrifice for sin. This the writer justifies, because of the resurrection: 'If he were not expecting that they that had fallen would rise again,

it were superfluous and idle to pray for the dead.' This book is an abridgment of a lost work by Jason of Cyrene (2nd). Jason wrote c. 150 B.C., and the abridgment was made between that date and the destruction of Jerusalem (A.D. 70). The passage in question probably shows the existence among the Jews of the custom under consideration in the 2nd cent. before our era; but whether Judas extended it beyond the limits afterwards approved by the Christians (below, § 6) is another matter. That Jews inscribed on their tombstones words similar to 'Requiescat in pace,' and that in later times (as at the present day) they habitually prayed for the dead, is universally agreed; but the dates of the tombstones are uncertain (for the evidence on these heads reference may be made to Luckock, *After Death*, pp. 56-65). It has often been said that the Jews would never have borrowed the custom from the Christians. Thus is a line of argument which history shows not to be very safe; but in this case we have the evidence from 2 Mac. for the early existence of prayer for the dead among the Jews. We must not, however, push this argument too far; the practice was, almost certainly, not universal among the Jews at the beginning of our era, for the Sadducees would not have used it. And it is hazardous in any case to say that our Lord approved everything in the teaching of the Jews which He did not condemn.

3. Early Christian evidence.—The silence of the very earliest ages on the subject is somewhat remarkable, in view of the fact that the custom was in existence among the Jews. Our Lord does not refer to it. A phrase in the Pastoral Epistles (2 Ti 1¹⁸) has been not unnaturally judged to be a prayer for Onesiphorus after his death (see the context, v. 16 4¹⁸). The wording is not much more than a pious wish: 'the Lord grant unto him to find mercy of the Lord in that day.' The lately-discovered liturgical portion of Clement of Rome's *Epistle to the Corinthians* (59-61), though it contains intercessions for the living, has none for the departed (c. A.D. 96). The *Didache* (c. A.D. 120?) in its prayers at the agape (or eucharist) only prays God to remember His Church and deliver it from all evil, perfect it in His love, and gather it together from the four winds (§ 10)—a petition which must by its wording include the whole Church, but does not explicitly mention the departed.

We find, however, copious evidence of prayers for the departed in the catacombs, usually in the simple form 'Mayest thou live in peace,' or the like. There are some inscriptions asking those who come to the catacombs to pray for the deceased person (Swete, in *JThSt* viii. 502). The exact dates of these are uncertain, but they are undoubtedly ancient. An inscription in Phrygia gives the remains of the epitaph made for himself by Avircius (Abercius) Marcellus, bishop of Hieropolis, in the 2nd century. This is also given by other authorities, and has been restored by Lightfoot (*Apost. Fathers*, pt. ii., 'Ignatius and Polycarp,' London, 1889, i. 496); it contains this line: 'Let every friend who observeth this pray for me' (the extant inscription breaks off before this). For Perpetua's prayer for the dead at the end of the 2nd cent. see below, § 6. Tertullian (*de Monogam.* 10 [c. A.D. 217]) bases an argument against remarriage on the fact that the widow prays for her deceased husband that he may have refreshment and fellowship in the first resurrection. Of later writers it is necessary to mention only Eusebius, who describes how all the people, with the priests, prayed for Constantine's soul after his death (A.D. 337; *Vita Const.* iv. 71).

4. Prayer for the departed in public worship.—This first appears in Tertullian, who, however,

does not treat it as a novelty; and for some time we have no absolutely certain evidence of it outside the province of 'Africa.' We read of eucharists for the departed on their anniversaries, 'as birthday honours,' in Tertullian (*de Cor.* 3, *de Monogam.* 10); and so in Cyprian (*Ep.* xxxix. [xxxiii.] 3, on the ordination of Celerinus) we read of them being offered for the repose even of martyrs and confessors on their anniversaries (see also § 6 below). At the end of the 3rd cent. the 'African' Arnobius speaks of the Christian churches (*conventicula*) in which 'peace and pardon are asked for all . . . for those still living and those freed from the bond of the bodies' (*adv. Gentes*, iv. 36). Such anniversaries were apparently known to Origen, who testifies to the reading of Codex Claromontanus in Ro 12¹² of *μεμνηται*, 'memorials,' for *χρηται*, 'needs' [of the saints]; but some think that this passage is due to Rufinus's Latin translation and not to Origen.¹ Two references in the *Canons of Hippolytus* (xxxiii. [ed. H. Achelis, *TU* vi. 4 (1889), § 169 f.], and in E. Hauler's *Didascalia Apostolorum Fragmenta Veronensia Latina*, Leipzig, 1900, p. 85), which, though themselves perhaps of the 4th cent., yet, if so, adhere closely to a 3rd cent. original, attest memorial eucharists for the departed at the time when they were written, and perhaps 100 years earlier. In the 4th cent. memorial eucharists are constantly attested—e.g., in the *Apostolic Constitutions* (vi. 30 [c. A.D. 375]), which say that they were held in cemeteries (so the *Verona Fragments*, as above); in pseudo-Pionius (*Life of Polycarp*, § 20 [Lightfoot, iii. 452]), who says that at the funeral of Bishop Bucolus (Polycarp's predecessor at Smyrna; early 2nd cent.) 'they offered bread for Bucolus and the rest' (we can only take this as evidence for the 4th cent., when the *Life* was written); in Ambrose (*de Excessu Satyri*, i. 80, ii. 5, and elsewhere), who speaks of the eucharists on the solemn anniversaries of the departed. An earlier example is in the Leucian *Acts of John*, which speak of a eucharist on the third day after death at a grave; but the date is not quite certain. Augustine describes the eucharist at the grave when his mother Monica was buried (*Conf.* ix. 32 [12]), and says that it was a universal custom, because eucharist and alms help the departed (*Serm.* clxxii. 2). We also read of an agape, or commemorative feast, for the departed (e.g., *Can. of Hipp.*, *loc. cit.*; *Apost. Const.* viii. 44; see also art. AGAPE). And we frequently read of alms being given for the benefit of the dead; in the *Testament of our Lord* (c. A.D. 350?) they are taken out of the deceased's possessions and given to the poor that he may be profited (ii. 15, 23).

As the earliest written liturgies known to us are of the 4th cent. (but see below), we cannot tell whether the departed were prayed for at the ordinary eucharists before that time; and, indeed, the intercessions were probably developed into fixed forms somewhat later than the other parts of the service (see art. INTERCESSION [Liturgical]). In the early liturgy known as the Old Ethiopic, which some believe to be a translation of Hippolytus's liturgy of the 3rd cent., there is no intercession given (Brightman, *Liturgies Eastern and Western*, i. 189). But we find the departed prayed for either in the 'Great Intercession' or in the 'people's prayers' given in the *Testament of our Lord*, by Cyril of Jerusalem (A.D. 348), by Sarapion, bishop of Thmuis in Egypt (c. A.D. 350), in the *Apostolic Constitutions* (bk. viii.), and the *Arabic Didascalia* (c. A.D. 400?), as in all the

¹ Origen is clear that the departed pray for the living—e.g., *Com. in Ep. ad Rom.* ii. 4. So the *Testament of Abraham*, § 14, a work probably of the 2nd cent. A.D. (ed. M. E. James, in *TS* ii. 9 [Cambridge, 1892], p. 94).

Great Liturgies of the following ages. Sarapion also gives a prayer for the departed, to be used at a funeral (§ 18).

5. Purport of the prayers.—In several of our authorities the language is severely restrained, the prayers being, as in Sarapion, for the repose of the departed in 'chambers (*ταμεῖος*) of rest' and for his resurrection 'in the day which thou hast ordained,' and that his transgression and sins be not remembered (§ 18), or, as in the prayer which follows the recitation (*προβόλη*, lit. 'prompting') of the names of the departed at the eucharist, for their sanctification. So in the *Testament of our Lord* the prayer is for a place of rest and remembrance (i. 23, 35). Note especially the oration of Gregory of Nazianzus on his brother Cæsarius (c. A.D. 369). He prays for him that he may have an entrance into heaven, and enjoy 'such repose as the bosom of Abraham affords,' and 'behold the choir of angels and the glories and splendour of sainted men and share their joy,' etc. (§ 17). Nothing is said of suffering for sin. Compare also Gregory's oration on his deceased sister Gorgonia (§ 23). Many of the Great Liturgies have an equally restrained prayer for the dead: the Byzantine 'St. Basil' and 'St. Chrysostom' (Brightman, i. 332, 388); the Greek 'St. Mark' (Egyptian *ib.* i. 129), which asks for them rest and that they be made worthy of the Kingdom of Heaven, and for us a Christian end; the Coptic (*ib.* i. 170), which has nearly the same language, but somewhat amplified; the Greek 'St. James' (Syrian rite *ib.* i. 57); and the Armenian (*ib.* i. 440).

In other cases the forgiveness of the sins of the departed is explicitly prayed for. In Arnobius we find the first instance of this (above, § 4), though perhaps he means 'pardon' for the living and 'peace' for the dead. But forgiveness of sins is emphasized by Augustine (*Conf.* ix. 34 f. [13]; he is speaking of his mother Monica); and so in the *Apostolic Constitutions* (viii. 41: 'that God . . . may forgive him every sin, voluntary and involuntary'), and in several of the Great Liturgies, as in the Syriac 'St. James' (Brightman, i. 95), the E. Syrian 'Addai and Mari' (*ib.* i. 265); and in the West in the Leonine, Gregorian, and Gelasian sacramentaries (for the Gregorian see H. A. Wilson's ed., Henry Bradshaw Soc. [London, 1915] p. 209, etc.). Theodoret tells us (*HE* v. 36) how the emperor Theodosius II., when the body of St. Chrysostom was brought to Constantinople, laid his head against the bier and 'prayed for his parents and for pardon on them who had ignorantly sinned, for his parents had long ago been dead.' Augustine (*Enchiridion*, 29) uses the word 'propitiation.' Cyril of Jerusalem had already spoken of 'propitiating our merciful God both for them [the departed, 'though they be sinners'] and for ourselves' (*Cat.* xxiii. [*Myst.* v.] 10).

6. Who were prayed for.—(a) There seems to have been a difference of opinion in Christian antiquity as to whether all the faithful departed should be prayed for, or the martyrs and great saints should be excepted. Cyprian (*Ep.* xxxix. [xxxiii.] 3) speaks of offering sacrifices for certain martyrs 'as often as we celebrate the passions and days of the martyrs in the annual commemoration.' At the end of the 3rd cent., in 'Africa,' Arnobius makes no limitation (see above, § 4: 'for all'). In the 4th cent also there is no limitation in the prayers in the *Testament of our Lord* (i. 23, 35), and Epiphanius of Cyprus expressly says:

'We make our memorial on behalf of righteous and of sinners; on behalf of sinners praying for the mercy of God, and on behalf of righteous and fathers and patriarchs, prophets and apostles and evangelists and martyrs and confessors, and bishops and anchorites and all the estate (*τάγματος*) [of man], that we may separate the Lord Jesus Christ from the order

(*τάξεις*) of men by means of the honour given to him, and that we may render worship (*σεβας*) to him, remembering that the Lord is not to be put on the same footing with any man' (*Har.* lxxv. 8).

Already, it seems, there was a tendency to exalt the greatest saints to a superhuman position.

In Syria the *Apostolic Constitutions* mention assemblies in the cemeteries with lections and with psalm-singing (*ψάλλοντες*) on behalf of (*ὕπέρ*) the martyrs and all saints who have fallen asleep (vi. 30), and the liturgy in bk. viii. explicitly says:

'We offer to thee also on behalf of all the saints who from the beginning have pleased thee, patriarchs, prophets, just men, apostles, martyrs, confessors,' etc. (ch. 12).

In the era of the Great Liturgies the same feeling still survived in some Churches. The Greek 'St. Mark' prays for rest and remembrance for the souls of the patriarchs, prophets, apostles, martyrs, confessors, and others, including St. Mark himself by name (Brightman, i. 128). In the Byzantine rite the Greek 'St. Chrysostom' and the Armenian liturgy have an almost identical prayer (*ib.* i. 387 f., 440).¹

On the other hand, there was a tendency in some circles in the 4th cent. to abstain from prayers for the martyrs and the greatest saints. Cyril of Jerusalem, speaking of the Great Intercession in the eucharist, makes a distinction:

'We commemorate . . . first patriarchs, prophets, apostles, martyrs, that at their prayers and intervention God would receive our petition. Afterwards also on behalf of the holy fathers and bishops who have fallen asleep before us, and, in a word, of all who in past years have fallen asleep among us, believing that it will be a very great advantage to the souls, for whom the supplication is put up, while that holy and most awful sacrifice is presented' (*Cat.* xxiii. [*Myst.* v.] 9).

Augustine (*Serm.* clix. 1) expressly denies that martyrs are prayed for, though they are commemorated at the altar; and he considers that it is an insult (*injuria*) to pray for a martyr, 'to whose prayers we ought to commend ourselves.' And we see the same feeling in several of the Great Liturgies—in the Greek 'St. James' (Syrian rite [Brightman, i. 47 f.]), the E. Syrian 'Addai and Mari' (*ib.* i. 264), and the Abyssinian Liturgy (*ib.* i. 206, 208, 228 f.). The Coptic takes a middle line (*ib.* i. 169). It asks for rest and remembrance for all the great saints, including the 'holy Theotokos Mary,' but goes on to say:

'Not that we . . . are worthy to intercede for their blessedness . . . but . . . that . . . they may in recompense intercede for our poverty and weakness.'

The question depended much on whether it was believed that the greatest saints have already received their full reward or await it at the Last Day. That they have already received it is denied by Justin Martyr (*Dial.* 80) and Irenæus (*Har.* v. 31). Tertullian (*de Anima*, 55, *de Res. Carn.* 43) makes an exception only in the case of the martyrs. In the 3rd cent. Origen makes no exception (*Hom. in Lev.* vii. 2: 'not even the apostles have yet received their joy'). So, indeed, Augustine, though with some hesitation, makes the Last Day the time for all the faithful to receive their complete reward (*Serm.* cclxxx. 5). But gradually in the West the view prevailed that all the great saints, whether martyrs or not, are already reigning with Christ, and ought not to be prayed for (for a review of belief on this subject see A. J. Mason, *Purgatory*, pp. 81-96).

(b) There was a general feeling that it was of no avail to pray for the heathen departed, for any but the baptized. There might, indeed, be an exception, especially in times of persecution, in the case

¹ This article is not concerned with the subject of the invocation of saints, but, as an illustration of the feeling expressed in these authorities that all the faithful departed are of one class, it may be mentioned that the Greek Orthodox Church at the present day habitually invokes the prayers, not only of the saints, but of departed relatives, whether they were especially saintly or not. There is a beautiful poem by Alexis Rhomaios, asking his dead children to pray for him (Birkbeck, *Russia and the English Church*, p. 21).

of a catechumen who desired baptism but died before he could receive that sacrament. The *Canons of Hippolytus* (x., ed. Achelis, § 63) say that catechumens are already 'Christians,' and so the 7th canon of the Council of Constantinople (A.D. 381). The former work (xix. [101]), the *Egyptian Church Order* (Sahidic, § 44), and the *Testament of our Lord* (ii. 5) recognize a martyred catechumen as 'baptized in his own blood.' But, generally speaking, only the baptized were prayed for. Augustine says (*Enchir.* 29): 'We offer . . . for all baptized departed.' We do, indeed, read that Perpetua prayed for her brother Dinocrates, who, as we gather from her own words, was unbaptized, though Augustine denied this. A similar case is found in the *Acts of Paul and Thecla* (Swete, *JThSt* viii. 502 f.). Gregory the Great prayed for the soul of the emperor Trajan, and was warned in a vision not again to pray for the unbaptized (Lightfoot, *Ignatius*, i. 5). But these were mere private speculations, which did not represent the ordinary feeling of Christianity.

For those who died in wilful sin it was felt that prayer could not be offered. The *Apostolic Constitutions* (viii. 43) say that one will never help the wicked (*ἀσεβῶν*), even though he gave all the goods in the world to the poor. Augustine (*de Civ. Dei*, XXI. xxiv. 2) says that prayers are not for unbelieving and unholy dead; they are (*Enchir.* 29) neither for those who are very good nor yet for those who are very bad. In the 3rd cent. Cyprian had forbidden the eucharist to be offered for the soul of a certain person who had seriously transgressed an ecclesiastical rule and had died impenitent (*Ep.* i. [xv.] 2, to the clergy and people at Furni).

7. Early objectors to the custom.—In the 4th cent. Aetius, a presbyter in Pontus, the founder of the sect named after him (it seems scarcely to have survived his death), protested against prayers for the departed. We learn about his history and his views from Epiphanius, who says that he was alive in his time (*Hær.* lxxv. 1), and from Augustine (*de Hær.* liii.). He had been disappointed at not being made bishop, and lapsed into Arianism. Among other things he said that the eucharist 'ought not to be offered for them that sleep.' He adduced as the reason for his objection the danger of a man leading a sinful life in the hope that he would be saved from punishment by the prayers of his friends.

Though Aetius is the only person in antiquity known by name who objected to prayers for the departed, there must have been others. Cyril of Jerusalem says that 'many' held that they were profitless (*Cat.* xxiii. [Myst. v.] 10); and the language of Augustine (*Enchir.* 29) and others seems to imply that the question was frequently debated in the 4th century. Yet the objection cannot have been much pressed, for Augustine (*Serm.* clxxii. 2) says that the custom was universal, and Epiphanius (*Hær.* lxxv. 8) traces it back to primitive times.²

8. Mediæval Western views.—As doctrines about the intermediate state developed in the West, chiefly in consequence of the tentative suggestions of Augustine and the visions related by Gregory the Great, the principal aim of prayer for the departed came to be the deliverance of souls from a penal purgatory. The schoolmen discussed the matter at considerable length. Their speculations concern us here only so far as they resulted in the

¹ This is clearly the meaning. At the time *προεβήκειν* and *offerre* were used absolutely, without a substantive, as the technical terms for celebrating the eucharist. See the present writer's *Ancient Church Orders*, Cambridge, 1910, p. 48.

² On the subject of prayers for the departed reference may be made to a learned catena of Patristic and liturgical writings (as far as they were known in his day) by James Ussher, archbishop of Armagh (1625-56), reprinted in the *Oxford Tracts for the Times* (Tract 72, London, 1837).

particular shape taken by the prayers. When purgatory was conceived as a place of punishment whose tortures differed from those of hell only in not being eternal, it is not surprising that men's energies were directed to the deliverance, by prayer and alms, of their friends therefrom. Yet the prayers of the mediæval Latin service-books show great restraint, and do not reflect popular beliefs to any very large extent. But they exhibit a sadness which is not found in earlier rites. The keynote to the Sarum service for the burial of the dead is struck by the opening antiphon:

'Circumdederunt me gemitus mortis, dolores inferni circumdederunt me' (see W. Maskell, *Monumenta ritualia Ecclesie Anglicanæ*, Oxford, 1882, i. 142).

The popular conceptions about purgatory are not necessarily the official views of the Church of Rome. According to Roman Catholic writers of repute, the only statement which is of faith in that communion is that 'there is a purgatory and that the souls detained in it are helped by the prayers of the faithful' (Creed of Pope Pius v.). The Council of Trent (*Canones et Decreta*, sess. xxii. § 2) says that the eucharist is offered 'for the departed in Christ not yet fully cleansed'; and sess. xxv. (decree on purgatory, A.D. 1563) has the words just quoted from the Creed, adding 'especially the acceptable sacrifice of the altar,' and enacting that a 'same doctrine of purgatory, handed down from the holy fathers and sacred councils, is to be believed and taught.' The last words probably are meant to rebuke the extravagances of some popular teaching.

9. The Church of England at the Reformation took a middle course. In the First Prayer Book of Edward VI. (1549) there were explicit prayers for the departed. But since 1552 these have been removed from the public services; the only relics of them remaining are the petitions in the Communion Service (perhaps purposely left ambiguous) that 'we and all thy whole Church may obtain remission of our sins,' etc., and (in the prayer for the Church militant) that 'with them (the departed) we may be partakers of thy heavenly kingdom'; in the latter case the title does not exactly correspond with the contents of the prayer, as is sometimes the case in the Thirty-nine Articles. In the Burial Service there is a prayer 'that we, with all those that are departed in the true faith of thy holy Name, may have our perfect consummation and bliss,' etc. But, while thus removing explicit prayers for the departed from its Prayer Book, the Church of England declined to condemn the practice in itself. In the original draft of art. xxii. it was proposed to do so, but the condemnatory words were struck out (see E. C. S. Gibson, *The Thirty-nine Articles*, London, 1897, p. 537 f.). And the Act of Uniformity of 1552 expressly declared that the First Book of 1549 was 'a very godly order, agreeable to the Word of God and the primitive Church.' In the Second Book of Homilies, on the other hand, the homily on prayer repudiates prayers for the dead; and this book is said by art. xxxv. to 'contain a godly and wholesome doctrine,' though all its opinions are not necessarily the official views of the Church of England. The position of that Church is thus a mediating one. It neither commands nor condemns the practice, and leaves it, as far as private practice is concerned, to the discretion of its members.

10. The Westminster Confession.—This was adopted as a standard by the Presbyterian General Assembly in Scotland, A.D. 1647. It takes a very precise line on the subject now under consideration. It says:

'Prayer is to be made . . . for all sorts of men living, or that shall live hereafter; but not for the dead, nor for those of whom it may be known that they have sinned the sin unto death' (xxi. 4).

The same statement (with a slight difference of wording) is found in the *Larger Catechism* of 1648 (qu. 182), but is not contained in the *Shorter Catechism* of the same date. Already in 1580 the Scottish National Covenant, when denouncing (in the strong language of the day) 'that Roman Antichrist,' had repudiated among many other things 'his purgatory prayers for the dead.'

The reason for the prohibition of prayers for the departed in the *Westminster Confession* is seen in its teaching as to the state of the faithful after death. All progress after death is denied. After saying that at death man's soul does not die nor sleep, it goes on:

'The souls of the righteous, being then [at death] made perfect in holiness, are received into the highest heavens, where they behold the face of God in light and glory, waiting for the full redemption of their bodies: and the souls of the wicked are cast into hell . . . Besides these two places for souls separated from their bodies, the Scripture acknowledgeth none' (xxxii. 1).

Very similar is the wording of the *Larger Catechism* (qu. 86). The well-known words of the *Shorter Catechism* (qu. 37) are:

'The souls of believers are at their death made perfect in holiness and do immediately pass into glory; and their bodies, being still united to Christ, do rest in their graves till the resurrection.'

This may be taken to be the general teaching, not only of Presbyterians, but of a large number of other Protestant communities throughout the world. Luther, however, favoured the practice of praying for the departed (see S. C. Gayford, *The Future State*, London, 1903, p. 58).

11. The Eastern Orthodox Church.—The teaching of this Church remains much the same with regard to prayer for the departed as that of the Greek Fathers of the 4th and 5th centuries. It is remarkably cautious in refusing to dogmatize. The eminent Russian layman, Alexis Khomiakoff, remarks (Birkbeck, p. 217 f.):

'Each person owes his prayers on behalf of all, the living and the dead, and even those who are as yet unborn . . . We do not acknowledge purgatory, that is the purification of souls by sufferings from which they may be redeemed by their own works or those of others. . . Who will forbid us to pray [God] to glorify his saints and to give repose to his elect?' (see above, § 6).

The official treatise *On the Duty of Parish Priests* (§ 16 [Blackmore, *Doctrine of the Russian Church*, p. 281]) says that we ought to pray for the departed in the hope and faith of the resurrection of them that sleep, and bases this teaching on Bar 3rd, 2 Mac 12th, and on apostolic and primitive tradition. The Synod of Jerusalem (or Bethlehem, A.D. 1672) went farther than Khomiakoff and most Eastern theologians would approve. 'The doctrine of purgatorial fire has never been recognized or admitted in the Eastern Church' (Duckworth, *Greek Manuals*, p. 63); but the Synod, which was held at a time when the Eastern Church was largely under Roman influence, pronounced in favour of some sort of punishment in purgatory for a certain number of sinners, and affirmed that 'they are released by God's goodness in answer to the prayers of priests and the benefactions done in the name of the departed by their kinsfolk,' and that for this the eucharist is 'of especial avail'; 'but the time of their release we know not' (ib. p. 64 f.). On the other hand, Archbishop Philaret of Moscow, the author of the *Longer Catechism* of the Russian Church in its present form, denies that there is such a thing as purgatory in which souls have to pass through fiery torments in order to prepare them for blessedness (Headlam, *Teaching of the Russian Church*, p. 17). And the *Catechism* itself (Blackmore, p. 98 f.) says nothing of any punishment even for those who have died without having had time to bring forth fruits worthy of repentance, but affirms that they may be aided towards the attainment of

a blessed resurrection by prayers, eucharists, and works of mercy offered for them. It says of all the righteous dead that they 'are in light and rest with a foretaste of eternal happiness,' while the wicked 'are in a state the reverse of this'; the righteous do not attain to perfect happiness till the resurrection of the body.

12. The Separated Churches of the East.—The service-books of these communities have already been dealt with, in reference to prayer for the departed (§§ 5, 6). We may, however, in conclusion notice a very remarkable custom which is found among both the Armenians and the E. Syrians (Nestorians), namely that of animal sacrifices. These seem to be properly memorials of the dead (for the custom among the E. Syrians see A. J. Maclean and W. H. Browne, *The Catholicos of the East*, London, 1892, p. 334; for the Armenians see F. C. Conybeare and A. J. Maclean, *Rituale Armenorum*, Oxford, 1905, pp. 54-60). This custom appears to be a curious survival of paganism.

A. J. MACLEAN.

PRAYER-WHEELS (or 'magical wheels').—This name is applied to wheels or cylinders which are made to revolve in the expectation of spiritual or magical profits. Sometimes they are actual wheels, hung in a temple and turned by hand or by means of a cord. To this category belong the small metal wheels fixed in the wooden pillars at the entrance of certain Japanese pagodas.¹ Such also are the so-called 'wheels of fortune,' suspended from the ceiling or attached to the pillars of some Breton churches. Worshippers are allowed to turn these on payment of a few pence for behoof of a saint whose image is placed alongside, and which bears the name of 'Saint of the Wheel' (*Santic-ar-rod*). The Japanese wheels have metal rings, which slide along the spokes and make a silvery sound. The Breton wheels produce the same effect by means of the small bells with which they are decorated. The use of these instruments is of long standing in the Church. According to the *Monasticon Anglicanum*, St. Ethelwold, bishop of Winchester in the 10th cent., introduced into his cathedral a wheel of gilt metal, all covered with little bells ('tintinnabulis plenam'), which was made to revolve on saints' days, to increase the devotion of the faithful ('ad majoris excitationem devotionis').² Among the ancient Greeks the grammarian Dionysius of Thrace notes 'the wheels which are revolved in the temples of the gods.'³ Plutarch and Heron testify to their presence in Egyptian temples of a late period. Plutarch makes them a symbol of the instability of human things,⁴ Heron an instrument of purification: 'Below the colonnade of the Egyptian temples are placed movable bronze wheels, which are turned by those entering, in the belief that the bronze purifies.'⁵

¹ See illustration in Simpson, *The Buddhist Praying-Wheel*, p. 116.

⁴ *Nyma*, xiv.

⁵ *Peterum Mathematicorum Opera*, Paris, 1693, p. 220.

Again, the instruments used may be cylinders, or rather cylindrical boxes, containing texts or sacred objects. Such are the praying-mills, which have assumed special importance among the Buddhists of the North. The smallest ones are bobbins, often of silver, attached to a wooden handle, which the lāmas by a slight movement of the wrist keep steadily revolving for whole days, while they repeat the invocation engraved on the surface—generally the famous formula, *Om mani padme Hūm*, 'O the jewel in the lotus!' Other cylinders, of a larger size, generally of wood painted in bright colours, are to be seen in the vicinity of the lamaseries. Passers-by make them revolve by means of a handle which returns to the hand, making a bell ring several times. As many as 300 of these wheels may be found, placed side by side like barrels in a beer-cellar.¹ Some are of such a size that it requires several persons to set them in motion. The traveller Gérard saw one at the monastery of Sunum which carried 108 lighted lamps. Others contain shrines, images, and prayers, and occasionally a number of manuscripts. Each revolution confers on the worshipper the same spiritual benefits as the reading of all the texts. Miss Gordon Cumming found some in Japan which were veritable libraries—'circulating libraries,' as William Simpson wittily called them.² Gabriel Bonvalot mentions having encountered, in the monastery of Dotou, 100 large bobbins, each containing 10,000 invocations. As a few minutes suffice to revolve the whole in succession, one may thus rapidly gain the benefit of the indulgences attached to the recitation of 1,000,000 formulæ.³

In the Himalayas these mills are often erected above a rushing stream, which turns unceasingly a wheel with blades dipping into the water. It appears that the merit mechanically engendered by these applications of natural forces goes to increase the *karma* of those who constructed the apparatus. E. R. Huc,⁴ Gilmour, and W. W. Rockhill⁵ report that among the Mongols there are mills made of paper and hung in the tents over the fireplace in such a way that they may be set in motion by the displacement of the heated air.

Such is the fashion in which the Buddhists of the Northern school have materialized the 'wheel of the Law,' the *Dharmachakra*, the chain of causes and effects. There is no mention of praying-mills in the oldest Buddhist treatises. Nor are these instruments known among the Buddhists of the South. Nevertheless the symbol of the wheel was in very early times held in high esteem by the followers of the Buddha. It is to be seen on Buddhist monuments prior even to the first appearance of the image of the Master. The wheel figures in the oldest Buddhist sculptures, in the place of honour upon altars, where it receives the homage of the faithful.⁶ A. Cunningham supposed that it represented the Buddha himself.⁷ But it is more probable that it personified his teaching, the 'wheel which he set in motion for the salvation of humanity,' by the revelation of the Four Great Truths in his famous sermon at Benares.

We may suppose that the Buddhists have combined their symbolism of the wheel with a magical rite previously practised either by the Scythian races of Central Asia or by the Brāhmins of Northern India. In support of the former of these conjectures use may be made of the circumstance that on a coin of the Indo-Scythian king Hoerkes or Huvichka this monarch holds in his hand a spindle-shaped object in which some have thought to recognize a praying-mill.¹ On the other hand, William Simpson has found in the *Satapatha Brāhmaṇa* a text which shows beyond question that the Brāhmins revolved chariot-wheels horizontally around a stake fixed in the ground, while they chanted a hymn from the *Sāmaveda* in honour of the sun-god Savitri.²

What was the original purpose of this rite? The wheel, which has a round shape, and which implies a movement of translation in space, has everywhere been one of the images most frequently employed to represent the sun. The latter is called by the Latins *rota altivolans*,³ in the Edda 'the beautiful wheel' (*fagravel*),⁴ by the Celts 'the luminous wheel' (*roth farl*),⁵ and the *Rigveda* invokes the god who directs 'the golden wheel of the sun.'⁶ The wheel thus becomes the symbol of the regular course of the sun, and consequently of the celestial or cosmic order, the *rita*. Another passage of the *Rigveda*⁷ speaks of it as 'the immortal wheel which nothing stops, on which all existence depends.' It was this symbolism that the Buddhists applied to their 'wheel of the Law,' with its thousand spokes, the *Dharmachakra*, 'that wheel which not by any Sahmana or Brāhman, not by any god, not by any Brahṃā or Mārā, not by any one in the universe can ever be turned back!'⁸ All observers agree in stating that the praying-mills must turn in the direction followed by the sun.⁹

On the principle of imitative magic, to revolve the wheel in the apparent direction of the sun's course is to facilitate or assure the beneficent movement of the sun, and thus to secure general luck, as in the similar case of circumambulation (*q.v.*). Hence the popular customs, described by Mannhardt¹⁰ and Gaidoz,¹¹ in which the inhabitants of certain districts—in Germany, France, and England—may be seen driving a wheel, sometimes set on fire, across the fields. As Mannhardt maintains, this is simply a solar charm, intended to secure an abundant harvest.

Finally, mention must be made of certain forms of rattles used by the inhabitants of New Mexico. In so far as they are magical instruments, they resemble in construction the invocation-cylinder, but they belong to quite a different symbolism.

PREACHING.

Christian (J. STALKER), p. 215.
Jewish (H. HIRSCHFELD), p. 220.

Muslim (D. S. MARGOLIOUTH), p. 221.

PREACHING (Christian). — 1. The early Church. — From the accounts of Christian worship in the NT, especially in the Epistles to the Corinthians, it can be gathered that great liberty of prophesying was allowed in the meetings of the primitive Christians, although there is a general understanding that the prompting to speak should come from the Spirit of God. As early as the *Didache* the 'prophets' are mentioned as a separate class, the members of which wandered from community to community in the exercise of their gift; but already their inspiration was so far from being above suspicion that the churches were coming to be better satisfied with any authentic light they could receive from their own elders than with the illumination afforded by those wandering stars. This tendency was increased by the growing sense of the inexhaustible treasures of wisdom and spiritual power lodged in the Holy Scriptures the canon of which was gradually forming. From the synagogue the Church had inherited the practice of reading aloud the sacred writings and attaching to this reading the word of exhortation. When the Christian community had the whole of the NT and the OT thus to draw upon, it could not lack the bread of life, if a moderate amount of attention or skill were given to the application of what had been read to the life of the individual and the community. At all events the first form of preaching was homiletical, a homily being a running commentary on a passage read. This is known to have been the form of instruction given at the first college for the training of preachers, the Catechetical School of Alexandria, of which Clement and Origen were the shining lights. Many of Origen's homilies have come down to us; and they show how boundless a thesaurus of truth he was sensible of possessing in the Word of God, though the heritage left by him to succeeding ages was sadly vitiated by the introduction of the allegorical method, which tempted nimble wits into excessive ingenuity, but, in incompetent hands, could make almost any passage of Scripture mean almost anything.

During the first 300 years of its existence Christianity, in spite of the persecution to which it was subjected, made more rapid progress than it has ever done since; yet the names of outstanding preachers, after the death of the apostles, are so few that it cannot have been by this means that success was gained. It was rather by a kind of preaching which has been too little practised in subsequent centuries, but will have to be rediscovered if the world is to be fully evangelized. At the first the gospel was so intense a blessedness that no one who heard it with faith could keep the secret to himself. Neighbour told it to neighbour, slave to fellow-slave; the sailor carried it to every shore visited by his ship, and the soldier communicated it even to the enemy whom he had conquered on the field of battle. Justin Martyr, after becoming a Christian, continued to wear the philosopher's cloak, because this gave him access to those to whom he 'talked' the gospel, and the verb 'to talk' is a good name for preaching in the NT.

2. The Middle Ages. — When, at the beginning of the 4th cent., Christianity was adopted as the religion of the Roman empire, there immediately took place a great revival and extension of preaching; for it was no longer necessary to confine such testimony to the places where the myrmidons of

persecution could not find the worshippers, but, under imperial auspices, Christian places of worship, of growing size and magnificence, rose all over the empire. The first Christian emperor himself set an example of preaching, like a well-known imperial figure of the present day; and, as at least one of his efforts has come down to us, we can judge of their quality for ourselves. It is by no means bad preaching for an emperor. Even the apostate Julian, who attempted to restore heathenism, betrayed his consciousness of the importance of preaching by exhorting his priests to make sermons with the pagan myths for texts and by setting an example himself. But his attempt was very soon at an end; and in the courts of the Christian emperors by whom he was succeeded preachers and preaching held a conspicuous place. The more famous became as much topics of conversation at court as favourite charioteers or actors had been before; and in the sunshine of imperial favour preaching attained to a notable development. The 4th and 5th centuries contain many outstanding names, the greatest of which in the East is that of Chrysostom, in whose hands the homily was transmuted into an oration, which the hearers applauded in church, as they might a speech in a political meeting. In the West the greatest preacher was Augustine, whose sermons, being addressed to audiences of fishermen, were more simple and practical. But the first impression made by even the greatest sermons of that age is, how much the long continued exegesis of the Scriptures through the Christian centuries has benefited congregations; for, in explaining the book of Acts, e.g., the humblest preacher has now within easy reach materials far more true to the text and useful to the people than were at the command of even a genius like Chrysostom, who has left lectures on this book of Scripture.

Many other names of the period could be mentioned, such as Gregory and Basil in the East and Ambrose and Hilary in the West, to show that this was a great age for preaching; and it has another sign of distinction in the appearance of books on the preacher's art, both Chrysostom and Augustine having produced examples of this species of literature. But it was not long before the descent of the barbarians from the north, and then the pressure of Muhammadanism from the east, nearly squeezed the life out of the Church, and preaching, like the other functions of her life, was reduced for centuries to the lowest terms. Yet this was the time when monasticism arose and spread with extraordinary rapidity over the Church, occupying territory from which it has never since been wholly dislodged; and in the monasteries and nunneries preaching obtained a new sphere of influence. Monks and nuns must often, in the centuries that followed, have been unusually intelligent and sympathetic hearers, and the opportunities thus opened up to a spiritual and gifted preacher may be inferred from the relation of Staupitz to the youthful Luther; for this worthy, who was inspector of monasteries in the district of Thuringia, must have made use of preaching as one of his ordinary activities. A still more attractive aspect of the preaching of the Dark Ages is that of the missionaries; for, in spite of its repellent features, this was one of the great eras of missionary progress, when, issuing from the monasteries of Great Britain and Ireland, the

heralds of the Cross not only evangelized the tribes who had occupied the countries of S. Europe, but carried the gospel to the inhospitable regions of the north out of which the invaders had come. Names like those of St. Columba and St. Patrick, St. Columbanus and St. Gall, are worthy of everlasting remembrance, and in the remains of St. Boniface, in some respects the greatest of them all, we can still see for ourselves the kind of message with which they operated. It was a message of realism and terror; for the conditions were very rude with which the missionaries had to deal. Sin was then the chief theme of the pulpit, because there was abounding iniquity in the world; and it was not for centuries yet that preaching learned to deliver in its fullness the gracious message of deliverance from sin.

It was in the reaction from Muhammadanism that the sound of a new era of preaching began to be heard in the atmosphere of Europe. Peter the Hermit 'preached' the first Crusade; and the preacher of the second was no less a personage than St. Bernard, usually reckoned the greatest preacher of the Middle Ages, although the sermons for which he is most famous—those on the Song of Solomon—belong not to popular oratory but to the preaching of the monastery. The tendency, however, to consider the multitude had, as well as the romanticism of the Crusades, a place in the movements with which the names of St. Francis and St. Dominic are identified. Preaching was one of the principal instrumentalities made use of by both of these reformers; and even in our time, in Roman Catholic countries, it is a red-letter day in the history of a country congregation when a stranger in the graceful garb of the Dominican order rises in the pulpit, as a visitor, to occupy the place of the ordinary incumbent. Among the Franciscan preachers Antony of Padua and Berthold of Regensburg are the foremost. The matter of preaching was adapted for presentation to the general mind through the labours of the Schoolmen, not a few of whom were themselves famous preachers; and, after these had had their day, the hardness of their doctrine was softened in the atmosphere of the mystics, who gave to the pulpit some of its very greatest names, such as Eckhart and Tauler. The chapters of the *Imitatio Christi* preserve the exquisite blossom and flower of monastic preaching at its best.

3. The Reformation.—Immediately before the Reformation preaching suffered in most parts of the Church a sad decline. In many quarters there was hardly any preaching at all, the Christian religion being reduced to a mere pagan round of forms and ceremonies, pilgrimages and penances. In vain did councils summon the clergy to their duty; for the higher clergy, who presided in such assemblies, were themselves the most remiss in the discharge of this function, and the lower clergy were too deeply sunk in ignorance to be equal to the task. The description of the preaching of the time given in Thomas McCrie's *Life of John Knox* is not exaggerated, and it may be applied without hesitation to the rest of Christendom.

'It is difficult for us to conceive how empty, ridiculous, and wretched those harangues were which the monks delivered for sermons. Legendary tales concerning the founder of some religious order, his wonderful sanctity, the miracles which he performed, his combats with the devil, his watchings, fastings, flagellations; the virtues of holy water, chrism, crossing, and exorcism; the horrors of purgatory, and the numbers released from it by the intercession of some powerful saint; these, with low jests, table-talk, and fireside scandal, formed the favourite topics of the preachers, and were served up to the people instead of the pure, salutary, and sublime doctrines of the Bible' (*The Works of Thomas McCrie*, new ed., Edinburgh, 1855, i. 11).

It is in the writings of Erasmus that we see most clearly both the ludicrous and the deplorable aspects of the preaching of the time; but, in

Ecclesiastes, one of the worthiest of his books, this great Humanist exhibited the image of what, in his opinion, a preacher ought to be. The Reformers before the Reformation, especially Wyclif, Hus, and Savonarola, revealed popular talent in the pulpit, and in the last-mentioned especially the gift rose to the prophetic strain.

The Reformation was a crowning era in the history of preaching. Innumerable abuses were pushed aside, which had been preventing the pulpit from having its chance. The Word of God was exalted above all other authorities, and it was not only heard with new fullness and force from the pulpit but put into the hands of the common man, in his own tongue, so that he could bring what he heard to the judgment of the law and the testimony. The Reformers had themselves passed through the great experiences of the soul, and they spake that which they knew and testified that which they had seen. Among the people there was the most extraordinary appetite for the new message, the more prominent among the preachers being called on to preach every day, and no limit being put to length. In Luther there were accumulated all the elements of a great preacher—learning, experience, knowledge of men, humour, homeliness, indignation, spirituality. To this day the best of his discourses have not lost the freshness of their prime, and everywhere in them the music of free grace sounds like the tinkle of a hidden well. Zwingli was more of the orator, bringing into the new movement the treasures of the Renaissance, but his testimony to the new truth is also clear and strong. Calvin excelled in the exposition of the Scriptures, and his great dogmatic work, the *Institutes*, swelled, in the course of his lifetime, to five times its original size just because he crowded into the successive editions the best things gathered from the Word through incessant preaching and lecturing. John Knox applied the examples of the Bible to the problems of the passing hour; and the English ambassador, in a letter to Queen Elizabeth's Chief Secretary of State, bore to him this testimony:

'I assure you, the voice of this one man is able in one hour to put more life in us than five hundred trumpets continually blustering in our ears' (McCrie, *Life of Knox*, p. 178).

In all the countries in which the Reformation took any hold there arose preachers of power, whose names are cherished to this day as household words, and in many cities and towns men of the second or the third rank arose, who directed the course pursued by their fellow-citizens and left a name still identified with the scenes of their labours. The pulpit had the making of the people's convictions, the moulding of their manners, the direction of their education; and this continued for generations, in some places more and in others less visibly.

4. The Puritan era and after.—In England, in spite of such early names as Hugh Latimer, Nicholas Ridley, and John Hooper, the effective Reformation was long in commencing; but, when it began, it produced the same appetite for preaching; and there were not wanting those capable of satisfying this spiritual hunger. In the Long Parliament it was quite an ordinary practice to set time apart for the hearing of sermons, and days of humiliation or thanksgiving were frequent, in which not only sermons an hour long but even prayers of like extent were the order of the day. To satisfy such a critical assembly can have been no ordinary responsibility; but, if ever there was a dynasty of great preachers in England, it was in this age. On the Puritan side were such names as Thomas Cartwright, Richard Sibbs, Richard Baxter, John Owen, John Bunyan, John Howe, Thomas Goodwin, and Thomas Adam; and for

intellectual grasp, mastery of Scripture, spiritual analysis, and constructive skill these men have never been surpassed. He who is in search of the substance of Christian truth can turn to their works still with the certainty of finding in abundance that which he is seeking. But, with few exceptions, they were as defective in literary form and grace of utterance as they excelled in solidity. What, however, was lacking in them was supplied in abundance by their rivals—the Cavalier preachers of the period, such as Richard Hooker, John Donne, Joseph Hall, Thomas Fuller, and Jeremy Taylor. Whether it was that these had audiences to preach to less hungry for the bread of life than those who listened to the Puritans, or whether it was due to a marked difference of natural endowments, it is undeniable that these are as exuberant in all the graces which make style and literature as the others are deficient in them; and yet it cannot be said that there is any lack of substance in their discourses. On the contrary, although the ornamentation is sometimes excessive, the Cavalier divines, as well as their rivals, were great exponents of Christian truth and experience.

So great a revival of religion as Puritanism could not be confined to the British Isles; and on the Continent the stirring of the dry bones first appeared in Holland, where the signal of the new movement was the emergence of what is called the Federal Theology. This is usually fathered on Cocceius, a native of Bremen and a professor at Franeker and Leyden; but it is certain that the conception of revealed religion as a series of covenants belonged earlier to the Puritan thinkers, as, indeed, it is developed in the documents of the Westminster Assembly, which were in existence before the publication of Cocceius' renowned treatise on the subject. From Holland the revival movement spread to Germany, where its principal representative was Philipp J. Spener, court preacher successively at Dresden and Berlin; but it is known that he was influenced in youth by Puritan authors, especially by Richard Baxter, whose *Reformed Pastor* has been an inspiration to preachers and pastors in all parts of the Christian world. Spener was only the most outstanding of many preachers of the Pietistic order, the names of some of whom, like A. H. Francke, J. A. Bengel, and J. J. Rambach, have taken their places among the worthies of the Church universal. Out of the Pietistic movement issued directly the Moravian Church, whose founder, Count von Zinzendorf, and his successor, A. G. Spangenberg, were noted preachers who have communicated their inspiration to many successors in their small but active community. To the Moravian Church John Wesley owed his experience of the gospel; and the same may be said of his coadjutors, Charles Wesley and George Whitefield. These were preachers who shook not only England but America to the heart, and they have transmitted the sacred fire to innumerable successors not only in the denominations founded by them but far beyond. Though the Established Church was not able to retain their services, there arose within it many who imitated their methods and reproduced their spirit; and the succession of Evangelical divines, reaching from John Newton down through Charles Simeon to the shining lights of this section of the Church at the present day, may all be looked upon as derived from this source. An original step on the part of Wesley and Whitefield was preaching in the open air; and, in the churches founded by them, lay-preaching has been a prominent feature, with memorable effects not only on the community but on the character of the preachers themselves (cf. also art. LAITY, § 7).

Charles II. was not without a taste for preach-

ing, and a curious letter has survived in which, before a visit to Cambridge, he lays down the law that the university preachers must refrain from reading their discourses, as the extempore style, to which he had been accustomed whilst living abroad, was more in harmony with the royal mind. But the recoil from Puritanism soon became so universal that anything like enthusiasm in the pulpit was looked upon as vulgar, and the quenching of the fire soon proceeded from form to substance, the tone of belief becoming lukewarm and the distinctive message of the gospel being forgotten. Preachers formed their style on that of Addison, and many a sermon hardly attained to the warmth of an article in the *Spectator*. The model preacher of the time was Archbishop Tillotson, and even in the chapels of the Dissenters cold respectability held sway, although there were not wanting figures like Isaac Watts and Philip Doddridge to keep alive the memory of a better time. The Latitudinarianism of England had its equivalent in the Moderatism of Scotland, whose apostles were such men as William Robertson, Hugh Blair, and 'Jupiter' Carlyle, as well as in the rationalism of Germany, which was represented in the pulpit at the one extreme by the vulgarity of K. F. Bahrdt and at the other by the eloquence of J. L. von Mosheim.

5. The 19th century.—(a) *Britain*.—All historians of preaching are agreed that the 19th cent. has been an epoch of unsurpassed maturity and productiveness. It has been a period when the human mind has blossomed in every direction, and preaching has both enriched itself from the progress of investigation and discovery and risen to the demands coming from every side. The most native impulse has been that of the Evangelical Revival, and thus has been visible in its purest form in Scotland, where, at the beginning of the century, the movement was received into the mighty mind of Thomas Chalmers, taking on there a form of singular benignity and dignity, which has never since ceased to hold the heart and mind of his fellow-countrymen. Indeed, at the end of a century it is more in possession than ever, there being hardly any preachers of note at present who do not look up to Chalmers with veneration or are not proud of the name of Evangelicals. Chalmers' own eloquence was believed by the best judges of the time to be not inferior to that of the very greatest masters of the oratorical art in any age; and his coadjutors in the ecclesiastical conflict, such as R. Murray McCheyne, Robert S. Candlish, Thomas Guthrie, Robert Buchanan, were all preachers possessed of popular gifts and spiritual power. The Establishment from which these seceded, however, continued to produce preachers of eminence, such as Norman Macleod, John Caird, George Matheson, and James MacGregor. The United Presbyterian Church, which had originally sprung from the gospel preaching of the brothers Erskine, had such outstanding names as John Cairns, Robertson of Irvine, John Ker, and W. M. Taylor, who, however, rendered his principal service in America. The English Presbyterian Church, in spite of its limited size, was rich in gifts, having such names as Edward Irving, James Hamilton, J. Oswald Dykes, and W. G. Elmslie.

In England there was much more variety. The Evangelical school in the Church of England had a nursery for talents in the Church of Simeon at Cambridge; and in the Keswick Movement it has produced speakers whose messages have been carried to all parts of the world. The same views have had much more powerful intellectual representation in such Congregational preachers as Thomas Binney, R. W. Dale, and Joseph Parker.

The Methodists had such distinguished names as Richard Watson, Jabez Bunting, W. M. Punshon, J. H. Rigg, and W. B. Pope. But the Baptists, for their number, were the most fruitful of all, with such celebrities as Robert Hall, Alexander MacLaren, and C. H. Spurgeon, who held an archiepiscopal position during the latter half of the century among the Dissenters of the world. In sharp distinction from the Evangelical school rose the Broad Church at Oxford; and, although its predominance did not last long, it yielded some fine fruits in the pulpit, such as A. P. Stanley, Charles Kingsley, and, above all, F. W. Robertson of Brighton, whose sermons were probably the most widely read in the last half of the century, while in the 20th cent. they are obtaining a new lease of usefulness through having been translated into German. With the Broad Church preachers may be mentioned a very eminent Unitarian, James Martineau. The Broad Church was succeeded by the High Church school, which has to a large extent superseded it and is still in process of expansion. It was by a sermon of John Keble's, preached at the assizes in Oxford, that the movement was started, and its best known representative, John Henry Newman, would be esteemed by many the greatest of modern preachers on account of the intensity of his convictions, his power of probing the conscience, the nimbleness of his wit, and the perfection of his style. But another of the same school, J. B. Mozley, seems to not a few of the discerning to indicate the high-water mark of Anglican preaching; and the school had a noted orator in H. P. Liddon.

Wales is a land of preachers. Nowhere else are favourite preachers more beloved or better remembered; and it is no wonder that the Welsh people have invented a name for the *je ne sais quoi* which makes preaching effective. This is the *hwl*, which is a combination of nature, art, and grace. It is the happiness of the preacher; it is the thing that grips the hearer; and it expands and culminates like the rising tide. The present writer has heard Cyndylan Jones, secretary of the Welsh Calvinistic Methodist Church, do it to perfection in an hour's discourse, the tide setting in about a quarter of an hour before the end. But the effect can be attempted and missed; and then the preacher feels 'deserted,' and the people complain of the absence of the Spirit of the Lord. Among noted Welsh preachers the Anglicans have had Henry Thomas Edwards, the Wesleyans John Evans, the Baptists Christmas Evans and William Jones, the Congregationalists William Williams, Herber Evans, and John Thomas, and the Calvinistic Methodists John Elias, John Jones, Henry Rees, Edward Mathews, Edward Magan, and many of the name of Edwards, including two principals of theological colleges, of enormous influence in their day. The Irish pulpit has had its own share of both the Celtic fire and the spiritual power of the Welsh, and among the names that are household words are E. H. Plumptre, J. H. Bernard, and William Alexander (Episcopalians), and Henry Cooke and Fleming Stevenson (Presbyterians), while none of the smaller denominations has been without preachers of power, remembered with affection and reverence in a more limited circle.

(b) *The Continent*.—If the impulse of the Evangelical Revival was predominant in Great Britain, it was still more obviously so in some of the Continental countries. A visit to Geneva of a Scotsman, Robert Haldane, who had come powerfully under this influence was the occasion of a revival, which spread through the churches of Switzerland and brought to the surface such preachers as César Malan, Merle d'Aubigné, Alexander Vinet, Frédéric Godet, and, much later,

Gaston Frommel. The same evangelist, who was not himself a clergyman, was the means of initiating a similar movement in France, issuing from the college of Montauban and giving rise to the labours of such eminent preachers as Adolphe Monod, one of the most perfect sacred orators of all time, E. D. de Pressensé, and E. A. F. Bersier. In neither of these countries, however, was the gift of eloquence confined to men of one school; and in France especially Timothée Colani and the Coquerels, father and son, must be mentioned as belonging to the less Evangelical tendency.

In Germany in the 19th cent. everything in religion and theology dates from Schleiermacher, and preaching is no exception; for this second Luther both excelled in the art and expounded the theory of preaching to such a degree that great and small have in both respects been affected by him since. Many volumes of his sermons have been preserved, and they exhibit him as an original and daring thinker, a close interpreter of Scripture, and a Christian of spiritual power. A sermon by Schleiermacher usually begins where the sermons of other preachers end; that is to say, he takes for granted all the commonplace and ordinary remarks, and then inquires what else there is in the text. Sometimes what he finds left may be paradoxical, and not infrequently he leads for a considerable distance through a pathway which is obscure; but it is seldom that he does not at last come out on some height from which there is a wide and rewarding view over the fields of truth. The only German preacher since Schleiermacher who can be called a rival, as regards either the excellence of his own productions or the extent of his influence on subsequent generations, is F. A. G. Tholuck, who has also written, in the form of a preface to his collected sermons, an incomparable disquisition on the preacher's art. Tholuck is as infallible as even Robertson of Brighton in discovering something in the psychology of the hearer to which to attach the message that he brings; he has the same gift of unfailing interest; and he has an even stronger hold on the essentials of Christian truth. These two leaders have had a long and distinguished line of successors, exhibiting great variety and yet not forsaking the type. Among the more outstanding names may be mentioned L. F. F. Therman, Klaus Harms, W. Hofacker, K. I. Nitzsch, F. W. Krummacher, J. F. Ahlfeld, G. C. A. von Harless, C. E. Luthardt, J. K. W. Löhe, and Karl Gerok. The court of Prussia has for generations been careful to attract distinguished preachers to Berlin. When one heard Rudolf Kogel, the chief court preacher in the days of Prussia's greatness, it seemed impossible to conceive of any one more fitted for his position and his work; yet, when one was listening to Emil Frommel, who was preaching in Berlin at the same time, this divine seemed to have more genius for the business in his little finger than Kogel had in his whole body. The Ritschlian movement in theology has not failed to produce eminent preachers giving currency to its views. Among recent names may be mentioned E. Dryander, B. Dörries, C. Geyer, and F. Rittelmeyer.

In the neighbouring countries of Holland and Denmark there have been similar currents of opinion at the same time; and among preachers whose renown has passed into other lands may be mentioned J. J. van Oosterzee, C. E. van Koetsveld, and A. Kuyper for the one country; and N. F. S. Grundtvig, S. A. Kierkegaard, and H. L. Martensen for the other. For Norway may be added the names of W. A. Wexels, O. A. Berg, C. Knudsen, and J. G. Blom; and for Sweden J. O. Wallin, S. L. Oedmann, C. P. Hagberg, J. H. Thomander, and F. O. Nilsson.

(c) *America*.—In no part of the world has preaching been a greater power in the 19th cent. than in America. The energy of the surrounding life has communicated itself to the pulpit also, and not infrequently have great preachers been the leaders of public progress, their names becoming so identified with the places in which they have been settled that the mention of the city still suggests the preacher or the mention of the preacher the place. Certain bodies, like the Methodist and the Baptist, have accompanied the pioneers on their westward way, suiting their ministrations to the stage of culture and the spiritual aspirations of those under their charge, and they have had their reward in the phenomenal development which these denominations have attained in the newer States. Preaching has been a very conspicuous social force, and preachers have occupied a commanding position and exercised unusual influence. Nowhere else has talent been surer of recognition, and the demand has called forth the supply. Not only has every variety of preaching been exemplified, but the art itself has been thoroughly studied and taught; and books on the subject have been produced in exceptional numbers and of high quality. At Yale University the Lyman Beecher lectureship on preaching has been established since 1872, and in the successive issues every phase of the subject has been handled by experts from both the Old and the New Worlds. A similar lectureship now exists at Union Seminary, Richmond. The countless sects into which Christianity is divided in the United States have all had men of spiritual power, whose names are warmly cherished within a limited circle; but it will be possible to mention here only those who have attained something like a world-wide reputation.

Here again the beginnings were Puritan and Evangelical. The Pilgrim Fathers carried to the shores of New England the convictions of the age of Cromwell, and these were powerfully reproduced in the pulpit by Jonathan Edwards and the other leaders of New England theology, such as Joseph Bellamy, Samuel Hopkins, N. W. Taylor, Samuel Harris, and E. A. Park. The piety of the country was deeply affected by revival movements, which emerged from time to time and in no small degree affected the character of preaching. Among the more noted revivalists may be mentioned C. G. Finney and D. L. Moody. But some of the denominations which kept apart from revivalism produced distinguished preachers nevertheless, the Unitarians having in W. E. Channing and Theodore Parker representatives of very opposite types, and the Episcopalians, besides producing many distinguished preachers such as S. H. Tyng, H. C. Potter, F. D. Huntington, and W. S. Rainsford, having in Phillips Brooks a pulpit representative of the first rank, whose Yale *Lectures on Preaching* may be characterized as the finest product of the kind yet given to the world by America, while the big humanity of the man, his spiritual power, and his literary charm will long keep his memory green.

The Congregationalists had many names of great eminence, and reached a supreme preacher in Henry Ward Beecher, who possessed in the highest degree almost every gift of the pulpit orator, and who was the first of the Yale lecturers on preaching. Among the Baptists, while the names are very numerous, the greatest is perhaps that of John A. Broadus, in the south, who not only illustrated the best qualities of the preacher in his practice, but wrote on both the theory and the history of the subject with distinguished success. The Presbyterians have not been behindhand, as the names of the Hodges and Alexanders at Princeton testify, as well as those in the south of M. D. Hoge at Richmond and B. M. Palmer at New

Orleans. In Canada the Anglicans have had Bishop Baldwin and J. de Soyres; the Methodists George Douglas, Potts, and C. L. Stafford; the Baptists E. A. Crawley, Denovan, and R. A. Fyfe; the Congregationalists H. Wilkes and P. S. Henson; and the Presbyterians G. M. Grant, D. H. MacVicar, and Barclay.

6. The Roman Catholic pulpit.—Protestants are apt to overlook the history of preaching since the Reformation among Roman Catholics; but these have had their own tradition and have embodied their practice both in books and in prelections on sacred eloquence in their seminaries. The prominence given to the Mass and other ceremonies tends to eject preaching from its lawful place; on the other hand, the arrangements for the observance of the Christian Year afford special opportunities for preaching on the greatest themes of the Christian system, and men possessed of oratorical gifts are trained to deliver courses of sermons at Lent and other seasons, which often attract very large audiences. There has been one scene of extraordinary development in the art of sacred oratory since the Reformation. This was the court of Louis XIV., during whose long reign a succession of orators was maintained, embracing the names of Bishop Bossuet, Louis Bourdaloue, Esprit Fléchier, Archbishop Fénelon, and J. B. Massillon. These lights of the pulpit were accounted among the principal ornaments in the court of the Grand Monarque; their merits and performances were compared and contrasted by the courtiers in the same way as the dramas of the poets and the books of the men of letters; and the stimulus of the cultivated audience excited the speakers to the utmost exercise of their powers. The sermons were expected to be lengthy and to deal with great themes in a great way; and in some respects the discourses thus produced remain as imperishable models of the art. Some of the greatest of them were on the death of princes, and the vanity of human things was a constant theme, as if the frivolity and the extravagance of the courtiers required this foil to make their enjoyment complete. The memory of this brilliant period has never died out in France, and from time to time there have been more or less successful attempts to revive it, as by J. S. Maury in the French Revolution and J. B. H. D. Lacordaire, F. A. P. Dupanloup, and Père Hyacinthe (= Charles Loyson) in the 19th century. In other parts of the Catholic world there have been striking personalities in the pulpit, such as J. M. Sailer and Martin Boos in Germany, Theobald Mathew, Tom Burke, and T. J. Potter in Ireland, and N. P. S. Wiseman and H. E. Manning in England. In the United States such names are mentioned as Bishop England, Archbishop Spalding, Archbishop Kenrick, and Cardinal Gibbons.

LITERATURE.—There are books of the past on preaching which may be called classical, such as Augustine (†430), *de Doct. Christ.* iv.; Alanus ab Insulis (†1203), *Summa de Arte Prædicatoria*; Bonaventura (†1274), *Ars Concionandi*; Erasmus (†1536), *Ecclesiastes*; Melancthon (†1560), *Rhetoricæ*; Hyperius (†1564), *De Formandis Concionibus Sacris* (republished, Berlin, 1901, by E. C. Achells and E. Sachsse as *Die Homiletik und die Katechetik des Andreas Hyperius*); J. Wilkins (†1672), *Ecclesiastes*, London, 1646; P. Doddridge (†1751), *Lectures on Preaching and the Ministerial Office*, do. 1804; G. Campbell (†1796), *On Pulpit Eloquence*, do. 1807; F. Theremin (†1846), *Die Beredsamkeit eine Tugend*, Berlin, 1814; A. Vinet (†1847), *Homilétique*, Paris, 1858, Eng. tr., Edinburgh and New York, 1858. But the modern books are better, as they not only include whatever was of value in their predecessors but address themselves to the tastes and requirements of the present day. Valuable to the practitioner are C. H. Spurgeon, *Lectures to my Students*, two series, London, 1876-77; H. W. Beecher, *Yale Lectures on Preaching*, 3 vols. in one, New York, 1881; R. W. Dale, *Nine Lectures on Preaching*, London, 1882; A. Phelps, *Theory of Preaching*, do. 1882; H. Bassermann, *Handbuch der geistlichen Beredsamkeit*, Stuttgart, 1886; Phillips Brooks, *Lectures on Preaching*, New York, 1881; W. Boyd Carpenter, *Lectures on Preaching*,

London, 1895; J. A. Broadus, *The Preparation and Delivery of Sermons*²⁰, ed. E. C. Dargan, New York, 1905; A. E. Garvie, *A Guide to Preachers*, London, 1906; P. Kleinert, *Die Homiletik*, Leipzig, 1907; P. T. Forsyth, *Positive Preaching and Modern Mind*, London, 1907. Preaching holds a place of course in works on Practical Theology, such as those of K. I. Nitzsch (*Prakt. Theologie*, 3 vols., Bonn, 1859-68), A. E. Krauss (*Lehrbuch der prakt. Theologie*, 2 vols., Freiburg, 1890-98), E. C. Achelis (*Prakt. Theologie*, Tübingen, 1903), J. J. van Oosterzee (*Practical Theology*, Eng. tr., London, 1878), as well as in series of books on the same subjects, like H. Hering's *Sammlung von Lehrbüchern der prakt. Theologie*, 50 vols., Berlin, 1895-1908, which includes both history and theory, in a series edited by himself. In the same way the subject is included in works on Pastoral Theology, such as those by K. Harms (*Pastoraltheologie*²¹, Kiel, 1878), P. Fairbairn (*Pastoral Theology*, Edinburgh, 1876), W. G. Blaikie (*For the Work of the Ministry*, London, 1896), J. O. Dykes (*The Christian Minister*, Edinburgh, 1908). Choice books, worthy of mention by themselves, are George Herbert, *A Priest to the Temple, or the Country Parson*, London, 1633; W. Loehe, *Der evangelische Geistliche*, 2 vols., Stuttgart, 1852-58; John Watson, *The Cure of Souls*, London, 1899; and H. van Dyke, *The Gospel for an Age of Doubt*, do. 1899. On the history of preaching there are an excellent work by Broadus (*Lectures on the Hist. of Preaching*, New York, 1876) and a small but characteristic one by John Ker (*Lectures on the Hist. of Preaching*, London, 1889); but the best work in the English language is an American one, by E. C. Dargan, *A Hist. of Preaching*, New York and London, 1905-11, vol. iii. of which dealing with the preachers of America, it is to be hoped will not be long delayed. The two volumes already published trace the theme from the beginning to the present day, and they are characterized by learning, insight, and vigour. In German there exist voluminous works on the history of both preaching in general and German preaching in particular, some of the outstanding names being R. Rothe (*Gesch. der Predigt von den Anfängen bis auf Schleiermacher*, Bremen, 1881), A. Nebe (*Zur Gesch. der Predigt, Charakterbilder der bedeutendsten Kanzelredner*, 3 vols., Wiesbaden, 1870), K. H. Sack (*Gesch. der Predigt in der deutschen evang. Kirche*²², Heidelberg, 1876), C. G. F. Schenk (*Gesch. der deutsch-protestantischen Kanzelberedsamkeit*, 1841), C. G. Schmidt (*Gesch. der Predigt in der evang. Kirche Deutschlands*, Gotha, 1872). Of writers on French pulpit eloquence there are many, among whom may be mentioned E. Boucher, *L'Eloquence de la chaire*, Lille, 1894; A. de Coulanges, *La Chaire française au 18me siècle*, do. 1901; A. Vinet, *Hist. de la prédication parmi les réformés de France au xviii^e siècle*, do. 1880; P. Stapfer, *La grande Prédication chrétienne en France*, do. 1898. On the history of preaching in Holland and Denmark there are works by J. Hartog (*Geschiedenis van der Predikants in de Kerk van Nederland*, Utrecht, 1887) and V. L. Nannestad (*Portrætter fra Kirken-Bidrag til en Karakteristik af dansk Prædiken*, Copenhagen, 1899), and on the same in Italy by U. Micocci (*Antologia della sacra eloquenza moderna*, Turin, 1897), and F. Zanotto (*Storia della Predicazione*, Modena, 1899). J. E. Kempe has edited two volumes on the *Classic Preachers of the English Church* (London, 1877-78), and J. C. Ryle published a volume entitled *Christian Leaders of Last Century* (Edinburgh, 1869). O. Jones has written on the great Welsh preachers (*Preachers of Wales*, London, 1836), while to the Scottish pulpit the same compliment has been paid by both W. G. Blaikie (*The Preachers of Scotland*, Edinburgh, 1883) and W. M. Taylor (*The Scottish Pulpit*, London, 1887). Under the title of *Representative Modern Preachers*, New York, 1904, L. O. Brastow published elaborate essays on nine preachers belonging to different countries. Finally may be mentioned collections of sermons, of which by far the greatest is that of J. P. Migne (Paris, 1844-66) in no fewer than 86 volumes. H. C. Fish's well-known *Hist. and Repository of Pulpit Eloquence*, New York, 1856-57, is modestly limited to two volumes and a supplement (*Pulpit Eloquence of the 19th Century*, do. 1857). Recent publications in America are *The World's Great Sermons*, 10 vols., ed. G. Kleiser, Chicago, 1910, and *Modern Sermons by World Scholars*, 10 vols., ed. R. Scott and W. Stiles, New York, 1909.

JAMES STALKER.

PREACHING (Jewish).—The word 'preach' is derived from Latin *prædico* (Gr. *πρόφημι*), and means to foretell or to announce (in public). Generally speaking, the term conveys the idea of making a proclamation on behalf of God. The notion of preaching is based on many passages in the OT, such as Is 29²⁴, Am 5¹⁰, etc. The Biblical prophets are, therefore, to be considered as preachers in the literal sense of the word. In Dt 31¹² the injunction is laid upon the king to read the Law before the assembled people once in seven years. Such public readings are recorded in 2 K 23², Neh 8³⁻⁵, and in the Mishnâh *Sôṭâh*, vii. 8. A kind of model sermon may also be seen in Pr 1²⁰⁻²².

During the second Temple, and some time after, preaching retained its spontaneous character. Whoever felt called upon to preach stepped forward

and spoke. The Mishnâh (*Ta'anith*, ii. 1) states that in times of prolonged drought the community, in deep contrition, gathered in the open and were addressed in stirring words by the oldest member present. John the Baptist preached (*ἐκφύκε*) in the wilderness of Judæa (Mt 3¹), and Jesus preached in the synagogues. Preaching seems at that time to have been a regular feature of the Sabbath service. It grew out of the reading of the lessons from the Tôrâh, and consisted of the interpretation of the passages read and exhortations connected therewith. Since the people could not be trusted to follow the Hebrew text when read out, the latter was accompanied by a translation into the Aramaic vernacular, known as the Targum. The translator (*methurgemân*) was bound to be a person well versed in the original text. As a literal translation of many passages was impossible or impracticable, the translator frequently resorted to paraphrastic rendering, introducing into it elements of the Haggadâh as well as of Halâkhâh. Instances of homiletic translation in the so-called Targum of Onqelos are Gn 49³⁻⁴ 10², Dt 32²⁴, which contain expressions of comfort, hope of speedy delivery and the rebuilding of the Temple, also admonitions to observe the Law and to study the Tôrâh. Broader still are the homiletic additions to the other Targumim, but it seems that these were meant for private rather than public reading.

The Greek-speaking Jews proceeded in a similar way, using the Greek language for their religious lectures. We are in possession of two Greek sermons and the fragments of a third ascribed to Philo.¹ He is himself credited with having acted as preacher, and Freudenthal is probably right in regarding his allegorical writings in the light of public lectures actually delivered.²

The transformation of these rather informal lectures into sermons proper, based on Biblical texts, proceeded gradually. Their promoters were the heads of the Sanhedrin, who were distinguished by the title *darshanîm* ('interpreters'). As interpretation was the main feature of the lecture, the preacher 'opened' (*נחם*) his sermon with a quotation from the weekly portion, or *haphtârâh*, or from any part of the Bible in some way connected with the occasion. These occasions were not only Sabbaths and festivals, but also marriages (Talmud *Brâkhôth*, 600) and funerals (*ib.* and *M'gillâh*, 600). The specimens of introductions of funeral sermons given in these passages are in pure Biblical Hebrew, which is a sign that the preachers were highly trained persons who bestowed great care on their sermons. The ordination of rabbis was also solemnized by homiletic allocutions (*Sanh.* fol. 14vo). A large number of such introductions (*נחמנות*) are to be found at the beginning of the Midrâsh on Lamentations and the *P'siqtâs*, together with the names of the preachers, each paragraph giving either a complete sermon or the nucleus of one.

As a rule the sermon was spoken in the vernacular, Hebrew or Aramaic in Palestine and Babylon, and, correspondingly, Greek, Persian, and Arabic. Of the use of Arabic we have direct evidence in Muslim tradition. There existed a Bêth 'Midrâs' in Medina, where the Jews interpreted the Tôrâh in Arabic.³ The preacher (also styled the *hakham*) often did not address the people direct, but spoke to the *methurgemân* (or *amôrâ*), a paid official who translated his words

along to the congregation. From this it follows that the *methurgemān* himself must have been a man of some learning. He had to add explanations and to answer questions, and the latitude allowed him is probably reflected in many passages of the Targumim and Midrashim.

Whilst the ordinary sermon was delivered in the synagogue, lectures on *Hālākhāh*, which demanded some preliminary knowledge, were left to the school hall (Beth Hammidrāsh). There was not, however, any fixed rule for such an arrangement, especially where the school hall was also used as a house of worship. On certain occasions, especially on Sabbaths preceding festivals, the public had to be instructed on certain duties and prohibitions, and the sermon assumed a mixed form. This custom is still observed in most communities. The natural place of the sermon was immediately after the reading of the lesson from the Pentateuch and the *haphṭārāh* from one of the Prophets. We read in *Massékheṭh Šopherim*, xii. 7: 'On Sabbath the Targumān or Preacher (דרשן) recites the *haphṭārāh* from the Prophets.' A passage in the Midrāsh *Yalqūt* (92a) states that, when a person wakes from his sleep, he goes to the synagogue, reads the *Š'mā* and the *Tephillāh* ('Eighteen Benedictions'), and listens to the Tōrāh and to the elder (preacher). There are many passages in the Midrashim containing similar statements. Occasionally, when the morning service exceeded its limits, the sermon was delivered before the termination of the afternoon service. In some places this custom is observed even in modern times.

The Gaonic period saw some changes. Whilst the preacher was honoured by the title *hākhām*, *darshān*, or *zāgēn* ('elder'), the *methurgemān* became a mere precentor, and the Midrāsh marks the contrast between the two by applying to them the verse Ec 7⁷. The latter embellished the service by his melodious voice, but contributed nothing towards the uplifting of the congregation. The liturgy became fixed. The function of the translator was either abolished or greatly restricted. Relics of the same, however, still exist in congregations of Sephardic rite, where during the service of the Fast of Ab the Aramaic Targum of the *haphṭārāh* is read in an enlarged Spanish version. In Oriental congregations Arabic versions of the Targum are read of the Blessing of Jacob, the Song of Moses, the Decalogue, the *haphṭārāh* of the first and last days of Passover, and similar pieces.

Even the function of the preacher did not escape the vicissitudes of time. During the persecution of the Middle Ages many synagogues were closed, the 'public' service was banned to secret places, and expulsions made an end of many congregations. Another cause which affected the sermon, chiefly in 'German' congregations, was the enlargement of the liturgy, by the insertion of *piyyuṭim*, i.e. unofficial poetic compositions. The large Haggadic elements which they contained in some measure replace the homily, and sermons were delivered in intervals or on special occasions. The names of famous preachers in France and Germany are, therefore, comparatively few. A list of them is given in Zunz's *Gottesdienstliche Vorträge der Juden*² (Frankfort, 1892, p. 435 ff.). Spain, prior to the expulsion, offered a more fertile soil for pulpit eloquence, probably on account of the simplicity of the rite. Only on one Sabbath in the year and the minority of festival days are some *piyyuṭim* recited. This country, therefore, produced a large number of renowned preachers. Of those not mentioned by Zunz¹ must be named Jonah of Gerona³ († Toledo, 1340), who was one of those who joined the movement against Maimo-

¹ P. 443 ff.

² ספר הדרשן (1430 ff.).

nides' philosophy, Nissim b. Reuben Gerondi (1350),¹ and Asher b. Jehiel († 1340). A great preacher of the 15th cent. was Joseph b. Shem Tōb. From a note prefacing a collection of his sermons² we gain some interesting information. It was in June 1452, when Prince Enrico arrived at Andalusia, that the Jews of Segovia dispatched a complaint to him concerning a persecution which had taken place on Christmas day. The prince sent Joseph with a written order to the authorities of the town commanding peace, and in another letter he assured the Jews of his protection. On the following Sabbath Joseph preached in the synagogue *after the reading of the lesson*. Subsequently he preached three more sermons in the same place. In Italy there were Abraham Farissol and Obadiah Sforno, both in the 15th cent., and David Zaccuth, who left a collection of 300 sermons.³ In the 16th cent. we find Joseph Taytazak of Salonica.

The following two centuries were not favourable to any further development of the spiritual life of the Jews, and this circumstance also affected public preaching. There exists a rather extensive literature of sermons produced in Italy, the German lands, and Poland, but, as they were written in Hebrew, it is doubtful whether they were actually delivered. In the Sephardic communities of Holland and England, where the Jews lived in comparative safety, sermons were delivered in Spanish and Portuguese. In other countries, with the exception of perhaps Italy, the vernacular was lost to them. In German-speaking countries the Jews could converse only in the Jewish-German dialect, whilst the use of pure German was almost regarded as rank apostasy. This condition lasted till Mendelssohn inaugurated a reform. The beginning of the 19th cent. brought the revival of the sermon. Its effect made itself felt all over Europe, and the old-fashioned *derāshāh* was gradually replaced by its modernized substitute.⁴ It has not died out entirely, and travelling and resident *maggīdīm* are listened to by large congregations in E. and W. Europe.

Even the modern form of sermons has undergone some modification in the direction of curtailment. The rather ponderous lecture, with its three (or more) points, which was fashionable fifty years ago is now a thing of the past, and is generally replaced by an address of about half-an-hour. A competent preacher can find sufficient scope for edification even in this short space of time, as long as he remembers that the sermon owes its origin to the exposition of the Law.

LITERATURE.—See works mentioned throughout, and L. Philippson, *Die Rhetorik und jüdische Homiletik*, Leipzig, 1890; S. Back, *Die jüdischen Prediger, Sittenlehrer und Apologeten in dem Zeitraum vom 18. bis Ende des 18. Jahrhunderts*, Trèves, 1895, 'Die Darschanim vom 15. bis Ende des 18. Jahrhunderts,' in Winter and Wünsche, *Gesch. der jüd. Litt.*, Leipzig, 1892-95, ii. 609-686.

HARTWIG HIRSCHFELD.

PREACHING (Muslim). — 1. The pulpit.—The pulpit is designated in Arabic by the Ethiopic word *minbar*, literally 'seat,' or 'throne,' ecclesiastically the bishop's throne, in Greek *καθέδρα*, whence the French *chaire*. In early times the Arabic synonym *maylīs* seems to have been occasionally employed in lieu of *minbar* (Bukhārī, *Ṣaḥīḥ*, Cairo, 1312, i. 107). Such a throne was introduced into the Prophet's mosque at Medina before his death; it was of tamarisk wood, and

³ See Benjacob, *Ozar Ha-Sep̄harim*, p. 122, s. vv. דרשן and דרשה.

⁴ For a selected literature of sermons see S. Maybaum, *Jüdische Homiletik*, Berlin, 1894; see also M. Kayserling, *Bibliothek jüdischer Kanzeldredner*, 2 vols., do. 1870-72.

was mounted by two steps. The traditions concerning the occasion and purpose of its introduction are contradictory, but the name indicates that it was conscious imitation of what was seen in Abyssinian churches; according to a tradition, the Prophet said that his purpose in introducing it was to enable the congregation to see how he performed the *ṣalāt* ceremonies. Of these, however, the prostration could not be performed on the *minbar*, whence it was eventually used only for the sermon, which was probably delivered by him standing, though there is some doubt about the matter. In 50 A.H. the Umayyad Mu'āwiyah contemplated removing this pulpit to the mosque of his capital, Damascus, but was prevented (it is said) by an eclipse of the sun, which was supposed to mark divine disapproval of this scheme; Mu'āwiyah accordingly disavowed this project, and instead raised the height of the pulpit by six additional steps. The eclipse is apocryphal. Several of the later Umayyads had the same idea, but they were all dissuaded (Ṭabarī, *Chronicle*, Leyden, 1881, ii. 92). Peculiar sanctity naturally attached to this pulpit, which, since perjury by it was thought to bring terrible punishment, was used for the settlement of disputes. It is said to have lasted till 654, when the mosque was burned (Aun al-Ma'būd, on the *Sunan* of Abū Dāwūd, Dehli, 1323, i. 421).

Pulpits were after a time erected in the mosques of the cities occupied or founded by the Muslim conquerors. Thus we hear of Mu'āwiyah, when governor of Syria, exhibiting the relics of the murdered Khalifah 'Uthmān on the *minbar* of the mosque in Damascus. The material is properly wood; hence 'the beams' is often used as a synonym for *minbar*. In the more elaborate mosques it is richly ornamented; specimens of such *manabir* are to be found in the South Kensington Museum.

2. The preacher.—The orthodox law-books prescribe that the preacher shall be properly clothed, without specifying the mode; the Shi'ite manual (A. Query, *Droit musulman*, Paris, 1871-72, i. 86) ordains that he shall wear a turban and a striped Yemen cloak; the Umayyad Khalifah Walid II. used to robe himself in white when preaching (*Aghāni*, vi. 141); but in 'Abbāsīd times it would seem that the preacher wore a black gown (Ibn Abi Usaib'ah, i. 274; A. von Kremer, *Culturgesch. des Orients unter den Chalifen*, Vienna, 1875-77, i. 137). In a description by Ibn Jubair (ed. M. J. de Goeje, London, 1907, pp. 222, 15) the preacher uncovers his head; the covering of the head was doubtless more usual, though the illustration cited by von Kremer (*loc. cit.*) perhaps refers to a special occasion. He should lean on a staff, bow, or sword, held in his left hand, 'indicating that this religion is maintained by the use of weapons' (Sherbini, *Comm. on the Minhaj*, Cairo, 1308, i. 286),¹ while his right hand rests on the pulpit-edge; and he should face the congregation, turning neither to the right nor to the left (Shāfi'i, *Umm*, Cairo, 1321, i. 177). The sermon (*khutbah*) is of two parts, between which the preacher should sit down;² if, however, bodily infirmity render it necessary, he may sit throughout, or even maintain a recumbent posture. Some authors recommend an elaborate ceremonial (so Rashid Pasha, *Dini Mubini Islam*, Constantinople, 1328, ii. 145-147). The preacher (*khāṭib*) was in early times the sovereign, i.e. the Prophet and his successors; various authors profess to reproduce discourses pronounced by the Prophet himself

(Shāfi'i, i. 179; Jāhiz, *Bayan*, Cairo, 1232, i. 165; Ya'qubi, ed. M. T. Houtsma, Leyden, 1883, ii. 98; Bukhārī, i. 108), but these are very clearly spurious; Jāhiz produces others by early Khalifahs, and in the *Nahj al-balāghah* there are several supposed to have been delivered by the Khalifah 'Alī. Outside the metropolis the preacher was the Khalifah's representative; the historian Abū'l-Mahāsin (ed. T. W. Juynboll, Leyden, 1852, i. 81) reproduces a sermon of 'Amr ibn al-'As, governor of Egypt for 'Umar I. During Umayyad times the Khalifah continued to deliver it; 'Abd al-Malik declared that his hair had been whitened by the fear of making a mistake in his Arabic when preaching (*Fakhri*, ed. W. Ahlwardt, Gotha, 1860, p. 148). In 'Abbāsīd times it would seem that the duty began from an early period to be delegated; the preaching of the Khalifah Rāḍī in 324 A.H. is mentioned as exceptional (Miskawaihi, ed. H. F. Amedroz, in the press, i. 334). As late as 987 A.H. the emperor Akbar tried to deliver a sermon at Faṭhpur; but the experiment was a failure. An official called the *khāṭib* was ordinarily appointed by the sovereign to discharge this function, and it was normally held that the sermon should be delivered only in cities, and in each city only at the official mosque. Where (as was the case with Baghdād) the city was bisected by a river, it might count as two cities. In the Shi'ite manual it is suggested that the mosques in which it is pronounced should be at a distance from each other of not less than three miles.

3. The sermon.—The occasions on which the law prescribes a sermon are before the mid-day prayer on Fridays, and after prayer on the feast-days, and in the services at times of eclipse and drought. Sermons are also delivered at weddings and on many public occasions. The language, according to the orthodox law-books, should be Arabic; the Zaidis, however, permit the use of Persian or any other language understood by the congregation (*Muntazā' al-Mukhtar*, Cairo, 1327, i. 221), and some other authorities permit this, though use is rarely made of the leave on the prescribed occasions.

Orthodox jurists enumerate the elements of the sermon as five: the words 'Praise be to Allah'; a blessing on the Prophet; an admonition to piety, of which the minimum amount is the phrase 'Obey Allah'; a blessing on the believers; and a lesson from the Qur'ān, not less than a complete verse. The fourth belongs to the first part of the address, and the fifth to the second. This list fails to include the prayer for the reigning sovereign, which is prescribed in the Zaidi law, the legitimate sovereign to be named or not according to the needs of the time. Although an innovation, the practice is so general throughout Islām that orthodox jurists advise its observation, for fear of giving offence ('Alī al-Adawī, *Comm. on Sidi Khali*, Cairo, 1307, i. 432); but it is not quite clear when it was introduced. Shāfi'i (c. 200 A.H.) disapproves of prayer either for or against any individual being made part of the *khutbah* (i. 180); yet by 324 the prayer for the sovereign had become so regular a part of the Friday sermon that the Khalifah, having undertaken to deliver it, required expert advice as to his treatment of this passage (Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913, ii. 349); and omission of it on the part of a preacher was at this time regarded as a sign of rebellion against the sovereign (Miskawaihi, ii. 90). Some writers assert that the practice was introduced by the Prophet's cousin, Ibn 'Abbas, when governor of Baṣrah (Ahmad Rasim, *Manaqib Islam*, Constantinople, 1326, ii. 437); the historian Ibn al-Athir states that the first person for whom this prayer was offered in

¹ The orator's staff is an institution far earlier than Islām.

² Possibly this practice was suggested by the Christian sermon following the reading of Scripture (F. E. Brightman, *Liturgies Eastern and Western*, Oxford, 1896, Index).

Baghdād was the Buwaihīd Sulṭān 'Aḍud al-Daulah in 367 A.H.; his meaning probably is the first person other than the Khalīfah.

If the introduction of a prayer for the sovereign was late, the practice of cursing public enemies from the pulpit was early; the second Khalīfah is said to have so cursed a man who was guilty of what was thought an immoral practice (*Mabsūt*, Cairo, 1324, xxiv. 20), and in the first civil war 'Alī and Mu'āwiyah introduced imprecations on each other into their sermons. The cursing of 'Alī in the Friday discourse was continued till the end of the 1st Islāmic cent., when the pious 'Umar II. put an end to it; as late as 321 A.H. there was a question of re-introducing the cursing of Mu'āwiyah (Miskawihī, i. 260).

On the question whether the audience should be greeted at the commencement of the discourse there is a difference of opinion between the schools.

The Prophet is said to have recommended brevity to preachers, and the discourses attributed to him are of 'ten words,' i.e. a few sentences. The early discourses recorded by Jāhīz (ii. 25 ff.) are somewhat longer than the minimum permitted, but are still very short. Some of them are partly in rhymed prose, and this style at a later time became normal. The cultivation of the sermon as a branch of literature may have been stimulated by the work of Jāhīz († 255 A.H.), but the classical collection of sermons belongs to the 4th cent., and is the work of 'Abd al-Rahīm b. Muḥammad, known as Ibn Nubāṭah († 374). The best edition of these is that published at Beirut, 1311 A.H. They are throughout in rhymed prose, and occupy on the average five minutes in delivery. The subjects with which they deal are such as are natural in homilies; owing to the preacher's patrons being princes who fought against the Byzantines, many of them are exhortations to the Sacred War. Probably from the time of their publication it became the practice of those official preachers who had no talent for their vocation to learn them by heart, and they are still largely used in the mosques of Egypt and perhaps elsewhere. In Turkey a collection by various authors is now ordinarily used for this purpose (Rashid Pasha, ii. 149, where one of these sermons is given in full with Turkish translation). The famous poet and sceptic Abū'l-'Alā al-Ma'arri composed several collections of homilies (see *Centenario della nascita di M. Amari*, Palermo, 1910, i. 230), but they had little popularity. The polygraph Shāmīm al-Hillī (601) informed Yāqūt that his own collection of sermons had superseded those of Ibn Nubāṭah in popular estimation (*Dict. of Learned Men*, v. 130), but this boast was not justified.

4. Unofficial preaching.—Besides the formality of the Friday service many persons felt a call to encourage their fellows to virtue and piety, to propagate the Islāmic religion by exhortation, or to spread particular opinions. The name usually applied to discourses of this kind is *maḥlis*, 'sitting,' *'aqada maḥlisa'l-waḥs*, 'he held assemblies for the purpose of preaching,' being the phrase employed to describe this form of activity. Jāhīz (iii. 86) speaks of Thursday as a natural day for such assemblies. Tabarī (ii. 507) gives a specimen of a sermon delivered in 65 A.H. by the most eloquent preacher of the time in the interest of the Prophet's house; it is partly in rhymed prose, but the artifice is irregular and the language on the whole simple. Most of the famous Sūfīs were powerful preachers, and their effects on the audiences are described in the hagiologies; at a meeting held by Muḥasibī († 243 A.H.) the company sat in silence after evening prayer until midnight; then some one propounded a question, whereon

the preacher began to discourse, 'the audience listening in rapt attention, some weeping, some groaning and some shrieking' (Subkī, *Ṭabaqāt al-Shāfi'iyah*, Cairo, 1324, ii. 39). The crowds which gathered to hear these orators roused the curiosity of Jews and Christians, some of whom were moved by the sermons to embrace Islām (*Asrār al-Tauḥīd*, ed. V. A. Zhukovski, Petrograd, 1899, i. 169). With the growing fashion of erecting religious buildings of various sorts which characterizes the 5th cent. of Islām the chronicles pay more attention to the presence of influential preachers in Baghdād; the ground occupied by the male audience of the preacher Ardashīr b. Maṣṣūr, who came to Baghdād in 486 A.H., was 175 cubits by 120, and the female audience was yet larger (Ibn al-Athīr, *Chronicle*, ad. ann.). The pulpit of the Nizāmiyyah College in this city was occupied by famous preachers in this and the following century; the sermons of 'Abd al-Rahīm al-Qushairī († 524) delivered here led to riots between the Ash'arites, whose cause he supported, and the Ḥanbalites, in consequence of which the preacher was exiled to Nisabur (Ibn Khallikān, tr. de Slane, Paris, 1842-71, ii. 154). The arrival in Baghdād of powerful preachers belonging to these respective sects is recorded by Ibn al-Athīr for the year 516; the sermons of the Ash'arite were attended by the Khalīfah himself, who presented him with the headship of one of the royal monasteries. For the middle of the 6th cent. we possess a volume of sermons by the famous Sūfī, 'Abd al-Qādir al-Jilānī († 561), called *al-Faṭḥ al-Rabbānī* (Cairo, 1302), some of whose discourses are also incorporated in the biography of him called *Bahjat al-Asrār* (Cairo, 1304); they were delivered on various days of the week, chiefly Sundays, Tuesdays, and Fridays (before the mid-day service) in different buildings of Baghdād, and would generally occupy about five minutes. They are in ordinary prose, but undoubtedly eloquent and spiritual; he claimed to have made 500 converts to Islām, and to have reformed more than 100,000 criminals (D. S. Margoliouth, 'Contributions to the Biography of 'Abd al-Qādir,' *JRAS*, 1907, p. 304). His personal character appears, however, to have left something to be desired, and it is to be observed that the authors of the *Maḡāmāḥs* (a word which properly means 'addresses' or 'sermons') place affecting homilies in the mouths of notorious evil-livers; and the success of the historical preachers at times led to their amassing great fortunes and maintaining *ḥarāms* of a colossal size. The traveller Ibn Jubair, who visited Baghdād in 580 A.H., notices the preaching of Baghdād as its one favourable characteristic:

'Scarcely a Friday passes without a discourse by a preacher, and those among the inhabitants who are specially favoured pass their whole time in meetings where such are delivered (ed. de Goeje, p. 219). He describes a Friday service at the Nizāmiyyah College, where after the mid-day prayer the shāikh Qazwīnī ascended the pulpit; chairs were placed in front of him for the Qur'ān-readers, who chanted elaborately, after which the shāikh delivered a powerful discourse; questions were then addressed him on strips of paper and he replied forthwith to every one. The historian Jamāl al-dīn Ibn al-Jawzī held services at this time every Saturday, and his eloquence also greatly impressed the traveller. The results were similar to the phenomena at times seen at revivalist meetings; many in the congregation sobbed and fainted, and crowds of penitents thronged to touch the preacher. 'It would have been worth while to cross the sea to hear one of these sermons' (p. 222). On Thursdays this preacher's gatherings were held in a private court of the palace, from which the Khalīfah and his family could hear them. The text was a verse of the Qur'ān which ended in *nās*, and the preacher maintained this rhyme throughout his discourse. Into the sermon he introduced compliments to the Khalīfah and his mother and prayers for them; he further recited many verses, some encomia on the sovereign, others of the Sūfī erotic style, which affected the audience powerfully.

This anecdote is of interest as indicating that the difficult artifice which characterized the

sermon was at the time unusual; we find it practised in a volume of sermons by a preacher of the 8th cent., Shu'aib al-Huraifish († 801; *Al-Raud al-fa'iq*, Cairo, 1280), which closely resemble the style which affected Ibn Jubair so vehemently. These are interspersed with erotic verses or hymns, which appear to be the preacher's own compositions, and are much more lengthy than the sermons of 'Abd al-Qadir; the time which their delivery would occupy is probably from twenty minutes to half-an-hour, or in some cases considerably more. They are clearly intended to work on the feelings of the audience, and to produce something resembling ecstasy. The narratives introduced are highly imaginative, though they are often attached to historical names.

The style which has prevailed since seems to resemble that of Ibn Nubāṭah more nearly, when his discourses are not actually reproduced. A collection published in Damascus in 1909 by Muḥammad al-Qāsimī contains sermons extracted from volumes of the years 653, 772, 873, and 1079 A.H., intended to be delivered at the Friday service and on the feast-days; the time which they occupy rarely exceeds five minutes; the continuous rhyme is carried on through the opening sentences, but does not usually extend beyond the first third of the sermon. The *Majālis* of the official preacher of Baghdad, Alūsī-Zāḍah (*Ghāliyat al-Mawā'iz*, Cairo, 1911), resemble in length and to some extent in artifice those of Huraifish; the verses introduced are not, it would seem, original. It is said that the Islāmic preachers have in places where there are Christian missions modified their theory of the sermon in order to provide something as attractive as the Christian discourses; the reproduction of Ibn Nubāṭah has had to give way to a style more closely related to the spiritual needs of the time.

LITERATURE.—This has been cited throughout the article.

D. S. MARGOLIOUTH.

PRECEPTS (Buddhist).—The early Buddhists had very naturally quite a number of injunctions, precepts, short sentences on ethics or conduct, popular texts, or short verses current in the community. European writers call these 'precepts.' The Pāli word thus rendered is usually *sikkhā-pada*. *Sikkhā* is 'training'; *pada* is ambiguous, meaning either 'foot-step' or 'quarter verse,' and both meanings were called up by the word. Hence *sikkhā-pada* is either 'first steps in self-training' or 'textlets of training.' The basic idea is an influence from within, not an injunction or command from without.

An anecdote will show how such rules were looked upon by the new community. There came to the Buddha a *dhikkhu* of the sons of the Vajjians, and he said: 'Lord, it is more than a hundred and fifty precepts that are intoned to us every fortnight. I cannot, Lord, train myself in all these!' 'Could you train yourself, brother, in three—the higher morality, the higher intelligence, the higher wisdom?' was the reply. He said that he could. And he did. And thereby he put away lust, ill-will, and stupidity (i.e. reached *nirvāṇa*), and all the lesser matters were gained at once.¹ So also it is related of the Buddha that on his death-bed he told the order that they could revoke, if they chose to do so, all the minor and subsidiary precepts.²

In both of these cases the 'precepts' are for full members of the order. Another group consists of ten precepts for novices. It is often referred to in European books, but is found as a group only in the latest portions of the *Nikāyas*³ and in the *Vinaya* (i. 83). In this group the novice takes upon himself in succession ten precepts. These are: (1) not to destroy any living thing, (2) not to steal, (3) to be celibate, (4) not to lie, (5) to abstain from strong drink, (6) not to eat save at the right time, (7) not to frequent variety shows with

dances, songs, and music,¹ (8) not to wear garlands or to use perfumes, (9) not to use luxurious beds, (10) not to receive gold or silver. Each of the ten occurs in different groups and in different order in earlier parts of the Canon—eight of them, e.g., in a different order, in the *Sutta Nipata*, one of the earliest documents.² But the above are the number and order that have survived in the use of all those Buddhist communities which adhere to the older tradition. It should be added that no one of them is exclusively Buddhist. What is Buddhist is the selecting—the omission, e.g., of any precept as to obedience, or as to belief in any particular doctrine. But we need not here make any comparison between this list of 'first steps for the Buddhist novice' and similar lists for the novice in European or non-Buddhist Indian orders.

Of the many moral precepts for the use of ordinary Buddhists, not members of the order, it will be sufficient to refer to the well-known *Dhamma-pada*, an anthology of such precepts in verse gathered from the extant early books and other sources now lost. They are there arranged in groups of about 20 verses each on 26 selected subjects. Where the verses deal with ideas that are common ground to ethical teachers in Europe and India, the versions are easily intelligible and often appeal strongly to the Western sense of religious beauty. Where any verse is based on the technical terms of the Buddhist system of self-culture and self-control, none of the numerous translations is able to convey the real sense of the Pāli. The best translation is by Silāchāra.

There is a pretty custom that was current from very early times among the Buddhists in India, and is still current in Ceylon, Burma, and Siam. A layman (or laywoman), moved by some religious influence or emotion, will formally 'take upon himself,' for some definite period, the observance of the first five of the above ten precepts for novices. This is done by kneeling with clasped hands before a member of the order, and solemnly repeating after him, usually in Pāli, the words of each of the five precepts. This is called in Ceylon 'taking *pan-sil*,' i.e. taking the five moral precepts. It is not known when or where the custom originated.

PRECEPTS (Christian).—See COUNSELS AND PRECEPTS.

PRECIOUS STONES.—The first difficulty in considering the opinions of earlier times regarding gems is that of realizing the standpoint before modern chemistry had revealed the nature of matter. Only 140 years ago the editor of Theophrastus, Sir John Hill, was publishing entirely futile classifications, lumping together as varieties of sapphire such different materials as ruby, topaz, emerald, hyacinth, garnet, carbuncle, amethyst, chrysolite, and prase, and assigning the mixture which caused the colours of each, because 'we know the ingredients which give their colour by experiments in colouring glass' (*Theophrastus's History of Stones*, London, 1774, p. 286). Long classifying of spars and earths follows, which has no more reality than the epicycles of planets. All this was an advance on Pliny and earlier observers, yet it has been extinguished by modern chemistry,

¹ This is sometimes rendered 'concerts or plays'—wrongly, for at that time in India they did not exist. See Rhys Davids, *Dialogues of the Buddha*, i. 7, note 4.

² See Rhys Davids, *Buddhism*²², p. 139.

³ *Anguttara*, i. 230; cf. *Saṃyutta*, iv. 251.

² Rhys Davids, *Dialogues of the Buddha*, ii. 171.

³ E.g., *Khuddaka Pāṭha*, i.

so that we can hardly realize the ancient confusion of thought. To understand the ancients we must set aside all chemical ideas, and regard stones only in their colour and hardness. Such a position must confound together materials entirely different, and divide identical substances which differ in colour. Thus the Egyptians had but one word, *mafkat*, for turquoise and malachite, a phosphate of alumina and carbonate of copper.

The questions about the ancient names and their modern equivalents are difficult to settle owing to the confusion of substances which look alike. The actual ancient usage of materials must be the guide, as it is impossible to connect with ancient names any gems that were then unknown. For the equivalents of the Biblical names see art. 'Stones, Precious,' in *HDB*.

1. *Egypt*.—In Egypt several stones are named anciently with specimens, and some others are named as the material for amulets which are regularly of one material. Thus we can be certain of *sef*, white quartz; *sef taken*, amethyst; *khenem*, red jasper, or sard; *hersed*, carnelian; *khesdeb*, lazuli; *gesonkh*, a variety of lazuli; *nemehen*, jade; *go* or *qada*, hæmatite; *neshen* or *mafkat neshen*, green felspar and beryl; *mafkat* of Syria, malachite; *mafkat* of Amen, turquoise; the last two may be perhaps reversed. The use of some stones was almost constant for certain amulets—carnelian or sard for the leg, hand, name-badge, and serpent-head; jasper, or imitation in red glass, for the girdle of Isis and the sacrificial cow; diorite for clothing; green felspar or beryl for the papyrus sceptre and the writing tablet; lazuli for figures of goddesses and the cartouche; hæmatite for the head-rest, square and level; obsidian for the double feather and *sma* sign of union. The reasons for such usage can be guessed in some cases: the green stones symbolized verdure and growth; the red jasper is called 'the blood of Isis'; the weighty hæmatite is for the repose of sleep or of levelled building; the flesh-coloured carnelian for the hand and leg. Some of these amulets are ordered to be made of such materials in the directions in the *Book of the Dead*.

2. *Italy*.—Italy is the land of which we know most regarding amulets, anciently from Pliny, recently from Bellucci. The ancient ideas attaching to stones are: diamond for poison or delirium; hæmatite for success in petitions or to reveal treachery; siderites (black hæmatite or meteorite) to cause discord in law-suits; brown hydrous oxide of iron (limonite) for pregnancy; quartz crystal for parturition; amethyst and emerald for intoxication, against spells, hail, and locusts, and for access to kings; agate against scorpions; jasper for public speaking; blood jasper for invisibility; black jasper for taking cities and fleets; yellow quartz against jaundice; amianthus against spells; serpentine against headache and serpent-bites; white steatite for increase of milk; malachite for preserving infants; amber for throat affections, and against fevers; ammonite for prophetic dreams.

In modern Italy pyrites is used to preserve the eyes; red hæmatite stops bleeding; black hæmatite is for the evil eye; limonite for pregnancy; sapphire is for headache, and promotes contentment; quartz crystal for evil eye; white chalcedony for milk; red chalcedony for bleeding; agate eyestone for evil eye; blood jasper to stop bleeding; black jasper against lightning; staurolite against witchery; nephrite for kidney disease; garnet for widows, and comfort in misfortune; serpentine against reptiles; malachite for the evil eye; dendrite against venom; selenite for increase of milk; amber against witchery; white coral for increase of milk; red coral for menstruation and

evil eye; madrepora against witchery and worms. Obviously the use of a large part of these is due to 'sympathetic magic,' or, as it may better be called, 'the doctrine of similars.' A considerable revival of fancy beliefs about gems has occurred in recent times among the ignorant and superstitious of wealthy classes in Europe and America. There is little or nothing collected as to traditional beliefs about stones in other lands outside of Italy.

3. *Motives for use of gems*.—An examination of subjects engraved upon gems throws some light on the purposes for which they were worn. For this inquiry the number of occurrences of a subject in Furtwangler's great catalogue may be taken, supplemented by a few published in Petrie's *Amulets*.

Strength and love seem to have been the great motives, Herakles and Eros each occurring 173 times. Far below these come wisdom, with 75 of Athens and Minerva, Seilenos (86) for good living; Hermes and Mercury (68) for trade; Apollo (61) for music; and Damon (53) for propitiation of evil; Dionysos (53) for mysteries; Nike and Victory (53) come next; and, strangely, Aphrodite comes as low as 52. Of the lesser classes are Gorgoneia and Medusa (45), Psyche (31), Artemis (29), Menad and Bacchantes (28), Bes (18), Siren (17), Zeus (16), Perseus (15), Isis (14), Nereid (14), Ares and Mars (13), Bonus Eventus (11), Serapis (11), Pan (10), Nemesis (9), Cerberus (8), Eos (6), Harpocrates (6), Helios (6), Leda (5), Fortuna (5), Tyche (5), Asklepios (4), Dioscuri (4), Triton (4), Ganymede (4), Hephaistos (3), Hera (3), Hekate (3), Agathodaimon (3), lion-headed serpent (3), Ceres (2), Abundantia (2), Europa (2), Thanatos (2), and one each Adonis, Orpheus, Osiris, Anubis, and Set.

It is surprising how popular some deities were, nine surpassing Aphrodite; while Zeus, Asklepios, Fortuna, and Ceres were strangely neglected.

PREDESTINATION.—I. IDEA AND PARTS.

—1. *Idea*.—The idea of predestination bulks largely in the history of religious thought. Recently it has grown in interest. It has come down to us in two connotations, the one more strictly theological, the other more purely philosophical; and in both references severer definition demonstrates the reasonableness of its essential truth.

(a) As a technical term in theology the word stands for that voluntary act of the divine will whereby God predetermines or foreordains whatsoever comes to pass, and in particular the destinies of the good and evil.¹ The inclusion of the reprobation of the wicked has lent the term an ill savour. Shorn of this part, the dogma remains, the divergences of the schools in other points appearing less firm under the pressing practical and social needs of the modern Church. The predominant tendency is to identify this, the redemptive, aspect of predestination with election (*q.v.*), and to use the three terms—'predestination,' 'foreordination,' 'election'—as synonyms.

(b) In its philosophical character the word stands for a conception much more comprehensive and profound, viz. that original all-inclusive definite purpose of God and act of His all-holy will to manifest His glory in self-revelation, which self-revelation takes effect by stages in time, appearing not only in redemption, but in creation and providence as well. Here the idea is not given immediately in experience, but emerges in reflexion upon it and has in consequence to vindicate its rational validity. It has won favour under the ægis of the modern discipline of the philosophy of religion, its subject-matter furnishing one of the indispensable problems of that important science, where its claims are strengthened by several currents of the deeper thought of the age,

¹ The *Westminster Confession* used 'predestination' only 'to eternal life,' 'foreordination' 'to eternal death.'

the philosophy of nature and of history, comparative religion, the higher mysticism, man's tragic experience of life. The history of theism, moreover, shows predestinarianism to be an invariable concomitant of that form of religious thought, and to be as fundamental to theism as its other features. As theistic reconstruction proceeds, the idea of predestination correspondingly gains.

Note on the term.—The term 'predestination' has long been in disrepute, and for three reasons: etymologically it is unscriptural, theologically it is depraved in meaning, and philosophically it is not sufficiently distinctive. The word is not in the Bible. The verb and noun come from the Patristic period; the verb through the Vulgate won its way hesitatingly into the AV; in the RV its place is taken by 'foreordain.' The Latin *predestinare* translates the Greek *προορίζω*—a better translation is *prejūvire*. Then, in meaning, two declensions have occurred: *προορίζω* does not include 'reprobation,' while *predestinare* has come to include it; on the other hand, popularly the term has lost the larger reference to the totality of divine self-revelation other than that in redemption. Further, the speculative understanding finds the theological controversial taint of the term repugnant, and prefers to argue for the idea under other names.

Is this disparagement wise? Three considerations may help to a negative answer. (1) Both Hebrew Wisdom and Christian theology worked out a large conception of God's relation to the world and to man as part of the world, which it was found difficult to embody in a single word. Accordingly, in both developments there occur a number of terms each of which conveys some special nuance of the general idea, for that is how the religious consciousness works. The philosophic consciousness, on the other hand, desiderates a term for the idea in its largest breadth; that is its nature. In Hebrew probably the nearest equivalent is *נִצָּחַן*. In Greek in the NT there is none; hence Patristic thought coined 'predestination' precisely as in the case of another doctrine, that of the Person of Christ, is coined *θεοοικονομία*.

(2) If 'foreordination' be interpreted in a purely religious sense as the equivalent of election, referring to man's salvation from sin by grace, then it is not adequate to the whole idea intended in 'predestination.' God gathered His own in His electing will; but He has other activities in creation and providence, and, if these have a relation to redemption, they also have independent relations to God and each other, and, as such, have their ground in the divine will—a fact unrecognized in 'foreordination,' which, even if it be of wider compass than 'election,' embracing the reference of the divine predetermination of the works of creation and providence to that of redemption as its preparatory stages, is still inadequate to the whole idea of 'predestination.'

(3) The philosophical demand for stricter definition is not due simply to prejudice; there is a real need in the interests of truth to separate clearly the facts of religious experience from inferences deducible from them. The speculative impulse and the religious instinct move in different spheres and speak best each in its own tongue. The above contention is corroborated by the history of predestinarianism. The three greatest protagonists are St. Augustine, Calvin, and Jonathan Edwards (q.v.). The special worth of these three is to have combined in an unusual degree the religious and intellectual powers; they all feel the need of this term 'predestination.' It is noteworthy in this connexion that, in those forms of pure philosophy in which the spiritual aspect of existence has justice done to it, idealism becomes predestinarianism—as, e.g., in the German succession from Kant, through Schelling and Krause, to Lotze; and that those forms of theology in which philosophy finds a constituent place exhibit the same tendency—as, e.g., in the theosophy of F. X. von Baader¹ or the ethics of R. Rothe.²

2. Parts.—The predestination idea comprises two parts: (a) prescience, and (b) prevenience.

(a) *Prescience.*—'Foreknowledge' (*πρόγνωσις*) is a necessity of God's omniscience. It is involved in His knowledge of Himself and of His own will, and the immutability of His knowledge; for He sees all things future in the mirror of His will, and has never at any time been ignorant of what He was to do and what would be the consequences. Foreknowledge of the actions of free agents has sometimes been excluded from the idea of God's omniscience on the ground of its alleged inconsistency with human freedom,³ and indeed the difficulty of explaining how actions are free yet ordained has never been solved. But that God has perfect foreknowledge of all events and that man has free agency, implied in moral responsibility,

¹ *Spekulative Dogmatik*, pt. i., Stuttgart, 1828, pts. ii.-v., Münster, 1830-38.

² *Theologische Ethik*, 5 vols., Wittenberg, 1807-71. For this and the above English readers may consult O. Pfeiderer, *The Philosophy of Religion*, London, 1886-88, vols. i.-iv.

³ E.g., by the Socinians, Rothe, Martensen, etc.

bility, are truths supported by sufficient and appropriate evidence, although we may not be able to compose their harmony until our knowledge is such as God has. His foresight need not lessen man's freedom, if freedom be understood not as simple self-will, but as the growing faculty of co-operating with the divine purpose. That purpose is working out a higher thing than can be wrought between precise forecast and exact fulfilment; it is rather the evolution of men's free intellectual and emotional life, adapting them to their environment and improving their conditions. We can conceive of God influencing His whole creation in this way, persuading every grade of living things to assimilate more and more of His life-force, and go forward in the full tide of progress, while they are still free to close their pores, so to say, to His wisdom and life that encircle them as an atmosphere.

Such a purpose etches itself out against a background of much that seems purposeless, where much happens that is not His will but the will of an autonomous creature not yet won by His persuasive agency. As the divine knowledge is intuitive, not inferential, free, not necessitated, we are bound to assign to it the prescience of all things and all relations of things, of all actions and all conditions of actions.¹

(b) *Prevenience.*—Again, the promotion² of God is a necessity of His omnipotence. Predestination is no mere idea in God—not simply His resolve to enter on modes of self-revealing activity; it is also action creative of creaturely destinies and productive of His eternal purpose; it is the actual acting upon His resolve, action whereby He is the immanent spirit in all nature, history, life. We note, further, that God's prescience and prevenience exclude the deistic and naturalistic formulations of His relation to the world, since both deny His active presence in it, as certainly as they exclude the pantheistic formulation which regards the world as illusion, emanation, or self-evolution of God. Thus it will be seen that in the predestination idea lies the thought that all the works of God form one whole and move to one goal, that all find their ground in His attributes, their cause in His will, that all are the issue of one presupposition in the divine nature. How do we affirm this? Religious experience postulates it as the basis of its certainty (predestination in redemption); philosophical reflexion postulates it as the integral ground of its view of the world and man's history (predestination in creation and providence). The word 'predestination' sums up both postulates and witnesses to secret affinities between the natural and revealed wills of God, wherein the realities both of reason and of faith find their ultimate reconciliation.

II. *SOURCE AND ISSUES.*—I. *Source.*—Here two points require to be noted. Predestination has its origin in the divine nature alone, and there alone in the divine attributes. God's act of resolving to enter upon the various modes of His self-revealing activity is a free yet responsible act

¹ This excludes the celebrated distinction of *scientia media*, the proper discussion of which falls in connexion with the divine omniscience. It was invented by the Jesuits, defended and propagated by the Molinists, assailed by the Spanish Dominicans, and at a conference in Rome convened by Pope Clement VII. was condemned. The agitation continued. The Arminians of Holland spread the view among the Reformers. In England it spread widely in the 16th century (see J. Strang, *De Voluntate et Actionibus Dei circa peccatum*, Amsterdam, 1657). The hypothesis of *scientia media* is untenable. There can be no such intermediate knowledge, all knowledge being either necessary or free. Again, as inferential knowledge it cannot worthily be ascribed to God, whose knowledge is intuitive. He knows all the relations of things, but does not reason out those relations in the act of knowing.

² The favourite term in Scholasticism for 'prevenience.' St. Thomas Aquinas discusses it with fullness. Cf. also the controversy of Malebranche with Boursier.

to which He is determined by nothing outside of Himself, or alien to His nature, and by nothing in the way of an internal necessity of His being, or of any defect in His being, except the insistence of His own gracious character and good pleasure. There is no life outside the divine life. The life of God is inclusive of all life. It is a life with Himself alone and within Himself alone. In the vastest area of being there are no reaches beyond His boundless being or beyond the causation and control of His will. The whole actual and possible universe is at the last a monistic system, centring in a single truth to which everything in it may be referred. That truth is the one and absolute Being, who comprehends all being, the substance of all existence, God. God thus is not one side by side with others, whether like Him or unlike, co-equal or prepotent, relationship with whom He is bound to recognize and consider in His own action. He is God; and 'beside Him there is none other.' To be Himself is the sublimest glory conceivable. To go forth continually in self-manifestation is His constant good pleasure or will. Such a Being, overflowing with the sense of His beauty and infinite blessedness, must communicate Himself in love in every form and degree possible through which the features of His life may shine. His self-exhibition and self-communication are the only and original necessities of His action, and these reside in His own nature.

From that fact it follows that those original necessities operate in accord with the divine attributes and with nothing else—power, justice, wisdom, holiness, love. God is not all-powerful in the sense that He can do anything. He does what He likes, but He likes only what is according to His character, that which is true, just, holy. There can be no caprice in His action, for His will learns from His wisdom and works out what is just. His power is at the service of an idea which gives to His endeavour stability and worth. There can be no question here of His predetermining any thing or person to what is contrary to His character. The attributes of God, since they alone regulate His action, are the basal principles of existence and the supreme categories of thought, which takes origin in their exercise. All finite existences through which He designs to manifest and to bestow His life, founded in the qualities of His nature, find their real principles, their *ratio essendi*, there, and represent each one or more of those divine qualities. All life is rooted in the divine Being, is in Him an organic whole, and includes the life of nature, of history, of humanity, in which He displays His power, wisdom, righteousness, truth, goodness, and love, and no attributes opposed to these. All these lives are independent unities within their own spheres, yet related to one another in the all-embracing whole, which is neither identical with God nor separate from Him, but in which He is so present (and it in Him) that He is not merely the cause of it and all its parts, but is its and their immanent and active ground, so that they truly appear as His finite expression and image through a series of ascending stages in an organic process which tends to His honour and glory.

2. Issues.—Such is the divine design. The method of accomplishing it science and philosophy unfold. To their investigation nature, history, and man are all separate if related economies, susceptible of distinctive analysis—a task to which the modern spirit has addressed itself with eagerness. Here we are concerned only with an inductive generalization of broad results. These would appear to be three: (1) God works towards an end through means; (2) He employs means in a graded succession in time; (3) the character of the end

displays the principle of the whole and motives the effort of progress towards it. If these results be kept in view, we shall be led in the path of a true theism and a right predestination. The universal dualism deeply seated in the entire constitution of things cannot be denied; it raises the problems. There are speculative systems that easily set it aside, in the way of logic joining opposites that are held to be originally one; but by such logical redemption no strength is given to human thought or moral aims. Theistic monism cannot thus proceed; it must show the dualism overcome in the way of historical fact and moral process, such that God is seen to be all in all, realizing Himself in His attributes in finite forms through the free play and independent life of their internal forces.¹ The steps of the proof are clear. The physical creation, operating freely within limits imposed only by its own material, is an orderly system working out its special end in man. Man is the living synthesis of nature, which in all its parts prefigures him, and in its functions aspires to what is only satisfied in him. History is characterized by the same independent interplay of all her forces and moves on under laws which reduce the acts of the countless conscious subjects who make events to a world of order, the progress of which is the evolution of the spiritual man. Man himself, granted that he is by nature a divided and complex being, is nevertheless in the healthy personality one. Aim, will, resolve, make him a complete unit; as mind or will he is a whole; and the more he advances in intelligence and ethical power, the better he is fulfilling the ideal of his own life, and responding to the preparatory movements beneath the human sphere which have gradually disclosed it. Humanity is thus the final cause of the world, history, human nature. Now, as it belongs to the nature of God to actualize Himself in humanity, the human spirit, as it descends into the depths of its own being, recognizes itself to be divine in principle. The perfect consciousness of this we see in Christ, and owe to Him. He made known to man his inborn divinity. His incarnation exhibits the unity of the divine and human. That consciousness comes first in a single individual, in isolated form, a present divine fact, serving to stimulate the human spirit to new life. The last consideration is of the highest importance. It contradicts all ideas which resolve the revelation of God in Christ into a general fact belonging to the phenomenology of spirit, and implies the personal God communicating Himself in dynamic force in positive historical form. Man has not grown into the consciousness of his own divinity; it has been revealed to him. Revelation is not simply an extension of the knowledge of God; it brings in an actual economy of grace as actively employed in the redeeming of men. Only by a sum of saving acts, unfolding His mind and will, can the living God become fully unveiled. In this sense Christianity alone is the revelation of God's redemptive love, since the whole person of Christ—His words, works, death, resurrection, exaltation—serves to bring into actual view the will of God as concerned in the salvation of men. Not through Christ merely, but in Him, in the undivided whole of His personality and history, as 'Head over all things to the Church,' God was reconciling the world to Himself. The Christological element leads us to regard the will of God for our salvation not as abstract, but as personal and positive in His Son. That, however, could not have happened haphazard in the divine mind; as it was essential

¹ The first thinker clearly to expound this position was the Italian G. B. Vico; cf. his 'La scienza nuova,' in *Opere*, ed. G. Ferrari, Milan, 1835-37; R. Flint, Vico, in Blackwood's 'Philosophical Classics,' Edinburgh, 1884.

to the setting forth of His glory, it was 'before the foundation of the world,' by His determinate counsel; and it determined the foundation of the world and the subsequent fortunes of all therein. Predestination is by the will of God, in an organic process,¹ in Christ who is its primal and final principle.

III. *SIGNIFICANCE*.—I. For the idea of God.—The predestination idea safeguards three factors in the relation of God to the world: (a) His free agency and responsibility in His activities, (b) His co-operation with His creatures in their true life, and (c) His efficiency in the fulfilment of His purpose.

(a) *Arbitrariness* has been associated with God's predestination. Yet predestination forbids arbitrary caprice on His part. The great advocates of its truth know nothing of arbitrary acts of God. The acts of God, they argue, are consistent with the character of God; the nature of God is prior to His laws, and His nature and character are of the absolute and perfect good. *Inscrutability* has been associated with predestination, as a cover for any injustice that may emerge in its issues. Now, while on any theory of the universe the last reasons of the constitution and course of things must always be sought for in the council of an eternal wisdom which it is beyond our capacity to fathom, and therefore inscrutable, in the inscrutability there can be no injustice or partiality; for those reasons are the outcome of an eternal wisdom, righteousness, love. God's action here can never be that of a selfish man. He acts according to His glory, which cannot be dissociated from His nature as absolute good. In that character His moral perfection implies an absence of arbitrary or unjust act. *Indeterminism* has been associated with predestination. But God cannot act as an indeterminate power. He is intrinsically and necessarily good—not by necessity, but freely, because He wills the freedom which lends His action its ethical character. The necessity which keeps Him from evil is moral—conformity to love, goodness, holiness.

In contradistinction from these, the divine predestination is an act of *sovereignty*, in the exercise of which God shows only mercy and goodness. Sovereignty is not simple supremacy; it is the sphere of divine freedom whence issues only blessing,² for there divine procedure is not limited by considerations of man's excellences or sins.

(b) God's blessing us is His co-operation with us to cultivate in us His life. As in Him, so in man, true life is attained by a combination of necessity and freedom. Man everywhere, as he ascends in intelligence, is inwardly conscious that He is able to do right. He is also convinced that God is on the side of the right. The tendency to excellency of life indicates God's will. It grows in man by his response which he makes in his freedom as he directs himself more perfectly towards God. Yet it is not simply by his desire and aspiration and the efforts born of these that he ascends, but also by their satisfaction in the answering care and recreative energy of creative love. These experiences point to the transcendent truth that creation was with God from all time, came from God, is in part turning of its own will towards God, is in part ever turning more and more consciously towards Him, and becomes at last completely, self-consciously, at one with God in will—the doctrine of the Logos, the hope of the eschatologist, the dream of the mystic.

(c) Is it but a hope and a dream? Can God's

purpose fail? Our conception of *omnipotence* must be modelled on what we know of finite power, though not limited by it. In our experience the secret of power lies in the ability to conceive the end in view and to regulate action towards that end. Those are not absent from God. For the creation of the finite He is responsible. He has chosen to create it not a passive thing, but a life with a way of its own. Why should we not believe that it is only the possibility, not the actuality, of evil that is necessary? If the end which God has in view is a form of life produced by the ability to co-operate with or to resist Him, it must be part of His omnipotence to be able to give the ability to resist Him. The resistance would be evil. In so far the Creator is responsible for the possibility of evil and its attendant risks. On the other hand, the divine prescience cannot be conceived as dim or vague, or the divine blessedness as uncertainly fluctuating with the uncertainties of men's choices, as Calvin asks, 'How can the contingent affect the First Cause on which it entirely depends?' The possibility of future failure on His part must, therefore, be limited. God must be credited with provision against the results of all possible disaster. Is not fatherhood the best symbol of omnipotence? His creation must not finish in itself, but must go on to recreation—a consummation visible in Christ and Christian humanity, in whom 'the whole world is reconciled to God.'

God, then, has willed all men to be saved. He has predestinated all men and things in His Son. Creation is prelude to incarnation, and was never designed to furnish occasion for irreformable sinners. In the foreordination as in the judgment God might say, 'I never knew you sinners.' He has contemplated all in Christ; He has foreknown all in Christ; He has loved all in Christ; He has elected all in Christ; and by the one same act. He has taken every possible means to fulfil that act with success. Through creation, history, redemption, He has gradually exhibited and communicated His life to men, to raise men to its likeness step by step. Respecting his liberty God forces no man, yet presciently and preventively seeks to persuade men. He reserves also the right to intervene by His omniscience and omnipotence in order to avert thoroughgoing disaster. Both courses He takes in the exercise of His sovereignty, which is the field of His freedom. That 'preferential action'¹ of His can fail only if the infinite resourcefulness of His nature fails—a result inconceivable.²

2. For the idea of man.—The predestination idea yields two precious assurances for man's conviction along with a grave warning: (a) the certainty of his practical freedom of will, (b) the ability to attain his destiny, (c) the fact of failure as both possible and permissible.

(a) *Necessity* has been associated with predestination. The problem that it raises is perennial. Its reproach no system can roll away from itself. As the divine Being is a harmony of necessity and freedom, so they run through all His handiwork inclusive of man's life. In themselves they are not antitheses, and they are but crudely conceived when opposed. A theistic predestination excludes their opposition and leaves the vindication of necessitarianism to 'the wisdom of this world' as in materialism and idealism—in men of science like Huxley, Spencer, etc., in men of speculative idealism like Hegel and others more pronouncedly pantheist, who assert that they see in all things the working out of an eternal necessity. Philo-

¹ Martineau's phrase.

² The foregoing excludes three positions: (a) the notion that God predestinates fixed numbers, (b) the notion that God predestinates to evil, and (c) the notion that God predestinates, 'by permission,' eternal consequences of evil.

¹ The first philosopher clearly to recognize the organic process of the divine purpose was St Augustine.

² Calvin terms the opposed doctrine 'frigid and jejune' (*Inst.* I. 18. 1).

sophers of the type of Schelling, Lotze, and others are truer guides. History, they urge, is characterized by a union of freedom and necessity, the product of a freedom somehow pervaded by necessity, composed of the acts of countless conscious subjects which yet form a world of order.¹ How can this be?, they ask. Only through the operation of a principle superior to both in which they are one—God. History is the evolution of that principle. It reveals itself through the free play of individual wills, and could not be were those wills not free so that they are fellow-workers with it. Free will is incapable of rigid objective presentation; it is best exhibited by a process corresponding to the development of freedom itself. What is freedom? It is only in terms of experience that it can have any meaning at all. So with necessity. They are two constantly alternating poles of our experience. The only solution is a repeated appeal to the subject. The freedom which we at once oppose to and collate with necessity is subordinate to the higher freedom of consciousness on which the distinction rests. Thus modern psychology. In the metaphysical reference the difficulties arising from finite freedom may be met by the contention that, while the total possibilities, however far back we go, are fixed, yet within these, however far forward we go, contingencies arise,² and the best is reached only by living through the less good.

(b) *Fatalism* has been associated with predestination. Calvinism is alleged to be specially chargeable with the error in Christian times. Unquestionably paganism furnishes abundant traces. The popular misunderstanding of foreordination is fate. Predestination, however, is not fate. Fate is a conception for which there is no foothold in the Christian system. Belief in one's fate or star or fortune is apt to characterize both great men and small, and to prompt both to trust in their strongest qualities, which may not be their best. In so far as a man is possessed by a blind feeling of being an instrument of destiny used by an irresistible force he knows not to what end, his belief is a weakness. It bears no likeness to the Christian idea, which has two features: it makes a man rationally conscious that he has a mission to accomplish, and it impels him when he learns the divine will to be humbly submissive to its dictates. 'I will do God's will and what I choose,' said General Gordon. The Calvinistic 'fate' is incentive to heroic effort, a challenge to play the man. God's predestinations are moral inspirations.³ What God ordains man realizes. Yet withal there is more. Calvinism in its severer aspect embodies something additional. It is often neglected in Christian thought; it was seldom absent from the

¹ F. W. J. von Schelling, 'Philosophische Untersuchungen über die menschliche Freiheit,' in *Philosophische Schriften*, Landshut, 1809; R. H. Lotze, *Microcosmos*, Eng. tr., 2 vols., Edinburgh, 1885.

² This is Martineau's solution, accepting it from Dugald Stewart; cf. *A Study of Religion*, bk. III., 'Determinism and Freewill.' It is the position gradually but cogently won through the succession from Kant to Lotze. Science, as distinct from metaphysics, has also in recent years begun to vindicate 'freedom' as rational; with the activistic and vitalistic philosophies of Eucken and Bergson it has entered on a new era. In a recently published letter of more than ordinary interest Bergson writes: 'From all this [the contentions of his three works, *Essay on the Immediate Facts of Consciousness*, *Matter and Memory*, and *Creative Evolution*] there clearly emerges the idea of God, Creator and Free; the generator at once of matter and of life, whose creative efforts as regards life are continued through the evolution of species and the constitution of human personalities.'

³ Cf. J. Orr, *The Progress of Dogma*, London, 1901, lect. I. Calvin and Knox in their treatises strenuously deny that predestination is fate. Sir W. Scott credits Montrose with the ditty:

'He either fears his fate too much,
Or his deserts are small,
That dares not put it to the touch,
To gain or lose it all.'

pre-Christian conscience. In India and Greece, among the old Teutons, in many Christian sects and not a few of the noblest Christian minds it found impressive expression, viz. man's profound sense of the radical obscurity and deep underlying tragedy of human existence—the *Weltschmerz* of modern pessimism. It centres in that suffering in which the subject is victim. It is the tragic mystery of the world, something piteous and fearful; not emergent merely from external forces nor from human acts, not the moral order nor yet a mere fate cruel and indifferent; but something inscrutable and inevitable outside all these which bears on man's life and assails it. It is a demonic force, ready to spring, when circumstances or character or both give occasion, upon its victims to wreak upon them a dire doom, in the drawing down of which motives are nothing, circumstances nothing; the motives may have been aflame with goodness, the circumstances such that any other course was impossible, yet with sharp and swift consequence the stroke descends out of the place where dwell the Nornir (Teutonic), the Hathor (Egyptian), the Erinyes (Greek), the 'divine jealousy' (Hebrew), and all such as 'work woe to mortal man.' It is this almost universal dark instinct more than the Pauline election that is responsible for the horror of much Christian eschatology and Calvinistic gloom; it inheres in the natural man. Early Greek dramas, Shakespeare's tragedies, Maeterlinck's essays, cover a stretch of many centuries and represent widely divergent civilizations, yet in this they are one. It is an insistent sense in all thought which has these two grievous wants: the lack of personality in the Deity and the lack of reality in the world. It is the great merit of Christian thought to remedy both defects and to lift in some measure the awful burden from human hearts. It does so by teaching the unity of the physical and moral spheres, the organic character of all existence in God. It agrees that these spheres do not exhaust the content of reality nor enable us to grasp the depths of being, and so cannot be erected into the working powers of the world or made the complete expression of the divine will. But what is beyond them is not dark, cruel, vengeful, jealous of men, eager to slay, but an order far deeper and richer than that which we know in time and space, where God's will alone abides unchanged and unchangeable, working itself out not only in spite of but even by means of all opposed to it; and it is a will of good to man.

(c) Opposition there is. It is vital; so real and serious as, not indeed finally to thwart, yet grievously to hinder, the fulfilment of the divine purpose, and at the same time completely disintegrate its own spirit-power. God cannot fail; individual men may. The forces adverse to Him are autonomous, and the autonomy is real; hence all may not 'work to will and to do of His good pleasure.' His workmanship is not merely mechanical, infallibly realizing His conceptions. He has His conception and also its completion before Him, as every purpose must; but the first has to reach the second not forcibly but freely through the material in which it seeks to be expressed. That material may never move against Him in the mass, but it may in the individual; for the individual is not wholly moved by the mass and may use the energy that is his own at variance with the force of the whole. When this is so, what then? Are there refuges, reservoirs of latent self, for the rebels? The energy of life-force which they misuse, is it transformable? Perhaps; by lapsing into the universal life, there to be re-formed.¹ At any rate, it may utterly fail in its present form.

¹ Cf. the Biblical figure of God as 'the potter.'

Individual tragedy is too frequent here to render it improbable or impossible hereafter,¹ unless, within the reaches of the divine resourcefulness and the possibilities of the organic life of the race, there be means of conversion and renewal at which we cannot even guess. Men must 'give all diligence to make their calling and election sure.'

IV. HISTORY.—1. Ethnic.—Predestinarian conceptions arise at a certain stage of religious reflexion of necessity; and kindred conceptions are to be found in all religions which have been influenced in their development by speculative thought. Even polytheism adumbrates them in divine personifications of Destiny.

(a) *Greek*.—The best instance of this we find in the Greek poets and tragedians, with whom the belief passed through a variety of forms: *φθόνος*, *δίκη*, *μοῖρα*, *πέρας*, *Εἰρήνη*. These are less intellectual solutions of the problem than dedications of experience; and they are remarkably comprehensive. At first, as in Herodotus, Pindar, and Theognis, envy and caprice characterize the Olympic gods in their dealings with men. Men are the restless rivals of the gods, and must be taught their proper place. Occasionally a righteous purpose governs the divine dealings; occasionally also defects of character in men bring on their misfortunes. But such features do not manifest themselves in force till we come to the great themes of Æschylus and Sophocles, whose tone is vastly superior. The caprice of the gods is by them modified in an ethical direction. Personal calamity is a judicial act pronounced by a moral governor on men's follies and crimes. 'Divine Justice displaces the divine Jealousy.'² The mental and moral clouding gives way to the notion of events baffling human foresight and so leading to unconscious crimes. Even the dark power of *Mora* is part of the moral order, designed to incite man to resistance, in making which he may fall, but in his fall he is greater than if he had never met the challenge. Within increasingly broad limits, too, man's freedom is recognized. In Sophocles there is the mature idea that suffering is not always final, but is foreseen in the counsels of the gods as part of the permitted evil which is a condition of a just and harmoniously ordered universe. It is not inconsistent with this that epic poetry gives more prominence to circumstances and external forces in the determining of character; for such is the nature of epic as distinct from drama. Thus there is little justification for the common theory³ that in the Greek drama everything is foreknown and develops inevitably from the beginning. Tragic fate needs a tragic trait in the victim. Cf. art. FATE (Greek and Roman).

(b) *Roman*.—Nothing like the same subtle sensitiveness is found in the Roman early theology. The citizens of Latium and the surrounding parts were a more secular and political race; and destiny with them amounts to little more than a belief in their own genius and the enterprise that renders it effective. The deity *Fortuna* embodies this faith. Destiny is seldom regarded as personal doom; it is rather racial mission. Nor does it often occur to the Roman thinker to inquire into the origin of

the special genius of his people. The metaphysical and ethical implications of the belief were not canvassed. Cf. art. FATE (Greek and Roman).

(c) *Teutonic*.—Remarkable is the contrast in the Teutonic idea of destiny. It forms a prime element in an elaborate mythology whose foci are *Odin* and *Urd*, divinity and fate. It is difficult to delimit the respective jurisdictions of these two; but the lion's share of power falls to *Urd* (*Vyrd*). She is the goddess of fate, and also of death—a significant conjunction. She is the dispenser of life and death, with her maids the *Norns* (arbiters of life) and the *Valkyries* (arbiters of death), who dwell with her under the world-tree (*Ygdrasil*), which stands forever green, watered by her gold-cased fountain. The might of *Odin* standing behind is no relief; he wields a lawless power, with a loveless will. He stands for blind, arbitrary, elemental will—will cut off from wisdom, a brute, blundering, pitiless, eccentric will (with the single bright feature that it chooses the warriors for *Valhalla*), which surrounds human passion and affection with a tragic cloud against which the heroic figure is shown off. A deep pessimism pervades the *Eddas*. It is as if the cruel and dismal climate of the North, the huge terror of storm and sea, the high courage of reckless hearts crushed by the irresponse of apathetic deity, were all gathered up in a vast and bitter gloom—that general spirit which for modern understanding has been so powerfully portrayed in the romantic operas of Richard Wagner.¹ Cf. art. DOOM, DOOM-MYTHS (Teutonic).

(d) *Indian*.—On a higher plane, turning to ancient India, we find a definite theistic development in the later stages of the *Upanishads*, in the *Kāthaka* and the *Svetāśvatara*, where there occurs the clear idea that 'only by the man whom he chooses is God comprehended—to him the *ātman* reveals his essence.'² In the Buddhist teaching prominence is accorded to the law of *karma* (*q.v.*), according to which the soul in its successive transmigrations has each stage irrevocably determined by its conduct in the previous stage—a suggestion of ethical necessitation which even in its fullest expression remains vague. Apart from express teaching, Hindu life and ideas are predominantly fatalistic, unfree, unenergetic. The drama is full of *deus ex machina*; the actors seldom rely on their own will. The religion, largely a ritual, shows the divine wrath ready to burst out on the most trivial occasions and for the most trifling offences.³ Cf. art. FATE (Hindu).

(e) *Chinese*.—In ancient China there is the great law of *Tao*, circumscribing the course of human life in a cosmos of omnipresent order. It overrules the entire animation of the universe in both its aspects of light and darkness, life and death, good and evil. It never deviates or diverges. It metes out justly and equitably to all men, by means of the spirits or gods rewarding the good, by means of the spectres punishing the bad, with perfect impartiality. Blessing comes to those who conform to its laws, hurt to those who violate them. The fear of the spectres is very great; there is an all-pervading demonism, counteractives to which make up a large proportion of Chinese religious practice.⁴ The evil spectres may interfere at any moment with human business and fate, favourably or unfavourably. These spectres are the instruments of retributive justice. *Tao* is

⁴ Schiller's so-called reproductions of Greek dramas illustrate this popular but erroneous idea.

⁴ J. J. M. de Groot, *The Religion of the Chinese*, 4 vols., Leyden, 1892, bk. i. p. 935 f., bk. ii. ch. ii.

both the creation and the creator, the motive force of the universe and the free determiner of its agency, spontaneously working from all eternity. His favour, won by obedience to his motions, may be secured by faithful observance of them in the actual movement of the world and life. Having no superior or co-equal, he secures it that human destiny is neither dark nor cruel; it is clear and orderly as himself. Cf. art. FATE (Chinese).

(f) *Egyptian*.—In ancient Egypt the moral conditions of character and destiny are similarly conspicuous. Egyptologists are divided as to the characteristics of primitive Egyptian religion, whether they are those of a polytheism or those of a monotheism. But even that school which asserts its polytheistic character agrees that underneath the multiplicity of deities there is always the feeling of their unity; and, whenever that unity is at all recognized, it carries with it the further concept of the spirituality of the divinity in things¹—a spirituality that is righteousness. The goddess Hathor, the patroness of joy and happiness, is also the cosmic principle, the personification of the great universal power of nature perpetually creating and maintaining all things, great and small; she is further in the judgment a foremost figure on the bench. In 'The Precepts of Khensu-hetep' (F. J. Chabas, in *L'Egyptologie*, Paris, 1876-78, ch. vi.) the explicit references to *sekher neter* show a clear and definite idea of divine providence,² by whose goodness men subsist. To the supreme being who is thus regarded is attributed at the same time the creation of the world and all things; and, as he is righteous, his plan is righteous. We owe it to this religion that it emphasizes the fact that the guilty suffer, the penalty being exacted at the time of the wrong-doing, not deferred to a later day or generation.³ Cf. art. FATE (Egyptian).

2. *Jewish and Muhammadan*.—The OT and NT ideas are given *in extenso* in the art. ELECTION. There all in creation, history, redemption, is referred back to the divine sovereignty. The special features of that relationship as experienced in vital religious activity alone are set forth; the general idea never gets beyond its most general expression. The same speculative reserve characterizes later Jewish thought. Its particular interest is not high; except in the case of individual rabbis, nothing further is ventured than the statement of a comprehensive dependence of all things and all persons on the divine supremacy, and an insistence, always in subordination to God's sovereignty, on man's free will. Intellectual problems are evaded as beyond human solving. Of the Jewish sects in the time of Christ Josephus is responsible for making the Pharisees material predestinationists, the Essenes absolute predestinationists, and the Sadducees hostile to all forms of predestination, since they traced all events to chance. Material predestination limits the divine decree to this material life; an example from *Hul. vii. 6* is to the effect that a man does not hurt his finger in this world unless it has been decreed. It is a peculiarly Judaic idea, and belongs to the main stream of Rabbinic conviction. Other currents represented in Rabbinism are the two familiar to Christian controversy—the one emphasizing man's freedom, the other divine overrule. According to the one, the decision rests with man, whose conduct determines his destiny; the spirit's prime endowment is freedom. According to the other, God directs and foreknows all. A representative utterance is that of R. Akiba (*Abhōth*,

iii. 15): 'All is foreseen yet freedom is granted'—a position whose last eminent apologist was the renowned Maimonides.¹

Muhammadanism teaches an absolute predestination, to both good and evil, happiness and misery. God is conceived of as absolute will, operating by rigid law, moulding the material by whose instrumentality it works, after the manner of Oriental despotism. Muhammadan philosophers expound it in a more extreme way than it is set forth in the Qur'an until the doctrine has become practically pernicious. The reaction set in by the Mu'tazilites, who assailed the orthodox view with keenness, made room for free will, but was eventually overcome by orthodoxy.² Cf. art. FATE (Muslim).

3. *Christian*.—Predestination holds a large place in the history of the Christian Church. It has fanned burning controversies, and generated popular fear; it has fostered stern ideals, and moulded strong natures. In its largest sense the finest intellects of the Church have been attracted to it, and those periods that have been most fruitful in reconciling the development of Christian ideas with the growth of culture have been indebted to it above all for inspiration. The epochs of its progress are marked by these periods.

(a) *First stage*.—The first stage is signaled by the conflict of the Greek Fathers with Gnosticism, the conquest of the Greek mind by Christian theology. The problems of Gnosticism are in the main two: (1) the nature of the Absolute, and the method whereby He can be the creator of matter, and (2) the origin of evil. The Gnostic solution is found in an endless succession of æons or emanations of the Absolute which serve to span the gulf between Him and creation. Gnosticism, in establishing its theory, had to deny free will. It is a solution metaphysical and necessitarian. The Greek Apologists and Fathers, addressing themselves to the problem, reached a solution ethical and personal. They know nothing of unconditional predestination; they teach free will. Believing in the sovereign efficacy of reason and conscience, they interpret the Absolute in terms of them. Their contribution combines four points, viz. (α) the Absolute requires mediation; (β) the mediator is the Logos; (γ) through the Logos the Absolute is creator; (δ) freedom is the mark of man.

All schools at that period held an abstract notion of God. The central quest was after an appropriate medium of communion between the Supreme Being and the world. The Gnostic attempt failed before the magnificent doctrine of the Logos (*q.v.*)—the issue of the controversy and its end. The doctrine of the Supreme as Creator through the Logos, and the activity of the Logos in nature, history, and man, are the primary ideas of Patristic theology, set forth partially in the Apologists, with fullness and learning in Clement and Origen, and preached by Chrysostom. It is essentially a new Gnosis, summing up the divine design of cosmic history.

(b) *Second stage*.—The second stage opens with the Latin Father, St. Augustine († 430), and the fall of imperial Rome. That event gives the *motif* to his profoundest thought that history is the history of two antagonistic cities, so that he can compare the ordered series of the centuries to an antistrophic hymn pervaded by an antithetic parallelism which turns on the call of God and the response of man (*de Civ. Dei*, xi. 18). Into his particular opinions on religious predestination we need not enter (see AUGUSTINE, ELECTION). His

² E. Sell, *Path of Islam*, London, 1896, D. B. Macdonald, *Development of Muslim Theology*, London, 1908.

positions are not always superficially consistent. But his great merits are clear. He distinguishes prescience from predestination, and aids to a better analysis of the latter. He expounds a richer idea of will than the inherited views of the Greeks and the Pelagians; and initiates a discussion from the main position of which Christian thought has never since withdrawn, viz. that the unregenerate will is not free; freedom is growth in the power to do right.¹ Great as these services were to the progress of truth, they are not his chief contribution to the predestination idea. That concerns itself with the nature of the divine purpose the *motif* of which is referred to above. He unfolds his ideas in his main book, *de Civitate Dei*, called forth by the decay of the Roman State. The underlying principle of that masterly exposition is the organic character of the divine purpose. It is pervaded by his deep sense of the continuous evolution of the divine purpose in all things. It sums up his conviction of a life's study. Throughout his life he was intent on reducing to a consistent unity the varied elements of nature, history, and revelation, as they presented themselves in believing consciousness. So successfully has he vindicated that principle that subsequent developments have proceeded upon it, always the more clearly to demonstrate its essential truthfulness. The controversies that ensued, directed against St. Augustine, assail details—in particular the doctrine of 'predestination to evil' or the reprobation of the impenitent wicked. Rabanus Maurus († 840), Hincmar († 882), and others argued the inconsequence of that doctrine by Scripture proof, John Scotus Erigena² († c. 877) its inconsequence metaphysically—both legitimate corrections. The Augustinian doctrine in its general drift worked on with increasing cogency throughout mediæval Christendom, quickening an extraordinary ferment of ideas, creative of new impulses in every direction, religious and disciplinary, political and social. Into the stream of religious and general culture there entered currents widely dissimilar, deriving from the study of Aristotle and of Dionysius the Areopagite, really alien to the Latin genius. The pregnancy of St. Augustine's philosophy succeeded in acclimatizing rich elements in both in the atmosphere of Western theology.

(c) *Third stage.*—Of this the constructive intellect was that of St. Thomas Aquinas (c. 1227–74), who quells the maelstrom of mediæval thought. In him we see St. Augustine pruned of his many verbal and logical inconsistencies and his view of the world and history so presented with a logical thoroughness and developed on different sides as to exhibit a proper system, or *summa*. Of specific value is Aquinas's discussion of prevenience or premotion, and the grace of natural virtues—features of Augustinianism that have obtained a secure lodgment in Romanist theology, but not in Reformed. The whole effort of Aquinas results in a fusion of the best culture and most spiritual faith of his age. The Augustinian spirit pervading it is in his work definitely incorporated with the official teaching of the Roman Church. St. Thomas inspired the Decrees of Trent (1545–63), which, while affirming several Scotist positions, define a mild Augustinianism.³ The Augustinian principles are three: (a) God is absolute master by

His grace of all determinations of the will; (β) man remains free under the action of grace; (γ) the reconciliation of these two truths rests on the manner of the divine government. The Tridentine formulæ reaffirm original sin and man's need of grace as against Pelagianism (sess. vi. can. 2), the freedom of man and the ability of doing good and evil even before embracing faith (vi. 6. 7) as against the Protestants. Trent further, with St. Thomas, teaches the universal offer of salvation and divine provision of the means of grace. The problem of harmonizing grace and freedom is left undefined; the brief of Benedict XIV. (1748) gives liberty to all schemes of reconciliation—the strict Augustinian, the Thomist, and the Molinist.¹

(d) *Fourth stage.*—The fourth stage came with the Reformation and the awakened moral conscience. The absorbing interest of the 16th cent. was religious, not speculative. No commanding intellect of the comprehensive order of an Origen, Augustine, or Aquinas arose to offer the new synthesis of faith and culture which the times imperatively demanded, and little progress was made in the growth of the predestination idea. Luther and Erasmus, Zwingli and Calvin, with minor divergences, agree in reverting to St. Augustine on the main issues and in the supposed interests of evangelical piety; but none of them had adequate philosophical equipment to formulate anew the problem in consistent and convincing form. Hence Western Christendom remained divided. Its continuance in disruption was due as much to the absence of a first-rank philosopher as to the presence of a fiery Reformer; for fresh religious feeling is less divisive than stale religious dogma, and the speculative reason of the Reformers made but indifferent flights. The proper contribution of that age lies elsewhere, in the fresh emphasis set on the doctrine of election as the believer's ground of certainty of salvation as against the Church and its machinery of grace. Polemical motives against Roman ideas of authority impelled the Reformers to give election a paramount place in their system, with the result that its philosophical counterpart, predestination, assumes, not only in general theory, where it is relevant, but also in theological construction, where it is not, the position of basal principle controlling the entire system. The *Institutes* of John Calvin († 1564) is representative. It asserts the double predestination, to life and death quite irrespective of merit. The central idea² is that of an independent and immutable decree of God, in which foreordination and foreknowledge are inseparable. Beza, Calvin's successor at Geneva, is the father of 'high,' or supralapsarian, Calvinism. The common view of the Reformed Confessions, confirmed alike by the Synod of Dort (1618–19) and the Westminster Assembly (1647), is infralapsarian. The infralapsarian (*infra lapsum*) theory of predestination, or the decree of predestination viewed as subsequent in purpose to the decree permitting man to fall, represents man created and fallen as the object of election. The supralapsarian theory designates the view which supposes that the ultimate end which God proposed to Himself was His own glory in the salvation of some men and the damnation of others, and that as a means to that end He decreed to create man and to permit him to fall. Strict Calvinism subsequently found mitigations in the 'Federal Theology,' expounded by Cocceius (1603–69), professor at Leyden, who introduced the idea that God's judicial charging

¹ Augustine's denial of freedom is really denial of capricious choice—the assertion of self-determination along the lines of one's true character.

² Erigena's contention, 'no predestination to evil' because that would imply a duality in the divine nature, or else the existence of some power above God determining His will, is acute (cf. his tractate *de Predestinatione*). It undermined for the future the recurring idea of God as the author of evil.

³ Loos's statement, 'the history of Catholicism is the history of the progressive elimination of Augustinianism,' we regard as a gross exaggeration.

¹ Cf. a valuable account by E. Portalis, in *CE*, s.v. 'Augustine.'

² Ritschl, Sneckenburger, etc., have denied the centrality; Schweizer proves it fully. M. Scheide (*Calvin's Predestinationslehre*, Halle, 1897) describes the religious motives underlying Calvin's construction.

of the guilt of Adam's apostasy to his descendants was racial, and not personal; and in the contemporary Saumur school of Cameron, Amyraut, and others in France, who attempted a combination of particular election and universal salvation (sublapsarianism). Bold opposition was offered by the Remonstrants led by Arminius, professor in Leyden from 1602 to 1609. A year after his death his disciples, as an organized party, presented a Remonstrance to the States of Holland pleading for toleration, and, for the sake of defining their position, presented soon afterwards five Articles expressing their views. This is the origin of the famous 'Five Points' in the controversy between Calvinism and Arminianism. Of Calvinism the 'Five Points' are unconditional predestination, particular election, efficacious grace, divine reprobation of the wicked, and final perseverance of the elect. Of Arminianism the opposed points were conditional predestination on foreseen merit, universal salvation, resistible grace with the provision of means sufficient for salvation, preterition of the wicked, and possible lapse of the justified from grace. Later, Methodism came with a synergistic solution which is logically indefensible, but has proved serviceable for piety. The Calvinistic victory was one of logic only; even the victors felt that, if not handled with special prudence and care, the doctrine would be the reverse of helpful to morals and piety. The Calvinistic Synods restate old positions—Dort with relentless rigour, Westminster a little more cautiously. They contribute nothing new to the theology of the subject. The work of the Protestant scholastics was one of systematization for civil and religious reform rather than of inspiration to spiritual or apologetic progress. It had unquestionable merits. It demonstrated the political potency of the predestination idea in common life, when men are found to believe implicitly in the absolute will of God and to range themselves submissively under its behests in simple obedience. It established as never before the religious principle as the controlling principle of civilization, taught the civil power definite ethical function, laid thereby the only workable basis of free democracy, and thus, when the unity of the world's life and knowledge had been shattered by the break-up of the mediæval Church, pointed to fresh sources of cohesion which prove the more efficient the more they are tested in the complexities of modern growth. Whatever criticism may be urged against Calvinism as a religion and a theology, it is certain that as a polity it has been a triumphant success, as the maker not indeed of kings—the claim of the mediæval Church—but of what is much greater, States.

The most commanding Calvinistic intellect appeared where there was obvious relief from the political pressure, in New England. Jonathan Edwards (1703–58) draws into the system somewhat of the wider expanses of the New World that gave him birth. He sets forth the Calvinistic view of the world with a masculine strength and rich insight of rare excellence, and in face of the most imposing critical antagonism which Calvinism has ever encountered—New England Unitarianism. He prepared the way for the final outfit of the predestination idea for its modern task; and he did so by having greater confidence in reason than his contemporaries. Edwards was no reactionary. In the widely prevailing scorn of human reason he dived deeper into its depths and achieved two superlative results—the reconciliation of the divine decrees and free will, and the exposition of the divine motive for predestination as resting in the divine glory. Regarding the former he argued that the law of causality is

universal; that, while every man is free to act in accordance with his will, his power to will is controlled by causes outside of himself, so that ultimately the will must obey the behests of a power independent of its own purposes. Regarding the latter he argued that God's freedom is exercised in 'self-exhibition' and 'self-communication'—a self-communication which is creative in man of 'the religious affections' (the form that union of man with God takes) which display the reality of predestinating grace. His work is a distinct advance towards overcoming the dualism in the Calvinistic position, leading directly to the idea of God as moral personality, the controlling principle of modern theology. In the Catholic theology God is construed as substance; and in Scotist, Socinian, and Arminian theology as will. The Reformers conceived God as the embodiment of the moral law, bound by His own nature to punish sin and to uphold the eternal principles of righteousness. The conception, however, was not clear; and side by side with it we find the old conception of sovereignty as arbitrary will. Calvinism reconciles the two by distinguishing between the nature and will of God: nature is the sphere of necessity, will of freedom; justice belongs to the one, mercy to the other. Edwards makes 'the love of being' his controlling principle—lying behind both justice and mercy, containing them within itself. It is but a step from the divine self-love to the divine Fatherhood—the idea which fresh experience of the redemptive love of God in Christ (the discovery of the modern Church) revealed.

(e) *Fifth stage.*—Under the influence of the renewed study of the life of Christ modern theology has brought into fresh prominence the ethical and spiritual qualities which were central in Jesus' thought of God. For the abstract Absolute of the earlier theology and the arbitrary will of the later it substitutes the God and Father of our Lord Jesus Christ, and seeks to show that in His wise, holy, and loving character we have the ultimate reality of religious truth. In this attempt it receives aid from two quarters. Through a better understanding of the nature of the will modern psychology makes it possible to overcome the supposed opposition between freedom and law, while philosophy, through its renewed emphasis upon the immanence of God, opens a way for the conception of God which shall include the concrete features essential to Christian faith. So far as the first is concerned, we are coming to see that it is not will, but character, that is fundamental for our idea of personality. That man is most truly free whose will is most completely dominated by a consistent moral purpose and whose acts—given a knowledge of that purpose—we can most certainly predict. Character denotes to us such consistency of moral purpose; and law, so far from being a limitation of freedom, is its most effective means of expression. In Christ, then, we can fill up 'the mere good pleasure' of historic Calvinism with the inner constraint of redemptive love. Not less significant is the help from modern philosophy. We are seeing that the ultimate reality, instead of being the most abstract, must be the most concrete of all conceptions. We do not explain the world by thinking away all that is most characteristic in experience into a colourless residuum, but rather by studying experience to discover, amid the infinite variety which it contains, the elements of permanence. Life is to be interpreted by its highest forms, not its lowest, and the qualities which Christian faith finds central in God become those most needed for an explanation of the actual facts of life. The main outline of the historical growth of the pre-

destination idea is thus evident. In ethnic religion, lower, we have the instinct of fatality predominant; in ethnic religion, higher, we have the dawn and gradual growth of the instinct of freedom. In Hebraism there is a definite conviction of the general idea of predestination, combining the two features of divine sovereignty and human liberty. Judaism, on the whole, conserves the same general idea. Muhammadanism reverts to fatality. Christianity, primitive and Patristic, preserves and defends predestination as received from Hebraism along ethical lines. The mediæval Church deepens the idea, and develops its definition by setting in strong relief the absolute supremacy of grace over nature in St. Augustine and the congruity of grace with nature in St. Thomas. The Reformation Church deepens the idea, and develops its definition by setting in strong relief the absolute spirituality of grace as resting in God's mercy (in the Reforming leaders) and its finality as resting in God's glory (in Jonathan Edwards). The modern Church, relying on modern philosophy, which has gathered up the results of the modern sciences, of nature, history, and man in a broad synthesis centring in the Supreme Being as moral personality, accepts the vindication of the harmony of divine sovereignty and human liberty, thus closing the most prolific source of conflict concerning this subject. The two foci of the predestination doctrine are both true, and every theory exalting one at the expense of the other has had to give place to the more adequate formula. The stubborn protest of orthodox common sense, which has never in any age lapsed, has been justified. The facts of the religious consciousness have availed to beget the theory, not the theory the facts.

V. *THE MODERN TASK*.—The supreme desideratum of modern religion is strong individuality, with its enterprise, romance, ever-fresh experience, and transforming impulses. It may be secured by that enlarged conception of the divine will regulating man's destiny to which every vital pulse of the modern spirit points. It will include a larger theism, a freer society, a richer soul.

1. *A larger theism*.—The antitheisms of the age are not wholly in error. They are popular because of the meagreness of the current theism. They are attempts to do justice to factors to which the prevailing theism does scant justice or even violence. They are not negative; their negations proceed from a positive faith; and in their positive contribution to thought they correct one another and enable us to discern the lineaments of an impressive philosophy. Superficially regarded, they all seem to lead to determinism, apparently absorbing the individual in the whole. Pantheism, materialism, socialism, secularism, naturalism—they look like the deification of the finite world. But only in the popular or semi-popular intelligence. Take, *e.g.*, pantheism. It is a term to which the vaguest and most contradictory meanings are attached, the clearest being that which identifies the world with God and regards man as part of the world. Yet that is a notion destitute of historical foundation and, indeed, of any rational meaning. How can pantheism say that the finite world is the infinite? We may say that it represents the infinite, but not that it is the infinite; and that is the precise opposite of the deification of the finite. It implies not the divinity, but the nothingness, of the world of sense and sight. The formula which expresses it is not 'All things are God,' but 'God is all in all'; or, in the comprehensive phrase of Indian philosophy, 'There is but one Being, no second'; or the Christian conception, 'There is one God, beside Him no other.' Do not materialism and naturalism, when their real signifi-

cance is seen, imply the same truth? They are eager to exalt the cosmic life-force as the dominating world-force. But how do they interpret it? Not abstractly, but from detailed observation of the actual phenomena of the world; hence its general conception is not untrustworthy; it is the concrete content of the abstraction of pantheism. And what is the contention of socialism ultimately but this, that no individual stands alone, that his perfection can never accrue in isolation, that, as the attraction of physical particle for particle causes every material body to retain its form and relations, so the self that will separate from the influence of other selves is on the sure path to disintegration? Together these antitheisms in their essential pleas urge that God is the only reality in the universe, that the life-force of creation is one, that man's safety and perfection rest in right relation with them. God's immanence in the world is the modern understanding of the eternal reality of its process and progress. Such conceptions are as profound as they are novel. They arise directly out of the minutest investigation into the facts with which science and history deal. They appeal to the theological mind to be drawn up into the idea of God and His relation to the world and man to enrich our apprehension of His transcendence and divine purpose. They teach us definitely concerning that purpose in the world that we know, and of Himself standing above it working out its ends. On the foundation of that knowledge we are summoned to build up convictions of the character and will of Him who thus acts and of the destiny of all His actions.¹

2. *A freer society*.—Social theory is as multi-form as antitheism. Anarchism, communism, socialism, nationalism, imperialism, are imperfectly understood apart from the ideal and emotional impulses prompting them. They are preparing the physical basis, the material conditions of large advances in human liberty. They are adversely criticized for doing the very opposite. But surely in their broad spirit they are operating to restrain those who need restraint within the attainments of human progress already won, in order that human welfare may enter on higher achievements. Social pressure, law, is not the foe of liberty; it is its nursing mother. Life depends on environment. A 'fullness of time and place' must be before fresh growth can come. Conditions must be organized if new life is to be generated. It is from lower forms that the higher arise as the appropriate *métier* of their life is secured. The social and industrial unrest of the times implies the bringing to birth of a fresh life of humanity. The new quality of life cannot live except with new social advantage. Here we note two facts of modern psychology: (a) social integration promotes individual independence, and (b) personality is enhanced by progress in material conditions. The individual is conditioned by his environment; that is the basis of all sound sociology. As a machine cannot work in an atmosphere that freezes its oils, or a plant flower in beauty in the Arctic zone, so man cannot grow to his full stature in a world of squalor, sin, and disease. This is the modern rendering of the ancient 'fate,' yet with what a difference for human hope! A large share of man's destiny is sealed by his birth and surroundings. On the one hand, while a certain power of choice remains his, his moral endeavour and moral vision are due quite as much to the community which produces him as to himself. On the other hand, it is a fact as well that this is for man's benefit; it is the grace of the universe to his growth. A man is, first of all, a unity; and his nature as such prevents his easy descent into

¹ Cf. R. Flint, *Agnosticism*, Edinburgh, 1903, last chapter.

the mass or dissolution into weakness. The more that unity of his is preserved and pressed, the stronger rises the outflow of original force of character, the result of social amelioration. Is this the mode of operation of the divine will upon the human? 'Our wills are ours to make them Thine'—have we here the method of discipline? Here once more is a summons to revise that harassing perplexity of foreknowledge and free will; here too a mightier incentive than before conceived for material progress and Christian enterprise.

3. A richer soul.—The practical experience of that old doctrine, the mystical union with Christ, has almost died down. It is well worth revival. The time is opportune. The stream of mysticism runs with a strong current in the modern conscience. It will enter theology as a power for good. Modern mystics are training us in their way of experience, and teaching the sacramentalism of nature; they are renewing our confidence in the validity of both in grace. Redemption is an economy like nature and providence; its spirit can be known and felt equally with theirs. The ordinances of Christ's appointment which sum up His saving acts to represent, seal, and apply their benefits, are its proper medium of communication, conferring 'God's essence and His very self' on believers. There is a spirit in creation; there is a spirit in history; there is a spirit in grace. These three are not one, but the experience of the first prepares for the last, in which their partial union with the divine life is consummated in perfect union. That union feeds the spirit of man, for the simple reason that the spiritual nature of man is not some special faculty or out-of-the-body ecstasy, but the conversion and sustenance of his ordinary powers. It is because we confine our union with the divine Being to communion with Him by our ordinary powers that our religious life is so pulseless. But the fault rests, not in the powers, but in the method of using them. We commit two blunders. We use our powers in analysis, not in synthesis; and the result is that the self is not offered to the divine life for its unfolding. The self is more than the collection of its faculties; and we have to realize that there is no end to the spiritual treasure latent in it when God has access to it. Then, again, we think God rather than experience God. But a thought God is abstraction; a lived-with God is power—action and passion. We have to learn that in the infinite personality there is no end to such action and passion. These recognitions, of our own deeper self and of the divine self, open the way for inflows from God constantly increasing unto perfection. Within our self God speaks and to our self; there is no identity, for identity would close intercourse. In this—the fine principle of the higher mysticism of our day—lies the sure hope of further spiritual advance.

But now every increase of living experience of this sort brings with it an increase of power to understand what God's will is, what it is doing, and by what method He is doing it. Those ideas, the divine immanence in the world, the social solidarity of the race, the enhancement of self-conscious life, have as yet no place in theological system.¹ The divine transcendence idea and predestination idea have been drawn deductively from data that are abstract; we must now build them

up by induction from what we have seen are the data alone intelligible to the modern mind. They will then assume their proper position as the controlling principles in a scientific theology fitted to enlist the finest sympathies of modern culture and to effect its greatly desired harmony with modern faith.

LITERATURE.—W. A. Copinger, *A Treatise on Predestination, Election, and Grace*, London, 1889 (a full bibliography in Appendix, up to recent times). The classical authors are in need of re-perusal and study: Origen, *de Principiis*, ii, iii; Augustine, *de Predestinatione Sanctorum*, *Epigena, de Predestinatione*; Calvin, *Institutes*, iii; Jonathan Edwards, *Works* (in particular 'God's End in Creation' and 'Freedom of the Will'), New York, 1869.

The Histories of Doctrine furnish useful reviews: Hagenbach, Shedd, Harnack, Loofs, Bovon, Grétilat (Protestant), and Moehler, Denzinger, Scheeben, Pohle (Roman Catholic). There are careful, if brief, articles in *EB*, *PRE*, *CE*, *JE*. The Biblical material has been laboriously canvassed by B. B. Warfield, in *HDB*.

The credal and confessional definitions will be found in G. B. Winer, *Doctrines and Confessions of Christendom*, Eng. tr., Edinburgh, 1878; C. A. Briggs, *Theological Synoptics*, do, 1913; W. A. Curtis, *A Hist. of Creeds and Confessions of Faith in Christendom and Beyond*, do, 1911; P. Schaaf, *Hist. of the Creeds of Christendom*, 8 vols., London, 1877.

For special periods consult C. Bigg, *The Christian Platonists of Alexandria*, ed. F. E. Brightman, Oxford, 1913; W. Bright, *Select Anti-Pelagian Treatises of S. Augustine*, do, 1889; J. B. Mozley, *A Treatise on the Augustinian Doctrine of Predestination*, London, 1883; A. Dorner, *Augustinus, sein theologisches System und seine religionsphilosophische Anschauung*, Berlin, 1873; Thomas Aquinas, *Summa Theologica*, R. Seeberg, *Die Theologie des Johannes Duns Scotus*, Leipzig, 1900; D. J. Kennedy, in *CE*, s. v. 'Thomas Aquinas'; E. F. K. Harris, *God the Creator and Lord of All*, 2 vols., New York, 1896. A. S. MARTIN.

PRE-EXISTENCE. — 1. Definition. — Pre-existence, from being a general term, has come to have a limited, technical application in the philosophy of religion. It is used in stating the doctrine that the human soul has already been in being before the beginning of the earthly life, i. e. prior to the time of its union with the body. The precise character and conditions assigned to the pre-existent state cannot be brought out in a general definition, as these vary in different systems of religion. Where this belief appears it is generally

¹ Fragmentary essays in that direction have been forthcoming during the latter half of the 19th century. Modern theology has moved away from the old moorings; partial reconstruction is proceeding apace; the comprehensive synthesis still lags. Yet the most fruitful interpretation still of the divine nature is that of will, motivated by love, showing that in its general decline the heart of Calvinism, like that of Shelley in the ashes of his funeral pyre, remains entire.

held in conjunction with belief in transmigration, but in a strict sense it has reference to a state of being prior to any incarnation. The reference is to the human soul. For the pre-existence of the divine nature of Christ see the art. JESUS CHRIST (cf. also art. LOGOS). Doctrines regarding the pre-existence of the souls of animals and plants are treated, for the most part, in connexion with transmigration (*q.v.*).

2. Origin of the doctrine.—The origin of belief in pre-existence is obscure. Man has difficulty in conceiving himself as non-existent, but experience familiarizes him with the facts of birth and death. When he reaches the conception of a soul in distinction to the body, his thought turns not only to the future but to the past. What is its origin? Among the answers which suggest themselves is this, that it has already existed before its union with the body. The inquiry may not proceed beyond the thought of previous incarnations, and of this we have many examples in the more primitive religions. But in other cases the inquiry has been pushed beyond this, or has advanced independently, to the thought of the existence of the soul in a spirit-world previous to its embodiment on earth, and a definite doctrine has been formulated. If we cannot for the present discover more exactly the origin of the doctrine, or the precise influence which one people exercised on another with regard to it, we can in some cases trace its development and observe the extent to which it has prevailed. It is found in a well-developed form in Greek religion and philosophy, in Judaism, in the early Christian Church, in the religions of India, and to a very considerable extent associated with modern thought in the West.

3. Greek and Roman doctrine.—Belief in the pre-existence of the soul prevailed widely among the Greeks from an early date, and at a later time became a theory of their philosophers. The influence of Greek thought in this respect was strongly felt in the early Christian Church, and is still apparent to some extent throughout the whole of Western civilization. To gain a knowledge of the subject it is well, therefore, to begin by observing its place and character in the Greek religion and philosophy. Regarding the origin of the doctrine among the Greeks there is no reliable evidence that, in the early stages, Egyptian or Oriental thought had any considerable influence. It appears to be of native origin and to have two distinct sources: (1) the early religious ideas of the people which found expression in certain ceremonies and myths; and (2) the philosophic principles which were gradually formulated in the schools, and from a statement of which this doctrine followed as a corollary; but, even in the latter case, religious pre-possession was not without its influence.

To the Greeks, as to many other peoples, the soul is air or breath (*πνεῦμα, ψυχή*), or an essence of a similar nature. It departs with life; it comes at the beginning of life. What is its origin? Homer and Hesiod do not give us much help, but the answer of the Orphic religion is that it is divine. The direct testimony as to what was taught in the Orphic religion as early as the 7th cent. B.C. comes from a later date.

Plato speaks of it as an ancient doctrine that the souls of men, 'having gone there from here subside, and return hither again and are produced from the dead' (*Phædo*, 70 C). Philolaus states that 'the ancient theologians and soothsayers bear witness that the soul is joined to the body by way of punishment and as it were buried in it' (Clem. Alex. *Strom.* iii. 433A; cf. Plato, *Phædo*, 62 B).

The statement of Plato and even of Philolaus may refer only to transmigration, but their testimony must be taken in connexion with the evidence of the Orphic tablets, on one of which the soul

declares, 'A child of Earth and of starry Heaven am I; but of Heaven is my race.' There is also the strongest probability that Pythagoras derived his views on the soul's pre-existence from Orphic sources. The egg used in the Orphic ritual was a symbol of the cosmic egg from which sprang the principle of all life. We have here indications of an ancient religious belief that had already taken definite form. At a later time it gained precision of statement at the hands of the philosophers who adopted it, and became an integral part of their theories of the universe. The pre-Socratic philosophy prepared the way for the dogma. Some unifying principle was being sought. Thales found in water the principle of all things; Anaximander in undetermined, unlimited matter; Democritus in atoms which are indestructible; the Pythagoreans in number. The Eleatic school accounted for the phenomenal world by the principle of eternal, immutable being; Heraclitus by continual change, becoming; and the Atomists by an attempt at combining those two principles. The thought of the indestructibility of atoms involved that of the pre-existence of the constituents of the soul; and, as already in the Orphic religion, its transmigration was taught by Pherecydes and Pythagoras (c. 540 B.C.). The distinction between soul and body is worked out by Anaxagoras (c. 470 B.C.). He introduces into his philosophy the thought of a world-forming mind (*νοῦς*) that is absolutely separate from matter and that acts upon it. This matter-forming mind is immanent in different degrees as an animating soul in plants, animals, and men. The human soul is thus a portion of the world-creating mind, and existed in it prior to its manifestation in the body. In his treatment of the *νοῦς*, however, the conception of immateriality is not yet made clear.

Plato (c. 387 B.C.), developing the teaching of Socrates, turns his attention in the first instance, not, like the earlier philosophers, to the investigation of external nature, but to reflexion on the mind itself, its essential qualities, its endowments and activity, and in this way arrives at his theory of ideas. The idea is not a mere abstraction, but is a real archetypal essence and is eternal. The highest idea is the idea of the good, and this idea of the good Plato seems to identify with God who existed from eternity. Matter also existed eternally, but without quality or order. At the beginning of time God appears as the world-builder or demiurge, and out of the ideal world and the germs of the material world forms the soul of the world. The chaotic matter is reduced to order and fitted to this world-soul as its body, which it animates and rules. The universe, which is the result of this creative work, is fashioned for the sake of what is good only, in beauty and harmony, after the model of the eternal ideas. Of this universe man is a part. He consists of soul and body, and in the embodied soul there are three elements: (1) the cognitive soul, which has its seat in the head, and sways and controls the body but at the same time is debased by association with it; (2) the appetitive soul—the lower, sensuous faculty; and (3) the courageous soul, which in man forms a link between the other two. The relation of the last two to the first resembles that of two steeds to a charioteer. Sometimes Plato seems to think of the whole soul as pre-existent and immortal, but in general it is the cognitive soul alone that is thus represented. This rational soul, as distinguished from the irrational and mortal elements, is of the same nature and character as the world-soul. A certain definite number of souls have been created by God, and this number is neither increased nor diminished,

Before the terrestrial life begins, the soul, with true personality, exists in a state of purity so refined that it is difficult to conceive its original estate from beholding it, as we now find it, mired by its abode in a mortal body. It has knowledge of the divine and eternal, and enjoys a life of bliss in contemplating the ideal world. From this state of purity, for the sake of completing the world-order, the soul is brought into union with a mortal body. Its higher nature is still shown, when incarnate, by love of wisdom and by a yearning for the divine to which it is akin. The soul is indestructible, but in the conflict of the earthly life, if it is overcome by the sensuous, it migrates at death into another human body, or even into a lower form of existence; if it maintains its purity, it returns to its original state of bliss, from which, however, it will again become incarnate. Through all these changes the continuity of its life is maintained. The soul in any particular body may, apparently, be undergoing its first or any subsequent incarnation. In the *Phædo* a proof of pre-existence is found in the doctrine of 'reminiscence,' the meaning of which is illustrated in the *Meno*. It is shown that in mathematical and philosophical learning the knowledge of universals is not acquired by direct experience or by teaching, but is drawn out of the soul; that the gaining of knowledge is an awakening of the memory which has become dulled through the soul's embodiment, the recollection of ideas with which it was familiar before the present terrestrial life began.

Aristotle (335 B.C.) regards the soul as an organizing principle, manifesting its activity in plant, animal, or man. The human soul is a microcosm, uniting in itself all the faculties of the lower grades of organic being with the additional faculty—reason. This reason, which is divine and immortal but not subject to transmigration, is the only element in the soul that exists before the body. His statements are, however, conflicting and his reference may be merely to the universal reason.

For the Stoics (from 310 onwards) the soul is an inborn breath pervading continuously the whole body. It is an emanation from the deity or a part separated from him. The fiery breath or generative reason which pervades the whole world appears in man as a rational soul. This purest portion of the central fire outlives the body, but at the end of the world-period at longest it returns to its source.

Stoic teaching, as well as Platonism, Pythagoreanism, and Oriental mysticism, had its influence on Greek and Jewish speculation at Alexandria from before the Christian era, and the thought of emanations was given a prominent place. This thought was taken up and developed by the Neo-Platonic schools which arose from the teaching of Ammonius Saccas (c. A.D. 210). Besides its influence in Alexandria the Neo-Platonic movement gave rise to Roman, Syrian, and Athenian schools. The most notable exponent of Neo-Platonism is Plotinus, the mystic who founded the Roman school in A.D. 224. In the system of Plotinus the Absolute One or the Good is not merely, as with Plato, the highest of the ideas, but 'is greater than all we call being, greater and better than reason and intelligence and sense, though it is that which gives them whatever reality they possess' (*Enn.* v. 3, 14). The ideas are emanations from the Absolute One and the soul is an emanation from the ideas. As the sun emits rays, the One, through its very perfection, overflows and sends forth an image of itself; and this image in turning to behold its source becomes the *vous*, or pure intelligence. In like manner the soul, an immaterial substance, is an emanation from the *vous* of which

it is an image. The ideas, endowed with true being and life, are immanent in the *vous*. As the *vous* exists in the One, so the soul exists in the *vous* and thus partakes of the divine. The soul has a generative power which enables it to produce and fashion its material environment. Of souls the highest is the world-soul. It occupies the lowest stage of the ideal world and produces the world of matter and change. Other souls are not mere parts of the world-soul; but, although they are included in it, they have a distinct existence. The life of the human soul, derived from the universal intelligence, is prior to its union with the body and is independent of it as regards power of thought, memory, and even sensuous perception. It is in itself indivisible and permeates the body as fire permeates the air, or, rather, we ought to say that the body is in the soul. Its union with the body is the result of a fall from its original state. In its self-will it has revolted and has sought to be something for itself; it has chosen the unrest of time instead of the peace of eternity. In consequence of its own act it is shut out from the universal life of reason and joined to a mortal body. It has forgotten its dignity and its divine origin, but it has not lost its freedom; it can attain to consciousness of its own nature; by a faculty higher than discursive reason, by ecstatic feeling, it can rise into contact with God and partake of the truest bliss.

Except in so far as they adopted Greek ideas, the Romans do not appear to have formulated any theory of pre-existence. Where the influence of Greek speculation concerning the soul is apparent in the writers of the classical period, the interest generally centres in transmigration, as we see by the references of Ennius, Persius, Horace, Lucretius, and others; and, when inquiry is made into the soul's origin, the answer is mythological, or is given in a pantheistic sense, as by Virgil, or in other terms suggested by the theories of the Greeks. Cicero thinks of the human soul as an essence of a divine nature, a portion of the divine and rational principle. The Sextians favoured the Pythagorean doctrines, and Marcus Aurelius, although he is vague on this point, speaks of 'the divinity within a man' (*Meditations*, iii. 6, 16, v. 10). Later came the Neo-Platonic doctrine, elaborated by Plotinus and maintained by his disciples Amelius and Porphyry in pagan circles when Christianity was spreading at Rome.

4. The doctrine in Judaism.—According to the teaching of the OT, the soul had no previous existence apart from the body. The representation of man's origin excludes the idea. In the case of the first pair there is a direct creation (Gn 5¹⁴ etc.). When the other works were finished, man was not yet made (Gn 1²⁶), and in the statement 'God created man in his image . . . male and female' (v. 27) the same verb is used as in v. 1, where the object is 'the heaven and the earth,' and in v. 4, with object 'sea-monsters.' The account in 27 is more in detail: the dust is fashioned and man becomes a living soul (*nephesh*) by the divine inbreathing. The life of the soul or of the body is not contemplated apart. With regard to other individuals of the race, there is nothing to suggest the view that the soul existed before the joint life begins on earth. The few passages most frequently quoted as favouring pre-existence are to be explained otherwise.

In Job 1²¹, 'Naked came I out of my mother's womb, and naked shall I return thither,' 'mother's womb,' on account of 'return thither' in the parallelism, has been taken to mean the deep bosom of mother earth, Sheol, in which the soul previously dwelt. This is a strained interpretation, and it makes the 'I' identical with the soul. 'Mother's womb' is to be taken in its natural sense (cf. Sir 10²⁵ 10²⁶); then in 'return thither' there may be an abbreviated comparison between this and the depths of mother earth (cf. Sir 40¹); or, less pre-

cisely, the state after death is thought of as being similar to the conditions in the womb whence man issues when life begins. Another passage is Ps 139¹⁵, 'When I was made in secret, curiously wrought in the lowest parts of the earth.' The term 'lowest parts of the earth' is elsewhere used of the realm of the dead (Ps 63⁹), and it is suggested that it means here the abode of the soul before birth; but two things are against this application: (1) the whole passage (vv. 13-16) is a description of the growth of the embryo, and (2) the reference is explicit in v. 16^a to 'my bones' (RV 'my frame'). We have here, therefore, a poetical comparison of the 'mother's womb' of v. 13 with the deep, mysterious recesses of the earth. In Job 38²¹ the context shows that the words are used in an ironical sense: 'Thou knowest; for thou wast then born' (LXX 'I know then that thou wast then brought forth'), i.e. Job was old as the first dayspring. The reference is to birth. It is only by a fanciful interpretation that passages like 1 S 2⁶, Dt 29¹⁴ can be thought to have any bearing on the subject.

Outside the Hebrew canon, however, we have early traces of the doctrine, and in Hellenistic circles and in later Judaism we find it fully developed. The idea of a disembodied soul, with an individuality of its own, had already become familiar to the Jews through their contact with Persian and Greek thought. The question of the disciples (Jn 9² [see below]) shows that theories of pre-existence were known to the Jews of Palestine in the time of Christ. Josephus tells us that it was a doctrine of the Essenes that souls are immortal and continue for ever; that, when they wander forth from the most subtle ether, they are drawn down by a kind of natural allurements and entangled in bodies as in prisons (BJ II. viii. 11). Whether his account is exact or not, the idea was familiar to him. The Essenes were probably influenced by the Pythagorean views that spread with Hellenism. Parsi and Buddhist influences are also suggested.

Among the Jews of Alexandria the doctrine was held before the Christian era, as we see from the statements of Philo and from the Apocryphal writings (Wis 8¹⁶, 'Now, I was a child of parts, and a good soul fell to my lot; nay rather, being good, I came into a body undefiled'). He speaks first as if his personality was distinct from his soul (so, too, Wis 15⁸, where man at death 'is required to render back the soul which was lent him' [RV]), but then he corrects this and speaks of the soul which pre-existed as being the real self. He implies, further, that there is a distinction between souls, as being pure or corrupt prior to union with the body (cf. *Slav. Enoch*, xxiii. 5, 'All souls are prepared to eternity, before the formation of the world'; *Syr. Apoc. Baruch*, xxx. 2 and 2 Es 4³⁵, sometimes quoted, are not to the point). Philo the Jew, at the beginning of the Christian era, developed this doctrine under the influence of Plato's idealism, and fitted it into his allegorical method of interpreting the OT. Man is composed of soul and body. The soul consists of two parts, the rational and irrational principles. It is only in speaking of its functions that he adopts the Platonic tripartite division. The irrational part of the soul, like the soul of animals, rises by generation, and, being material in its origin, is mortal. The rational principle, which is the true soul, is pre-existent and immortal. It is an emanation from the Deity; and, although Philo makes a distinction between the Supreme Source of all things and the world, he speaks of the human soul as 'a fragment of the Soul of the universe' (*Mutat. Nom.* 39), and as 'a fragment or a ray' of the divine reason (*de Mundi Opificio*, 51). Of incorporeal souls, which are emanations from the Deity, there are two classes, and these have their abode in the air and the heavens. The higher class, called 'daemons' in philosophy and 'angels' in the Scriptures, do not descend into bodies and are incorruptible; but the other class, viz. the souls of men, being nearer to the earth, are attracted by the body, and by their union with it become corruptible. The soul finds in the

body its prison-house or tomb, from which it escapes at death to enjoy its true life.

In the Talmud and the Midrash the pre-existence of souls is clearly taught. They are created by God and given a distinct existence as living beings. There are variations in the statements regarding details such as the time of their creation and their abode. In *Be'reshith Rabbah*, 8, God is represented as taking counsel with the souls of the righteous before He created the earth. According to *Tanhūmā*, 3, all souls which were to enter human bodies were formed during the six days of creation and were in the Garden of Eden. Before their descent to earth the souls are kept in the seventh heaven (*Hagigah*, 12b) or in the storehouse (*Sifrē*, 143b), and it has been said that the Messiah will come when all the souls in the *gāph* have passed through the earthly life (*Abodāh Zārāh*, 5a; cf. *Yebāmōth*, 62. 1). It is not settled whether the soul comes to earth at the time of conception or after the embryo has taken form (*Sanh.* 90a). The doctrine appears in great detail in the Kabbālā literature. According to the book of *Zohār* (13th cent.), the soul in its essence is derived from the Supreme Intelligence, the Universal Soul. When the Holy One purposed to create the world, it was brought before Him in His will, and He formed all the souls that were to be given to men; they were there made in the exact form in which they were afterwards to appear as children of men on the earth; they were created pure, but He saw that some of them would afterwards corrupt themselves in the world (*Zohār*, i. 96b). They are sent into their bodies that they may be educated by taking their part in the universe and by contemplating creation. The doctrine was further developed and rendered popular by Isaac Luria (16th cent.) and his school. All souls destined for the human race were created together in Adam. They had their place in different parts of his body—the brain, the eye, the hand, etc.—and, as there are superior and inferior organs and members, there are corresponding differences in the qualities of souls. As every human soul is a spark from Adam, all bear the taint of his first sin. These theories of the Kabbalists are put forward in connexion with an elaborate system of transmigration (cf. Luria, *Sēfer Haggigālīm*). At present the doctrine, as taught in the Talmud and the Midrash, is part of the creed of the Jews (cf. Prayer Book, *passim*), whilst the Hasidim, who constitute perhaps half of the race, adopt in addition the Kabbalistic views. In the Morning Prayer in the Synagogue the form of expression, 'the soul which thou hast given me,' is similar to that used in Wis 8¹⁶, but it is understood in the sense made explicit in v. 20 (cf. above).

5. In the Christian Church.—Pre-existence is not taught in the NT. When the disciples asked the question, 'Who did sin, this man, or his parents, that he was born blind?' (Jn 9²), they probably had the doctrine of pre-existence in mind; but this would merely show that it was current in Palestine at the time, and that they may have still held it at this stage of their discipleship. Through the influence of Hellenistic philosophy and the Zoroastrian and Buddhist religions, it soon made its appearance among certain sects who derived part of their teaching from Christianity, notably the Mandæans (q.v.), originating in Palestine in the 1st cent.; the Gnostics (q.v.), spreading from Antioch and Alexandria in the 2nd cent.; and the Manichæans (q.v.) from Persia in the 3rd. It is involved in their theories of emanation and of the inherent evil of matter, by association with which spirit is defiled. An illustration may be given from the

speculations of the Valentinian Gnostics. From the dust of the earth and the pneumatic seed which Achamoth had conveyed into it the Demiurge formed man and breathed into him psychical life. He placed him in the lower heavens, but in consequence of disobedience banished him to the earth, and clothed him in a material body. Men multiply and the best of them—those with pneumatical natures—have an innate longing to return to the Pleroma. With the Manichæans the soul is a particle of the heavenly light imprisoned in matter, from which it may, at death or after further purification, return to the realms of light.

Under the influence of Greek philosophy many of the Church Fathers made a theory of pre-existence part of their system of doctrine. As early as the middle of the 2nd cent. it was taught by Justin Martyr, who, being a Platonist before his conversion, allowed his philosophy to colour his views of Christian doctrine; but its most influential advocate was Origen, who works it out in a clearly defined form in his great dogmatic treatise, *de Principiis*. Origen was familiar with the Alexandrian philosophy, being a fellow-student of Plotinus at the school of Saccas. Fundamental to the system of Origen is the thought that God is immutable and spirit indestructible. Among the spirits which God has created from all eternity are the spirits of men, and these were made in the image of God. All created spirits are endowed with freedom, and in the exercise of that freedom the spirits of men have fallen. The material world was subsequently created for the discipline and purification of spirits who have misused their freedom. The fallen spirits of men are banished into bodies in this material world. Man has a threefold nature: body, soul, and spirit, the material body and the rational soul or spirit being united by the animal soul. The rational soul is the immortal and eternal part which has suffered the premundane fall. Origen was followed in this teaching by Pierius, John of Jerusalem, Rufinus, Nemesius, and others. Jerome at one time believed in it, and Augustine acknowledged himself in doubt. It was opposed by Methodius and Gregory of Nyssa, and condemned by a decree of Justinian in A.D. 543, and by a synod at Constantinople in the same year; but in the Western Church it maintained itself in some quarters till the time of Gregory the Great at the end of the 6th century. Since that time it has been commonly held that the existence of all men was present to the foreknowledge of God and that it is part of the divine purpose; but a definite statement of actual pre-existence has not had a place in the acknowledged creed of any of the great Christian Churches. Still, individual theologians are to be found who have explicitly maintained it.

A particular phase of this doctrine occurs with regard to the person of Christ. It was taught by Origen and held by his followers that, like the souls of men, the human soul of Christ was created by God from eternity. It did not, like the others, suffer a premundane fall. The divine nature of Christ united with this undefiled soul and through it with the body. Among modern writers Isaac Watts (1747) adopted this theory. Cf. also Julius Müller.

6. In Indian religions.—The doctrine of pre-existence has a place in some form or other in most of the religions of India—Buddhism and Islām being the chief exceptions. Whether it was brought there by the Aryan invaders or afterwards originated among them, or was adopted by them from the pre-Aryan inhabitants, has not yet been determined. The significance of the doctrine is

conditioned by the varying conceptions of the Deity which have been current in different periods and in different religious systems. The prevailing mode of thought is pantheistic, but in the Vedic hymns it sometimes shades off into polytheism; and sometimes—as is the case also in the later codes of laws—it approximates to monotheism. In Buddhism it becomes practically atheistic; whilst the pantheism of Brāhmanism becomes blended with polytheism in Hinduism.

In the Rīgveda the mother Aditi, 'immensity,' is conceived of as the substratum of all existences; she is 'what has been born, and what will be born.' The teaching—already a part of Brāhmanism—becomes clear in the *Upaniṣads* (c. 500 B.C.) and in most of the systems of philosophy founded on them, as well as in the codes of law. The doctrine is common to all these writings that the soul (*puruṣa*, or 'the self,' *ātman*) is eternal. It has always existed and it always will exist. In the case of man the soul, when united to the body, is brought into bondage and endures the misery of an earthly life. Of the various modes of presenting the doctrine only examples can be given here. According to one representation, all organized existence, material and immaterial, develops out of a primal substance, *prakṛti*, in virtue of its own inherent energy. In the earliest *Upaniṣads* this view is set forth in such a way as to involve a materialistic monism, but in the Sāṅkhya philosophy the basis is dualistic. According to the last theory, besides the *prakṛti*, there are individual souls existing eternally and indestructible, and it is to unite with these that the *prakṛti* energizes itself. There is no supreme soul, for all souls are equal; but the modifications of the *prakṛti* with which they unite produce differences in the earthly life. When the soul comes to recognize its distinction from matter, it can free itself from it and regain its liberty. There is another way of presenting the theory in the *Upaniṣads* and worked out in the Vedānta philosophy which is essentially idealistic and involves a pantheistic view of the universe. One principle of life animates man and nature. It is the *ātman*, or self. It appears in nature as air or ether and in man as breath. The individual soul (*jīvātman*), which has its abode in the heart, is part of the supreme soul (*paramātman*), but has an independent existence of a practical, experimental kind. The consciousness of separate existence is, however, illusion, ignorance of its real nature, and true knowledge consists in recognizing itself as identical with the supreme *ātman*.

A doctrine of pre-existence cannot be said to find a place in Indian Buddhism (which denies the *ātman*), but it appears in a distinct form in the closely related system—Jainism. The Jains believe that the world is eternal; all animate beings are composed of soul and body; the soul has always existed and always will exist, but during the earthly life or series of lives it is in bondage through its association with matter.

The two most prevalent forms of religion among the Hindus are Vaiṣṇavism and Śaivism, although the sects which represent these have been subjected to almost endless subdivision. The materials for their creeds are derived chiefly from Brāhmanism but partly also from ancient ideas, Aryan and aboriginal, that were independent of Brāhmanism. Vaiṣṇavism has the greatest number of adherents, and among most of its sects the influence of the Vedāntic idealism, as expounded by Śaṅkara, is apparent, although as time went on dualistic conceptions became more common. Sometimes Kṛṣṇa, one of the incarnations of Viṣṇu, is represented as being alone real, the absolute being in human form, and the consciousness of independent

existence in men is the product of his deceptive magic; but in the teaching of the Pāṇcharātras individual souls are emanations from the Supreme Being and, till they are absorbed in him again, enjoy a real and distinct existence. The followers of Rāmānuja, who are numerous both in N. and in S. India, attribute a distinct but finite reality to individual souls; and the followers of Ananda-tīrtha in the south regard individual souls as having an eternal existence distinct from matter and from God. The Sikhs—in some respects deists—follow the Vedāntic teaching on this subject.

In Saivism, which is more closely related to the deism of the Sāṅkhya philosophy, the distinction of the soul from God on the one hand and from matter on the other is made clear. While the soul is united to matter, it is subject to error and sin; it is separated from God, held back as by a chain which the faithful should earnestly seek to have broken. There is, however, a branch of the Saivite religion, represented chiefly by ascetics in Benares and in the Deccan, in which a pure idealism is adopted. God is regarded as the only substance, and objects, including the individual ego, as His ideas.

These notices are far from an exhaustive enumeration of the modifications of the doctrine to be found in the Indian religions; but from them we see that pre-existence has been part of the teaching of all the great religious systems of the Hindus except Buddhism; that it is still a definite part of the teaching of that Hinduism, whether the cult adopted be that of Viṣṇu or that of Śiva, which is now the religion of more than 200,000,000 of the people of India, as well as of the smaller communities of the Sikhs and the Jains.

7. In other religions.—The belief in previous incarnations common to many primitive religions—among N. American Indians, Australian aborigines, African tribes, and elsewhere—is discussed under the title INCARNATION; here we are concerned with the origin of the soul previous to any incarnation. On the other hand, it is probable that pre-existence was believed in among some races whose religious system was more developed, but where direct evidence is now wanting. This is probably true of the Celts of the Druidic period, who believed in transmigration. The references to the cosmic egg in Teutonic legends, in the Orphic mysteries, and in Indian myths show that all these had certain ideas in common regarding world-origin. Among the ancient Egyptians there was a belief that one element in man—the *khu*—is a god-like essence, a spark of the divine intelligence. It comes down from heaven and forms part of the human soul, or *ka*, from which it is separated at death and, rising again to heaven, becomes a spirit. The Pharaoh was regarded as an incarnation of the sun-god and subordinate princes as incarnations of various gods. Chuang Tse (c. 300 B.C.), the opponent of Confucianism and the expounder of the philosophy of Lao-tse, the founder of Taoism, teaches that the soul is an emanation from God; that life on earth is a misfortune, involving a breach of the partnership with God, to whom the soul returns at death. Some forms of Buddhism, through contact with native religions outside of India, have developed a doctrine of pre-existence. Among certain Arab philosophers the Neo-Platonic teaching was revived, notably by al-Fārābī of Baghdad († A.D. 950).

8. In modern philosophy and general literature.—In modern times and within the bounds of Western civilization belief in pre-existence has been shown by various philosophers, poets, and other writers. In some cases it is accompanied by a pantheistic faith or undefined views tending

towards pantheism, and in others by belief in a personal God. There are many varieties in the form of the doctrine, and all that can be done here is to refer to typical instances. In Spinoza it occurs in a pantheistic sense, the individual finite forms being *modi* in which the Infinite Substance particularizes itself. In Hegel's philosophy finite persons are differentiations of the Absolute Spirit, who is the sum of reality. God is the One-and-All of which every man is a part. 'The whole is in every part, and every part is essential to the whole' (J. M. E. McTaggart, *Studies in Hegelian Cosmology*, Cambridge, 1901, p. 243 f.). For Leibniz human souls are monads of a high rank. They have existed since the beginning of things and have been in the ancestors since Adam's time. They have been, however, merely sensitive souls possessed of perception and feeling, and are endowed with reason at the time of generation by a kind of transcreation. From the beginning they have the imperfection inherent in finite things. Kant is generally referred to as teaching pre-existence in discussing the origin of evil, but the statement of his position requires care. Man at his birth has an innate bias, which Kant calls 'radical evil.' This bias is referred to the will, and (as *peccatum originarium*) is itself an intelligible act, cognizable only by reason, performed by the individual, not in the phenomenal world but in the supersensible sphere. He does not, however, represent this act as taking place in a pre-existent state. The act is timeless (*Religion innerhalb der Grenzen der blossen Vernunft*, ii. [Gesammelte Schriften, Berlin, 1900-13, vi.]). The thought thus darkly suggested by Kant was given more definite form by subsequent philosophers. Schelling, postulating pre-existence, conceives of man as falling at the beginning of all things from absolute to self-dependent existence, in which state he remains till birth. Variations of a theory of pre-existence on a basis of idealism or of realism are to be found in Schleiermacher, Schopenhauer, I. H. Fichte, Herbart, and many others. Julius Müller presents the doctrine in a clearly-defined form. A threefold primitive condition is assigned to man—his primitive state in the eternal ideas, in the extra-temporal existence of every ego, and in the temporal beginning of his earthly development. Believing in trichotomy, he regards the *ψυχή* as being generated with the body, and the *πνεῦμα* as being the element that is pre-existent. The *πνεῦμα* of every individual, except Christ, became involved in a condition of primitive sinfulness in the extra-temporal stage of existence. Among recent philosophers J. M. E. McTaggart thinks that pre-existence can be proved in a directly metaphysical way. He believes in a plurality of lives both before and after the present life. Henri Bergson, developing his theory of creative evolution, speaks of souls as being continually created, which, nevertheless, in a certain sense pre-existed. William James, in explaining his transmission theory of the function of the brain, thinks of our consciousness as being continually derived from something mental (a mind or minds) that pre-existed—from a consciousness that exists, behind the scenes, co-eval with the world. The direction in which the minds of many writers are turned is shown by the frequent use of such terms as 'oversoul,' 'soul-stuff,' 'mind-stuff,' 'subliminal self,' and Fechner's 'psycho-physical threshold.'

Belief in pre-existence is expressed by several English poets and by other writers. Vaughan has it in *The Retreat* (1654), the leading thoughts of which are borrowed and amplified by Wordsworth in his *Ode on the Intimations of Immortality*. In the treatment in both cases there is an echo of

Plato's doctrine of reminiscence, with this difference that it is the child in its earliest days that has the clearest recollection of the heavenly world and the impression becomes dimmed as life advances. Rossetti, in *The House of Life*, assumes pre-existence to account for his familiarity with a strange place, and for the bond that binds two lovers. Browning represents Cristina as feeling that 'ages past the soul existed' (cf. *La Saisiaz*). Tennyson expresses it in *Early Sonnets*, i., and in *Crossing the Bar* (cf. *The Two Voices*). Of course in poetry it is sometimes difficult to distinguish between the statement of a conviction and the play of poetic fancy or what is spoken in character. Jules Michelet, in *L'Oiseau* (1856), whilst not advocating transmigration in the ordinary sense, speaks of birds as embryo souls, candidates for the life to which the human soul has attained. Edward Beecher is an advocate of pre-existence in *The Conflict of the Ages*. A. B. O. Wilberforce, in *The Hope That is in Me*, says, 'I believe we have all been in being prenatally.' The evidence of a similar belief can often be seen in recent Russian literature. Among modern theosophists the belief is common that the conscious spirit is an eternal entity, a unit from eternity.

9. Summary.—By referring to the particulars given above it will be seen that belief in pre-existence prevailed very widely in ancient times, especially in the more developed ethnic religions. To what extent borrowing occurred has not been determined, but the probability is that in several cases the belief originated independently. It is held at present by most of the Hindus, by most Jews, and by many philosophers and other writers in Christian countries. There seems to be a tendency to revert to it in philosophic arguments in favour of the immortality of the soul. The doctrine appears in at least three distinct forms, each of which has several variations. (1) In the pantheistic form the soul pre-existed only in the Deity, and in the present life it continues to be merely a manifestation of the Deity. The Vedāntic philosophy, Spinoza, Hegel, and many others may be cited. It ought to be noted that in strict pantheism the same theory applies to the body as to the soul. (2) Another form is where the soul is thought of as having a distinct independent existence during the present life, and as having existed previously, but not as a soul. Manichæism and some of the Hindu systems supply instances. (3) In the other form the pre-existing soul is a distinct individual entity. The degree of consciousness ascribed to it varies, but the present life is a continuation of that which went before. The soul is an emanation from or is created by the Deity, or is eternally existent. It is in one of the varieties of the last form that the doctrine generally appears. The conditions in which the pre-existent soul lives are seldom described with any attempt at exactness, but generally it enjoys a state of bliss or at least of freedom from distress exceeding anything known on earth. This is the doctrine of the Essenes, Plato, Philo, and the Saivites. In many cases pre-existence is simply postulated, but attempts have also been made to justify belief in it. It has been regarded as more easily credible than any other account of the soul's origin—than either creationism or traducianism; as accounting for the feeling of familiarity that one sometimes has with a place never visited before, and the affinity that certain persons discover to each other at their first meeting (so in modern poets); as accounting for innate ideas (Plato), for original depravity (Müller). Origin derives it from the nature of the soul and regards it as the correlative of immortality; the idealists from the conception

of existence. McTaggart hopes (1915) to justify his belief by a discussion of the fundamental nature of reality. None of the arguments advanced is convincing, and the phenomena observed can be better accounted for on other grounds.
